"The children were playing ball in front of the school when we arrived, it being their noon hour. Their principal, Cornelia Bowen, made us quite welcome, but had not been on duty for a few days, on account of "La Grippe." She had the children assembled before school closed, in their large room, three sitting at a desk, making a very orderly and thoughtful appearance. Over two hundred were enrolled, but many were out picking cotton during the nice weather; some came from a distance with mules and buggies, while one persistent fellow walked four miles morning and evening. They have added five buildings, and have manual training go hand in hand with literary schooling. The boys are taught wheel-wrighting, blacksmithing and farming. The girls are taught sewing, in a nice well-lighted room, where they work up many remnants sent from the North into small garments, which they sell, and thus procure necessities for the school. Several girls from a distance board with the teachers and sleep in the girl's dormitory. Those unable to pay for this accommodation furnish eatables from home, even to their share of the salt, pepper and soda. The cooking and general house-

keeping form an important part of their training; the principal's sister, Katie, is at the head of the domestic department.

"As we sat in their rear parlor, before a bright pine fire, on andirons in a capacious fire-place, the score of girls over head reminded us of Hannah, the housemaid's "light heart, but her feet so heavy and awkward." The noise on the bare floor was, however, no more than we have known from Northerners, with paler faces and daintier feet. It was the plaintive narrative given by this energetic little woman that made us forget our surroundings for the time, in our desire to be of assistance in her great undertaking. This year's cotton crop little more than paid the land rental; many will be obliged to mortgage their next year's crop, for their subsistence while it grows. The few savings that had heretofore been willingly contributed for tuition must this winter support the family at home. What tuition is paid will be as a tax upon their living fund or a draft on future crops. One thousand dollars must be raised for the five teachers, which would be certainly moderate salaries, beside living expenses and necessary repairs, that ought to add as much more expenditure to the year's account. They are trying to economize by eating only two meals a day, but are too hungry with this economy to be in condition for the most efficient work.

"All but their first buildings were erected mainly by the students themselves, and results have shown that the children of adverse circumstances in these isolated plantations valued their education in proportion to its cost. Other and more noted schools on the railways or in cities, have powerful friends in the North, and have large State aid, but this, so largely the negroes, own venture, seems likely to fluctuate with their crops' success or failure, and this year promises to be a crisis. The money spent at Tuskegee to beautify the ground would almost support the Mount Meigs Colored Institute. True, a few friends in New England and some in New York have known of their needs, and rendered some assistance that has been thankfully acknowledged; but their work has not been of a character to attract by the brilliant achievements of their pupils, as larger and more advanced schools have been able to do. The problem of the Southern States is not so much a matter of color or race prejudice, as of ignorance, poverty and vice, all of which are fostered in no small degree by a far reaching system of securities, whereby the value of next year's crop is lived up before the crop is grown, in too many cases the poor man becomes discouraged and gives over his contract without working the cotton at all. This condition was lamented by all except the Jews who furnished the capital to the planters, in land mortgages at extravagant interest, and safe sureties. Different remedies were suggested. The typical Southern white, if not so hampered himself, would suggest starvation for a year or two. But the New England philanthropist would educate the poor negro and allow the shiftless whites still to reap the fruits of the seeds sown in slavery times. Our sympathies were with those who advocate and pioneer the school system that educates the masses right in their own homes or communities, and thereby uplift child and parent.

"In no case were we so impressed with the need of assistance as in that of the Mount Meigs Colored Institute, and we feel assured that contributions will be judiciously appropriated if forwarded to the M. M. C. I., Cornelia Bowen, Merry, Alabama, via Sea Board Air Line R. R. Checks should be made out to the Mount Meigs Colored Institute, Treasurer, Edwin P. Root, 115 Dwight Street, New Haven, Conn."

(To be concluded.)

ST. JOHN THE AGED.

Selected.

I'm growing very old. The weary head
That has so often leaned on Jesus' breast,
In days long past that seem almost a dream,
Is bent and hoary with the weight of years.
These limbs that followed Him—my Master—oft
From Galilee to Judea; yea, that stood
Beneath the cross and trembled with his groans,
Refuse to bear me even through the streets
To preach unto my children. 'E'en my lips
Refuse to form the words my heart sends forth.

My ears are dull, they scarcely hear the sob
Of my own children gathered round my couch;
God lays his hand on me—yes, his hand,
And not his rod—the gentle hand that I
Felt those three years, so often pressed in mine,
In friendship such as passeth woman's love.
I'm old; so old I cannot recollect
The faces of my friends; and I forget
The words and deeds that make up daily life;
But the dear face and every word He spoke,
Grow more distinct as others fade away.
So that I live with Him and hold dear
More than with living.

Some seventy years ago

I was a fisher by the sacred sea.
It was at sunset. How the tranquil tide
Bathed dreamily the pebbles! How the light
Crept up the distant hills, and in its wake
Soft purple shadows wrapped the dewy fields!
And then He came and called me. The light I gazed,
For the first time, on that sweet face. Those eyes,
From out of which, as from a window shone
Divinity, looked on my inmost soul,
And lighted it forever. Then his words
Broke on the silence of my heart, and made
The whole world musical. Incarnate love
Took hold of me and claimed me for his own,
I followed in the twilight, holding fast
His mantle.

O, what holy walks we had,
Through the harvest fields, and desolate dreary
wastes!
And oftentimes He leaned upon my arm,
Weary and wayworn. I was young and strong,
And so upbore him. Lord, now I am weak,
And old and feeble! Let me rest on thee!
So, put thine arm around me. Closer still!
How strong thou art! The twilight draws apace.
Come, let us leave these noisy streets, and take
The path to Bethany for Mary's smile
Awaits us at the gate, and Martha's hands
Have long prepared the evening meal.
Come, James, the Master waits; and Peter, see,
Has gone some steps before.

What say you, friends!

That this is Ephesus, and Christ has gone
Back to his kingdom? Ay, 'tis so, 'tis so.
I know it all; and yet, just now I seemed
To stand once more upon my native hills,
And touch my Master. Oh, how oft I've seen
The touch of his garments bring back strength
To palsied limbs! I feel it has to mine.
Up! bear me once more to my church! Once more
Thee let me tell them of a Saviour's love;
For by the sweetness of my Master's voice

Just now I think He must be very near—
Coming, I trust, to break the veil, which
Has won so thin that I can see beyond,
And watch his footsteps.

So raise up my head.

How dark it is! I cannot seem to see
The face of my flock. Is that the sea
That murmurs so, or is it weeping? Hush!
My little children! God so loved the world
He gave his Son. So love ye one another,
Love God and man. Amen. Now bear me
My legacy unto the angry world is this,
I feel my work is finished. Are the streets
What call the folk my name! The Holy J.
Nay, write me, rather, Jesus Christ's beloved
And lover of my children.

Lay me down

Once upon my couch, and open wide
The eastern window. See! there comes a
Like that which broke upon my soul at eve
When in the dear Isle of Patmos, Gabriel came
And touched me on the shoulder. See, it
And as when he mounted toward the pearl
I know the way. I trod it once before.
And hark! It is the song the ransomed
Of glory to the Lamb! How loud it sounds
And that unwritten one? Methinks my soul
Can join it now. But who are these that
The shining way! Saved! joy! 'tis the
With Peter first! How eagerly he looks;
How bright the smiles are beaming on James!
I am the last. Once more we are complete
To gather round the Paschal feast, My pla
Is next my Master. O's, my Lord, my Lord.
How bright thou art! and yet the very sun
Beloved in Galilee. 'Tis worth the hundred
To feel this bliss. So lift me up, dear Lord
Unto thy bosom. There shall I abide.

—Bishop Bu

A MAN NAMED JOHN WESLEY.—In
her lectures, Frances Willard told the
of a young nobleman who found himself in
little village off in Cornwall, where he
had been before. It was a hot day,
was thirsty, and his thirst increased
rode up and down the village streets
in vain for a place where something
than water could be had.

At last he stopped and made impatient
quiry of an old peasant who was on his
home after a day of toil.

"How is it that I can't get a glass of
anywhere in this wretched village of
demanded, harshly.

The old man, recognizing his questioner
a man of rank, pulled off his cap and
humbly; but, nevertheless, there was a
flash in his faded eyes as he answered
ly: "My Lord, something over a hun
years ago a man named Wesley came to
parts," and with that the old peasant
on.

It would be interesting to know just
the nobleman thought as he pursued his
way. But what a splendid testimony was
to the teaching of John Wesley! For
than a century the word that he had
for his Master had kept the curse of dr
ness out of that village; and who can es
the influence for good thus exerted up
lives of those sturdy peasants? What
memorial could be desired by any Ch
minister?—*Epworth Herald.*

RELIGION is always an education, but
cation is not always religion.

For "THE FRIEND."

Hannah More.

There are several reasons for recommending the life and writings of Hannah More to the notice of modern readers. Perhaps the foremost of these is, the example of religious piety under difficulties, as an encouragement to those who may plead excuses for neglecting their duties that pertain to a future life. Her temptations in her case to stifle the voice of the inward monitor were uncommonly strong.

But her triumph in turning a course of thought contemptible by her associates into a source of admiration and power for herself, was complete.

She should withdraw from the allurements of pleasure, of fashion and the world's eye, and in humility yield to the yoke of Christ in itself doing much. But that she had turned instructor to the generations around her, and led them to respect what she had hitherto despised, that she should have them an interest in life's solemn restraints, both efficacious and abiding, is rather remarkable. Independently of the good influence exerted upon others, the history of her life makes us acquainted with most of the distinguished persons then living in England, and deceased authors who still lived in their own minds. The most eminent of those in active life were her associates, and we learn from her writings to form a correct estimate of their

character. She first came into public notoriety, by her dramatic productions; she was naturally a companion and guest of distinguished characters, among whom were Gibber, Johnson, Burke and Jemys. At that period, when the lesson of religious piety had changed the current of her life, we find her in converse with Newland, Wilberforce, Chalmers, Rowland Hill and others of the best of the English clergy. Her society was courted at the homes of high refinement.

While still in early life, she gradually drew from scenes of dissipation, retaining in her intimacies only those most congenial to her altered feelings. Though her dramatic efforts still acted at the theatres, she did not attend their exhibitions. She does not appear to have expressed regret that she had written them. Perhaps, as it seemed needless to the unregenerate populace should be better that it should be from her pen than from writings more common.

One of her last efforts in this line were the so-called "sacred dramas." In witness whereof, the attenders would have some Bibles at least brought to their notice. Her length withdrawn from associates of whom she was but devotee of pleasure, and front and commenced a series of sermons in which the corruptions of the age and the shallowness in religion on the part of late associates was thoroughly unfolded. It should be remembered that about the corruptions native to the English age, were fomented by the libertinism of the age, where people mocked at religion and trampled sacred things under foot. Such a state of popular sentiment that there were few, who in social converse dared manifest religious feelings. Cowper writing at

this time describes it by saying of George Whitfield,

"Whoever mentioned him at once dismissed all merriment from his lips and sneered and hissed."

Such was the formidable entrenchment of irreligion pervading all the upper classes in England, not excepting the clergy, when this intrepid woman turned her batteries upon it.

She wrote and published "Thoughts on the Manners of the Great." She did not put her name to this; modestly assuming it might do more good if people were left to imagine it was from the pen of some one of more force of character. The book at once fell into the hands it was designed for, and it was the general opinion that Hannah More only could have written it. It sold with great rapidity. A number of editions were soon disposed of. She had reason to expect approbation from former associates she so boldly reproved, but their general verdict was one of commendation.

This book was soon followed by another reaching more deeply into the springs of human conduct. It was entitled, "An Estimate of the Religion of the Fashionable World."

Her biographer says: "In this essay she inadvertently in bolder strain on the prevailing corruption, on the decay of domestic piety, and on the absence of religion from the education of the higher classes. Tracing the want of moral restraint to its true source,—the prevailing indifference to vital religion, she brought her charges so home to the experience and conviction of her readers, as to make many a Felix tremble, and touch the consciences of many who were sitting at their ease in self-righteous complacency."

"The Spectator" had the address, beyond all the works that went before it, to gain an audience for religion in the societies of the vain, the unthinking and the unstable; but then it was religion in a compromise form, modified at least if not unchristianized, to please the trifling and conciliate the unimproved. But the challenge of Hannah More, penetrated the proudest and gayest resorts, and surprised and shamed the votaries of fashion, in their full career, without giving to truth either drapery or disguise, to qualify or conceal its awful realities. Hers was the solitary case in the whole history of man and his anomalies, in which severe and sober truth was enabled to make its way through all the obstacles of habit, interest and prejudice, without art or strategies or machinery. She went forth with her sling and her pebbles from the pure brook and fought and triumphed. Her clear understanding had no other ally than the sanctity of her cause, and by her honest and vigorous efforts, the whole reading world and a large part of the idle world were constrained to listen and confess while she told them in fearless language the truth, the whole truth and nothing but the truth."

It appears that not only were these books read with interest but were the means of infusing a considerable leaven of religious vitality.

Now it is remarkable that such works should have met with such a reception. The human heart when led captive, into the labyrinth of sin and error, is little disposed to listen to words implying censure. And it is a question whether any other person in England

could have enunciated the same truths with like effect.

It appears from the correspondence between Hannah More and her friends that there was a marked increase in religious vitality among the upper classes during the latter years of her life.

As the higher classes had been thus aroused by her labors, some interested ones invoked her aid in regulating the conduct of the peasantry. There was great political unrest. With the example of the French revolution before them the rulers were alarmed lest these troubles should lead to insurrection in England. There was an anxious glance turned to Hannah More, in some way to pour oil on the troubled waters. She wrote some simple dialogues such as might take place between unlearned mechanics and laborers. Those interested in these publications scattered them broadcast over England. They were read with avidity by people of all classes, and the cause of law and order obtained the ascendancy. Thus it would seem that England was saved from rebellion by the pen of a woman.

The vast sale of her books brought her a liberal income. Besides what was needed to embellish a country home for herself and sisters, who were co-workers with her, there was a considerable amount for which she considered herself but the steward. Among her intimate friends were a number like-minded, who could help in contributions, and a system of schools for the poor was started. William Wilberforce was a strong co-adjutor in this work. She in turn aided him in his anti-slavery efforts. Her sisters, especially Martha, were also active in conducting these schools. They met with much opposition from the middle class in the neighborhood, who thought it their interest to keep the laborers in ignorance. The schools were attended with such success that in the thirty-five years during which Hannah More lived after they were started, quite a new aspect was placed upon the country for ten miles round Barley Wood.

In many cases religion was added to mental and moral improvement and from these degraded poor there were raised up those qualified to continue the good work.

While in the prime of life she withdrew from personal associations in London that she might enjoy the privacy of retirement. But correspondents sprung up in all parts of the world where her writings had gone, and many persons of almost all ranks sought her converse.

There were some who called from no better motive than curiosity. There were many who called to ask her counsel in the contest of life. And there were the many already endeared to her by their congenial minds and previous acquaintance. She was obliged, for the sake of endurance, to limit her calls to certain hours of the day or week, and at many repeated intervals she was laid up by sickness for months together. As these periods of bodily infirmity did not affect her mind she utilized them to write some new works.

The home at Barley Wood occupied by herself and four sisters, witnessed the happy deaths of those sisters in the order of their ages, at about the seventy-fifth year of each.

She was spared to the world which seemed to need her, and for whose welfare in tem-

porals and spirituals she was especially called and trained, some fifteen years longer. In the latter part of this period her mental perception of worldly affairs became somewhat clouded, but in spiritual things the mind was unimpaired. Her death-bed scene, which lasted about ten months, was one of serenity and peace and even of "triumph in Christ."

She died at Clifton in the eighty-ninth year of her age.

LLOYD BALDERSTON.

From "The Spectator."

A ROYAL HEART.

Ragged, uncomely, and old and grey,

A woman walked in a Northern town,
And through the crowd as she wound her way,

One saw her loiter and then stoop down,
Putting something away in her old torn gown.
"You are hiding a jewel!" the watcher said.
(Ah! that was her heart, had the truth been read!)

"What have you stolen?" he asked again.
Then the dim eyes filled with a sudden pain,
And under the flickering light of the gas

She showed him her gleaming, "Its broken glass."

She said: "I have lifted it up frae the street
To be oot o' the road o' the bairnies' feet!"

Under the fluttering rags astir

That was a royal heart that beat!

Would that the world had more like her!

Smoothing the road for its bairnies' feet!

WILL H. OGILVIE.

COMMUNION.—My child, it is not needful for thee to know much, or to do great things, it is only that thou lovest Me. Tell me thy heart as thou tellest thy mother, it shall be well.

Do not hesitate to ask Me for strength, for body, mind and mercies. I can give you all, things.

Hast thou no joy to make known to Me, why dost thou not let me share! Let me know thy happiness, tell me what has happened to console thee. Bring me all thy failures, I will shew thee the cause of them. Hast thou trouble? who has caused thee pain, tell me all then thou wilt forget, and then I will bless thee.

Tell me of the poor thou wouldst relieve, the sinner thou wouldst have converted, and those who are estranged from thee. Repeat to Me their names and after each name add what thou wouldst have me do for them. Ask much—ask much! because I love generous souls who forget themselves for others. Tell me simply how proud thou art, how sensitive, egotistical and mean and indolent. Poor child, do not blush, there are in heaven many saints who had thy faults, they prayed to Me, their many faults were corrected.

Poor child! Spin the flax of patience. Thou thinkest that answers come not. Yes! they come, sometimes thou knowest not how.

My child, go now, take up thy work; be silent, humble, submissive, kind, and come back to-morrow. I shall have more blessings prepared for thee.—From the Latin of the Middle Ages. Translated by a native of British India.

EVERY temptation that is resisted, every noble aspiration that is encouraged, every sinful thought that is repressed, every bitter word that is withheld, adds its little item to the impetus of that great movement which is bearing humanity toward a richer life.—*Anon.*

Institute for Colored Youth.

An Address to all who may be interested in the Institute for Colored Youth, and to Friends generally.

The Institute for Colored Youth has had more than sixty years of successful history. During nearly all that time it has maintained a School of academic grade for the training of teachers and since 1885 an industrial department with opportunities for education in nine grades has been successfully operated. The original impulse for the work came from a bequest in the will of Richard Humphreys. It is interesting to note that every recent advance in industrial training for the negro was anticipated in the broad provisions of this original trust. Colored youth were to be instructed "in school learning, in the various branches of the mechanic arts and trades and in agriculture in order to prepare, fit, and qualify them to act as teachers." It is estimated that for several years past more than five thousand children have been in daily attendance during the school year where graduates of the Institute have positions as teachers, so that the original design of the foundation has had large fulfillment.

Since 1885 efforts have been constant to secure as large a proportion of industrial training as possible for those who were preparing in the academic department for teaching. Such graduates as received this industrial training took more lucrative positions than the others, and several of them were instrumental in starting institutions or departments in these lines in the South. Our late highly esteemed principal, Fanny J. Coppin, was an ardent advocate of the extension of industrial training so as to be required of every aspirant to the teaching profession. Through her earnest efforts, opportunities in this direction were multiplied. By much sacrifice she established a home for students from a distance so as to secure better control of them and to give them some training in the essentials of home-making. The limitations of city life were felt in all these efforts, but the fruit of her faithfulness was very considerable and served in measure to educate the Board to take the step that is now before them.

In order to join her husband, Bishop Coppin, in a missionary effort in Africa, Fanny J. Coppin insisted upon resigning her position at the end of the school year 1902. After several months of careful study, of consultation with experts and of deliberation, the Board concluded that the time was ripe to extend the normal training work of the Institute to include all that is demanded by the highest type of a teacher for the colored race. This must embrace shops, an opportunity for agriculture, a suitable home environment, and instructors of a rare order. To make the work most effective a limited number of students only should be admitted and they should be those who have had good preliminary education and show some signs of the teaching gift. The present resources of the Institute are not equal to this expansion. They amount now to about one hundred and fifty thousand dollars, but these funds should be kept intact as an endowment. A farm at Cheyney Station has been purchased and active efforts are now in progress to be in readiness for students by the Ninth Month, 1903. A rich return for the funds invested

in this work during the past sixty years parent. It is most desirable that this should be increased in the future. The ing industrial work in the city as well normal training should be sustained and tutored. The case is too plain for argument and Friends now as ever will know the in the matter.

Fortunately the Board has secured the ablest colored men in the country for the normal department. Hubert Browne is a graduate of Princeton, and is at the University of Edinburgh and in Germany. For twelve years he taught successfully in Washington. For three years in charge of the summer school for teachers in Hampton, Virginia, and last year he reorganized the Industrial School for Colored Children in Baltimore. In common with Bookman Washington, who recommended him to the Board, he feels that the greatest need of his race is the properly trained teacher. He will call on members of the Corporation to present the opportunities now open for helping out the project at Cheyney.

As a matter of interest a copy of the issued sixty-six years ago is appended.

J. HENRY BARTLETT,
Secretary of the Board.

Board of Managers.—George Vaux, J. Henry Stokes, George Vaux, Jr., Edward M. Vaux, Francis B. Gummere, Walter P. Stokes, J. Smedley, George M. Warner, J. Henry Biddle, David H. Forsythe, Alfred C. Elkinton, G. Yarnall, Stanley R. Yarnall, Cora Shoemaker, James G. Biddle.

PHILADELPHIA, Fifth Month, 1903.

Esteemed Friends:—A number of friends whose attention has been directed to the neglected condition of the colored people and their descendants, and the propriety of taking some measures which under the blessing of Divine Providence might tend to promote their welfare and improvement, met in this city, and after a free interchange of sentiment arrived in the opinion that the period had come when it would be proper to make an effort for the attainment of this object. At a subsequent meeting held Fourth Month 19th 1903, they adopted the following preamble and constitution which will explain the measures which they propose to improve the situation of this destitute class of our fellowmen.

Should such funds for the purpose be procured it is designed to obtain a farm in the vicinity of this city where a portion of the funds shall be spent by the children under the supervision of suitable superintendents and teachers requiring school learning and a part also in agricultural and mechanical labor by which they may be trained to industry and obtain a knowledge of some useful trade or business.

Our valued friend, Richard Humphreys, of this city, bequeathed a sum of money to trustees with the benevolent intention of promoting the establishment of such an institution; and although it is inadequate for carrying out the plan he had suggested, yet we are assured that the benefit which it promises to confer on the African race will procure for the cordial and liberal support of Friends.

we consider the hardships and cruel-
ties which this people have been subjected
centuries, in which the whole country
ated; that many of them labored to
the comfort and interest of our ances-
held them in bondage, or made them
small compensation for their services;
and we are children of the same al-
Parent and alike the object of his
and care, the claim they have upon our
ties and aid, as a people torn from their
oil by their oppressors, is strong and
r. The present appears to be a favor-
opportunity for uniting the energies of
in the promotion and support of an
ing which holds out a rational and
ended prospect of essentially benefit-
ing population by educating men in
industry and economy, imbuing their
with sound principles and useful knowl-
and thus preparing them to be helpful to
er and to become useful and peaceful

a meeting above alluded to the follow-
nds were appointed a Board of Man-
agement (see request) to use exertion to
subscriptions in aid of this interesting

In pursuance of this object they
cit the co-operation of Friends in dif-
ferences in the country and respect-
uest thee to bring the subject before
ce of Friends of your Preparative
in order that such measures may be
will give to each of your members
unity of contributing to this benev-
olentaking.

FOR "THE FRIEND."

A PRIVATE COMMUNICATION.

"And he said privately, Blessed are the eyes which see
the things which ye see," etc. (Luke x: 23.)

Am I a babe beneath the Father's eye,
Has the recording angel marked my name?
Thy sov'ran choice has put on pavement pure
My feet, to stand and mark the mighty way
Of rising grace from life's eternal sea!

From eyes of kingly men thou didst withhold,
Denied the deep desires of holy seers,
Kept back the glow of life from reverend thought,
And poured before my humble gaze the store
Of deep dominion and of lofty praise!

Bereft of dismal shreds of pride of life,
I plead, why didst thou stamp me for thine own?
O secret most profound, no sequel yet,
And "Father, even so," my life-long song!

H. T. MILLER.

BEAMSVILLE, Ont.

Items Concerning the Society.

There is an indefinable quality arising out of
long dependence upon inward strength, and a freedom
from the priestly or professional elements in
religious life, which, if we may venture to say so,
has, among all its many weaknesses, given the
Quaker his full force.—*Present Day Papers.*

Being willing to lay all at his feet, we shall be
shown what the Lord would have us do. Surely
this is not will-worship, with which we are aban-
donantly supplied at this time. Will not the Guide
be forsaken when we go on of ourselves?—*Cor-
respondent.*

General Booth is reported to have once said of
us: "Ye were a spiritual people, ye are a natural
people."

Another fears that "instead of walking by faith
we have been walking by sight, just as any prudent
business man of the world would do in his
ordinary business." He once insisted that the Lord's
business is not like any other business. The busi-
ness methods of the world will merely build up
a worldly establishment without spiritual life and
power."

"Friends (Quakers): This sect, once so important
in Pennsylvania, where it was brought by William
Penn, seems to be going or to have gone out of
fashion or out of business. Their peculiar dress
and speech are rarely seen or heard nowadays. They
issue eight periodicals, of which four appear weekly,
but none gets credit for issuing so many as five
thousand copies." Thus speaks Geo. P. Rowell &
Co's pamphlet on "The Religious Press," considered
from the advertiser's standpoint.

While this is but a mild sample of what can be
read regularly in local papers in many parts of
our country, in news of meetings under our name,
we need at times to have such statements set be-
fore us as warnings of what an easy drifting on
our own part may lead us into:—

"A profitable [Quarterly] meeting was held on
Saturday, with H. T. Miller as leader, a business
meeting following. In the evening there was a
meeting, and after the business part was
dispensed with, a programme of music, reading
and recitations was given. On Sunday morning
Rev. R. R. gave a scholarly discourse and
was listened to by a large audience."

Notes from Others.

I believe that in the adoption of the philosophy
of the religion of Jesus Christ as a practical creed
for the conduct of business lies the easiest and
speediest solution of those industrial difficulties
which are exciting the minds of men to-day, and
leading many to think that the crisis of govern-
ment is at hand.—*Carroll D. Wright.*

The Christian thinks that the ministerial break-
downs are not the fault of Providence or the re-
sult of response to the true calls of duty, but
follow individual imprudence or over-zealous ac-
tivity, or personal disregard of duly consulting
God. It says: "The renewal of strength is prom-
ised in Isaiah xl: 31; and Caleb's testimony at
eighty-five was that he felt his powers as vigorous
as they had been at forty. The root of the matter
lies in the question, Upon whom does the ministry
rely and continually wait? If, like Isaiah and
Jeremiah, he goes only where God sends him, speak-
ing only when, and where, and what God commands
him, he may expect the continued supply of the
everlasting strength of God. Under these condi-
tions he will do God's work, and breakdowns will
become impossible." Whether one wholly endorses
this opinion or not, he should exercise great care
of his health, husband his strength as much as
possible, and show good judgment as to time,
place and extent of work, if he is to live long and
enjoy physical comfort and vigor in God's service.

The Christian World of London states that
trumpets and drums to supplement the organ are
creeping into the Church of England service. St.
Saviour's, Southwark, owns a pair of kettle drums,
and these, with trumpets and trombones are used
to emphasize passages in the chanted Psalms and
in the canticles and anthems.

The Russian peasantry openly maintains that
Father John of Kronstadt is the Christ, and the
good priest has been compelled to go among them
at Kostroma to put a stop to the growth of a sect
which was being founded to worship him. Portraits
of Father John are frequently used as icons and
are greatly venerated.

CHINESE CHRISTOPHOBIA.—The chief obstacle to
the spread of Christianity in China is due, I be-
lieve, not to any especial dislike of it as an im-
ported religion, but a fear and an objection to
certain foreign concomitants which, because of a
mistaken point of view, are regarded by mission-
aries as essentials. "Christophobia" is due not
only to Chinese hardness of heart, but also to the
methods by which the message of "Peace on earth
and good will to men" has been presented to them.

The missionary tells the Chinese that they need
the Gospel above and beyond anything else, but
he supplements this announcement with the idea
that a Chinaman cannot be a Christian unless his
Christianity finds expression in exactly the same
forms and observances that it would in the land
from which the missionary has emigrated. The
missionary does not stop with the statement that
the Chinaman is a non-believer in Christianity.
He goes a step farther and calls the Chinaman a
"heathen."

The conversion of a "heathen" to Christianity
means much more than it would in the case of an
American. A Chinaman must not only experience
a "change of heart," he must also undergo a com-
plete revolution of opinions and sentiments. He
can no longer venerate his ancestors and pray be-
fore their tablets that he may keep unsullied the
honored name they have left him. In other words,
in order to become a Christian according to mis-
sionary standards, a Chinaman must be denational-
ized. In sentiment he must become a foreigner.
And naturally enough his "heathen" countrymen
who still love their country and reverence their
ancestors do not like the denationalizing process.
—*Francis H. Nichols, in the Atlantic Monthly.*

Milford H. Lyon says in the *Advance*: "If the
authority and spirit of Jesus were as dominant as it
ought to be in every church, the factions and criti-
cisms and jealousies that are so often glaringly
evident would have to cease."

Joseph Parker used to say that "The house-top

has now superseded the hearthstone." Private life, he thought, had quite disappeared and life was now but a variety of "the open air treatment."

He also used to say that his library, or study, was in underground trains, on omnibuses, in tea-shops, at churches, stations, receptions, meetings, jubilees, and sick beds and many other places where his work called him.

That of "fire chaplain" is a newly created office in Brooklyn. The chaplains attend all second alarm fires, visit the different companies, and minister to sick and injured firemen.

SUMMARY OF EVENTS.

UNITED STATES.—A bill H. R. 15345 was passed by the House of Representatives at its former session to provide the efficiency of the militia, which it describes as consisting of every able-bodied male citizen within the ages of eighteen and forty-five years in the United States. During the present session of Congress this has been discussed in the Senate at different times. On the 14th inst, the following amendment was offered by Senator Beveridge, of Indiana:

"Provided, That nothing in this act shall be construed to require or compel any member of any religious organization whose creed forbids its members to participate in war in any form, and whose religious convictions are against war or participation therein, in accordance with the creed of said religious organization, to serve in the militia or any other armed or volunteer force under the jurisdiction and authority of the United States."

Several Senators favored the adoption of this amendment, among whom was Senator Hoar, of Massachusetts, who said: "It seems to me we ought to meet the important question of the right of conscience in the proper way, and in the way in which it has been met in the United States from the beginning of the Government of the United States, to wit: That persons belonging to religious bodies who have conscientious scruples against military service shall not be compelled to violate their religious faith. It seems to me the proper place for that, the righteous thing to do, is in the act of Congress, where we define the persons who shall be compelled by the United States to do that service."

This amendment was adopted, and the bill was passed. It afterwards passed the House of Representatives with the Senate amendments.

John Mitchell, president of the United Mine Workers of America and director of the recent strike in the anthracite regions, has issued a circular letter to the miners urging them to exert every means to increase the production of coal.

There are 373 collieries, including washeries, in the anthracite coal regions. These collieries and washeries are operated and controlled by 130 different companies and firms. Some of the larger coal companies buy the output of the smaller operators, but the larger proportion of the coal mined by the individual operators is sold through their own agencies. Many of the individual operators are disposed to sell their coal at the highest prices obtainable, and a wide difference in price is thus produced in different places.

President Baer, of the Reading Railway Co., recently stated that: "The companies I represent do not believe that it is just to the public to take advantage of the temporary scarcity of coal to increase the price. In general, it is true that the seller has a right to get the highest market price for his goods, but this rule ought to be modified as to food and fuel in times of great distress, when a decent respect for the necessities of mankind should restrain the seller from taking more than a normal, legitimate profit."

Among the serious results of the scarcity of coal is the crowding of the hospitals, which in this city are said to have more inmates than ever before, the recent cold weather having greatly increased the sufferings of the infirm and poor.

The duty on coal of 67 cents per ton has been repealed by an act of Congress, which was approved by the President on the 15th inst.

The anthracite commission, sitting in Philadelphia, has continued to hear testimony upon various points connected with the mining of coal.

A dispatch from Lockport, N. Y., of the 15th, says: Several prominent independent steel manufacturers of the country to-day witnessed a test of the new process of making steel direct from ore in an electric furnace. It is claimed that the process saves 33 per cent. in fuel and almost all in power.

"Dried potatoes" is the name of a new product which

is said to have been prepared by the South Carolina agricultural experiment station. The potatoes are boiled, peeled and evaporated in a cannery, and will remain in perfect condition for years. The preserved potato becomes fit for eating after being soaked in warm water for an hour.

It is stated that a stone slab in Henry Mar's farm, near Columbus, Ind., marks the centre of population in the United States, as fixed by the last census.

A dispatch from Boston, says: Representatives of the American Telephone Company have conducted successful experiments utilizing rails for wire, on the Dedham branch of the New York, New Haven and Hartford Railroad. Telephone lines are being laid in the station at Roslindale, Highland and Dedham and connected with the rails. No difficulty whatever was experienced in talking except when trolley cars crossed an overhead bridge.

A herd of 114,000 head of cattle, belonging to certain cattle owners in the Indian Territory, has lately been driven out of that country into Oklahoma, on account of the refusal of the owners to pay a tax of 25 cents per head to the Chickasaw tribe of Indians. Twenty-six members of the Indian Police Department were engaged in this work.

A dispatch from Austin, Texas, says: Several of the largest ranches in Texas, aggregating more than 3,000,000 acres and including one 1,000,000-acre ranch, are to be divided into small farming tracts and placed under irrigation. Four companies have been organized to lay out the sites on these ranches, build and operate extensive systems of irrigation and carry on the development work.

There are, in the United States, according to the last census, 126 women plumbers, 45 women plasterers, 167 women bricklayers and stonemasons, 241 women paper hangers, 1,759 women painters and glaziers and 545 women carpenters and joiners.

A dispatch from Albany, N. Y., says: In a report to the Legislature, Charles R. Skinner, State Superintendent of Public Instruction, says that, despite the ruling of his predecessors that the practice of reading the Bible in the public schools is a violation of the Constitution, he will not stop such reading providing there is no sectarian teaching accompanying it. He says that at present extracts from the Bible are read without comment in every public school in New York city, while in the rest of the State it is not generally done, and this fact led to the presentation of a discussion on the subject.

There were 498 deaths in this city last week, reported to the Board of Health. This is 44 less than the previous week and 81 more than the corresponding week of 1902. Of the foregoing 282 were males and 216 females; 48 died of consumption of the lungs; 99 of inflammation of the lungs and surrounding membranes; 5 of diphtheria; 19 of cancer; 24 of apoplexy; 19 of typhoid fever; 2 of scarlet fever; and 2 of small pox.

FOREIGN.—Minister Conger has informed the State Department at Washington that the Chinese Government has declared its inability to pay the indemnity under present conditions on a gold basis, and it has suggested that if the Powers insist on such payment China be permitted to collect the import duties in gold. This would mean a partial doubling of the import customs receipts. It was felt at Washington that the only logical solution of the problem is a submission of the matter to The Hague Tribunal, as has already been proposed by China.

A dispatch from London of the 14th says: The daily marches of London's vast army of unemployed is followed with a growing uneasiness among merchants and shopkeepers. Lately more than 2,000 unemployed men marched through the streets, and the custom of standing in front of the shops of shopkeepers, alarmed at the cries, put their shutters while the parade was passing.

Much suffering has lately been caused by the cold weather in England, and for the first time in many years the river Thames was frozen over.

Prof. Niels Finzen, of Copenhagen, announces that since his discovery of the light cure treatment of lupus, about 800 sufferers have been wholly or partly cured by that method.

At the present day, it is stated, there are 250,000,000 Mussulmans in the world. The Christian population is put at 447,000,000.

A dispatch from Berlin says: Dr. Schröder, at Hanover, has perfected an instrument that measures the time elapsing in the reaction of the sensorium after mental exertion. The principle upon which it is based is that the more the mind produces fatigue of the nerve centers.

The measurement of fatigue during class room work generally shows that history makes but a slight call on the mental powers. Geometry and Latin are far more exhausting. During the study of Latin the nerve-power is reduced one-quarter and the memory appears to suffer greatly.

Two new steamships for the Cunard Line have been

ordered to be ready for use in the Sixth Month. They are to cost about \$6,250,000 each.

The Marconi Wireless Telegraphy Co. of Canada has been organized at Montreal, which acquires all the territory of the Marconi Co. in Canada.

There is an earthquake about 100 miles from Mexico City, 13th instant, and in other places in the southern part of Mexico, causing considerable alarm.

A despatch from Stockholm of the 15th says: Pressing accounts of the famine in Northern Sweden of which have been prevalent for some time continue to come, and it now appears that the famine is as critical as that which confronts the people of Finland, about 70,000 persons are said to be dying of crops, and the starving people are eating grass which is dried, ground to powder, mixed with staid moss, and made into a kind of famine bread. The famine area extends from the sixty-first to the seventh degree north latitude and from the Gulf of Bothnia and the Russian border far into the interior.

It is estimated that the expenditure of about \$1,000 will be necessary to save the population from starvation. Thus far about \$200,000 has been sent, of which sum over \$12,500 was sent by Sweden to the United States.

Professor William Dunbar, of St. Paul, Minn., a member of the Hygienic Institute at Hamburg, announces that a toxine made of serum taken from a malarious patient is an effective cure for hay fever.

NOTICES.

NOTICE.—The sub-committee (Cain Quarter) of the Yearly Meeting's committee, have appointed a time for Divine worship to be held at the home of Wm. Gibbons in Coatesville, Pa., at 3 o'clock First-day, the 25th instant.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when ready stage fares are paid after 9 P. M. Write to the Westtown and reach the school by telegraph, wire, Westtown, Phone 114x.

EDWARD G. SMEDLEY,

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to the principal.

WM. F. WICKERSHAM, Principal.

Payments on accounts for board and tuition, and communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

FRIENDS' WESTERN DISTRICT DOBCAS SOCIETY.—At stated meeting of the Society held Twelfth Mo. 31st, 1902, it was decided to make a special appeal to each member and contributor, and Friends generally, for more aid to the poor women of the Society to aid them during this season of scarcity. The proper disposition of the fund thus obtained will be decided upon at the next meeting of members.

It is hoped that a generous response will be given, so as to relieve a great deal of suffering.

EMMA M. SHINN, President.

ALICE C. LETCHWORTH, Secretary.

MARY H. BIDDLE, Treas.,

1429 Arch St.

DIED, on the tenth of Ninth Month, 1902, in the fifth year of his age, at his residence near Jersey City, N. J., WILLIAM ROBINSON, a minister and elder of White Plains Monthly Meeting and Jericho Particular Meeting of the same denomination. Another standard bearer of the doctrine and principles of the Society of Friends had been called to his rest, and we can adopt the language, "Well done, thou faithful servant, enter thou into the joy of thy Lord."

On the twenty-fourth of Tenth Month, 1902, WILLIAM H. REID, in the sixty-second year of his age, a member of New Garden Monthly and West Grove Yearly Meetings. He was just and upright in all his dealings with his fellow men, loved mercy, and walked in the light. In his sudden removal we mourn the loss of a true husband, affectionate father and kind brother. Our loss is his everlasting gain.

He resided in Philadelphia, First Mo. 1903, RACHEL S. MARKS, widow of Edward Mark, in the seventy-first year of her age, a member of Monthly Meeting of Friends of Philadelphia.

Concealed Explosives.

"I don't know it was loaded," is said with the frequency of guns or pistols that "gone off" in thoughtless hands and many a precious life. A recent anecdote is opened up to our thought the accidental discharge of loads of other kinds. A man between a major and an admiral, delicate because the former, who had been heavily, got into a dispute with the admiral and struck him, is said to have been beside at the last moment by the wit of the seconds, whose plea was that the admiral had "gone off accidentally, not knowing he was loaded."

The moral world most of these "accidental explosions" but are normal unfoldings. It surprises it makes sometimes when a woman, after years of exemplary conduct, suddenly breaks out into an eruption of her passion. He who is thus overtaken as much surprised as his neighbors. I don't know he was so fully loaded with spirit. But he is the one who need not wonder, had he noticed how year after year a little and there a little, he had been adding just a grain at a time to a sure maturation of lust, or of greed, or of resentment. By and by the enlarging force is pressing a vent, when a mere spark or a weakness of control under increasing loose an outbreak of some sin, to the detriment of trusting friends, besides of those who have trusted in himself that he is righteous. Time after time he knew when loading himself, though he did not when he was loaded, nor how small a load had become enough for an explosion.

There is no grain of a personal fault too small to occasion alarm,—the more so for its smallness, if so it beguiles us of a sense

of the volume which is steadily at every little repetition accumulating. By one bad habit even of thought secretly indulged we may know that we are loading up with a vice, though ignorant that we are loaded till the day shall declare it. Lust when it is conceived in the heart "bringeth forth sin, and sin when it is full grown bringeth forth death."

So we can look upon sudden conversions, whether unto Satan or unto God, were their whole history known, as not always really sudden. They may be developments of a series of inward experiences maturing up to the fullness of time when the revealing touch or word shall disclose unto a man himself or his Saviour. The sudden conversion of the century plant into the glory of its blossoming is not the work of a day, but of years of secret gathering and growth. Yet whenever to a soul the opening word comes, let it not, because it is "sudden," be refused, on the plea that we did not know we were loaded or inwardly furnished. Ours is the duty to be growing in grace by obedience, but with Him is the knowledge of the time to put forth his own.

Sometimes there appear great emergencies, when we are surprised at ourselves. Some will regard us as having summoned to our help a store of reserved strength; or to ourselves it will seem a supernatural endowment of power. Some will say a latent wisdom and discernment sprang forth, to do the right thing at the right instant; but we will attribute the praise to the inspiration of a Divine wisdom and spirit. For to be quick of understanding in emergency, is learned in the fear of the Lord as one watches daily at wisdom's gates. His sheep learn to know his voice and to follow Him, and so the touch of the swift witness for truth to disclose a wisdom what to do, is no stranger, but an old acquaintance to that disciple of Christ who has walked unreservedly in the light, as He is the light.

The habit of minding the light is an accumulating of ready wisdom. Our Friend John Warren's friend, the sea captain who ordered all sails furled under a clear sky and a calm sea, did it none too soon to save the ship from a cyclone; and later, when ordered by the inward voice which from boyhood up he had learned to respect, he put about his ship at night and sailed in an opposite direction till

at day-break he found her among floating planks and timbers, and rescued from them fourteen men whom he took to Boston,—this man had a practical acquaintance with revelation which was not the product of an emergency or of a day, but of long obedience from youth up in little things to little monitions of the living Truth. And being found faithful in the littles, he was made trustee of much. So did his shipmate John Warren, as an able minister of the new covenant. Little do such humble servants to the word of grace know to what extent they are loaded, till occasion for its putting forth comes; and none are so quick as these to recognize that the miracle is not an outbreak by accident, but in demonstration of the Spirit and of Power. Happy for the man who did not know that he was loaded with sin, when, on coming to the startling discovery, a godly sorrow works in him repentance not to be repented of; and he is brought by the Spirit to behold the Lamb of God who taketh away the sin by the sacrifice of Himself; and he thenceforward follows Him who "was manifested to take away our sins," and who comes to destroy the works of the devil and "to bear witness for the truth," and guide us into it, and our feet in the way of peace.

Selected for "THE FRIEND."

Joseph Coale.

Joseph Coale, of Reading, in the county of Berks, England, a young man about nineteen years of age. . . . When the ministers of Christ Jesus our Lord came to Reading, he was one of the first that received their testimony, also one of the first in the county of Berks that suffered imprisonment on Truth's account. In the year 1655 he was committed to the counter in Reading, by Henry Freevin, justice, and afterwards to the jail, for declaring, in the public place of worship, that Cain's sacrifice was not accepted, but was an abomination to the Lord.

He preached the everlasting gospel and the day of God's visitation to the world and his ministry was effectual, not only for the conviction, but also for the establishment and confirmation of many, he being experienced in the work and dealings of the Lord God, and also of the wiles and baits of the enemy of the souls of mankind; a faithful witness-bearer to the truth, not in words only but in life and conversation also; walking in innocence and lowliness of mind, in which he was a good example and pattern, as became the gospel of Christ Jesus.

Being delivered out of prison, he was

moved, in the year 1656, to travel abroad in the west of England, to visit his friends and brethren who were prisoners for the truth in Launceston jail in Cornwall, when at that time our dear Friend, George Fox, was also a prisoner, with other Friends. In compassion to their sufferings he was conscientiously concerned to lay before Justice Anthony Nichols the cruelty of the jailer towards his friends, carrying also with him a letter from George Fox to the said justice; who, instead of relieving the oppressed, committed the said Joseph Coale to the rest of his friends at Launceston as a vagrant. He lay there many months, after he was fined at the assize, for the most part in a wretched place, called Doodsdale, where they used to put murderers, after they were condemned to die. It was so noisome that it was observed few who went in ever came out in health; and the jailer would not let Friends clean it, neither would he let them have beds or straw to lie on. Being released he went on farther westward to visit Friends, but was committed by Justice Ceely again to Launceston jail as a wanderer, where he lay three months. In the year 1657, he being with other Friends, met to worship God, near Penryn, in Cornwall. Captain Fox, with a troop of horse, came and abused Friends in a wicked manner, and Joseph was much beaten, and some of his blood shed, to the hazard of his life.

He was also afterwards, for declaring truth in the public place of worship at Exeter, fallen upon by the rude people, and haled by the hair of his head, and had to the town hall, and from thence to jail, a very filthy place, where they put a pair of double irons upon one of his legs, and ordered the jailer not to let him have any bed or straw to lie upon; but the next week he was set at liberty. . . . In 1661 he was again imprisoned at Exeter for not swearing; being taken from a peaceable meeting, and tendered the oath.

Many other times he hazarded his life for the testimony of the blessed Truth, in stocks, and stonings, and divers other hardships and difficulties.

He was once in Ireland with Edward Burrough, in the service of the goshel.

Last of all he was committed to the jail of Reading, on the thirteenth of the Fifth Month, 1664, by William Armourer, a justice of the peace, because for conscience' sake towards the Lord, he could not break his command, who had said, "Swear not at all." After six years being shut up in prison, and much deprived of common air to breathe in, he was greatly impaired in his health. In the time of his sickness, he gave forth many heavenly exhortations to Friends who came to visit him; and this was his faith, which, he declared on his dying bed, saying, that the light of that glorious everlasting day of the Lord, which is broken forth in this our day, shall never be extinguished, notwithstanding all that men can do; "And though," said he, it may be in the hearts of men to destroy and root out, if it were possible, the righteous from off the earth, yet the Lord doth not intend so, neither is it in his heart to suffer it so to be, but to exalt his own name and kingdom over all; and the wrath of man shall turn to the glory of God, and the rest he will restrain." Death was made easy to him; and

near his departure he bid one of his fellow-prisoners farewell, and resigned up to him that office of love and care which he exercised amongst his brethren and sisters, in bonds for the Truth's sake. Being filled with heavenly love and life and fully satisfied, he laid down his head in peace and a full assurance of everlasting rest and joy in the Lord. Aged about thirty-four years.

Being Charming.

"What is the secret of being charming?" a girl asked recently. It is not easy to define charm, nor is it easy to give directions for acquiring such a quality. It may be a gift, like beauty. It may be in a sunny temperament, a sweet and cheerful disposition. It is certain that it may be cultivated in true politeness, a wish to please, an absence of selfishness, a freedom from self-consciousness, an unwillingness to hurt another person by word or action. If you are in search of this quality of charm, you are already on the road toward finding it. At the start you must realize that it must not be sought for your own gratification or by way of winning power, or you will soon discover that it will prove elusive.

If you would be charming you must take the trouble to be thoughtful of others. You will be considerate of older persons, greet them as cordially as friends of your own ages take the time to talk to them, listen when they are talking. You will not be so absorbed in your own interests that you cannot enter into the interests of others. You will look people in the face when you are talking and give your attention to what they are saying. You will not interrupt others or contradict them or show impatience for your chance to talk, and will not try to monopolize the conversation. You will not be effusively gracious to someone because you wish to gain an invitation or something of that sort, while you are coldly indifferent to another who may not be of so much importance in the world or among your set of friends. Sincerity is one of the essential parts of charm. A lack of it is very quickly detected.

Perhaps I can show you how charm can be gained by pointing out other things to be avoided. You would not call a girl charming who is loud in talk, or aggressive in manner, who discusses people or private affairs in a loud voice in public, who pushes rudely past others, who seems to fancy that by asserting her own independence she is maintaining her rightful place in the world. Contrast with her the girl with gentle, sweet manners and voice, who talks quietly, who offers graceful little kindnesses, who sacrifices her own comfort and ease rather than inconvenience anyone.

A girl may not be a beauty, or a brilliant talker, or wonderfully clever, yet she may be so charming that it is a delight to be with her, and to count her among our friends. She is winsome, sweet-tempered, full of tactful, considerate ways, genuinely kind and sympathetic, and she has that wholesome sense of humor which helps to smooth away so many of the rough places of life.

One thing to avoid, if you would be charming, is the tendency to talk about grievances.

A girl who fancies herself a martyr and

who claims that no one understands her moods is not on the road toward the possession of charm. A girl who is morbidly centered, egotistical, cannot be charming; she needs to make every effort to overcome these characteristics, or she will become some to her friends and the prey of discontentment.

Try to live in the "sunshine of cheerfulness and the breeze of larger interests," and you would be charming. Say pleasant things. Praise others when you can do so with sincerity. Praise is an encouragement. Be courteous, really polite. When I tell you to cultivate charity I mean that kindly disposition which looks for and believes in the best in others, which is generous in pardoning mistakes, which defends the absent, and does not repeat idle gossip.

I will add a last word about the importance of being careful in speech, if you would have charm and refinement. Always think before you speak; thus only can you acquire the habit of speaking to the purpose. Good speakers are generally deliberate talkers. They use plain, simple words, and correct expressions, and endeavor to have a well-modulated voice in speaking. *Exchange.*

One Young Lady's Method.

"The most effectual temperance lecture ever heard in my life was preached to me on New Year's day," said a young man, recently, in our hearing.

"Why, Horace, where were you? and who delivered it?" we asked.

"I was visiting in Philadelphia, and my cousin, John Levins, set out to pass the number of New Year's calls. It is no custom now, as formerly, to set out with before guests, but it is still done sometimes. Our second call was at the princely home of Franklin Graves, of whom you have heard. His lovely daughter greeted us, smiling and beautiful, a very queen among women. She was also an elegant assortment of choice words, which the father pressed upon the guests. "Did you come to see papa or me?" was the question asked of each guest, and, as far as I know, there was but one answer, "I came to see you." "My guests touch no wine," she said. "I have other refreshments provided for them." The wine glasses sat untouched, the fair young girl fitted to be a queen among her guests, ministering herself to their needs. The father gracefully acquiesced, and finally had the wine glasses removed.

"Did you ever witness anything so effective as that?" said Cousin John, as we stood up the street together.

"Never," I answered. "No temperance lecture ever touched me like that speech, 'My guests touch no wine.' It helped me, it is the last time the glass will ever touch my lips."

I have since learned that more than one young man began reformation on New Year's Day, the result of that very call.

"My guests touch no wine." They were simple words, quietly spoken, but what did they not imply?

This Christian girl performed a service faithfully as though the kingdom of God depended upon her fidelity.

Perhaps it does!—*Christian Intelligence*

FOR "THE FRIEND."
Southern Colored Schools and Experience.

MT MEIGS VILLAGE SCHOOL AND MONTGOMERY STATE NORMAL.

(Concluded from page 220.)

From Cornelia Bowen's school we went in open buggies to the Mt. Meigs village school, Cornelia kindly accompanying us.

We reached the house shortly before the hour for the day session to close, and after a visit to the different rooms the scholars assembled in their largest room to have an opportunity of a religious character before separating. They had an enrollment of nearly two hundred, but not one-half that number were at school that day, the cotton picking interfering as at other places. Here our friend led us to the care of the five female teachers, of whom Georgia Washington, Hampton graduate, was the principal. Besides the commodious school house they have a home for themselves, in which they took satisfaction in making us welcome. As we sat with them at supper in their little dining room with two boys as waiters, we felt that we were surrounded with a genuine education, in the heart of a country where of other localities we had seen it was the need. We were glad to note that by aid of many Northern friends their financial needs were not so serious a problem as at the school visited.

The Northern remnants of dry goods were needed were skillfully worked into a variety of needle-work.

They had two very good mules contributed to the service by benevolent friends, which with a pace conveyed the women to the railway station one mile from the school.

We reached Montgomery about eight P. M., where we found comfortable quarters and had breakfast at the hotel, that we might reach the State normal school before their regular exercises were gone through with. On our way to the institution we passed the Capitol where Jefferson Davis was inaugurated President of the Confederate States. On arrival we were met by the female principal of the institution, Hattie Stratton, who was interested in a supposed relationship. Her branch of the family is repelled by herself almost entirely alone, and as recently happened, she is greatly interested in genealogy. Having, she believes, traced her family to Daniel Stratton, of Wales, said to have been a descendant of one William Stratton, of Stratford, England, born about

we were invited to attend their morning prayer, where a little time of silence was observed when the love of the gospel seemed to be in dominion, to the comfort of many gathered. It was an unusual company, many young people who were preparing to marry, and seemed in a degree to know the importance of their calling. It has been noted that the colored people of the South are more sensitive of religious feeling than our own, but in this case the white members of the assembly seemed deeply sensible of the merited goodness of our God.

The head of the school, William B. Patterson, was very kind to show us their work in

the various departments, and narrate something of his own history.

He came from his native Scotch home to the Northern States in 1867. In 1869 he went to Alabama, to a section where negro schools were greatly opposed by secret bands of the white population. After several school-houses had been burnt and the teachers' lives threatened, he completed his first term of school under a tree. One of his pupils in that school is still with him as foremost man teacher in the State normal, having nine hundred and sixty colored pupils under him. They have moved their school three times, each time at the urgent desire of their neighboring white settlers who would aid them by securing additional State appropriation if they would only move from them; the feeling is so strong against living near an educational centre for negroes. Now they have large State aid, and a good equipment for both academic and industrial work. He has found his greatest success in submission. In this attitude of mind he and his work have been most blessed.

The satisfactory meeting at this school proved to be the closing opportunity with the colored people in the South. We took train in the afternoon for Atlanta, where after a day's rest we felt at liberty to return home. At Cincinnati we found the remains of the great ice storm that had visited some of our northern sections while we were hearing the frogs chirp at Mt. Meigs, the mosquitoes buzz in Montgomery. The high waters were so impeding railway traffic, that we were determined to take a comfortable boat up the river for our nearest point home.

The packet line with an assurance not uncommon in such cases advertised the river trip as the most beautiful in the world. However that may be, we had some very fine views of high hills and fertile valleys, rugged rocks and beautiful cities.

It was indeed cause for thankfulness that we should be favored to return with the reward of peace to our families and friends, finding they had been favored with health during our absence.

RUSKIN once remarked that as a nation the British have despised literature: "What do we as a nation care about books?" he asks. "How much do you think we spend altogether on our libraries, public and private, as compared with what we spend on our horses? If a man spends lavishly on his library you call him mad—a bibliomaniac. But you never call anyone a horse maniac, though men ruin themselves every day by their horses, and you do not hear of people ruining themselves by their books. Or, to go lower still, how much do you think the contents of the bookshelves of the United Kingdom would fetch, as compared with the contents of its wine cellars? What position would its expenditure on literature take as compared with its expenditure on luxurious eating? We talk of food for the mind, as of food for the body; now a good book contains such food inexhaustibly; it is a provision for life, and for the best part of us; yet how long most people would look at the best book before they would give the price of a large turbot for it!"

"EXTRACTION is the best remedy for sin and weeds."

Glimpses of Early Church History.

Condensed from Charles Tylor's "Pictures from Early Church History."

Few who have read the Book of Acts but have wished it had been longer. To pass from the New Testament to the scanty remains and traditions of the succeeding ages is like passing from light to darkness. We have in the writer of the Acts a safe, wise guide for the thirty years which followed our Lord's ascension. Although he does not tell us half of what we might like to know, he leads us through a region glowing in the light of truth. But, for the next fifty or sixty years, we have to grope our way through a tangled wilderness, only here and there illumined by a gleam of twilight.

The apostles, as Mark tell us, went forth and preached everywhere. Neither they nor their successors had much time for writing. They saw around them a world lying in wickedness, and they had before them a mighty work—to gather and build up the Church of Christ, in preparation for the Day of his coming which they believed to be nigh at hand. They were but a handful of men, a little army, but never in the history of the world was army sent forth to make so vast a conquest or to encounter so terrible a foe.

Very little regarding the heralds of the gospel can be added to the Book of Acts. But though it is so little it helps to carry on the story of the Church to future days, when men had more leisure for writing. Paul, after his imprisonment at Rome, seems to have travelled again in Judea, Asia Minor, and Greece. And possibly, to have visited Spain, as we know from the Epistle to the Romans he intended to do.

It is believed that he came a second time to Rome, where he met Peter, and that they both suffered martyrdom in the persecution under Nero.

We read in Galatians, "There is neither Jew nor Gentile; there is neither bond nor free; for ye are all one in Christ Jesus." Thousands upon thousands of heathen people, ploughmen, vine-dressers, and shepherds, swarthy sailors of Alexandria and Sidon, fierce soldiers and centurions of the Roman army (which was gathered from all nations), artisans and merchants, lawyers and philosophers, slaves and freedmen, and even members of the imperial household, were, through the preaching of the apostles and their successors, turned from darkness to light and from the power of Satan to God.

Now, too, "the fulness of the time" was come; the whole civilized world was united under one Sovereign, and the Roman roads, straight as an arrow, well paved, had made intercourse easy and rapid. Preachers on their way to the unconverted "regions beyond," bishops on their rounds, messengers with tidings or epistles passed from city to city, and wherever they came met with a brotherly welcome; whilst such as were unknown beyond their own church were furnished with "letters of commendation." "Tickets of hospitality," as they have been called. On the arrival of the visitor, the faithful were called together, and listened while he recounted the sufferings of the confessors, the dying words of some venerated teacher, or the rise and spread of some

strange doctrine—(so frequent in the East.) When the visitor had told his errand and partaken with the brethren of the simple meal, in the name of the Lord, and they had prayed with him and replenished his scrip and purse, they kissed him and he departed.

The disciples met for worship in private houses or hired rooms. They had no temple, or consecrated building, no altar, sacrifice or priest, no ritual, and no instrumental music.

Now at length the golden visions of ancient prophecy were fulfilled. The partition wall which for two thousand years had separated Jew from Gentile, was broken down; both were seen to enter at the same door, embrace one another with a brotherly kiss, recline around the same table, break bread, and dip together in the same dish. Now woman was restored to her rightful rank and honor; and the slave found a place of refuge and was welcomed as a brother, in the Lord.

We know from the Epistles and the Revelations that the church, even from the beginning, was troubled by false doctrine and false brethren. As time went on these troubles multiplied. The party spirit which divided the Corinthian believers in the time of the Apostle Paul broke out with still greater violence in the next century.

Yet for all this it may safely be said that at the close of the first century the Church was in a condition of spiritual health and vigor, such as has seldom, if ever been known, abounding in love and separate from the spirit of the world.

"The Christians," says an ancient writer, "are not separated from men by earthly abode, language or custom, but whilst they conform to the usages of the country in things pertaining to the outward life, they show a peculiarity of conduct wondrous to all." "They inhabit their native country, but are strangers. They take their share of all burdens as citizens and yet endure all kinds of wrong as though they were foreigners. They are in the flesh, but they live not after the flesh. They dwell on earth but their citizenship is in heaven. They love all, yet are persecuted by all. They are reviled and they bless. What the soul is to the body, that Christians are to the world. The soul dwells in the body and yet is not of the body; and Christians dwell in the world and yet are not of the world."

Our Saviour told his disciples, "It is impossible but that occasions of stumbling should come;" and, as we know, many did come. Yet there were in these times of persecutions and sufferings, when there were troubles within and without, men, who steadfast to the faith, stood as watchmen and standard-bearers. Such are known as the Fathers. Resisting the errors shown to them, striving with eloquent tongues and by their writings, to uphold the truth—they lived self-denying lives, and not a few sealed their testimony by cruel deaths.

Of these Polycarp's long life sketches, as a connecting link, from the apostolic age to near the end of the second century. One of his disciples was Irenæus, bishop of Lyons, a native of Asia Minor. In a letter written in his old age, recalling his boyhood, (of which he tells us he had a much more vivid recollection than of later events), Irenæus thus describes his revered teacher: "I could point

out the very place where Polycarp was accustomed to sit and discourse—his gait, his form, his manner of life, his conversations, and what he was accustomed to relate of his familiar intercourse with John and others who had seen the Lord; how he used to repeat their discourses, and speak of the miracles of Christ and of his doctrine, agreeably to the Holy Scriptures. To those things, by the mercy of God I listened attentively, noting them down not on paper, but in my heart, and by the grace of God I habitually call them to mind."

When of great age Polycarp suffered martyrdom at Smyrna. A persecution had arisen in the city in which a number of Christians, being thrown to the wild beasts, confronted them with admirable courage.

The devotion of the confessors only increased the appetite of the heathen citizens for fresh victims, and they cried out, "Perish all atheists! Let Polycarp be sought for." Summoned before the proconsul, "swear," he was urged, "revile Christ, and I will set thee at liberty." The reply was "Eighty-six years have I served Him, and He never did me any wrong; how then can I now blaspheme my King and my Saviour?" The proconsul said, "I have wild beasts at hand; to them I will cast thee, except thou repent."

"Send for them," answered Polycarp; "to repent from things better to things worse is impossible."

Then the sentence was given, "Seeing thou despisest wild beasts, I will have thee consumed by fire." And so having "witnessed a good confession," his earthly life was destroyed.

The records of the early Church bear the names of Ignatius, Justin Martyr, Cyrian. Of this last we are told, that he was a native of Carthage and did not become a Christian until he had reached middle life. He writes to a friend that in his younger days, even though living in affluence, he was in the gloom of night, a wretched wanderer, unable to believe how anyone in his state could be born again, could put off what he had been all his life, and be changed, heart and soul. "But when," he says, "by the help of the water of the new birth the old stains were washed away, and a light from above shone into my heart, then doubtful things began to be certain, and hidden things clear, and what before had seemed hard, and even impossible, now became practicable. He adds this good piece of counsel, "Let godly fear be the keeper of innocence, that the Lord may dwell in us as in the guest chamber of a grateful heart, and that the assurance we have gained may not beget carelessness, and so the old enemy creep in upon us again." When Cyrian renounced paganism he sold his villa and garden and gave the money to the poor. He was soon made deacon and presbyter, and in the year 248 was elected bishop of Carthage. In the following year Decius was made emperor, and his reign is memorable for a more general and determined attempt than had yet been made, utterly to destroy and root out Christianity. Forty years of ease had put the Church off the watch. The line of separation from the world had gradually lost its sharpness, and many who professed Christ had so far forgotten their vows as to frequent the public shows, the theatre and the circus. The giving up of

these things had been the very badge of piety, a token which every heathen could understand, and to return to them seemed less than a denial of Christ. Dress another powerful temptation. It was the midday of Roman display and luxury, not a few Christian women vied with heathen acquaintances in the adoption of absurd fashions and the use of costly garments. From this condition of ease and false security the Church was suddenly roused by the onset of persecution. Beginning at Rome the Christians in every city and village were required to present themselves on a certain day at the market place, deny Christ, and offer sacrifice to the gods. Very many yielded. Some sought to quiet their consciences by bribing the officers, or presenting forged certificates of having complied with the decree. Happily, however, many brave and faithful witnesses were to be found, who endured the rack, dungeon, hunger and thirst and even death itself, rather than deny Christ.

Cyrian writes of the Church at Carthage: "The Lord would prove his people; and because the Divine rule of life had been broken during the long season of quiet, a judgment was sent to revive our tottering, I might almost say, slumbering faith. Forgetting our believers had lived in the time of the apostles they had set their hearts on growing rich, they had maligned and quarreled, and hated one another."

As the storm of persecution continued, Cyrian was first banished, and afterwards beheaded. At the place of execution he knelt down and prayed, then taking off his tunic and binding his eyes with his own hand he stood in his linen vest, awaiting the sword of the executioner, to whom he desired that as many pieces of gold should be given.

Chrysostom, so called from his eloquence (the "golden-mouthed"), wrote, "That the Providence ordained that the Scriptures should be written by publicans, fishermen, tent makers, shepherds, goatherds, in order that the things written should be understood by the workmen, the poor widow and the slave."

When Paul, in his second letter to Timothy, said, "From a child thou hast known the Holy Scriptures," we understand that he spoke of the Old Testament only; no part of the New Testament had then been written. The gospels, one after another, as they appeared, were thankfully received, read in the churches, and copies made of them for private use. In course of time they were joined together in one roll or book. To these were gradually added the Acts and Paul's epistles; and later, the rest of the Epistles and the Revelation. But, many years elapsed before the New Testament was completed. The gospels were almost immediately translated into Latin.

Some of the brightest ornaments of the early Church came from the African continent, from Egypt and Carthage. Tertullian was one of these. Son of a centurion of Carthage, he was trained for an orator. He was converted to Christianity in middle life. Of warm and deep feelings, he possessed a rich store of knowledge. His death took place about A. D. 220.

Clement of Alexandria lived about the same time. His writings are much valued. He

advice to those who undertake the office of a Christian teacher: "Every one ought to seek whether he has taken to teaching or from rivalry or vain-glory; or for the only reward he proposes to himself the salvation of those who hear him." "The rich he says, 'The saying, 'I possess, should I not enjoy?' is not becoming to him who possesses, or to the commandment. More worthy it is to say, 'I possess, why then should I not give to those who need?' This is the true luxury, the real wealth."

Origen Tertullian and Clement were both able writers and shining exemplars of Christian life, their minds were widely read. Clement was an ardent admirer of Greek philosophy, which he regarded as the method, and a preparation for the gospel. Origen, on the contrary, sought to clear ground of paganism in all its forms and varieties, believing that the gospel would be freer and more prosperous course if applied to itself. Thus far the witnesses of the gospel of whom we have spoken, were children of heathen parents. The father of Origen, Leonides, was a Christian. He was of Alexandria, Egypt. The child gave proof of superior genius. Required to learn a portion of Scripture, he was assisted with knowing the words, but he sought to understand the meaning, and asked questions which were difficult to answer. During the persecution under Septimius Severus, the father was thrown into prison. Origen, who was then seventeen, went to go and be a prisoner with him, but he prevented him by hiding his clothes. He wrote to his father exhorting him to remain in the faith, and to take no care of himself. Leonides was beheaded and his property confiscated. The persecution being over, Origen visited the confessors in the dungeons, and went with them to the place supporting them in the presence of the people, the power of his faith and sympathy. He exposed him to imminent danger of being killed. But only eighteen he appointed him teacher of the church school. As there was no salary Origen sold his library of classical books, which he had bought or copied out, for a pension of six hundred sesterces, on which pittance he lived many years. He panted after holiness of life, but he sought the simple gospel method, he strove to attain it by bodily mortification. Allowing himself no garment, which was too thin to protect him from the cold, he walked barefooted often, and slept on the bare floor. Each of his time was given to the Old Testament. The Greek translation made in Egypt, known as the Septuagint, was commonly used in the churches, and was looked upon by Christians as inspired. But in this version there are many faults, and many variations from the Hebrew. The better to teach the Truth, Origen set himself to Hebrew, at that time little known by any of the Jews, and to examine and collate the Greek and Hebrew manuscripts.

When he had done this, he divided his lives of papyrus or vellum into six columns. Down the first column was written the original Hebrew in Hebrew characters; the second contained the Hebrew in Greek

letters; the third the Septuagint version; fourth, fifth and sixth, were three other translations in Greek made before his time by Christian scholars. The work was called the Hexapla (the Sixfold). Origen's industry was very great. "The collation of manuscripts," he says, "leaves me no time to eat. Even the night is not allowed me for rest, as a great part of it is consumed in study."

Many more examples of the faith of the Fathers might be given, but as we are told in the Epistle to the Hebrews, "the time would fail me" to tell of those who "through faith subdued kingdoms, wrought righteousness obtained promises, stopped the mouths of lions, quenched the power of fire, escaped the edge of the sword, from weakness were made strong."

Heartening Counsel, Thanksgiving and Exhortation of Friends—With Biographical Notes.

(Concluded from page 211.)

And when I read of the crucifixion of our blessed Lord and Saviour Jesus Christ, it would break my soul into tenderness. I thought it was enough to awaken and humble any soul that was well meaning, and had any sense of the power, love and grace of Christ. Thus I went on for several years, feeling that peace which passeth natural understanding, which many times accompanied my poor and needy soul; and being advanced to about fourteen or fifteen years of age, I remember that I used to shun the cross of speaking in the plain language, which I always read in the Holy Scriptures, to those whom I conversed with, except my father and mother, who would not allow me to speak otherwise. I was convicted in my conscience that it was not right to play the hypocrite after that manner; and on a certain time I had occasion to speak with an officer, a great man in our neighborhood, and my heart moved within me for fear I should shun the cross of Christ; for it was Christ's language to all, as we may read in the New Testament, and all the Scriptures, from Genesis to the Revelations, speak "thee" and "thou" to a single person. So I took up the cross, and said "thee" to him, and he was much affronted, and said, "Thee! What dost thou say me for?" I soberly asked him if he did not say "thee" to his Maker in his prayers? and whether he was too good, or too great, to be spoken to in the same language in which he addressed the Almighty? To this he made no reply, but seemed to fall from his passion into admiration, as one smitten in himself. He bore me respect ever after, and I greatly rejoiced that I was preserved faithful. Though it may look a little thing to some, yet I found it good, as the Scripture saith, not to despise the day of small things.—Thomas Chalkley (1675-1742).

The scruple of THOMAS CHALKLEY as a small lad in his native city of London, in the matter of simplicity of language, I fear would not now be deemed of much worth by many members of our religious Society, who appear to believe it one of the minor testimonies, hardly worth while to be upheld. With the arrival of the Century Testament, which displaces the thee and thou of the gospel narrative by the plural pronoun, the convictions of some who may not be prepared to yield to

the popular speech in this particular, may bring them into the like straits with some of their predecessors. When but twenty years of age, Thomas was taken by a press gang and carried on board a man-of-war, but his wise and staunch words against carnal fighting were recognized by the officers, who gave him his liberty. At the age of twenty-two we find this youthful valiant in the Lord's army, on a religious visit to Friends in America, and a little later he removed thither, fixing his residence at Philadelphia. As master of a vessel, he went many times to the West Indies, generally to the island of Barbadoes, sometimes returning with a cargo of sugar, at other times going over the ocean to London. Several excellent essays were prepared while at sea, and were widely read. Long travels between voyages in the love of the gospel were taken to various parts of Europe as well as in the American provinces. Many tribulations were his lot, as may be inferred by the fact that he makes record in his journal of the death of all his children, of whom he had twelve, except one daughter, Rebecca, yet he remained bright, loving and ever praising God through all. His death occurred on the island of Tortola (near the Danish possessions in the West Indies), where he had been holding meetings with Friends and visiting their families. "Chalkley Hall," in the Frankford suburb of Philadelphia, is yet standing. In his verses, so named, Whittier thus testifies his early appreciation of the Journal of its owner, whose occupancy of the place, however, witnessed many long interruptions:

"O far away beneath New England's sky,

Even when a boy,

Following my plough by Merrimack's green shore,

His simple record I have pondered o'er

With deep and quiet joy."

J. W. L.

FOR "THE FRIEND."

Mind Your Calling, Brethren.

The Master bids us mind our calling in the language, "Follow thou me."

In order thus to obey the Saviour's injunction, the heart must be open to receive Him in order that we may know Him before we can follow the Good Shepherd.

There must be that begotten in us that is of Himself, that understands, knows, and is able to follow as the intimations of the Holy One are unfolded unto us.

The gentle voice of the pure and Gentle One is whispered in the soul that is weaned from the tumult of the many voices. That has learnt in some measure to cease from the strivings of the working-nature in man that cannot rest.

To mind our calling is to follow the Lamb whither soever He goeth. But that mind, in measure, must be in us which was in Him before we can thus embrace by a ready obedience the mind of our Saviour, whose meat and whose drink it was to do the Father's will.

As we are made partakers together of the one Spirit, we become baptized into a like mind and will not to live for self-pleasing, but God-serving. There is a higher and nobler plain upon which we may be raised by ceasing from the desire to be something, in order to know the virtue that flows from a sense of our

own nothingness by our becoming enamored with the fullness that is of God.

To part with all is to be made possessor of all, and to enter into that glory that is of God in Christ Jesus. The perfect man revealing the fulness of God in knowing no will but his.

How high that calling by which we are stripped of all self-dependence, and to be stripped of self-dependence is to know perfect security and rest in God.

Do we really realize our calling—to be made partakers of his Divine nature, through whom alone we can escape the corruption that is in the world through lust after other things than those that be of God. How many are the devices and twistings of that nature that is out of harmony with God, that Christ alone can redeem from.

The adversary of our soul is likened unto a crooked serpent, and until that is uprooted in us that springs therefrom, Christ cannot become formed in us, and hence that likeness which is of God cannot shine through us, to the Glory of God the Father. Our works all are tainted so long as we remain in the border land. Hence we must know a dying daily to that which is not of God by the resurrection life of Christ who is the image of the invisible God.

Mind your calling brethren, the call to be saints, not sinners, for the blood of Christ cleanses from all sin, and the blood is the life, so that without the life or spirit of Christ abiding in us we cannot know cleansing from sin, as his power alone can keep from sin, and bring into and keep in that condition that sinneth not.

There is a condition of union a communion with God the Father through the indwelling of Christ's Spirit in us. It is as the relation of branch to the vine, which betokens a continual drawing of sap from the parent stock, and also the putting forth of the natural shoots of growth, and the evidence of life brings forth fruit in its season ripening under the moisture and sunshine of heaven as these fall upon it; the vine and the branches alike showing forth the praise of the Great and Good Husbandman.

Are we such to the praise and glory of God? for there are signs of age upon many of us that show we have passed through many a wintry blast, but have these passed over us and left us more firmly rooted, settled and sealed in the Master's hand, for his use and service; or are we but lukewarm followers and half-hearted disciples much more than was the case with us in early life?

These are enquiries that press for an answer, if there is with us evidence of slackness in our love and allegiance to Him whose mercy took stronger hold upon us in early youth, and whose tender mercies have followed in our mature years, and now in our declining days there are not wanting the sensible care and guardianship of a gracious God and Father.

There is such a thing as living wholly on mercy, and in bringing no fruit to perfection, passing over the same ground again and in having to make the same acknowledgment time out of number. Is this the true and rightful condition of Sonship of the Lord God Almighty, to evidence so little of the sweetness of his grace in life and in service. For his servants do serve Him and not themselves, here on earth as well as in heaven above.

The shackles of mortality will soon fall from us. We are evidencing our being clothed upon with our heavenly habitation by the clothing and covering of one mind being more and more in unison with our Divine Master, and as such it will be our meat and our drink as it was his, to do the will of God our Father, through Christ Jesus.

The youth among whom we move will be exemplified by us to seek the heavenly country, and those of riper years to follow us as we are following Christ.

There is still the need for fruitfulness in the field of offering, and as this is known, there will be joyousness in the house of prayer.

O ye servants of the Lord, quit you like men, be strong in Him! Manifest your clothing to be the whole armor of God. Thus fighting the good fight of faith and adorning the doctrine of God our Saviour, we shall be prepared by grace to welcome the summons home to perfect rest in that more perfect service in his own realms of bliss, the happy consummation of our truly mindful our calling in and from Him, whom we rightfully call our Lord and Master.

Truly with such, what will the harvest be in that perfect ingathering of all to God?

Be encouraged, then, ye aged pilgrims, to hold on your way, neither faint nor grow weary in well doing even though sin doth abound around, proving the power of grace to give the victory over all, and thus bring honor and glory to Him who hath called you and who will assuredly perfect his own work in you, as faith and faithfulness is abode in.

Thus as the shadow of eventide doth gather round, let the sun of your life go down in the horizon of his love, who hath loved you and gathered you for purposes of his own glory. Even so saith my soul, in the like hope that is of Him,

Your friend in Christ,

CHARLES W. THOMSON.

Science and Industry.

HABITS OF THE STURGEON.—The big sturgeon which died at the aquarium recently was not the only specimen there on exhibition. There are two or three more swimming about in the tanks, says the *New York Tribune*. The sturgeon is an interesting fish. It has, for instance, a telescopic mouth. Its mouth has not the usual bony jaw opening like that of most fish. It is on the under side of its head, like that of a shark, and is more like a hole than anything else. In front of it, hanging down like a thin beard, are a number of sensitive tentacles.

Whenever the sturgeon in his search for food skims the surface of the bottom these tentacles sweep the ground. If they chance to pass over the end of the siphon of a soft-shelled clam, the information is immediately telegraphed to the brain, and the telescopic mouth unfolds into a tube over the neck of the clam. Its gills begin to work with the speed of bellows when a fire is being stirred up. The sand blows out of them on either side in a little cloud. In a few seconds the sand around the clam has been sucked through the gills and the clam is lifted into the mouth of the sturgeon. Once inside the vestibule of

the sturgeon's mouth, the shell is crushed, the pieces, the gills again working like a bellows. The clam, it is needless to say, does not follow the fragments of the shell.

Sometimes the sturgeon with his sharp nose will cultivate the sandy bottom in a manner of the husbandman. Gatherment, he forces his snout into the mud and ploughs a furrow from six to eight feet deep and from fifty to sixty feet long. The current clears away the debris thus turned up, and returning along the furrow he takes his harvest of mollusks and crustaceans. The number of sturgeon is rapidly growing, owing to the love of mankind for caviar and smoked sturgeon. Caviar is made from the roe of the female. This not only reduces the number of adult sturgeons, but cuts off the possibility of an increase of the supply. It is said that "smoked sturgeon" is better than the West Indian catfish. In some countries there are laws against the promiscuous catching of sturgeon.

NEW PENNSYLVANIA TOPOGRAPHIC SURVEY.—The United States Geological Survey has recently issued a number of topographic sheets of portions of Pennsylvania heretofore unmapped by the Survey. Three of these sheets, known as the Wernersville, Berks, and Slatington, cover the regions in the neighborhood of Reading, and include parts of Lehigh, Montgomery and Schuylkill counties, lying to the southeast of the Schuylkill and Lehigh river confluence. A fourth map, the Chambersburg, shows the country surrounding the city of Chambersburg, Greencastle and Waynesburg, in the southern part of the State. These are the result of the co-operative survey between the Federal Bureau and the State of Pennsylvania. They are on a scale of approximately one inch to the mile, and exhibit unusual accuracy and wealth of detail. The features of the regions represented.

One of their most interesting and valuable features is the admirable manner in which the marked inequalities of the country are shown. This is accomplished by means of contour lines running through points of equal elevation, at intervals of twenty feet. Fully are the surveys made that it is easy to distinguish the slopes, grades and shapes of the hills and valleys, and even of the ravines etched by the streams on the mountain sides. The work is carried to a degree of refinement that the location of individual houses in the country districts is shown. On the Slatington sheet the slate, iron and cement industries of the Slatington are indicated.

VALUES DUE TO IRRIGATION.—The statement is made in the current report of the Division of Hydrography of the United States Geological Survey, now in preparation that:

"The open range of the arid regions is generally stated to be capable of supporting one cow to every twenty acres. The same land when watered and put in alfalfa will feed ten cows to every twenty acres. Pasture lands at favorable altitudes will support a family of three, or even five, persons. The open range may have a value of fifty cents an acre, while under irrigation the selling

up to fifty dollars an acre, and if in some cases to five hundred dollars an acre. Thus the values of the lands are directly reversed, the irrigated lands having the greatest extent of least value and the irrigated land the least extent and the greatest value."

The progress of the West is so dependent on the prompt and the intelligent use of its water that the Geological Survey, in its study of the water resources of the country, has made a special effort to collect full information regarding the character and regimen of the important streams and other sources of water supply of that section. The investigation includes systematic measurements of flow, the survey of reservoir sites, the study of the conservation, and the consideration of the use of water on important watersheds.

NEL WAY OF HARVESTING PECAN NUTS.

Surprising Texas girl has solved the problem of harvesting the pecan nuts that grow on the topmost branches of the tall trees. These nuts are usually the very best of the crop, and are often one hundred and fifty feet from the ground, so it has been customary in the past to leave about twenty feet worth of nuts on the tree, because the most daring climber fails to reach them. She leased a number of pecan groves and determined to harvest the crop herself. She studied aeronautics and employed an expert mechanic to make an airship in accordance with a design that she had drawn. The balloon was finished the girl stepped into the basket, and soon was up to the level of the topmost branches of one of the trees. She had with her a long thrashing pole, and in the course of a few minutes the ground beneath was covered with pecans. Then she climbed the tree to tree with the same result. She said that the energetic young woman will bring a big sum out of her groves this year.

50,000 A YEAR FOR LISTENING.—Every day a telephone operator works, at three o'clock before twelve o'clock there is only one man in the whole country, from San Francisco to New York, that is privileged to listen. That man is the operator at New York. In those three minutes every man and all operators wait for three minutes, ticking which tells them the correct time. From that ticking every telephone company's clock is set. There are at least 20,000 operators at work. Taking three minutes every one of them equals 60,000 minutes every day. It would take one man less than a few minutes. At the rate of \$50 a day working for the required number of men this man would receive \$75,000, and that the companies pay a year to their customers for listening.

TO MEASURE COAL IN A BIN OR BOX.—A cubic foot of anthracite coal weighs 15 pounds. When broken for use it weighs about 54 pounds. Bituminous coal, broken up for use, weighs about fifty pounds. The consequent rule for the approximate measurement of coal in a bin or box is to multiply the length in feet by the height and again by the breadth in feet, and divide by 54 for anthracite coal, or by

50 for bituminous coal. The result will equal the number of pounds; and to find the number of tons, divide by 2,000, or to reckon "long tons," divide by 2,240.

Huber, the great naturalist tells us that if a single wasp discovers a deposit of honey or other food, he will return to his nest and impart the good news to his companions, who will rally forth in great numbers to partake of the fare which has been discovered for them. Shall we who have found honey in the rock Jesus Christ, be less considerate of our fellow-men than wasps are of their fellow insects?

The U. S. Geological Survey also announces its completion of maps of mountainous North Carolina, and of the Geologic history of Chicago and vicinity, said to be one of the most satisfactory of the series thus far issued. The price of the Chicago folios is fifty cents, and of the other charts usually five cents.

Letter from Anastasia V. Verigin to Eliza H. Varney.

VILLAGE PROTSEVSHY, December 1, 1902.

Heartily Respected and dear-to-our-soul Sister in Christ, Mrs. Varney.

Not long ago I received a letter with your hearty love and good wishes, and the desire that the Lord would grant a safe arrival of my sincerely beloved son Peter Vasilievitch; for all of which I send you sincere thanks. May the Lord save and show mercy to you in this life as also in the eternal kingdom!

With sincere delight I send you the news, sister, and also to all your acquaintances, that I, in the last days of my life, have received relief; the Lord of grace sent me my younger son, Gresha, who arrived here on the 15th of October. He left his place of suffering without any permission on the part of the government, and arrived here in safety.

The second joy is that on the 18th of November I received a telegram from England, from our well wishers, Tchertkoff, stating that "Peter Verigin arrived here to-day, is soon going to Canada." From such a joy I forgot all about my suffering and old age. I thank God for his mercy, and as, after a long and stormy night, which burdened my soul for over fifteen years, now I am waiting for the bright and joyful sunrise, which will give warmth to my soul and heart's delight. The break of day has shown itself, and the light is not far; I am waiting with impatience for that day in which I shall see my son; even now it is in my mind as though I am realizing my meeting with him. Gracious God, what will it be when we see each other!

ANASTASIA V. VERIGIN.

From letters received from different correspondents there is reason to believe that Peter Verigin has had a joyful reception by his relatives and brethren, and has been visiting among the Doukhobors, encouraging the taking up of homesteads, which is likely to become very general; he had no sympathy with the late movement of those who let go their cattle to start out on a Pilgrimage or Crusade; quite a number of those who have returned have bought farms for their own use.

A banker, at Swan River, gives the Douk-

hobors a high character in the Manitoba press for integrity, saying at one time he had eight thousand dollars loaned to them, every cent of which was paid back when it became due, and although he was a conservative in politics, he thinks the Doukhobors will be good citizens, and that the government did well in bringing them into the country.

A letter received from an interpreter in the Saskatchewan District, to whom was committed the translation of the letter from the Doukhobor committee to Peter Verigin, also an address from Joseph James Neave to the Doukhobors, with the instruction to send a copy of the latter in Russian to each village, informs, that the service has been completed, and there was evidence of its having been well received. (J. J. N. in company with J. Bellows, had some years ago visited the Doukhobors in Russia.) The translation has the confidence of the immigration department.

The same letter notes that there is preparation going on for building next summer, and the people seem comfortable this winter. The disturbance in that colony was quite limited; no accounts having reached us of any in that section having joined in the Crusade; a few had seemed unsettled, but were quieting down.

From "Home Thoughts."

THE MAIDEN AUNT.—In many a home, that woman of varied endowment, the maiden aunt, plays her quiet role of unrecorded and most valuable service, and her beneficiaries are scarcely aware of her sacrifice of time or personal enjoyment, or of the check she has to put on her individual preferences or opinions in order to carry out the family rule, which she often neither approves nor sympathizes with. She is ever ready to take the helm when illness or absence forces the heads of the home to yield it to other hands. If she has an independent income, this boy goes to college and that girl receives the education for which she longs. Too often, even in grateful young hearts no inquiry as to what might have come into her single, and in some ways, lonely life, had she used the money to gratify herself. She is dear and good and generous,—they fully understand that; but where she would have travelled, what she would have taken delight in possessing—books, pictures, a home which was her very own, in which to express herself—they do not think or dream of these. How could she be happier than she is?"

DEPRESSING INTERCOURSE.—The depressing effect of certain visitors or of entering certain homes, is too well known to need illustration. And usually this saddening influence comes from persons who have little to endure. A well-dressed woman, whose cheeks are rosy, and whose eyes are bright, awaits you in her drawing-room, and you meet her easy smile, with a mental assurance of her entire well-being. When at the end of a twenty minute visit, she says "good-by," you feel as if you had visited a field hospital after a battle. You have been told of severe illnesses, of threatening misfortune, of impending disgrace, of family disagreements, until the world seems wrapped in gloom . . .

Let us sedulously endeavor to hide that which mars and disfigures, while it is yet tri-

fling enough to be veiled, and set forth what is fair and sweet to human eyes, as far as it is possible for us to do so.

"THE atheist who spent a few days with Fenelon said, 'If I stay here much longer I shall become a Christian in spite of myself.' Fenelon had used no word of controversy or solicitation. It was but the quiet convincing argument of a holy life—a consistent walk and conversation."

Items Concerning the Society.

Referring to a letter from Kansas received over a year ago we find the following:

"Your friend CHARLES RHOADS, in the course of his religious visit in the West several years ago attended the said meeting. I at that time was down in a state of darkness and misery on account of the troubles in the Society, not hoping for nor expecting any good; but contrary to my expectation his ministry was so living and powerful as to lift me up into the light, joy and peace found in believing, which is only known in the faith of Jesus. This convinced me that there was something better in the way of ministry than I experienced in either party of the Society in the West." Continuing to find his satisfaction in Christ, but in no Society, he recounts how he resigned from the so-called progressive body to which he had belonged, to stand isolated in the church universal.

So representative a Friend of much that was excellent in gospel truth, and in the counsels of Philadelphia Yearly Meeting, is added now to the number of lately departed ministers whom it is hard to spare. CHARLES RHOADS deceased on First-day afternoon, the 25th instant. No Friend in these parts needs to be told what a loss he and we have met with. Seldom has one been raised up, both so esteemed and so beloved, whose taking away strips the church so widely, and the town of his residence so respectfully.

The same public paper which announces the death of Charles Rhoads, a twin brother of the late Dr. James E. Rhoads, reports in the very next paragraph, the death, at near the same age, of Alfred H. Smiley, twin brother of Albert K. Smiley, both widely known as formerly superintending the Friends' Boarding School at Providence, R. I., and since the remarkable places of summer sojourn at Lakes Mohonk and Minnewaska.

Word has been received from England of the decease of MARY ELIZABETH BECK, who, in the station of minister, has paid two visits to Friends in America, the last one during a winter mostly in and about Philadelphia. Also books and writings carefully prepared by her testify to her interest in the prosperity of the Society.

SUMMARY OF EVENTS.

UNITED STATES.—The new Panama Canal treaty, now under consideration in Congress gives the United States what is practically a perpetual and sovereign control of a strip of territory about six miles wide, in which the waterway is to be built. This is to be accomplished by means of a lease for 100 years, renewable thereafter in terms of 100 years at the sole option of the United States.

The United States agrees to pay Colombia a yearly annuity of \$250,000, which is to begin with the American occupation of the territory. The bonus to be paid by the United States in lieu of the rights of Colombia in the canal and in the railroad and from yearly fees collected at the terminal ports is to be either \$8,000,000 or \$10,000,000, of which one-half is to be paid upon entering into possession of the canal strip and the other half when the canal is completed. In order to make the control by this country the more absolute, it is agreed that the Colombian Congress will enact a code of special laws for the State of Panama through which the canal will run, and that the administration of these laws will be entrusted to American officials exclusively.

In a convention of the United Mine Workers, lately

held in Indianapolis, a letter was adopted which states that: "We recognize that the donations of money sent in from all parts of this country, and likewise from foreign lands, have been the greatest factor in maintaining the strike in the anthracite region."

Forty-five Chicago coal operators and dealers have been indicted by a special Grand Jury for conspiring to restrict the coal supply, and to charge a price for coal greatly in excess of its value.

The sessions of the Anthracite Commission have been continued, and a large amount of testimony has been offered.

A message by the Marconi system of wireless telegraphy was sent on the 19th inst. from President Roosevelt to King Edward VII. It was transmitted from Cape Cod to Cornwall, England.

In a recent meeting of the directors of the Marconi Wireless Telegraph Co., of America, held in New York, it was stated by the manager of the company that "the possibilities of the system are practically limitless." In sending the President's message from Cape Cod to Poldin only one-sixth of the available power was used, and I believe that it would be just as easy to send a message to New Zealand. Many new stations are contemplated. Some of them will be on the Pacific coast, and in time, doubtless, we shall have the world pretty thoroughly covered.

President Roosevelt has announced his policy in reference to appointments to office, as follows: "The spirit of the Constitution forbids that any man shall be refused office on account of race or color; it also forbids that any man shall ask office on account of race or color. The whole matter resolves itself within the party, back into a question of character, ability and fitness and of previous services or the independence of the community; at this shall constitute the best test; where a suitable member of the party cannot be found, the best man obtainable will be chosen."

The membership of 1380 congregations in New York City is stated to include 425,243 Protestants and 976,025 Roman Catholics.

A conference to consider the danger of the spread of the bubonic plague has lately been held in Washington, in which it was stated that ninety-three cases of plague had occurred in San Francisco, eighty-seven being in Chinatown. This conference passed a resolution, in part, as follows: "The gravity of the situation is greatly increased by the gross neglect of official duty by the State Board of Health of California and the obstructive influence of the Governor of California, by the refusal of the city government of San Francisco to support its city Board of Health, and by the obstacles opposed to the operations of the United States Public Health Service."

Chas. W. Eliot, president of Harvard University, lately stated in a public address that: "Within the last few years four new professions have developed—engineering, in its four distinct branches of civil, electrical, mechanical and mining; applied chemistry, architecture and landscape gardening." Of the four, he thought architecture should be ranked as one of the most learned.

As a result of a series of experiments. Dr. Leonard Pearson, of the Veterinary Department of the University of Pennsylvania, announces that he has discovered a method of vaccination whereby cattle may be made immune to tuberculosis.

On the 22d instant an earthquake shock was felt at Charleston, S. C., and throughout lower South Carolina, and also at Savannah, Ga.

There were 615 deaths in this city last week, reported to the Board of Health. This is 117 more than the previous week and 52 more than the corresponding week of 1902. Of the foregoing 317 were males and 298 females; 57 died of the assumption of the lungs; 121 of inflammation of the lungs and surrounding membranes; 6 of diphtheria; 14 of cancer; 29 of apoplexy; 35 of typhoid fever; 4 of scarlet fever, and 2 of small pox.

FOREIGN.—A despatch from Peking says: China has formally announced her inability to make the indemnity payments required by the treaty of Peking, and has thrown herself upon the mercy of the world. The German legation in Washington, and has taken steps to endeavor to settle the questions in dispute between that country and certain European Powers. This endeavor has been seriously endangered by the action of the German naval commander off the coast of Venezuela in bombarding the fort of San Carlos on the 21st instant. The Venezuelan Minister Bowen, representing Venezuela has arrived in Washington, and has taken steps to endeavor to settle the questions in dispute between that country and certain European Powers. This endeavor has been seriously endangered by the action of the German naval commander off the coast of Venezuela in bombarding the fort of San Carlos on the 21st instant. The Venezuelan Minister Bowen, representing Venezuela has arrived in Washington, and has taken steps to endeavor to settle the questions in dispute between that country and certain European Powers. This endeavor has been seriously endangered by the action of the German naval commander off the coast of Venezuela in bombarding the fort of San Carlos on the 21st instant.

A despatch from Washington of the 22nd says: Official circles here cannot see, without having details of the affair, what reasons may have induced the commanders of the German ships to create new complications at a time

when the negotiations for the solution of existing difficulties are about to begin in Washington.

The bombardment was continued by German vessels on the 22nd and 23d instants. This is a violation of the provisions of the London Convention of 1864, and a gross violation of the laws of England, and a gross violation of the laws of the United States. The act of uncompromising hostility committed by German warships in Venezuelan waters has thus dismayed all who were bent on securing a peaceful and tranquil solution of the problem.

Dr. Mavmorek, of the Pasteur Institute, Paris, has noticed the discovery of a tuberculous serum in many cases, as proved a specific.

The condition of German workmen is said to be respondent of the *London Times*, is miserably that of the English or Americans. Regarding of work, the English workmen were far ahead of the Continental brethren.

The bubonic plague in Marazan, Mexico, continues a virulent form; 141 houses which were built of infected were burned. Quarantine stations have been established to protect the people in neighboring towns.

A despatch from Stockholm of the 23d says: O. II, King of Sweden and Norway, has temporarily cast his throne on account of impaired health. Prince Gustaf, now 44 years of age, takes his place. A despatch from Bologna says: Professor Tassinari, of Bologna University, has announced to the Royal Academy of Sciences the discovery of a serum to combat malaria.

Earthquakes and volcanic disturbances are reported to have occurred lately near Urique, State of Chihuahua, Mexico, and the atmosphere filled with fine volcanic ash. An earthquake at midnight on the 23d was terrible to the inhabitants.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For convenient persons coming to Westtown School, the stage leaves Philadelphia 7:16 and 8:15 A. M., and 4:32 P. M. Other trains are met at Westtown, Stage fare, 15 cents; after 7:30 P. M., 25 cents. To reach the school by telephone, wire Westtown Phone 114x. EDWARD G. SMEDLEY, Superintendent.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters of introduction to instruction and discipline should be addressed to WM. F. WICKESHAAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

FRIENDS' WESTERN DISTRICT DORCAS SOCIETY.—The next meeting of the Society held Twelfth Mo. 8, 1903, it was decided to make a special appeal to each member and contributor, and Friends generally, for aid to the poor women employed by the Society to obtain during this season of scarcity. The proceeds of the fund thus obtained will be decided upon at the next meeting of members.

It is hoped that a generous response will be made, so as to relieve a great deal of suffering.

EMMA M. SHINN, President.
ALICE C. LETCHWORTH, Secretary.

MARY H. BIDDLE, Treas.,
1429 Arch St.

DIED, at the home of her brother, near Dunell, Iowa, shall County, Iowa, on the eighth of Tenth Mo. 8, 1903, ELLEN K. BOTNEY, in her eighty-first year; a member of the Stanger Monthly Meeting of Friends, Iowa. She was born in Roldal, Norway, and emigrated to this country in the summer of 1869. Although her parents were poor, she was deprived of her eyesight when one-and-a-half years of age, she manifested a cheerfulness and a confidence through her life not often witnessed in those who are outwardly more favored. In her were testified the words: "Godliness with contentment is great gain."

—, on the twenty-ninth of Eleventh Month, at the home of Alice Hiatt, his daughter, of Bennet, JONATHAN IRISH SUTWICK, in the eighty-fourth year of his age. He had been a life-long Friend and a member of the Westtown D. S. Society, and in an eighty-second year regularly made the journey to Iowa Yearly Meeting (conservative), of which he was a member. His life had been a testimony for Christ during his last illness he often calmly spoke of his approaching departure. A short time before the close of a look of solemn joy, he said, "This is death, in the sight of the Lord is the death of his sin."

Leadership, Fellowship, Worship.

A thoughtful woman who on one day recently attended two public meetings of Friends remarked "What I marvel at most is your ability in holding assemblies for public Divine worship, and then sitting still in them expecting the Lord to supply that which may hold the people's attention." She acknowledged that the faith exercised for those occasions was justified by results. But sometimes meetings which worshippers had regarded as lively, given by the Head of the Church in silent exercises of spirit, are afterwards pronounced by on-lookers who are not in-lookers, as dull meetings. Quiet they may be to the untrained ear, if that is what is meant by the word; but may such spectators yet learn the worship that is too living for words.

A philosopher is said lately to have pronounced George Fox not a mystic, as the typical mystics are. To be sure, all experimental spiritualists are mystics in the essentials of their worship, experience, and spiritual communion. But the communion of the so-called mystic was solitary, cloistered, that of the Friend shutting himself up away from human intercourse, hugging to himself and conversing alone with that inward discovery which he could dwell upon as the one centre of his life and interest. George Fox, too, knew that was to enter into the inner chamber of his soul and shut to the door, and confer with him who seeth in secret.

Upon us, also, by day or by night, are offered some opportunities than we improve by some indwelling with the inspeaking of our life. Even the busiest workers have moments afforded, without need of cloister, to leave to retire to.

But George Fox's distinction from the mys-

tics consisted in his concern to share such holy partaking in common with others. Frequently must his communion of the Spirit be with fellow beings. Herein is the genesis of the Friends' Meeting. These associate worshippers, when gathered in spirit unto the same living Centre, could feel what it was to be "members one of another" in Christ's body, — even that when two or three were gathered together in his name, there was He in the midst of them, dispensing the true supper of the Lord.

This living Treasure and Comforter was too good not to be shared. "Come, taste and see," and let us enjoy the secret of life together, — was his word to all who would be grouped in Christ's name, and become a fellowship together in Him. This is what a "society" is, — a fellowship; while a "church" is an assembly, a congregation. Fox did not aim to found a church, but to invite men into a fellowship, a sharing together of the one central Life. "Come and have fellowship with us; for our fellowship is with the Father, and with his son Jesus Christ." Such is the true inwardness of the social gospel which George Fox felt. His was a Society (fellowship) of the friends of Christ, beside which the name church (congregation) seems colorless. Yet a church to be of Christ, must be a fellowship; else, being not of the Spirit of Christ and out of mutual love, it is none of his. The universal church of Christ may have many societies of Christ, and all of them without sectarianism in the sense of separation of feeling, if only all of them are fellowships, — all eating the same spiritual meat and all drinking the same spiritual drink.

So that a church be a fellowship, the Spirit of Christ is equal to every emergency of public worship. The members of a true society in Him begin to be aliens and infidel, when they carry to meetings anxieties about the people being entertained, — fixing up in their minds sermons and sermonettes lest the Head over all things to his Church should be derelict, or too slow in his inspirations; devising ways and means in will-worship for holding the assembly, and so in the "assembly" utterly losing the "fellowship." "Thou who sayest, have confidence in God, hast thou confidence" in his holding of a meeting, when thou and it

are livingly trusted to his Spirit? It is indeed a work of faith, but whatsoever in worship "is not of faith, is sin." And many, seeing what God hath wrought when trusted, will be moved as the woman aforesaid was, who saw in a Friends' meeting the triumphs of faith in the conducting of it.

And so may be repeated the experience of many a stranger at our gates, that "thus are the secrets of his heart made manifest, and so falling down on his face he will worship God, and report that God is in you of a truth."

"GATHER THE CHILDREN." — If any would be gatherers of the future Society, they will look well into that which gathers and that which scatters the children. "When I was a child I thought as a child," and as a child needed some kindergarten mode of approach to my condition.

Small, five-minute silences, as before God, with a loving parent at home, — entering into an understanding with the child as to what this beautiful little privilege is for, — will tend to win the heart thus directed to commune with the Father of spirits, far better than the process of tiring him out with the strong meat of long sittings and sermons adapted rather to the full grown. These too he will in due season learn to love, by beginning with the little sittings as he is able to bear them and appreciate them. Children once touched with the preciousness of these short opportunities, have been known to seek such silent engagements by themselves. So will they be preparing to join their older Friends in what will be deemed an inestimable privilege. But how often do we, by our lack of Christian tact at the outset, turn Friends' meetings into a punishment and a dread to children. Even this is often overcome in their hearts, by a sense of wonder accompanying a Divine silence or an appointed utterance in the mention of Divine things, though they understand no sentence, but are bowed in spirit under the covering of good. In order thus to gather the children shall we not give heed to being rightly gathered ourselves?

MYSTICISM is a word employed by philosophers and monks alike, as involving the idea, not merely of initiation into something hidden, but, beyond this, of an internal manifestation of the Divine in the feeling of the secluded soul. — R. A. Vaughan.

How I Was Punished.

My father was a country minister. Like most of his guild his only abundance consisted in piety and the "poor man's blessing"—many children.

There were nine of us and the butter on our bread was very thin, our pantaloons were pieced down and pieced up and turned hind side before, and we went barefoot all summer, and never gave each other the value of a pin. One day a letter arrived from grandfather containing a gift of a small sum of money. It was deemed permissible that out of it father should treat himself to a certain book which he had long desired. So one cold winter morning (I was nine years old at the time), mother dressed me in the combined wraps of the family, and the precious coins in my pocket, and despatched me to the neighboring village, four miles away, to procure the book.

My way lay along the river which was frozen as hard as granite, and all alive with boys from the village skating. I recall again to-day my sensations as I stood upon the bank watching them. Such beautiful circles they cut! Such races they ran! and how splendidly they cleft the air as they drew up after a long run and let the momentum carry them on, on, as if they would never stop! It fairly made my legs tingle! I began to grow envious. I had no skates; I never had a toy bought for me in my life. I despised our home-made playthings. Then I had to cast the blame of my fancied wrongs upon somebody, and whom could it be but my father and mother? They were hard with me—they didn't love me, I said. Once in this mood it was easy for worse thoughts still to come. What if I should take some of the money in my pocket and buy a pair of skates! It would not be very wrong, I said,—father did not earn it. I tried hard to make myself believe that it belonged almost as much to me as to him. Besides, the jingling of that money in my pocket made me feel grand and independent. I wanted to do something on my own account; so upon reaching the village, instead of going to the book-store I went directly to a shop where, a few days before, I had seen a row of coveted articles hung across the window. The longer I looked, the stronger grew the temptation, until it seemed as though I lost the power of moving away. Finally I yielded—went in and bought the skates.

I was soon at the river with my skates strapped on. Another moment and I, too, should be sailing grandly before the wind! But what was my amazement to find upon rising to my feet, that I could not even stand, much less move a single step!

This brought me to my senses. My spirit every bit oozed out. I saw plainly what a foolish boy I had been. In a moment, conscience began gnawing at me, and I felt how wicked I had been. I have since learned that there is nothing better than failure to produce both understanding and penitence. What would I have given to be able to bring back the money! Should I ever be innocent again? I had stolen, and now was planning a lie to conceal the thief. I could scarcely believe that it was I! It seemed like some wicked boy I had read of. The skates I hated and left upon the ice. I shall never forget my walk home; how my guilt increased with

every step, how heavy my legs felt, and how strange our house looked when it came in sight, not larger, nor smaller, but so different, and as I neared it, all the windows seemed to be eyes looking right into my guilty breast! Then, as I thought of going in, there came such a feeling of suffocation, I was ill, and was glad of it, for I felt so far away from father and mother, and I was sure that would bring me near again.

Weak as an infant I tried the latch. Only mother was in the room as I entered. She looked surprised to see me empty handed.

"Where is the book Henry?" she said.

"Why mother," I replied, "as I was going along I took the money out to look at it, and I put it back in my pocket, and when I got to the bookstore, I felt for it and it was gone!"

Mother looked at me suspiciously. In a moment father came, and she told him my story, adding, "I think it had better be inquired into, closely."

Father looked at me and replied, "Henry has not been a lying child. I think he was never found in a falsehood, was he, mother?"

"But if I am not mistaken he shows guilt now," she said.

"That may be because he saw suspicion in your voice and manner. The conduct of a suspected person is often so like that of the guilty, that one is easily mistaken;" and then, in a tone which proved that he thought me innocent, he said, "Let us do no injustice to our child, mother."

Nothing could have melted me like those words. And I had thought my father hard! If a chasm had opened before me, I think I would gladly have jumped in to hide my shame and remorse.

That evening I wandered to the study (for I could not stay with the family), and counted the books over and over again, yet they were so few.

I went to bed early, but could not sleep. I lay awake all night, a lump of conscious, animated guilt. Cold, moist chills and waves of heat followed each other over my body. And harder to bear than even remorse, was the thought that it was my dear, loving father, whom I had treated so basely. A revelation came to me as to the nature of his life, that it was one of privation and self-denial. Oh, if I could only think of some way of earning money so I could make up this loss! But I racked my brain to no purpose.

When, at last the light of another day had returned, I was the same guilty wretch as I was the day before. Oh, how I envied my brothers and sisters! I wondered they did not seem happier, because they had not stolen and told lies. I was gentle and obliging that day, but the awful feeling at my heart would not go off. I was petrified with fear if but my name was spoken.

For three days and nights I endured this suffering, but then I felt as though I would rather be put in prison than endure it longer. The old remedy for prodigals occurred to me. I would go to my father. It couldn't be any worse. In desperation I went to the study door, but it was not easy to enter. At last the door opened somehow, and I burst into the room in a wild fit of tears.

"Father," I screamed, "I did not lose the money. I spent it for skates."

And then, what I could not understand that father seemed to feel as badly as I. He took me in his arms and held me close to his breast, and my heart which nearly smothered my jacket became smaller and smaller as I thought I had breathed it all out in solitary sighs.

"Punished enough for this time," I said to father say to himself. After I was quite alone he said, "Henry, we will say nothing of this at present to any one, not even you, either. If you ask God I think He will forgive you as I do, seeing you have so truly repented. I feel sure you will never be so wicked again. I felt sure of it, too, and so it was all between father and me."

Do I Discourage Others?

(Mark x: 46-55; Num. xiii: 26-33.)

It is one of the easiest things to do to annoy the meanest, and deserves the severest reproof. During the siege of Ladysmith a man was arrested, tried and sentenced to a term in prison. He had not stolen anything that men could see; he had not the stain of human blood on his hands, he was not a spy, the pay of the Boers, yet it was felt that he was a dangerous man to be at large. He would go among the soldiers and draw them here and there that so disheartened them that their power of defense was weakened. And so they dealt with him as an enemy. And so the discouragers of the Church were dealt with as severely! And why should it be so? They hinder the work far more than the enemy on the outside.

There's a man who is always magnifying his difficulties. He may be honest enough in his view of things, the enemies may be real as the ten spies saw in the land of Canaan, and as fierce as they were. And then himself may be as cowardly as the spies. If he only has sense enough to keep still, if nobody would be affected by his cowardice unless they should read his story in his face. But discouragement is dreadfully contagious. It is more catching than the measles and soon spreads through the congregation. Just after the battle of Bull Run a company gathered together deploring the awfulness of affairs and bemoaning the fate of the army. At length one sunny faced, white headed man arose, and told a story of a climbing mountain to see a sunrise. Part way up he came on a fearful thunder-storm, and the experienced were for turning back, but he urged them to go on in such a storm. But the others persuaded them to persevere, and so they got above the storm, which still raged around them and saw what they were seeking. Though it may be dark just where we are, there is plenty of light somewhere. Move on and draw others on towards it, instead of crying the darkness more dense and depressing.

Find the bright side and if, perchance he should be none, polish up the dark side and shine brightly.

Then we have the people who are discouraging the soul that is seeking the Saviour. They may not bid them keep quiet, but they do as effectually stifle them. This they do by manifesting no interest in them or their souls which concerns them. We do not see that we have no interest. Far be it from any

to feel no concern for the lost man who
xious about his soul. But if there be an
est why not show it? If only by a hand-
though no word be spoken; even that is
than a cruel silence or an ignoring of
anxiety. Or have not souls some times
discouraged by noting how little power
Christian faith has in the lives of its pro-
n? A young man attended a certain
and was wonderfully attracted by a
er there who was his ideal Christian.
eemed to his admirer to be just about
a Christian ought to be. Then came the
ht, I wonder if he is good outside the
h as he is inside! I'll watch him and
on and other inconsistencies. Result? Such
encouragement as sent that young man away
in the church and gave him the opinion
all church members are as hypocrites.
to discourage others? It's so easy to do
and just as easy to encourage and a lot
of.—*Christian Instructor.*

For "THE FRIEND."

Christ's Church, His Bride.

Love is love. The greatest gift of God's
man is that of his own dear Son. God
of his Son into the world to condemn
world, but to save the world, and Jesus,
son of God, said, "I came not to judge
world, but to save the world" (John xii:
But he did judge and condemn the sin
in world, and cast out the devils who had
ruined themselves in man.
Where does God now send his Son into the
deserts? He comes in spirit and in power, to
den the world but to save it. He by his
reproves the world of sin, of righteous-
ness and judgment. He condemns sin, the
seed of the Evil one, in the flesh,
makes this judgment manifest to man by
his light and glory of his presence, that man
may forsake the sin, and be made meet to hold
union with his Maker and Redeemer. If
he uses this arm of God's power, put forth
in salvation, and dies in his sin, he par-
takes of God's righteous judgments on sin.
Jesus, who came to save his people from
all unrighteousness, and now by his Spirit
in Gentiles too, that if we die in our sins,
we shall be lost, we cannot come.
But in his great love to his church gave
her, for her, that he might redeem her from
all iniquity, bringing her out from under the
weight of sin, and purifying her unto himself
a pure virgin, a fit spouse for the Holy One
and. He enrobes her with his own spot-
less garments of righteousness, and beholds in
holiness. He sought her and found her
and polluted by sin, in this wilderness
land. He wooed her to follow Him, to come
into the paths of sin, that He might lead
her into the paths of righteousness wherein
he walk with Him and with his Father.
He referred to Him her transgressions and
he gave love to her, he freely forgave her
sins, and cleansed her from all unrighte-
ousness. Her robes were spotless white,
from the King's wardrobe.
And he becomes the one out of ten thou-
sand, the one altogether lovely. "None have
loved her thus, and none on earth can
be compared unto thee." No love so holy,
and strong as this, uniting the

church to her Lord. Waters cannot quench
it, nor can fire have any effect upon it, and
like the fire in the burning bush it waneeth
not. His name to her is as incense poured
forth, and she is engraven on the palms of
his hands. His praise is the language of her
soul, and He delights to hear and answer the
incense of her prayer. She cries, "O Lord!
my King and my God." He answers, "What
is thy request? my love, my dove, my unde-
filed." W. W. B.

Morse's "Light."

George Winifred Hervey relates that long
ago, while pursuing investigations in the Astor
Library, New York, he used often to meet
there Prof. F. B. Morse, the renowned in-
ventor of the electric telegraph. Once he
asked him this question: "Professor Morse,
when you were making your experiments yon-
der in your rooms in the university, did you
ever come to a stand, not knowing what to do
next?"

"Oh, yes; more than once."

"And at such times what did you do next?"

"I may answer you in confidence, sir," said
the professor, "but it is a matter of which the
public knows nothing. Whenever I could not
see my way clearly, I prayed for more
light."

"And the light generally came?"

"Yes. And I may tell you that when flatter-
ing honors came to me from America and
Europe on account of the invention which
bears my name, I never felt that I deserved
them. I had made a valuable application of
electricity, not because I was superior to other
men, but solely because God, who meant it
for mankind, must reveal it to some one, and
was pleased to reveal it to me."

This utterance by a distinguished man of
science reminds us again, as many similar ut-
terances have done, not only that true great-
ness has no vanity, but that superior minds as
a whole, reverently acknowledge the Supreme.
They who climb highest see farthest, and the
light which comes from above shines the long-
est way.

A pleasing proof of the felicity and far see-
ing wisdom of this eminent man and devout
inventor appeared in the result of a grand test
by the Postal Telegraph Company. This com-
pany had a "field day" a short time ago,
when the various transmission methods and al-
phabets were tried on all their lines. When
comparative material costs, salary of opera-
tors, accuracy of work, time consumed, and
all other factors were taken into considera-
tion, the decision was wholly in favor of the
Morse system, which has been in use fifty
years.

The inventor's first message—"What hath
God wrought!"—intimated in no uncertain way
the inspiration which gave his work longevity,
and made it a light to the world.

At the completion of one of the Amherst
College buildings, when President Hitchcock
first assembled his geology class in a new recita-
tion room with sky windows, this was his
introduction to one of his best lectures:
"Young gentlemen, all the light we have here
comes from above."

ALL great things are born in silence.—
Martineau.

THE BOOKS OF THE BIBLE.

BY JEAN G. PARSONS.

In Genesis the world was made;
In Exodus the march is told;
Leviticus contains the law,
In Numbers are the tribes enrolled.
In Deuteronomy again
We're urged to keep God's law alone;
And these five works of Moses make
Perhaps the oldest writings known.

Brave Joshua to Canaan leads;
In Judges oft the Jews rebel;
We read of David's name in Ruth,
And First and Second Samuel.
In First and Second Kings we read
How bad the Hebrew state became;
In First and Second Chronicles
Another history of the same.
In Ezra captive Jews return,
And Nehemiah builds the wall,
Queen Esther saves her race from death.
These books "historical" we call.

In Job we read of patient faith;
The Psalms are David's songs of praise;
The Proverbs are to make us wise;
Ecclesiastes' net portrays
How fleeting earthly pleasures are;
The Song of Solomon is all
About the love of Christ. And these
Five books "devotional" we call.

Isaiah tells of Christ to come,
While Jeremiah tells of woe,
And in his Lamentations mourns
The holy city's overthrow.
Ezekiel speaks of mysteries,
And Daniel foretells kings of old;
Hosea calls men to repent,
In Joel blessings are foretold.
Amos tells of wrath; and Edom
Obadiah's sent to warn;
While Jonah shows that Christ should die
And Micah where he should be born.

In Nahum, Nineveh is seen;
In Habakkuk, Chaldaea's guilt;
In Zephaniah, Judah's sin!
In Haggai, the temple built;
Zechariah speaks of Christ,
And Malachi, of John, his sign.
The prophets number seventeen,
And all the books are thirty-nine.

Matthew, Mark and Luke and John
Tell what Christ did in every place;
Acts show what the Apostles did,
And Romans how we're saved by grace.
Corinthians instruct the Church,
Galatians shows of faith alone;
Ephesians, true love; and in
Philippians God's grace is shown.

Colossians tells us more of Christ,
And Thessalonians of the end;
In Timothy and Titus both
Are rules for pastors to attend;
Philemon Christian friendship shows,
Then Hebrews clearly tells how all
The Jewish law prefigured Christ,
And these Epistles are by Paul.

James shows that faith by works must live,
And Peter urges steadfastness,
While John exhorts to Christian love,
For those who have it God will bless.
Jude shows the end of evil men,
And Revelation tells of heaven.
This ends the whole New Testament,
And all the books are twenty-seven.

Without murmur, uncomplaining, in His hand,
Leave whatever things thou canst not understand.
—Hagenbach.

Science and Industry.

VEGETABLE FUEL FOR FUTURE.—Edward Atkinson is one of the most adventurous and indefatigable of intellectual explorers, says the *Chicago Tribune*. The intellectual world contains few recesses into which he has not penetrated. From fireproof wood he turns lightly away to the use of tubs as ovens in farm houses; from that he hurries off to the status of subject populations and from that he flits to the diffusion of light on planets through glass. Just now he is trying to find out whether a farmer cannot raise his own fuel "by devoting about one acre in a hundred of his possessions to that purpose for the supply of one family."

"Anthracite coal," he says, "is becoming a luxury. In about two generations it will be exhausted." There is no way of replenishing the supply. There is just so much coal and no more. Why, then," asks E. Atkinson in a letter to the chiefs of the agricultural experiment stations, "should we not try at once to discover some substitute?"

Consider the corn crop. The ratio of dry stalk, leaf and corn cob is about one and one-half tons to the ton of shelled corn. The amount of potential fuel, therefore, in the present corn crop is over one hundred million tons. Consider now the whole grain crop, including corn, wheat, oats, barley, rye, etc. The total amount of potential fuel involved is between one hundred and fifty million and two hundred million tons. Further, there are plants, like alfalfa, and the sunflower, which produce heavy fuel growths. Sorghum, however, is of all fuel plants the one which Edward Atkinson regards as the most promising. Sorghum, "compressed into logs in a partially green stage," and seasoned as green wood is seasoned, holds out great possibilities of future usefulness. Besides, there is a new seed grain plant from Egypt which grows rapidly in the semi-arid parts of this country. Could not this plant be used as fuel, and have we not here a means of turning the semi-arid West to account?

Whatever plant is used, the problem is essentially the same. Corn, wheat, alfalfa, the sunflower, rye, oats, sorghum, cane-brakes, horse beans, barley and the new seed grain plant from Egypt are all available for fuel only under one condition. Some cheap and effective means of compression must be devised. The farmer who wants to prepare his own fuel is confronted with a mechanical difficulty. If "fuel" were "cultivated," however, in large quantities on the Western plains compression could be accomplished on a large scale at small cost. As for the "caloric power" of vegetable fuel, Edward Atkinson thinks that twenty tons of cornstalk and leaves would equal about fourteen tons of bituminous coal. This being the case, one may hope that the chiefs of the agricultural experiment stations will give Edward Atkinson's suggestion something more than the "derision" which he differentially anticipates for it. If vegetable fuel is practicable, there are interesting industrial developments ahead of us.

SUPRARENALIN.—It is a big product of the packing house industry, says the *Duluth News-Tribune*. It is one of the most precious arti-

cles in existence, being worth seven thousand dollars a pound, and is so powerful that one part of it dissolved in one hundred thousand parts of water will show its presence when tested with chloride of iron.

It has been found that the suprarenal gland of the animal—which is found about the kidneys—when reduced to a drug, possesses wonderful astringent properties: so powerful that operations on the eye and nose may be performed without the loss of any blood. With the addition of cocaine, such operations are also painless. The great value of this to a surgeon will be appreciated when one realizes that when cutting around the eye he can have a perfectly clear field, and can do his work much more quickly, as a flow of blood would not only obscure the operation, but would make it necessary to stop frequently and wipe it away in order that he may see where he is cutting. The active principle has been isolated at the Armour laboratory, and has been named "suprarenalin," a word that has not yet gotten into the dictionary. It takes seven thousand grains of the fresh glandular substance to make one grain of the "suprarenalin." However, it is very powerful, and solutions employed by surgeons in performing minor operations on the eye, ear and throat vary from one-tenth of a grain to one one-thousandth in strength. This "suprarenalin" is said, also, to be the most powerful stimulant known. It may take the place of strychnia in the pharmacopeia.

A THOUSAND MILES OF COLLARS.—If all the collars and cuffs made in a year in Troy, N. Y., says Harry Beardsley, in *Leslie's Weekly*, were placed in a single line, end to end, that line would be more than one thousand miles long. It would extend from New York city to Chicago, with several miles to spare. Ninety-five per cent. of all the collars manufactured in the United States are produced in New York State, and eighty-five per cent. of the entire country's product comes from Troy. That an industry of this magnitude, and one whose product is of such general use, should be concentrated in a city of seventy-five thousand inhabitants is perhaps the most interesting industrial phenomenon in the country. From it arises a variety of unique conditions.

Troy is called "the collar city" of the world. Here the very first collar detached from the shirt, and bearing a semblance to that article of apparel as it is known to-day, was made; and since that time, seventy-five years ago, the industry has increased, with Troy always as its centre, until now collar manufacturing involves twenty million dollars annually and gives employment to nearly eighteen thousand persons, whose wages amount in the aggregate to between eight millions and nine million dollars.

Although the factories which construct these finishing touches to a man's attire are in some instances immense plants employing thousands of people—great, buzzing nests of activity—a large and important part of the work is done by women in their homes. For this is distinctly a woman's work, and while in the city of Troy the great factories are humming, through all the country round, in the farm houses and villages within a radius of fifty miles, the women sitting in their own

homes are helping to make the collars of the United States. It is the skill of these women as well as those who are employed with factories, that enables thirty manufacturers in and near Troy to turn out complete sets of collars and cuffs every year about sixty million collars, cuffs and shirts; and it is these same women, in the small houses of the city, in the villages round about and on the farms, that make it possible for this industry to live elsewhere.

NO LAW ON RUGGED ISLAND.—There is no law on Rugged Island, a few miles from Penobscot, that is in one respect of the most peculiar islands on the surface of the globe, says a correspondent of the *Pittsburg Gazette*. It is known on the charts as Rugged Island, but sentimental summer residents have named it Crie Haven in honor of old John Crie, a bearded Scotchman, who settled here among the rocks more than half a century ago.

The island is under no form of government, and, though it is part of the State of Maine, the people pay no taxes and have no officers of any kind.

There is not a rat or mouse in all of it, and a half of rocky length, and its half is of ledgy width. There are no bugs in the island, no roaches in the pantries, no cats on the porches, no mosquitoes behind the stoves, and no mosquitoes in the pools of fresh water.

The island has no church building in which to worship and no minister to tell the people whether they are doing right or wrong. The lawyers ever resided here and no sheriff or constable ever came to issue summonses or serve processes. A kind old doctor who lives in Rockland is the only physician who makes professional visits to the place, and he comes when to come by carrier pigeons. As soon as the doctor receives the call he liberates a pigeon from his loft, which bears a message to him when he is coming.

The regular inhabitants of the island number forty-two, but in the summer months are often as many as one hundred persons living on the island. There are eight cows and three horses there, but not a mile of road for them to travel in. The horses are used in hauling up boats. Everybody walks two worn foot-paths, which are originally laid out by cows while seeking feed among the boulders.

The only occupation of the residents is catching lobsters in pots covered by stones. Every person tries to capture enough lobsters each day to bring three dollars, which is all done when lobsters are sold to the steamer for fifteen cents a pound.

WEATHER NEWS FROM THE SEA.—Just because there happened to be a submarine putting a vessel in mid-ocean in instantaneous communication with the Pacific coast, a storm now deluging all Southern California was announced with accuracy and certainty sixteen hours before even the first indications arrived, says the *Los Angeles Times*.

Probably no storm was ever predicted in a similar manner, but it is the opinion of official weather experts that many more will be in future years. Weather Observer George Franklin stated yesterday that he believed few years will undoubtedly witness the establishment of some permanent system of predicting conditions at sea.

entirely unique idea was aroused by striking illustrations of the value of such yesterday. Without any local condic-
 ative of rain in Southern California, ter MacDise in San Francisco based his
 ful prophecy entirely on the cable re-om E. D. Moore aboard the Silvertown.
 rainstorm was located, the wind and heric surroundings briefly noted, and
 ater for the next twenty-four hours yely described.

valuable of such advices has already been eezed to some extent by the national r service by the establishment of ob-ies on nearby islands. A contract has en closed for laying a cable to the Far Islands, off San Francisco, for the pur-
 increasing the efficiency of the wea-vice by observations from that point.
 most of the outlying islands are consid-ly close to the mainland to be of the
 value as observation points. For the rults in the way of predictions condi-ould be known for a distance of several
 r miles out in the ocean. Laying of est vessels stationed far out seems at
 present day entirely impracticable for
 asons. Wireless telegraphy is looked
 ly the climatic experts eventually to
 y the problem, when observatory ships will
 be stationed at proper points and the weather
 forecasts be predicted as far in advance
 as great accuracy as in the most fa-
 land farming districts.

WEAVERS OF PERSIA.—Boys from eight
 years old do a great part of the car-
 rug weaving in Persia, says *The Amer-
 B.* They are very deft. Having been
 we design and coloring of the carpet
 to make to work, the boys rely on their mem-
 of the rest of the task. It is very sel-
 that you will see on any of the looms a
 carpet before the workers. The foreman
 is frequently a boy of from twelve
 to sixteen. He walks up and down behind
 the weavers calling out in a sing-song manner
 the number of stitches and the colors of the
 warp to be used. He seems to have the de-
 sign in his mind. A copy of a famous
 carpet at the South Kensington Museum
 is imitated. The design and the coloring
 are the same, but the boys who are working on
 the carpet are doing it without the design be-
 fore them and at the rate of from thirty to
 forty stitches a minute. Nothing but
 silk is employed in the manufacture of
 the carpets and rugs, and none but nat-
 ural vegetable dyes are used. This ac-
 counts for the superior quality of the Persian
 carpets. The secret of the beautiful dark
 reds used in the older days has been lost.

considered unclean by the Mohammed-
 ans because it is the product of a worm.

of deep-sea animals are not like
 those developed under the influence of the
 light. Some of the abyssal species are
 those that have eyes probably capture
 light by the phosphorescent light shed
 from their own bodies and the bodies of the
 number of other creatures that are con-
 stantly flashing their faint lamps over the
 floor.

TRUTH.

BY HENRY ALEXANDER LAVELY.

Men seek the Truth amid the shards of earth,
 And dig and delve for weary years in vain
 Among the creeds the schoolmen would explain,
 Forgetting that in God it has its birth,
 And never can be found in all the death
 Of books and tomes which harry heart and brain
 And furnish of its grandeur scarce a grain.
 Obscuring still, in clouds its sterling worth.
 But look! "I am the Truth!" In Me 'tis found
 In all its forms of glory and of grace;
 In Me, one with my Father, it is crowned,
 And in My life it holds a kingly place,
 From whence it brightly shines, the world around.
 And reigns supreme in all the realms of space.

The Irresponsibles.

Business men tell us that they can find any
 number of people to take wages or a salary,
 but they are able to secure, among a crowd of
 applicants, only a few, and sometimes none,
 who bring to their work a sense of personal
 responsibility. The boys and girls who gradu-
 ate from the high schools and seek a position
 are apt to be thinking how soon they will get
 through with their work or when they will
 have a rise in their wages; but they do not
 seem to know how to apply themselves to
 their work with the faithfulness and efficiency
 which make a business succeed. It is as if
 the "help" in a store or a factory were so
 many passengers, trying for their own con-
 venience to catch a ride on the train, or even
 willing to pay their fare as they go, yet with-
 out any consciousness of belonging themselves
 to the system.

It is idle, however, to complain of the boys
 and girls just out of school, and especially of
 illiterate people, because they have never learned
 to identify themselves with their employers.
 The youth and the ignorant naturally take the
 tone of the people around them and of those
 who employ them. The fact is, that irrespon-
 sibility is the fault of our times. We do not
 necessarily urge that men have a lower sense
 of responsibility, fidelity and loyalty than our
 forefathers; but the relative need of these
 qualities is vastly greater, while the supply
 hardly yet seems to increase. We are living
 closer together than men ever lived before.
 Our common interests are larger, more com-
 plex and more numerous, while we still go on,
 both by example and precept, teaching the
 youth of each new generation to look out each
 for himself; that is, to remain mere individ-
 uals, when the pressure of the needs of the
 world is for men and women who know how
 to co-operate, to effect things together, to ap-
 preciate the common welfare.

Catechise the very employer who has just
 filed his complaint against his irresponsible
 help! How much is he worth as an efficient
 and public-spirited citizen? The great cities
 are full of able merchants who know how
 to accomplish things in their own business.
 What is the reason, then, that their cities are
 continually plundered?

Why is it hard in the capital of New Eng-
 land to rescue even the public schools from
 the control of those who wish to use them for
 their selfish ends? The reason is not in the
 number of new immigrants in our cities; it is
 in the general irresponsibility of the men and
 women who ought by their means and educa-

tion to be the natural leaders in all civic en-
 terprise.

Catechise your complaining employer of la-
 bor again. His city is full of philanthropic
 necessities. We are only on the verge of true
 civilization. The poor live in slums and ugly
 tenements. Children suffer and die. Young
 fellows go to the bad for the want of the
 right kind of help. Read the list of the char-
 ities of any great city; throw out half or
 three-quarters, if you please, and keep only
 those which you believe in. How much now
 do you feel bound to do to help these good
 societies? Are you sure even that you give
 them your fair share of money? Are you
 willing to serve, on occasion, on any of their
 boards of management? Will you be a visitor
 for a single family of the Associated Charities
 of your town? If you undertake to help, will
 you be one of the people on whom the small
 band of active workers can depend?

Let us try another question. The fault of
 the country, every one says, is on the side of
 education. The darkest part of the map of
 the United States for illiteracy is the South.
 Peculiar needs exist there, calling for our sym-
 pathy in behalf of the youth of both races.
 What now will you do to help cure this evil of
 irresponsible citizenship from which we all
 suffer? The nation has taken on its shoulders
 the responsibility for millions of people on the
 other side of the globe. How far do our en-
 lightened citizens feel any personal responsibil-
 ity for them, or for the needy millions at
 home, black and white?

A question now touching our churches.
 The time was when the membership of a
 church involved a definite responsibility to
 stand by and make the church thrive. If men
 who belonged to a regiment vowed their loy-
 alty to answer to the roll-call, much more do
 men and women owe their allegiance—we will
 not say to hear any minister preach, but to
 help accomplish those great moral and spiri-
 tual ends for which a church exists. Who is
 without responsibility for these ends, without
 the securing of which all our institutions
 would perish? Is it strange that young men
 do not devote themselves to the interest of
 their employers when "the best people" throw
 off their sense of responsibility for the insti-
 tutions which conserve the spiritual life of the
 world.—*Christian Register.*

A GREAT scholar says: "In reading a book
 I always stop at the bottom of each page and
 compel myself to give an account of anything
 read on that page. Thou mayst as well ex-
 pect to grow stronger by always eating, as
 wise by always reading. It is thought and
 digestion which makes books serviceable, and
 gives health and vigor to the mind.—*Thomas
 Fuller.*

THE power to prevail in prayer depends prima-
 rily upon the revelation of the Father, the me-
 diation of the Son, the inspiration of the Spirit.
 The Father must be revealed to the praying
 soul, otherwise there is no desire and yearning
 to pray. But the confronting of God's holiness
 would make prayer impossible but for the
 mediation of the Son and even then we need
 the inspiration of the Spirit, for we know not
 what we should pray for as we ought.—*G.
 Campbell Morgan.*

For "THE FRIEND."
REPROOF.

Let me never stand aloof
 From the pain of just reproof,
 Though the blade be comrade-sent,
 Unaware, in friendship's tent,
 Where the feast has oft been spread
 With a blessing on the bread.

Friend, thou wouldst not hurt me so,
 Could the pain be spared, I know,
 Though I did not dream the need—
 Did not know the fault, indeed—
 Yet thy love I so can trust
 That I thank thee for the thrust.

FANNIE B. DAMON.

Emma Wilson's Struggles to Advance Her Race.

The boy who educates himself, studying his lessons by firelight after following the plow or wielding the axe all day, is a common type of effort in America. It is a heroic type, matched now and again by a woman, who achieves her end over still greater difficulties.

One of the most interesting schools in the South is the result of such a self-educated woman's labor. Her story, simple, sober, but admirable, begins in the last years of slavery. Emma Wilson was born in bondage in Mayesville, S. C., about five years before the Civil War. Hers was one of the cases where the bonds were lightly worn. Her mother was the family cook, and the child played on terms of equality with the white children.

The first intimation that ever came to her of the inferiority of her social condition was on the morning when her white playmates were first sent to school. She could not understand why she was left behind, and the blunt statement that she was black and therefore not entitled to an education failed to satisfy her. She wept and could not be comforted until her favorite boy playmate ran back and promised that he would teach her everything he learned in school.

He kept his word as far as he was able, and the girl learned to read easy sentences and to write the alphabet. Newspapers were used as textbooks, and a smooth sand plot and a stick for a blackboard.

The tumult of the war interrupted the lessons, and after those stormy days were over the young girl found herself on a small farm with her mother and brothers. There was a school for freedman's children in the neighborhood, and the brothers were permitted to attend it. The mother did not believe in educating girls, and in spite of entreaties the daughter was sent out into the cotton fields. Even this did not stifle the child's ambition. She carried scraps of newspapers into the field with her, and conned them over and over as she worked. It was her fixed determination to spell as many words as the boys who went to school, and she often stopped them in the road, when they passed by on their way home, and challenged them to spell some especially long word which she had mastered. A priceless gift of Webster's blue-backed speller helped her on her career, and when the mother's prejudice was finally overcome and the girl was allowed to go to school she was ready to enter the fourth class.

Her teachers took an interest in her from the first day, and as her progress advanced

they advised her to try to enter a higher school. The Scotia Seminary for Colored Girls at Colcord, North Carolina, was recommended. After several year's hard work the necessary money for traveling expenses, books, clothing, etc., was earned, the disapproving but kindly mother paying the entrance fee of fifteen dollars.

Emma Wilson remained at the seminary three years, a well-deserved scholarship paying her later expenses. The desire to help her race came to her in the midst of her studies, and first took the form of missionary work in Africa. After her graduation she went home to prepare for this work, but all ambition in his direction left her when she saw the condition of her people in Mayesville. Her work lay nearer home than the African coast.

At the First-day night service after her arrival she caused it to be announced that a school would open the next morning in her mother's cabin. Ten children came.

Even this small number was too tight a fit for the cabin kitchen, and the teacher set out to find a school building. She managed to secure the loan of an unused gin-house, bare of any furniture, without windows, and far from clean. Plenty of friendly hands were stretched out to help the new school, white hands as well as black. The owner of the saw mill donated a pile of boards for benches and blackboards. The druggists gave lamp-black to color the blackboards, and some one else gave a few sticks of chalk. The children brought their own text books—a new book with English letters in it served.

When the gin-house was demanded for cotton the school had to move. There were many moves in the next five years. Any vacant building was borrowed, always with the understanding that it must be given up when the owner needed it. Very often the children would gather up their books at night with the query: "Where's the school goin' to keep to-morrow, Miss Emma?"

And often she would be obliged to say: "I don't know yet children, but somewhere—that's sure." The school did not always open promptly at nine o'clock, but it never missed a day's session.

To raise funds to support a home for boarding pupils Emma Wilson rented six acres of land, and with the help of pupils raised enough cotton to keep the school going, and to buy a little home for herself. In 1895 the school had grown beyond the teacher. Help was needed to extend the work, and leaving an assistant in charge, Emma Wilson came North to find it. Since then she has made yearly trips, and has raised over eight thousand dollars for her school.

It was after her first northern journey that Emma Wilson came to the realization that her entire plan of education would have to be altered. The time had gone by when a mere literary training seemed to her either useful or desirable. She perceived that, in educating children beyond their growth, and giving them that which would breed discontent without helping them to better their condition, she ran a risk of making dangerous citizens. In other words, the industrial training advocated by Booker Washington replaced her old ideals of education.

The Mayesville school is now a farm school,

with a superintendent from Tuskegee other teachers similarly trained, and for freed pupils a proportion of whom live on the school. The institution is co-educational, domestic science and agriculture are the principal studies pursued. The boarding pay a tuition of five dollars a month, the work of the school. The tuition rarely paid in money, but wood, poultry, butter, etc., are quite as acceptable. Practically all the foodstuffs consumed are by the pupils. The pupils have also nearly all the furniture in the schools.

The farm is not stocked as it should be, the students' tables are without milk, a most without butter. This is not the ship it would be in the North, but the management is aware of the dietary value of such food, and is making a strong effort to buy cows. A carpenter shop and furniture have been promised by a New York woman and teachers already at the school are prepared to open classes in shoemaking and trades as soon as the tools can be obtained. The blacksmith's and wheelwright's trades much needed in the neighborhood.

For the little children, Emma Wilson is in the North studying the kindergarten system and basket weaving.

The old-time industries of the loom and dye-pot are to be revived for the girls, besides being instructed in housekeeping, needlework, will be taught to weave mats, rugs and carpets. There is a good reason for such articles.

One of the most pressing needs is a printing press. The town has not even a small one, and the school would be able to earn a considerable sum with a press, besides saving the cost of its own printing in Sumpter.

Mayesville, where this colored woman has been dedicated to the advancement of her race, is a village in Sumpter County, North Carolina. It is in the centre of a large white population of negroes, a number of whom own little farms of five or six acres, but are very poor. Many of their children are to be clothed at the school. There is no public school for colored children in the village, and the small sum set apart by the United States School Commission for the education of negroes is given to Emma Wilson's school, which enables her to receive free all children who cannot afford to pay the monthly fee of ten cents asked of day scholars.

The eagerness of the children and women and women of the neighborhood to school is pathetic in its intensity. One day it came through a howling storm and rain, in the school door dripping wet, chilled and weeping bitterly. Being comforted she sobbed out: "I ain't crying 'bout bein' cold, but the rain done wetted my book."

The influence which the school exerts over the older people of the settlement is gratefully acknowledged by the white people of the town and neighboring plantations. This influence is strongest with the mothers of the children attending. These ask to be admitted to the cooking and sewing classes, and are entertained very often with mother's meetings and social afternoons. Richard H. Smith, 53 State Street, Boston, is treasurer of the institution.—N. Y. Evening Post.

"Approximately sixteen million acres of land of three remaining tribes are now surveyed, claimed, valued, and platted down to forty acre units, a necessary preliminary to the dividing of these tribal estates into shares of equal value, as required by law. Survey of the location of the houses and other improvements of every citizen in most of the thickly settled parts of these areas are now made and platted, in order that the homestead and occupancy rights provided by law may be duly regarded." In reference to the labors of this commission, he says:

"In character and magnitude combined, this work is perhaps without a precedent in human experience or history."

The shipments of anthracite from the mines have lately amounted to about fifty thousand tons daily. These large amounts it is said would have supplied the demand, had it not been for the shortage in the receipts of bituminous coal. This shortage is due, as stated by an official of the Pennsylvania Railroad, which is the chief carrier of bituminous coal, to the congested condition of traffic on that road. He said:

"We are not only overwhelmed with coal shipments, but with every class of freight. There has been no discrimination against any operators in our distribution of coal cars, and all have been treated fairly."

The immense improvements now under way all along the line from New York to Pittsburg, while intended to expedite traffic, are really a hindrance in their present incomplete state. We have miles upon miles of 'slow' track where trains must run at decreased speed, and uncompleted freight yards which are almost useless. Many thousands of men are at work day and night trying to relieve the freight congestion on the Pennsylvania and to expedite the shipments of coal, and we must expect the completion of the proposed slow lines, we have unusually severe weather for the rest of the winter."

The Pennsylvania Railroad Company proposes to discontinue running the twenty-hour express train from New York to Chicago in order to break up the freight congestion, and it is said other fast trains may be taken off for the same reason.

The testimony of witnesses to be offered before the anthracite commission as to the troubles in the mining regions of Pennsylvania.

It has been recently stated there are six million four hundred and eleven thousand children of school age south of the Potomac—three million nine hundred and eighty-one thousand white, and two million four hundred and twenty thousand colored. In 1902, sixty and sixty per cent of the enrolled in school, and of the total only seventy per cent were in attendance. One-half the negroes get no schooling whatever, and one white child in every five is left wholly illiterate. The average child who attends school at all starts with the third grade.

The General Education Board for the promotion of education in the United States has lately been organized. Its object is to aid rural schools particularly in the Southern States. It has recently announced "that the opportunities are now at hand for wise and prudent investments of large sums of money to promote the education of all the people throughout the Southern States. The fact is demonstrated that no wiser or more patriotic opportunity for philanthropy is before the people of the United States."

At the beginning of its work, "a generous friend," as stated by the Board, subscribed one hundred thousand dollars a year for a period of ten years, which sum, the Board says, has enabled the demonstration of the possibility of effective work and the practicability of philanthropic co-operation with the public authorities.

A bill has been recently introduced into the Legislature of Pennsylvania, which repeals the law of 1794, which prohibits the carrying on of business of various kinds on the First day of the week. The repeal is strongly opposed by the Philadelphia "Sabbath Association," the secretary of which announces that three thousand petitions will be sent out in this State for the signatures of those opposed to the bill. The petitions will be sent to the Law and Order Committee of the Senate before Second Monday, 10th, when the proposed bill will come up for a hearing.

A dispatch from Baltimore of the 30th ult. says: Acting upon the recommendation of the State Live Stock Sanitary Board, Governor Smith to-day signed a proclamation forbidding the importation of cattle into Maryland from the territory south of an irregular line running from the northern corner of California to the northern border of Virginia.

This action is taken as a precaution against splenic, or Southern, fever. The prohibition will last from First Month 31st to Eleventh Month 1st.

A treaty was signed at Washington on the 24th ult. by Secretary Hay and the British Ambassador providing for the settlement of the Alaskan boundary dispute by a com-

mission of six jurists, three to be appointed by the United States, and three by Great Britain. The United States has held that the question involved is simply one of determining the title.

That section of the report issued by the executive committee of the National Afro-American Council, they say, "It is evident to the thoughtful among us that we are passing through one of the most critical periods of our existence in this country. Systematic effort has been inaugurated on the part of the South which has for its object the withdrawal of the franchise of the Afro-Americans of that section and their reduction to a position of absolute subservience in all the relations of life."

"We call the attention of the country to a condition of service on many farms in a number of the Southern States resembling very much the old peonage system, and ask for legislation looking to the remedying of the evil."

Six locomotives are now turned out daily at the Baldwin Locomotive Works in this city, but even this supply the demand for motive power by the various great railway systems cannot meet.

"We are working continuously, night and day," said the president of the company, "and we are turning out on an average one complete locomotive every four hours. The various branches of our plant are rushed with work. The demand for motive power by the railroad does not seem to slacken, and it reflects the general prosperity of the country."

In the annual report of the foreign commerce of the United States for 1901, issued by the Chamber of Commerce, it is shown that the most valuable article entering that port for the year 1901-02 was coffee. Coffee to the value of \$1,000,000 was imported, and the matter of the total imports New York received a valuation of \$574,066,854. The largest item of exportation was illuminating oils, valued at \$33,693,481.

The production of oleomargarine is stated to have fallen off during the first half of the fiscal year to the amount of eighteen million pounds, as a result of the late legislation on this subject. It is said that most of the oleomargarine now sold is water and no attempt is made to make it compete with butter.

It is known that a number of Southern cottonseed oil mills are blending palm oil with their product and selling the result to the oleomargarine manufacturers. This enables the latter to make a slightly colored imitation of butter, which is being sold in evasion of the tax of ten cents a pound.

There were 623 deaths in this city last week, reported to the Board of Health. This is 8 more than the previous week and 93 more than the corresponding week of 1902. Of the foregoing 314 were males and 309 females; 65 died of consumption of the lungs; 114 of inflammation of the lungs and surrounding membranes; 3 of diphtheria; 16 of cancer; 20 of apoplexy; 30 of typhoid fever; 2 of scarlet fever, and 4 of small pox.

FOREIGN.—The efforts to settle the claims of the European Powers against Venezuela was begun in Washington on the 27th ult. by a conference between Minister Bowen representing Venezuela and the representatives of different European governments. The question has been raised as to whether the Powers which did not join in the blockade shall share in the results secured through expensive naval operations by Germany, Great Britain and Italy. The question involves the right of the preferential treatment of the allied Powers as against France, Denmark, Holland, Norway and Sweden, Belgium, Spain and the United States in the payment of indemnities.

A dispatch from St. Petersburg mentions that great unrest has occurred in Teheran, the capital of Persia, on account of a religious sect which aims at the overthrow of Mohammedanism. This Ebabist sect, as it is called, has been scarcely heard of for a century, and it has obtained a remarkable hold in Persia, and promises to break down the wall of prejudice which has hitherto shut out Mohammedan countries from intercourse with the Christian nations. It was founded by one Mirza Ali Mohammed, who was born in 1825. He early conceived the falsity of the claims of Mohammed, and resolved by the formation of a new sect to annihilate his teachings.

The journey from Peking to Moscow has lately been made in 17 days and 19 hours over the Eastern Chinese and Trans-Siberian Railroads.

China and Mexico have each addressed the United States, desiring its assistance in endeavoring to restore and maintain a fixed relationship between the moneys of the gold standard countries and the silver-using countries. The disparity of value declared that the Government of China does not seek the restoration of the free coinage of silver by either the gold or silver using nations, the memorandum saying: "It is recognized by this Government that bimetalism, in the sense of free coinage of both metals, is a policy which has been definitely dis-

carded by leading Powers of Europe and by the United States, and that it would be futile to propose inter-nationally change their systems. What is asked of these Governments which have dependencies which are using should co-operate with the Governments named countries in formulating some plan for establishing a definite relationship between their gold and silver moneys and take proper measures to maintain a relationship."

As a result of experiments made in London by the Officer of Health has issued an alarming report, in which he condemns the entire vicinity of the Thames contaminated with sewage. Not only oysters are said to be viewed with suspicion. The Thames fisheries are a ploy to a large population, and the report is said to have started an agitation for some more effective means of disposing of London's sewage.

On the 24th ult. Mont Pelée on the island of Martinique was again in eruption, and about 800 feet of one of the volcano is reported to have been blown off. The volcano of Isalco in the Republic of Salvador is reported to be emitting smoke and fire at frequent intervals.

Earthquakes in Urique, Mexico, occurred on the 25th, 26th and 27th ult. Extensive deposits of asphalt and petroleum at Mexico, and an American company has lately entered into a treaty for tracts of land upon which these deposits are found containing more than 9,000,000 acres. It extends along the coast of the Gulf of Mexico, from point near Tampico north for a distance of more than 75 miles, and runs back from the coast for a distance of 75 miles.

NOTICES.

A FRIEND with experience in dressmaking and sewing wishes employment in private families. Address "S," 327 Vine Street, Camden.

CALN QUARTERLY MEETING of Ministers and laymen, Fifth-day, the 12th instant, will be held at the house of Elhanan Zook, at the usual hour, 10 o'clock, A. M.

WESTTOWN BOARDING SCHOOL.—A stated meeting of the Committee on Admissions will be held in Committee Room, Fourth & Arch Streets, on Seventy-first instant, at 10 A. M.

JOHN W. BIDDLE, Secy.

WESTTOWN BOARDING SCHOOL.—For carfare persons coming to Westtown School, the stage line trains leaving Philadelphia 7.16 and 8.15 A. M., 4.41 and 4.32 P. M. Other trains are met when necessary at Stage fare, 15 cents; after 7.30 P. M., 25 cents when necessary. To reach the school by telephone, wire Westtown Phone 114x.

EDWARD G. SMEDLEY, Superintendent.

WESTTOWN BOARDING SCHOOL.—Application of admission of pupils to the school, and letters of introduction and discipline should be addressed to the Superintendent.

WM. F. WICKERMAN, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to the Superintendent.

EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

DIED, at her residence near Danville, Ind., on the 10th of Twelfth Month, 1902, RUTH HADLEY, widow of John Hadley, in the eighty-first year of her age; a native of Ohio and elder of Mill Creek Monthly and Participants of Friends. She had been afflicted for several years with rheumatism, and her suffering had been borne with much patience and courage. Her life seemed slowly to be passing away, and she was engaged in giving counsel and encouragement to those who were ready to follow by the way, to be faithful. She was a life-long member of the Society of Friends, and evinced her attachment thereto by her regular attendance at meetings, as long as health permitted, and her earnest endeavors both by example and precept in holding and propagating the doctrines of the Society, as professed by early Friends.

First Month 14th, 1903, at Clements, Md., FRANCES G. RHOADS, daughter of Jonathan and Rebecca G. Rhoads, in the thirty-sixth year of her age.

THE FAILURE OF SUCCESS.—We see this
as part of the title of a recent book:
"Is Christianity so great a Failure?"
Now and then a magazine article appears,
"The Failure of Christianity." This seems
as absurd as to write about the failure
of Success, or to uphold sin as a man's truest
needs in life, or to affirm that the distinctly
non-Christian nations have advanced the most
successfully.

On the writers point out an instance where
man has fully embraced Christianity, sub-
stituting to be possessed of and governed by
the Spirit of Christ, and has found it a failure,
been himself a failure while so actually
successful?

Why that the failure which they bring
view are the failures not of Christianity
but the lack of Christianity in professors
of it.

The same must be said of the alleged failure
of Quakerism. Many bearing its name
are revealed, but the principle of the influence
and guidance of the immediate and perceptible
operation of the Holy Spirit, has not been,
and will not be, a failure upon earth. Quakers
may fail to be Quakers, but Quakerism
cannot fail. Nor can it fail, while there
remains one, even Christ Jesus, who can speak
a man's condition, or "uphold all things by
the Word of his Power."

The Friends' "Collect."

At the opening of a philanthropic meeting
in this city, a clergyman was asked by its
president, if he would please offer prayer.
Excuse me," was the response, "[I haven't
anything to collect with me." "Then pray from your
heart," said the chairman. But the minister
did not have the heart to do it. This being the
case, he was right in abstaining.

In another part of the country an assembly
came together to hear a moral lecture from a
clergyman. After some introductory words,
he called on a young Friend in the audience
to lead in prayer. After a few moment's re-
flection the young man arose and said, in sub-
stance, that he did not find the witness of living
authority with him at that moment for vocally
representing the company's wants before
the Throne of Grace; but while the saying of
prayers was not always obligatory, he desired
that we might live in that in which we should
"pray without ceasing." The minister was
taken aback, and said that if he had reflected
that the brother was one of the Society of
Friends, he would not have called upon him
thus. At the conclusion he sought out the
young Friend and thanked him for his testi-
mony, and said, "[I never have been so im-
pressed in my life with the solemnity of the
true standard for public prayer. I have been
taught a lesson."

Thus neither the ritualist nor the Friend
had his *collect* evidently with him for public
prayer. That of the former was a set form
"in the oldness of the letter" on printed pages;
that of the latter was "the true and holy
witness,"—Christ's inspeaking Word and Life,
collecting a sense of the needs present and
gathering the soul for a public offering in the
light of the immediate Divine will, Word, and
baptism. Our collect and whole Liturgy is
Christ. His grace is sufficient for us,—most
especially in Divine worship. Christ is to the
real Friend, "month and wisdom, tongue and
utterance." Will we not believe on him *practically*?

Now that there is in process of fabrication
under our name a "Hymnal," the whole ground
which Friends had contended for during two
hundred and fifty years is yielded back and
openly conceded to the systems which have
formulated man-made performances of a wor-
ship subject to human will and call. Though
those children of the same principle, the
"Friends' Collects" and Sermon-book, author-
ized or appointed to be read in collective ser-
vices, have not openly crept in as yet, never-
theless, since vocal Preaching, Prayer, and
Praise are placed on the same ground of au-
thority for their delivery, who that endorses
the book-praise with imitated intonations, can

forbid book-prayers or book-sermons? The
whole outfit belongs to the same principle for
so-called worship.

Furthermore, a new "progressive" measure
has come upon the stage of stated services.

We said, in our first number of the year,
that the machine minister, ordained in what-
soever correct form, whose utterance was not
of the fresh putting forth of the Holy Spirit,
"stands as a human manufacture, a pulpit
phonograph." Does any one assume that the
gramophone, or phonograph, sings, prays, or
sounds forth a homily "with the spirit and the
understanding also?" But if religious
services are to be done without the witness
and anointing of the Holy Spirit, why should
not their channel be metallic as well as of
flesh? There is a beginning of thinking so,
which our suggestion of the phonograph
scarcely preceded. To quote from a recent
paper: "The use of the gramophone at the
funeral of —, came about in this way: It
was a question of economy from the doctor to
the undertaker—one of those cases where a poor
man cannot afford to die. As a soloist or
choir would involve carriage-hire, even if the
singers donated their services, the idea of
using the gramophone suggested itself . . .
So the service was opened by the selection
'The Holy City,' and concluded with 'My Jesus
as Thou Wilt.' It was the first time the cler-
gyman had handled such an instrument, as
doubtless it was the first use of a gramophone
at such a service. The innovation did not ap-
pear to provoke surprise [why should it, as
worship is taught?] and the clergyman re-
ceived cordial thanks . . . There is no reason
why a wise use of this wonderful instrument
may not render efficient service at funerals.
[How appropriate for the funeral of worship
are mechanical performances in its place!] In
the light of the present possibilities of this in-
strument, undertakers and sextons may do by
proxy this service, where the services of a
clergyman are not obtainable or perchance not
desired. [And what if the clergyman also is re-
garded as the worshiper's proxy?] Fraternal
societies and lodges with a burial ritual can do
the same, with advantage on the side of the
gramophone, where the lodge chaplain is a
poor reader. Why not?"

The times of this ignorance Quakerism can-

not wink at. It regrets that the signs of the times for sections under the name of Friends are trending towards that unworthy view. Let this legitimate outcome of the popular outwardness in worship which many calling themselves Friends make haste to patronize, warn them of their progressiveness towards the "prayer-wheel" and praise-wheel system. If mechanical inventions can laugh us out of mechanical and routine systems of worship, they may tend rather to the furtherance of the gospel; as we trust other modern inventions are tending to the discouragement of warfare between nations.

But Quakerism was made for something better than graphophone collects, or machine praises, stated exercises, routine worship, or will-worship, in the mind and wisdom of man. It was made for a standing protest against these, by setting an example of spirituality in the higher walk and the higher life and worship of the kingdom which stands "not in word but in power." Would we not all feel happier to unite in a return to that?

"Tithes of All I Possess."

A lady sat in her quiet, beautiful room. In the early morning she had read the words of the Pharisee: "I give tithes of all I possess," and now, in thought, she was reviewing the day's busy work; but all through the crowded hours the words had followed her persistently, and she found herself continually repeating, "I give tithes of all I possess."

Shopping in the crowded stores, poring over the wealth of new books, choosing the exquisite roses for her sick friend and the beautiful picture for her young daughter, sitting in her sunny home with fingers moving swiftly over the beautiful fancy work, continually the refrain ran on: "I give tithes of all I possess."

It annoyed her, as she had often been annoyed by a strain of a foolish song, caught up by the memory and reiterated mechanically.

"It was a miserable old Pharisee who said it," she reflected, "and I don't know why I should be haunted by it. It is much the easier way to keep the peace between your conscience and so many conflicting claims. When I've laid aside my tenth I feel perfectly comfortable over the rest of the dollar."

Silence for a few minutes in the busy brain, and then a little laugh with the thought: "The Pharisee seems to have been perfectly comfortable about the rest of his dollar or shekel. I suppose the great trouble with him was feeling too comfortable about his tithes—as if that ended the matter. I never felt so, I am sure. My tithe is a real thank-offering, not a tax."

Again the needle sped on its way, but the face above it grew every minute graver and more thoughtful, until at last the hands lay idle in the lap and the eyes were lifted to gaze slowly about the beautiful room, taking in its charm and harmony and comfort.

"Tithes of all I possess," said the mistress of the home. "I never thought before how much that meant, and what a very small part

of my possessions the money was. It would mean a tithe of my time, and my thought, and my ingenuity, and my ability to make things go.

"All I possess"—that would mean love, human love, that makes me blessed among women. I am sure I never gave that. I never in my life gave any real love to those women whose lives are empty of it. I haven't taken time to love them. I have just let them be crushed out of my thoughts. I don't know just what good love could have done them; but it might have done me good, made me more grateful, more generous, more eager to help, and that would have reached to them.

"All I possess," would mean opportunity and influence with others; it would mean the beauty and rest and delight of my home; but how could I tithe that except with those who can be brought in to share it?

"If I had plenty of money I should love to help in every other way, but I have no talent for personal giving. Yet that was the way Christ helped—who loved us and gave himself for us—first the love, and then the giving of himself.

"Perhaps, if I had the love, really, truly, in Christ's measure, the giving would be easier. I might even have to give, for Paul says: 'The love of Christ constraineth us.' Well, I'll never say again: 'I give tithes of all I possess.'"

She sighed and took up her needle, but it moved slowly now, and in place of the haunting words, a gentle, persuasive voice seemed to whisper, "Freely ye have received, freely give." "Beloved, if God so loved us, we ought also to love another." "Wherefore receive ye one another, as God for Christ's sake hath received you." The tears began to fall, and in the quiet, beautiful room, David's prayer of thanksgiving ascended again: "Bless the Lord, O my soul, and forget not all his benefits."—*Leaflet.*

THE very natural desire to know things systematically and comprehensively must often give way to the Spirit's wish to show us things practically and next in order of our needs. Educational advantages we may have missed, or possibly may have forgone for Jesus' sake, may be more than made up by the advantage of having every event and experience illuminated and made an object lesson in the school of Christ. The shame we might feel in contrast with those who surpass us in worldly scholarship, is more than offset by the comfort we have in seeing things brought to pass by the learning the Holy Spirit vouchsafes to us.—*Selected.*

CHRIST was not a mere example; that cross was never needed to be set up to explain to me the meaning of the word example. He was an example, but not in his dying, not in his propitiatory act; He was an example, but on the cross, and all that belongs to the cross. He is the power of God unto salvation, the atonement, the mystery, that makes all discords harmonious. . . . We want more than an example; we want somebody to take off the leprous robe and give us newness of life. And that some One must not be one of ourselves, cannot be one of ourselves—must be God, God with us, Emmanuel, the incarnate Spirit.—*Jos. Parker.*

For "THE FRIEND"

Growth of the Roman Hierarchy.

Condensed from Chas. Tylor's "Picture of Early Church History."

The first officers in the community of Christians were the Elders or Presbyters, and the Overseers, (*Episcopi*, Bishops). The term was taken from the Jews, the latter the Greeks; and at first they were only laymen names for the same office. To them were added the Deacons. After a while one presbyter or overseer, under the name of bishop, was looked upon as head of the whole congregation.

The office of bishop rapidly grew in power and dignity; ambitious or mistaken men began to dream of even setting the Councils above the State.

It need hardly be said that this notion of the State being in subjection to the Church is entirely contrary to the New Testament. It is equally clear, on the other hand, that the church is independent of the State; she can have no other ruler than her Divine Lord, Jesus Christ.

The exalting of the bishop was followed by the separation of believers into clergy and laity. Such a distinction was unknown to apostolic and primitive times. The only distinction under the gospel is that of all believers. The distinctions which Paul makes between Christians are founded not upon office, but upon the variety of gifts. But when the Church had begun to leave her first love, she took the place of Christ, men fell upon the shadows and patterns of the Old Testament. The process was gradual.

During the second century a priesthood was still unknown. Ignatius with all the claims he puts in for the supremacy of the bishop has no such idea. Justin Martyr says nothing of it. But at the beginning of the third century Tertullian gives to the bishop the title of High Priest; and Origen, although he maintains the priesthood of all believers, and the sacrifices of the gospel are spiritual, yet sometimes speaks of the ministers under the names of Priests and Levites. By the middle of the third century Cyrian has completely identified the new clergy with the Jewish priests. Now where there is a priesthood there must be a sacrifice; and so the simple partaking together of bread and wine grew into a ritual act, and was in the end developed into the idolatry of the Romish mass.

Moreover, as the notion of a priesthood came to prevail in the Church, the old idea of the priestly character and consecration of life of every individual member was lost sight of. The clergy suffered loss because they supposed themselves to belong to a superior class, and to be more holy in character than the people; and the people suffered because the high gospel standard of holiness and unworldliness which the Lord had set for all his disciples, was removed, and a new standard set up in its place. Another result of this change was that the affairs of the Church, which at first were transacted in the whole body, fell into the hands of the priests, and so the Church lost strength and independence.

In the third century Gregory was bishop of Neo Caesarea. He ruled his diocese with vigour, but in his desire to enlarge the limits

to Church, he made a concession to the
as which was the occasion of much weak-
ness. "When he saw," says his biographer,
the ignorant and simple multitude clung
to his idolatry on account of the sensuous de-
light it afforded, he allowed them at the birth-
days and festivals of holy martyrs to give a loose
to their appetites, hoping that in time
they would of their own accord, rise to a more
exalted manner of life."

We know that the hermit's cell and the mon-
astery are no outcome of the gospel. Our
Lord, in his ministry, left no example of such
life, nor did He give any precepts which
might apply to it. Elijah and John the Bap-
tist, at their home in the desert, but he that
dwelt in the kingdom of heaven is greater
among them.

The origin of the ascetic life is to be sought
in India and Thibet, in the practices of the
Jains and Buddhists. It early made its ap-
pearance in the Church, but for a while the
higher view of the Christian life made head-
way against it. "Do not," says the Epistle
of Barnabas, written about A. D. 100, "retire
into a life solitary life as if you were al-
most perfect, but, coming together in one
place, make common enquiry about what con-
vener general welfare."

At a century later Clement of Alexandria
wrote "It is not in a solitary life that a man
knows himself to be a man, but he who as a
husband and the father of a family, endures
the trials of providing for wife and children
and servants, without allowing himself to be
swayed from the love of God." The monastery
went out of the hermitage. The first was
said to have been established on an island in
the Nile, not far from Thebes. The monks
found no means idle; they tilled the ground,
wove baskets from the Nile rushes, and built
boats which the produce of their labor was
sent down the river to the Alexandrian mar-
kets. They fasted often and gave much time
to prayer. Many of the purest and noblest
in the age betook themselves to the mon-
asteries, but many turbulent spirits also were
found there; ignorant and fanatical
men who, so far from living a life of tran-
quil devotion, meddled in all kinds of public
political and religious.

As time went on, Christians became more
and more numerous. The wife of the Em-
peror Diocletian and his daughter were Chris-
tians, and many high offices in the palace were
held by Christians. There were also many
soldiers in the army. Instead of the
persecutions in which the brethren had been
compelled to meet, large and handsome pla-
ces of worship had now begun to spring up,
and with the increase of wealth and outward
prosperity there had been a decline in faith and
piety; and the accusation was made that "some
of the light have been shepherds of the
darkened for nothing but to be lords over
of heritages."

Nevertheless, even in its degenerate state,
Christianity was intolerable to the heathen. A
renewed persecution broke out, and of those who
remained to their faith many were destroyed,
and with unspeakable torments. Others to
save their lives consented to offer to idols.

After some years Constantine became emper-
or, and publicly declaring himself a Christian,
issued an edict of universal toleration.

In 397 Chrysostom was chosen to be the
bishop of Constantinople. His predecessor
had lived in a style of princely splendor. To
a man of Chrysostom's habits, such a mode
of living in one who ought to be an example
to the flock, was intolerable, and he at once
showed his contempt for it. He dis furnished
the palace and sold the costly plate and rich
carpets, and with the proceeds built hospitals
and made provision for the support of the
poor. Instead of interchanging sumptuous din-
ners with the wealthy, he ate the simplest
food, alone in his chamber. He seems even
to have regarded social intercourse as a waste
of time. Spiritually minded, however, as he
was, he gave his sanction to the superstitions
of his time, urging them forward with all the
force of his eloquence. Not content with ex-
alting the merits of fasting, alms-giving, good
works, and the unmarried state, he fostered
the worship of saints and relics, and above
all, carried the pretensions of the priesthood
to the highest pitch of presumption. "Al-
though," he says, "their abode is on the earth,
the priests are entrusted with the manage-
ment of things in heaven, and receive an au-
thority such as God never granted to angels
or archangels." "Out," he exclaims, "upon
the madness which would despise an office
without which neither salvation nor the prom-
ised blessings can possibly be obtained."

One of the most eminent rulers and teachers
in the early Church was Augustine, a Nu-
midian. His father was a pagan, his mother,
Monica, the "pattern of mothers," was a
Christian. Notwithstanding her care, he fell
while a youth, into sinful habits. The mother
sorrowed more than those that weep for their
dead children. One who would comfort her
said, "Go thy way,—and God bless thee, for
it is not possible that the son of these tears
should perish." When the great change came
to her son, Augustine having now given him-
self to the Lord, in accordance with the ideas
of the age, took the vow of celibacy and with-
drew from worldly concerns, and began a life
of fasting, prayer, meditation and study, and
in after years became a bishop.

He did not carry his self mortification so far
as the monks of the East. The diet of the
brotherhood in his monastery was chiefly of
vegetables, but flesh and wine were provided
for the visitors, of whom there was a contin-
uous flow. On the dining table was carved a
Latin distich, "He who slanders the absent,
is forbidden to sit at this board." If any one
broke this rule, Augustine used to tell him
that either the verses must be effaced, or he
must leave the table.

Augustine was a very diligent and powerful
preacher. The fire which burnt in his own
soul kindled a corresponding flame in the souls
of his hearers. Like all true Christian preach-
ers he depended for success on the help of the
Holy Spirit, saying, "let us give heed to our
Lord's words, 'Take no thought how or what
ye shall speak, for it shall be given you in that
same hour what ye ought to speak: for it is
not ye that speak but the Spirit of your Fa-
ther that speaketh in you.' If the Holy Spirit
speaks thus in those who for Christ's sake are
delivered to the persecutors, why not also in
those who deliver Christ's message to such as
are willing to learn?"

But alas! it was not easy to carry out the

principles of peace and charity given by the
Lord. Earthly power was now used by those
who had hitherto been as strangers and so-
journers. Theodosius, the emperor, was a no-
minal Christian, and he ruled the East with a
rod of iron. "It is our will," came this com-
mand, "that all the nations who are subject
to the rule of our clemency shall adhere to
that religion which the Divine apostle Peter
gave to the Romans. We believe in the one
Godhead of Father, Son and Holy Ghost, with
equal majesty in the Holy Trinity. We order
those who follow this law to assume the name
of Catholic Christians. (Catholic signifies
general; universal.) We pronounce all others
to be mad and foolish, and we order that they
shall bear the ignominious name of Heretics,
and that they shall not presume to give to
their conventicles the title of churches. We
warn them that they will be visited, first by
Divine vengeance, and secondly by the stroke
of our authority, which we have received in
accordance with the will of heaven." At this
time there was a sect found only in the North
African province, called Donatists, which had
increased until they were almost as numerous
as the Catholic Christians. With the same
faith, the same worship, and nearly the same
discipline, there were thus two rival commu-
nities, each claiming to be the true Church.
The predisposing causes of the Donatist schism
were the belief, early introduced into the Af-
rican Church, that the validity of all sacerdo-
tial acts depended upon the personal character
of the agent; and the question, arising out
of that belief, as to the eligibility for sacerdotal
offices of the traditores, or those who had de-
livered up their copies of the Scriptures under
the compulsion of the Diocletian persecution.
The exciting cause was the election of a suc-
cessor to Mensurius, bishop of Carthage, who
died in 311. Mensurius had held moderate
views as to the vexed question of the treatment
of the traditores, and accordingly a strong fa-
natical party had been formed in Carthage in
opposition to him, headed by a wealthy and
therefore influential widow named Lucilla, and
countenanced by Secundus of Tigisis, primate
of Numidia. This was a state of things which
Augustine could not endure to behold. He
not only longed to bring all men to what he
deemed the peculiar privileges of the Catholic
Church, but believed like Cyprian that outside
her pale there is no salvation. At first Augus-
tine tried persuasion. He proposed a confer-
ence between the Catholic and Donatist bish-
ops. The Donatists agreed to the proposal,
but unwillingly; they were satisfied that they
were in the right, and they dreaded Augus-
tine's skill in argument. At the meeting in
Carthage the Donatist bishops showed great
suspicion, and conducted themselves in a dis-
courteous and even offensive manner. The
disputation lasted two days; but although the
Donatists were fully heard, they had no fair
chance. It was determined from the begin-
ning that they should be defeated and con-
demned. Accordingly they were adjudged to
have lost their cause and to be guilty of
schism. The alternative was offered them
of returning to the Catholic Church or of being
swept off the face of the earth. Unhappily
Augustine consented to this iniquitous sen-
tence. For a while, indeed, he could not
make up his mind to employ force. At one

time he said, truly and wisely: "You must go forward simply with the word of truth; you must seek to overcome by argument, else all the effect will be that instead of open and avowed heretics you will have hypocritical Catholic Christians." But in the end false principles prevailed. He made the fatal mistake of putting himself and his fellow bishops in the place of God. "If any one," he says, "should see his enemy delirious through fever, running headlong to destroy himself, and should not stop him and bind him, would he not be rendering evil for evil? Yet God quickens us by wholesome fear and sharp tribulation and disquiets his rebellious people by severe chastisements."

The Donatists had asked: "Did the apostles ever persecute? or did Christ ever deliver any one over to the secular power?" and again, "What must that man think of God who would defend Him with outward violence?" To which Augustine had nothing better to reply than that "although instruction is to be preferred to fear, yet bad servants must be reclaimed by the rod." With a strange perversity of interpretation, he instanced our Lord's words in the parable of the supper, "compel them to come in," as a warrant for every kind of violence.

The Donatist bishops and clergy stood their ground almost to a man. Many of their followers were won over to the Catholic Church by Augustine's eloquence and the fascination of his character; and many yielded through fear. The more warlike amongst them made a stubborn resistance. A fierce contest ensued, and the world beheld the followers of the Prince of Peace engaged in slaughtering one another, and the country was thrown into a frightful state of disorder; and when later, the Vandals overran the province, the remnant of the persecuted Donatists sided with the invaders and helped them in pillaging and slaying the Catholics.

From this time persecution became the law of the Church. "Believe as we do, or die," was the choice offered to all who dared to think for themselves.

The bitter tree bore abundance of fruit, from the burning of the Paulicians to the tornado of the Albigensian crusade, the ghastly secrets of the Inquisition, to the fires of Smithfield and the massacre of St. Bartholomew.

FAME.—One thing is certain in regard to fame; for most of us it will be very brief in itself; for all of us it will be transient in our enjoyment of it. When death has dropped the curtain we shall hear no more applause. And though we fondly dream that it will continue after we have left the stage, we do not realize how quickly it will die away in silence while the audience turns to look at the new actor and the next scene. Our position in society will be filled as soon as it is vacated, and our name remembered only for a moment—except please God, by a few who have learned to love us, not because of fame, but because we have helped them and done them some good.—*Van Dyke.*

THE real time to work is when indolence most tempts, is most fertile and ingenious in expedient and argument. You do best work then if you will.

Science and Industry.

THE LOCOMOTIVE.—In 1831 a jeweler in Philadelphia took a notion to make a toy locomotive for exhibition in a museum. The success of the model, says the *Scientific American*, brought him an order for a locomotive for the Philadelphia, Germantown and Norristown railroad company. The jeweler, whose name was Mathias W. Baldwin, completed the since famous little four-wheeled locomotive "Old Ironsides," not as big as an "L" engine, which did duty on various roads for over twenty years. Since those days the business of the Baldwin Locomotive Works in Philadelphia has grown immensely. The one thousandth locomotive was built in 1861, and the five thousandth in 1880. Three well-known types, the "Consolidation," the "Mogul," and the "Atlantic," have originated there. In 1889, the ten thousandth locomotive was completed, and in 1896 the fifteen-thousandth. This last spring the company celebrated with special festivities the building of its twenty-thousandth locomotive, a four-cylinder compound, weighing eighty-six tons, its cylinders having the diameters of fifteen and twenty-five inches, respectively, while "Old Ironsides" weighed but nine tons, and had a cylinder only nine and a-half inches in diameter. The *Scientific American* is right, says the *New York Advocate*, in declaring that it would be "difficult to find a form of mechanical construction in America which bears more strongly the imprint of our national characteristics than the American locomotive. In its general appearance, constructive details, and unquestionable convenience of operation, it stands entirely distinct as a type among the hundred-and-one styles of locomotives that are manufactured in the shops of the world." It should be remembered that in the evolution of the locomotive, as in that of many other now highly developed types of machines, many inventors, have successfully had a hand, no one of whom could claim to be the sole creator of the splendid modern "iron horse," but concerning all of whom it should be affirmed with a modern application of the scriptural saying: "Other men labored, and ye have entered into their labors."—*Presbyterian.*

THE toes of civilized people have lost much of their cunning as helpful members of the body in any work that requires skill. The Maya people of Yucatan, however, have kept the free-and-easy use of the toes in doing many kinds of work. It is said that the Maya women, who always go bare-footed, will pick up a pin from the floor as easily with their toes as their fingers. An archaeologist who has spent some time among that people in the interest of the Peabody Museum, of Harvard University, tells the following anecdote of his landlady at Chichen Itza:

Coming into the house one day, the American noticed that the pig had been rash enough to trespass upon the domain of the mistress of the house. The woman was in close pursuit of the intruder, but piggy would look in any direction other than toward the door.

Had she been compelled to stoop and seize the animal with her hand, the outcome of the chase might have been doubtful. Mayan training, however, gave her a great advantage. She reached out her foot as the pig ran by,

seized him by the tail between her great and the second toe, and with a graceful of the leg she landed the pig some yards beyond the threshold.

When told by the American that he had never seen the thing done in his own country the Mayan woman replied that it was as done with the toes as with the fingers. —*Youth's Companion.*

FOR the first time in many centuries a thing modern has appeared on the site of ancient city of Carthage. Here where once flourished the arts of war and peace, it was but a vast solitudinous plain. Of the way through which the conquering Hannibal marched in triumph amid the cheers of his countrymen, nothing now remains but the shadeless wheat fields. Instead of the plow war horse, the stalking camel plods on, drawing the plow or cultivator. Instead of the triumphant warrior is seen the tanned African, devoid of pride, spinning in self-reliance. The soil, though, is as rich as it was on the day when the Phoenicians founded the city, and the American and his remnant influences have found their way to the heart of the spot where the Romans wrought such destruction in their conquests. A modern American binder, made by the International Harvester Co., has been at work on the site of this ancient city of Carthage, with Americans in charge of a gang of native workmen. The machine is a source of wonderment to the natives, for generations have employed only the most dest of farm implements in harvesting and tilling the soil. The place is on the northern coast of Africa, about twelve miles from the present city of Tunis. American farm implements are now in general use here, and the market has been found a lucrative one.

THE growing scarcity of rubber and the increasing demand for the many commodities it now supplies has caused capitalists to seek new fields for its cultivation. It has been found to grow quite prolifically along the Isthmus of Tehuantepec and further south, and several companies have already been formed to push the enterprise. It takes about two years for a rubber tree to yield returns. The tree is then tapped (cut), and the thick milky sap is caught in a receptacle placed at the base of the tree and scraped from the trunk with knives. The process is not unlike that of gathering the sap of a maple tree.

Tropical Truth, a publication devoted to the interests of Tropical America, says: "The cultivation of rubber in this section is a great future, but is not yet sufficiently developed to make regular returns in commercial quantities. After eight or ten years a plantation is supposed to be immensely profitable and will last for forty or fifty years without replanting."

A YOUNG Ohio farmer attributes a good fortune entirely to his father's sense. A great field which had never been cleared of stumps was recently taken in hand by a son who discovered that the huge and old stumps were of black walnut, exquisitely grained. He sent for a furniture maker who realized their value for veneering, and sold more for the stumps than the former owner

whole field. Paternal indolence is not generated with such quick-wittedness and vision in the son.

Any girl ought (and it would not harm a girl) to learn to sew and to sew well, on the ground that she may some day need to make her own clothes and those of others. No matter how improbable may seem the advent of that day, it should be recognized as a possibility. To have skill in the simple task of sewing is to have drawn the fangs of the little serpents which make the torments of sudden poverty.

To doubt many women have to sew much, and to be forced to wish they might never see a needle again; but ignorance of the work will make their lot only the harder, not the easier.

A great cold turned our atmosphere to liquid, and it would make a sea thirty-five feet deep on the surface of the whole globe.

'Time of Peace, Educate for Peace.

In proportion as a military basis is the basis of society, national character is switched to war lines—materialism in morals, patriotism in religion, and unconstitutionalism in politics.

To ask what it is that excites this lust for a military type of character, we shall find the answer in society's weariness of the slow progress of agriculture and industry, and of the desire for those swift returns of conquest which add whole provinces, with their fertile territories, to the empire in a single day. Without the dull and prosaic necessities of living and paying. Imperial races beset with luxury, crave the excitements of the stimulants of conquests, and not the transformation of their homely life into gay soldiery.

But it is not more important to teach men to die than to kill? And if we were to train men as systematically as we train for war, should not the laborer present a front as cheerful and alert to the world? Ruskin, as we have shown the way: "Men are enlisted for war that kills—the labor of war; they are trained, fed, dressed, and praised for it. Let them be enlisted also for the labor of peace; let them be counted, trained, fed, and praised for that."

It is an extravagant thing to demand of our men, instead of serving the State, that they should develop human good? Instead of engaging our men for the bloody work of war, let them be allured into the holy work of agricultural and industrial development. Let our young men refuse to be enlisted for war, but offer to become the servants of a society. Let them decline to be enlisted for the purpose of killing their brethren, but demand to be educated in order to help their brothers live with a life more abundant. Let them make it plain that they desire their duty to the State to be recognized, only that it be made harmonious with the ends of humanity; that they will serve their country for good, but no longer as for their contribution towards the maintenance of a universal man.

Step towards this glorious servitude to

humanity, we may find it necessary to resist the encroachments of militarism by the same means as the Quakers of the seventeenth century, and the Russian Doukhoborts of our own; by submission to fines, imprisonments, and, in the last resort, death. Even in that Great Britain which has boasted of its freedom, men may yet be driven to bind themselves in a solemn league and covenant against the rendering of military service or payment of military taxes—and to take the consequences. The culmination of militarism in conscription makes compromise impossible, forces every citizen to make choice between the Prince of Peace and Imperial Baal. The question will cease to be one of expediency, and will have become one of principle; for the adoption of compulsory service is a definite repudiation of Christianity, a deliberate return to pagan ideas. As soon as the mark of the false prophet is visibly inscribed on the forehead of Christian men and free citizens it is time for them to stand together and resist "even unto blood"—their own blood, not the blood of their persecutors. That they may not become murderers, they must be ready to be made martyrs.—From "The Moral Damage of War," by Walter Walsh.

HARMLESS FALL OF CITY HALL ELEVATOR.—From the top of city hall tower, Philadelphia, which is higher than any building in the world, an elevator car weighing twenty-four hundred pounds was permitted to fall recently in order to test the efficiency of a newly invented air cushion. It is five hundred feet from the pavement to the base of the statue of William Penn, which surmounts the tower. In the car was placed a lighted lantern, six rats, fifty incandescent light bulbs and several dozen raw eggs. The test, which is the most remarkable ever made, was witnessed by hundreds of Philadelphians and scientists from Europe and all parts of America. At a signal the rope suspending the car was cut. The fall is thus described in the *Practical Engineer*:

"There was a hiss, increasing in volume to a roar, then a bang and crash as of the breaking of a hundred window glasses as the car passed with frightful rapidity into the mouth of the air cushion. It seemed as if the tower walls were tumbling down. The bottom had been reached in less than two seconds. Think of it, over four hundred feet drop—then there was a rush for the bottom by the spectators who were at the top of the tower.

"All were dumb-founded to find the car was not damaged a particle, and the glass globes and the eggs were just as they had been placed, and the rats unharmed.

"The shock of force of the fall had been deadened by the air cushion, known as the Ellithorpe. The compressed air was forced into the air-tight well at the bottom of the elevator shaft by the downward rush of the car, gradually reaching a degree of compression sufficient to check the fall of the car.

"At thirty-five feet from the bottom the cars fits tightly into the shaft, and the compression of the air beneath began in earnest. A valve with a strong spring lets out the surplus air in the bottom of the well, permitting the car to stop with a gentleness truly wonderful."—*Popular Mechanics*.

Seven Lamps for the Teacher's Way.

By FRANK A. HILL, Secretary of the Massachusetts State Board of Education.

These are seven principles or thoughts, in particular, that young teachers—all teachers, indeed—need to have impressed upon their minds—lamps, as it were, to illumine their way. And the first lamp is that of the Wonderful Interaction. There are two realms in our mental life—that of inleading currents and that of outleading ones, that of impression and that of expression, the one receptive and preparatory, the other executive and productive. The educative process engages both realms, indeed, but in a very special way belonging to the latter. All our mental states tend to action, and it is the right utilization of the reciprocal influence of each upon the other that constitutes the gist of the educative process. The perennial temptation of the teacher is to cut this process in two; to attend to the first realm and neglect the second—to neglect, in short, the wonderful interaction between thought and deed which is the life of all genuine education.

The second lamp is that of the Royal H's—the hand standing for that action which springs from thought, the head symbolizing that thought that tends to action, and the heart giving its warmth and color to the interplay. The traditional R's are necessary; mastery of them is an accomplishment, but after all they are only tools. It is not rhetoric that rules the world, but ideas. Good English is more than a grammatical collocation of words; it is adjustment to the idea. Have something to say—that's thought; then say it—that's expression. Our times are extending the maxim: Have something to do—that's thought also; then do it—that's expression also. Hence the endless form of expression. Whatever forms are suitable for the school, they all need the backing of high thoughts and fine feelings. Better no schooling at all than a schooling put to ignoble uses. Better illiterate honesty than cultured dishonesty.

The third lamp is that of the Worker's Interest. What a pity that the joy of the child in his spontaneous activity should ever sicken and die when it comes to the school guidance of that activity. Artificial stupidity is a possible product of the schools. There are teachers who still persist in bandaging children's minds as the Chinese bandage their feet, and with like results. The teacher should distinguish between pleasure interest and pain interest. Especially should the teacher note that that interest which leads to a fine action becomes by such action a finer interest, and so leads to a finer action still. The child's interest is captured at first by the novelty of the outward; but it is bad for both teacher and child to depend too long on such mild sensationalism of method. The teacher cannot be always discharging fireworks, and the normal child at length tires of effeminate methods, hates to have his food cut into bits and tendered him in a spoon. Respect, then, his interest in doing things, his spirit to overcome difficulties, his consciousness of growing power. There are two things that modern education does not stand for—effeminacy of method and the dissipation of energy.

The fourth lamp is that of the Commendable

Items Concerning the Society.

Thirty thousand volumes of the late Wm. Stone's books left to a Hawarden library study of theology are found scores of books that statesman "had collected relating to Quakers alone."

London Quarterly Meeting held at German-house the 5th instant, the feeling seemed to be that there was a call for an appointed meeting of the members, and the date was virtually fixed for Third Month 2nd at 4.30 P. M.

Quakers are being taken to replace the old German-house at West Grove, Pa., by an entirely new and more commodious structure. Quiet evidence of a deep and growing spiritual life among the young as well as older members there, are not wanting.

Question: What instruction have you had in religious knowledge? Answer: None. Question: Who was it given? Answer: By the vicar. Answer: From England, as found in an examination. What if some children among us were sent as to parents and heads of families?

Friends from Jacksonville, N. Y., show that variations are in progress for the building of a meeting-house for the Conservative Friends of the district, in sympathy with those known as "Polar Ridge" Friends. We trust this is an increase of life among them, as well as of our own theatre.

Some years ago, says the London Friend, C. D. Leach, a member of a Baptist Church in Worthing, gave up his charge, and severed his connection with denominationalism, commencing an independent, evangelistic cause at a building known as the "Temple." In the second year of the work, from various scruples with regard to receiving a minister preaching the Gospel, C. D. Crouch left business for himself in order to provide his own maintenance, still carrying on the work of the Tabernacle.

His capital was slender. He is found, and still finds it, "a very uphill" job, as he bears testimony to the providing of food. After six years' experience of men and preaching in his New Year's letter he says, "My business engagements rendered the work of preaching more arduous than the contrary, the regular physical exertion the more practical acquaintance with affairs of daily life, have conducted to better than a fuller appreciation of that 'Gospel of the Kingdom' which is the power of God unto salvation, the everyday-life salvation." The testimony of a life of special interest and satisfaction to

any picture comes to us, says the London Friend, an American paper, of an elderly-Friend, a Lippincott, who twice a week goes to a meeting-house at Woodstown, New Jersey, to a meeting of which she is the only constant. Week by week she sits in the same seat as occupied for fifty years, sometimes keeping it, and sometimes offering words. She is the remaining Friend of the "orthodox" body in the West, and if the meeting were to fall through, she would revert to the heirs of the original Friends of the land. But P. Lippincott never fails to knock at the door with the high brass key to the meeting on First and Fifth-days. The door sends us the cutting recalls a similar scene in Hertfordshire. "One of my ancestors was a member of a group in which to build a meeting-house which was to be in the hands of the Society, as long as there was a Friend to attend it, and after which it was to revert to the heirs of the door. My grandfather was the only Friend to attend for some years, and he died about

1834, when the Monthly Meeting had to give up the house. Two Friends went over every other Sunday to attend with my grandfather."

The following appeared in the Philadelphia Record:

"THE PASSING OF AN UPRIGHT MAN.—Charles Rhoads, whose death occurred on the 25th (of First Month), at his home in Haddonfield, New Jersey, was a man whose long life of uprightness, usefulness and charitable deeds suggests the type which caused the poet Whittier to write that he had come to know in the vicinity of Philadelphia a higher civilization than he had ever seen before. Like the poet, Charles Rhoads was a member of the Society of Friends. He had two spheres of activity—one in Philadelphia, where his business life was spent, and where he was a leader in the Yearly Meeting, and one at Haddonfield, where the affairs of the Haddonfield Meeting, the cares of many private interests and the sorrows and trials of the distressed and poor were borne by him with an unflinching self-sacrifice which won him the love of those whom he served so unselfishly and the esteem of all. In any community few men would have been found who were his peers. The church had not many preachers more winning and convincing than this modest, unassuming Quaker, who on First-day mornings spoke so truly, so simply, so nobly, with such rare intelligence that it was ever a delight and a gain to hear him.

"The meeting between ex-president McKinley and Charles Rhoads, when the latter as a representative of the Philadelphia Yearly Meeting went to the White House during the Spanish-American war for the purpose of speaking a word in behalf of peace, recalls the historic meeting on the Thames between King Charles and a boat load of Quakers bound for America. In both cases the thinkers and the paths of ruler and subject were different, but they parted with personal respect.

"Charles Rhoads by a life-long assistance rendered to the negro race appeared to express the thought that the Friends, who had done so much to abolish slavery, had imposed upon themselves the duty of caring for those members of the colored race who were incapable of self-help."

Notes from Others.

Lillian W. Betts expresses the opinion that "No surer method of reaching the unchurched exists than that of undenominational effort for the community's good."

"It is one of the most hopeful signs of the times," says the *Pilgrim Teacher*, "that so many capable scholars are engaged in studying the child in order that the secret of his right up-bringing may be mastered."

Famous church buildings, such as that called the "Church of the Holy Sepulchre" and the Mosque of Omar, will be reproduced in almost their exact size in the reproduction of the city of Jerusalem at the St. Louis world's fair.

Balfour, the Prime Minister of Great Britain, is a Presbyterian, and by virtue of his office has the power to appoint deans, bishops and primates in the English Church. This is an anomalous condition, and it is hardly to be wondered at that an Episcopal authority in England is greatly exercised over it.

The one course that W. Hudson Shaw has yet to give at 15th & Chestnut Streets is one on "The Life and Teaching of John Ruskin" on Fifth-day afternoons beginning Second Month 19th.

On Fifth-day evening of next week Edward Howard Griggs, M. A. will begin a course of six lectures in Association Hall on "The Philosophy of Plato and its Relation to Modern Life." He will

deal with Plato, and not with criticism and comment upon Plato. Beginning with the lighter, tentative dialogues, such as Charmides and Lysis, following with those that present most completely the mission of Socrates—the Apology, Crito and Phaedo, dwelling then upon the complex whole life of the Republic, and closing with such dreams as the Symposium, the effort will be to present in full outline the message of Plato and to show the relation of that message to modern life.

THE MONROE DOCTRINE.—What we call "the Monroe Doctrine" is not, properly speaking a doctrine at all, says the *Baltimore American*, rather is it a declaration made by President James Monroe on Twelfth Month 2nd, 1823, it did no more than define the attitude of his administration toward the question, then pending, of the occupation and colonization of territory on this hemisphere, by non-American powers. That declaration, reiterated by Monroe Twelfth Month 7th, 1824, was made with England's knowledge and consent, and bound this nation no further than the end of the Monroe administration.

It would have lapsed with its author's exit from office had it not struck the chord of public sentiment, and had not President Monroe's successors recognized the wisdom of giving adherence to the policy defined by him. This they did, and we find that the policy of Monroe was asserted by Tyler, Twelfth Mo. 30th, 1842; by Polk, Twelfth Month 2d, 1845; by Polk, Twelfth Month 7th, 1847; by Polk, Fourth Month 2nd, 1848; by Buchanan, on Twelfth Month 6th, 1858; by Buchanan, on Twelfth Month 3d, 1860; by Grant, Fifth Month 31st, 1870; by Grant, Twelfth Month 5th, 1870; by Grant, Fourth Month 5th, 1871; by Cleveland, Twelfth Month 2nd, 1895; by Cleveland, Twelfth Month 17th, 1895; by McKinley and Roosevelt, on numerous occasions in the past six years.

Grant, in reasserting the doctrine, declared it should be extended, and on Fifth Month 31, 1870, in a message to Congress, said that thereafter territory on this hemisphere should not be held "subject of transfer (by treaty or otherwise) to any European Power."

As the original declaration of this policy was made in a message to Congress, so has been each reassertion of it, and outside of these documents the doctrine of Monroe has no official existence. It does not live in any act of Congress, nor in any of the treaties by which nations are bound, nor has it ever been recognized as a principle of international law. Therein lies its principal weakness—and outside of public sentiment, and save as a Chief Executive of the nation chooses to give it his adherence, it is non-existent. It is, therefore, not a doctrine, but merely a matter of administrative policy.

SUMMARY OF EVENTS.

UNITED STATES.—A bill to admit Arizona and New Mexico as States of the Union has been under discussion in Congress, and in a recent debate the powerful and secret influence of the Mormon Church in politics was brought to view as now felt in Utah and to some extent in Idaho. Senator Hale characterized the debate as interesting, valuable and startling, because it had disclosed a powerful religious organization, "exerting itself as a dominant, potential force" over the mind and action of its followers, which should be taken into account in future legislation.

An earthquake shock was felt at St. Louis, in Southern Illinois and in Kentucky on the evening of the 8th inst.

In a recent decision respecting the legal rights of Indians, who are citizens, Judge Bernard said:

"If the Indian is ever to lift himself into the ranks of citizenship, he must do so by assuming responsibilities; he must be trusted to manage his own affairs, even at the risk of loss of property by unwise investments or imprudent living. He can never be a man if he is always to be treated as a child.

"To think that the Congress at the present time, as shown by its enactments, is to give him an equal chance with other races in acquiring property, education and habits of civilized life and building himself a home.

"It seems to me to be a wise policy, but whether so or

not, if the laws defining it are duly executed by the executive and judicial branches of the Government, and they prove to be unwise, Congress will see the propriety of repealing or amending the same."

Dr. D. E. Salmon, Chief of the Bureau of Animal Industry, said that about 5000 animals about sixty or ninety miles from Massachusetts, Rhode Island, Vermont and New Hampshire to prevent the spread of the foot and mouth disease, and that the indemnity the Government has paid the owners aggregates over \$100,000.

Dr. Salmon said that unless new cases should develop it is probable that most of the quarantine restrictions now existing will have been removed. The disease has been reported from any point outside of New England, although a general spread was feared at the inception of the epidemic.

The report of the State Mice Inspector shows the total coal output of the State of Alabama for 1902 to have been 10,238,793 tons, an increase over 1901 of 1,358,376 tons. The skilled workmen employed in Alabama coal mines number 16,572.

The total cost of the anthracite coal arbitration hearing is now estimated at \$750,000. The operators are credited with spending about \$500,000; the union men say that their expenses will not fall short of \$150,000, and Congress has already appropriated \$500,000 for the expenses of the Commission and the salaries, at \$15 a day, of each of its members as were not already on the Federal pay roll.

The testimony in regard to the subject has now been given and several layers of note on both sides will, it is expected, be heard.

The State of Pennsylvania has between 10,000 and 20,000 persons suffering from tuberculosis. The annual death rate for this disease is about 6000. The majority of these are poor people.

The State is to be asked to appropriate \$300,000 to aid in the movement to care for those affected with this disease, and to prevent its spread, which is under the care of the Free Hospital for Poor Consumptives, and towards erecting dispensaries in the large cities.

A despatch from Dover, Del., of the 4th says: "The House of Representatives on the 2d inst. passed a bill prohibiting the manufacture or sale of cigarettes in this State by a vote of 20 to 13. It is now assured that the bill will become a law. The bill makes it unlawful to manufacture or sell cigarettes, cigarette paper and cigarette tobacco in this State under a fine of from \$200 to \$500."

The Jefferson Medical College, of this city, has offered the Johns Hopkins University, Philadelphia, free courses in medical training to the trainmen so that they may be schooled in the first aid to the wounded. This action on the part of the authorities of the college was suggested particularly by the recent wreck at Plainfield, N. J. The railroad officials have favored the suggestions offered, and in conjunction with the medical director of Jefferson Hospital, will arrange the course of illustrated lectures. The New York Medical Society has lately received a report from its Committee on Hygiene which contained several recommendations, among which are the following: "We recommend that persistent agitation of the duty of the community to the tubercular poor be infused with new enthusiasm. The senior students in every grammar school and high school should be required to pass an examination in the subject of tuberculosis. Public lectures in each school district should be frequently given. By these educative efforts much could be done to teach the sanitary science of every-day living. We recommend the compulsory registration in the proper office by every physician of every case of tuberculosis, and that in case of death the house be thoroughly disinfected by the proper health officers."

treatment at the hands of a civilized nation. It is claimed that should the peace Powers and the blockading Powers agree to such a principle, they would incorporate in the law of nations a doctrine in conflict with the tenets of all modern day ethics. The refusal of Minister Bovea to accept the proposition was not followed by instructions from the three allied Powers to their representatives in Washington to submit the question of preferential treatment for settlement to President Roosevelt, and in the event that he declines to act as arbiter, to take that point, and possibly the entire Venezuela controversy to the Hague Tribunal for settlement, thereby breaking off negotiations with Minister Bovea.

A despatch of the 6th from Washington says: "President Roosevelt has declined the invitation of the allied Powers to arbitrate the question whether they shall receive preferential treatment over the other creditor nations in the settlement of their claims against Venezuela. The matter, therefore, now will be referred to the Hague Tribunal, and this, it is stated, will result in the immediate raising of the blockade. The representatives of Germany, Great Britain and Italy have been engaged in preparing a protocol on behalf of their respective countries for presentation at The Hague Tribunal."

It is announced that the new White Star steamship *Cedric* will start on her first voyage to New York on the 11th instant. This is the largest vessel afloat. She is 350 feet long, 45 feet wide, and has a displacement of 21,000 tons. The *Cedric* is 700 feet in extreme length, 75 feet in breadth, 49 feet deep, with gross tonnage 21,000 tons, and displacement 38,200 tons. It is stated that the *Cedric* will have accommodation for 350 first class, 250 second saloon and about 2000 third-class passengers, in addition to a crew of 335 men, 92 of whom will be in the engine-room.

Information from northern China has been received that a large army is being organized to proceed against foreigners in Kasau.

A Swiss invention has been patented for transporting live fish which appears likely to be commercially useful. The device consists of a tank or cylinder containing a quantity of oxygen attached. The most delicate fish can be packed in great quantities and will keep alive for 36 hours, and it is expected that with larger cylinders of oxygen the time will be lengthened. It is said that large quantities of live fish are now being sent from Switzerland to other parts of Europe by the inventors.

A cable has lately been laid across the English Channel from Dover, England, to a point on the coast of Belgium near Ostend, a distance of about 68 miles, through which it is expected telephonic communication will shortly be opened. It is said to be the longest submarine telephonic cable in the world.

Information has been published of a great loss of life in the Society Islands by a great storm which swept over these islands between the 13th and 16th of the First Month, accompanied by a tidal wave. It is estimated that 1,000 persons perished.

A despatch from Berlin says Professor Baginsky announces that a discovery of serum against scarlet fever has been made by Dr. Aronson. Good results have already been obtained. The professor believes the serum will prove to be a specific for this disease.

The Russian periodical press has lately been held, which adopted several resolutions declaring the importance of the removal by the Government of restrictions upon a free and full discussion of public affairs. One of these states that "Considering that, in the degree of development attained by public life and public opinion in our country, the existence of an independent press is a general national requirement; that this necessity is particularly urgent in the present complicated and difficult phase of Russian history; that the press cannot fulfill the important functions imposed upon it in present circumstances, being subjected by the existing legislation to the unlimited discretionary authority of the administration; we regard the thorough going revision of existing press legislation as a matter of the highest importance."

A recent despatch from Montreal says Marconi has almost perfected apparatus to measure the distance between a ship at sea and a station on land. This will be accomplished by means of a moveable disc, which will be affected by the current from the ship. Naturally, the further the ship the weaker the current. The disc will have stationary stations, which will register the distance from the ship to the shore. Stations will be established all along the St. Lawrence River and gulf to Belle Isle.

A despatch says the Czar has decreed severe disciplinary measures for all Finlanders who failed to comply with the military requisitions in 1902. These total

14,798 men. The decree orders that all delinquent in State service be immediately dismissed, passport be granted to any of them to go abroad the next five years, that all shall be enrolled Landwehr and that a full battalion of life guards recruited therefrom.

Indifference as to religion and socialism are as so prevalent in Germany and Austria among the middle classes as to be undermining the basis of faith.

A severe earthquake accompanied by loud rum reported to have been felt in the western part of on the 5th inst. Mont Pelee is reported to be still

NOTICES.

WANTED.—A mother's helper in a Friend's Address Box 42, Haddonfield.

WESTOWN BOARDING SCHOOL.—A stated meeting of the Committee on Admissions will be held in the Lecture Room, Fourth & Arch Streets, on September 14th instant, at 10 A. M.

JOHN W. BIDDLE.

WESTOWN BOARDING SCHOOL.—For convenient persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met with regular Stage fare, 15 cents; after 7.30 P. M., 25 cents each. Reach the school by telegraph wire West, Phone 114x.

EDWARD G. SMEDLEY.

WESTOWN BOARDING SCHOOL.—Application admission of pupils to the school, and letters in to instruction and discipline should be addressed to

WM. F. WICKERSHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester.

Friends' Library, 142 N. 16th Street.

—Open on week-days from 11.30 A. M. to 2 P. M., and 3 P. M. to 6 P. M. Also on evenings in which the Institute Lyceum Meetings are held from 7 P. M. to 9 P. M. New books include the following: BAYNE, S. G.—On an Irish Jaunting-car. BLANCHAN, Nellie—How to Attract the Birds. BOWTTELL, G. S.—Reminiscences of Sixty Years of Public Affairs.

DUMORE, A. R.—Nature and the Camera.

FISHER, S. G.—True History of the American Nation.

HIGGINSON, T. W.—John Greenleaf Whittier.

KEYSER, L. S.—Birds of the Rockies.

LUDLOW, J. M.—Incentives for Life.

MATHEWS, Alfred—Ohio and her Western Resources.

THWAITES, R. G.—Daniel Boone.

DIED, at her late residence, 2030 Ontario Street, Philadelphia, on the sixth of September, 1902, ANNE STORY HULME, widow of Samuel Hulse, in her 74th year. She was a member of the Monthly Meeting of Friends of the Monthly Meeting of Friends of Philadelphia for the Northern District. "To them which came out of great tribulation and have labored, and made them white in the blood of the Lamb."

—, at his home near Plainfield, Ind., on the 20th of First Mo., 1903, ABRAHAM PEACOCK, in the fifty-seventh year of his age, a member of Plainfield Monthly Meeting of Friends, Indiana. His last illness was of short duration, but the work of preparation had not been without death bed. All who knew him felt that his aim was to deal justly, love mercy and walk humbly with the Lord.

—, on the twenty-fifth of First Month, 1903, died, at Haddonfield, N. J., CHARLES RHODES, a well beloved member and minister of Haddonfield Friends' Meeting, and a shining example of devoted service to his Lord.

With wounding word thou piercest three,
Thy neighbor, Christ and thee.

Our part effort is for the sake of wants;
Our Creator's part our wants are for the
chief effort.

More and more lost is that soul becoming
pursuing an end of less than a soul's
value. Less than one's soul is the world,
knowledge is less, fame is less, the flesh and
its gratifications are less. What will it
cost a man to make any of these an end,
and see that which is worth more,—his soul?
It is permitted that things less than the soul
should be made a means, if unto an end that
is greater. Nearer and nearer is coming that
salvation which will satisfy a soul's demand,
the chain of its activities, prayer and faith be-
come greater than itself, and more than self.

We are nearing the date of the birth of
Washington, when doubtless much will be said
of that prominent man's life and services.
But it is likely that the orators generally will
miss views upon war and the implements
of war,—what, after some experience, he
thought of them. This had taught him there
could be a better way of reconciling differences.
"My first wish," said George Washington,
is to see this plague of mankind banished
from the earth, and the sons and daughters
of this world employed in more pleasing
and innocent amusements than in preparing
implements and exercising them for the destruc-
tion of mankind." J. W. L.

"LET ALL YOUR THINGS BE DONE WITH
FEAR."—Charity is a surrender of personal
importance, but not of discernment between
principles. It so rejoices in the truth, that it
cannot be an indifference towards error. It
governs too well to tolerate known error, or
live any quarter under a misty magnanimity

or easy-going liberality. True charity is not
blind, but uncharitableness is blind. Charity
is, in part, an openness of sight into principles
and motives, because it is its business, in
order to render righteous judgment, to discrim-
inate between principles and men, and hate
the sin while loving the sinner.

There are those who do not easily distin-
guish, when principles are brought under judg-
ment, but that themselves or certain individ-
uals are intended to be arraigned. Also, on
the other hand, some in a zeal for truth but
not against men, while not suspecting that
they are scolding men, denounce principles or
dissect tendencies in terms that seem to con-
demn some men. It is difficult to disentangle
the two in thought,—the heart of a man and
the principles of his views or practice. And
it is not always wholly the hearer's or the
reader's fault that he does not discriminate
the critic's intention, as between the abstract principle
that he protests against, and its human
representatives. All three might be at fault
together,—the representative so far as he delib-
erately identifies himself with an error, the
reader or hearer whose discriminations will
not separate a principle from apparent per-
sonality, and the writer or speaker who does
not criticise both himself and his expression.

The witness of the inspeaking Word is de-
clared to be a discerner of thoughts and in-
tents of the heart; and where we so sink self
out of sight as to clear the way for a dispa-
sionate view of his discoveries of our own and
each other's true inwardness of intention and
thought, we shall be in a condition while
passing judgments or while hearing them, "in
malice to be children and in understanding to
be men."

WHILE engaged in manual labor Paul did
not forget his high and holy calling. Rather,
he made the six days work contribute to the
one day's work. If it is not the most profitable,
the shop may, nevertheless, become a valuable
place of study. The Apostle might learn the
habits, the speech and the dispositions of the
people about him, and he might at times hold
private conversation or in silence he might
meditate on the great subjects that had long
engaged his mind. Many eminent martyrs have
come out of places of toil. But when the
Sabbath came Paul entered into the synagogue
(verse 4) and taught the people, both Jews and
Greeks, who would give the more earnest at-
tention because his labor was gratuitous.—
Ledges.

An Autograph Letter of Thomas Chalkley.

Our friend Josiah W. Leeds, in his prepara-
tion of "Biographical Notes" for THE FRIEND,
introduces, in No. 29 of the current volume,
a brief account of Thomas Chalkley, "Gent-
lest of Skippers, rare Sea Saint." Quite re-
cently, the removal of merchandise and chat-
tels from one place of business to another, in
Philadelphia, brought to light the following
fragment of a letter of T. C. to his wife,
written with the careful, clear chirography
more characteristic of the Friends of a cen-
tury ago than of the present generation. This
may in part supplement the accounts of
Friends in Tortola which our columns have had
from the pen of George Vaux.

TORTOLA, Feb 16th, Eighth Month, 1741.

MY DEAR.—By this know I am well, and
safely arrived here at Governour John Pick-
erings, who with his Spouse are very Loving,
and Christian-like kind and recd me with
Hearts full of Tender Love.

Yesterday we had a large & Satisfactory
Meeting at Friend Pickerings House, Where
were many People divers not of our profes-
sion, and I hope I may say that the Good hand
of the Lord was with us. John's wife, and
Sister, the Wife of one Hunt, Appeared in
their Meeting, & as my poor self, so many were
much Affected, & broken into tenderness, &
I felt some Reward in my Bosom, or heart,
in undertaking this Religious Visit. Here was
at this Meeting a Dear Young Creature, whose
father had turned her out of Doors for com-
ing to Friends Meetings, Saying he had been
at all that Charge to buy her fine Clothes &
taught her to sing & dance and all for nothing.

I have no sight of any Return as yet, but
as Soon as I have, & have an opportunity, I
shall let thee know it. This . . . (wanting)

I have my health now better than I
have had it for Several Years, which I take to
be a great favour from him in whom we live,
move, (if we live & move well) & have our
being.

The Governor, his wife, & her sister are
Dear Tender hearted friends, & He seems to
be better Satisfied as to defence since I came
than he was before. I understand from the
Governor that the General hath Sent for the
Warlike Arms here, Saying, If the People
were Quakers they would have no need of
them, that he should want them at Antigua,
that a Good Quaker stood fairer for Heaven
than a bad Churchman. But he liked his own
Religion best, & if they would trust Providence
with their Interest they had a Right to
do what they would with their own, & he has
still Continued Friend Pickering Governor of
the Island to the Mortification of all the Great
Swords'men. Things are yet young, & ten-
der here, But we hope for a growth as above
in the best things, the Great name of the most
high be praised for his Merciful Visitations,

so be it saith my Soul. . . . (wanting) . . . One of the Dear Friends who are come to see me. In a very Scarce time & corn at 6s; p Bushell, the Usual price being 3s.

He would take no more, Saying he would not raise the price since he had plenty & it is very observable that he always has so, which the People take to be a blessing on him, because of his Charity. He is a good friend, & is now (since I came) about building a Meeting House. He tells me, he believes it will be Money well laid out. The Governor intends to build another, these are Good Examples.

T. C.

TORTOLA ye 28th, Eighth Month, 1741.

MY DEAR.—To-day here being an Opportunity for Antigua, I gladly make use of it to inform thee of my health & welfare. I have been here upwards of two Weeks on this Island, & my heart hath been much opened as also my mouth to the People, & here hath been an Open Door to Receive the Doctrine of the Gospel of Christ & divers Added to our little Society. Such openness Love and Increase I think, I never met with, Except on the Isle of Nantucket. I was informed that about 30 persons have been so Convinced that they Resolve to keep to Meeting, & join with friends. Since my coming here . . . (wanting) . . . One who wrote against us, & another who Exceedingly disliked our Principles both Great Men in this Island, at whose House I having been Kindly Treated.

As my Coming here will be pretty much talked of with you by Reason of my Age, the Wars & this place being so near the Spaniards, & not likely to Come home these five or six months if ever, for these reasons, I did not Care if this letter was Spread among friends.

Thus brokenly & abruptly I am Obligated to Conclude with Love unfeigned to thee my Dear, & to my only Daughter Rebecca, & all thy Children whom I love and wish well as I do all who Sincerely Love our Lord Jesus Christ, I am

Thy faithful Loving Husband,

THOMAS CHALKLEY.

P. S.—I do not Expect to be at home

The following information, furnished by a Friend on the island of Tortola, was forwarded to Thomas Chalkley's friends after his decease, which occurred one week subsequent to the penning of the latter part of the above letter to his wife. He was aged sixty-six years and five months.

On third day (the 27th of Eighth Month, 1741) he was employed chiefly in writing to his family and friends in Philadelphia. On fourth day (the 28th) some friends from the road came to see him, which prevented his going out to visit the neighbors as usual.

On fifth day morning he found himself much indisposed, a hot fever upon him at the breaking up of the week-day meeting. The fever continued on and off until his death, which was between two and three o'clock on fourth day morning, the fourth day of the Ninth Month, 1741.

"Is the sermon done?" was asked of one who returned from meeting sooner than usual. "No, not yet," was the answer; "It is preached but it still remains to be done."

FOR "THE FRIEND."

The Secret Lodge not Desired by Marshall, Washington, Ritner, Lincoln.

Several months ago, while interior alterations were being made to strengthen an old brick building on the lower side of Walnut below Fifth Street, in Philadelphia, it became necessary, on account of work being done about the main stairway leading from the street, to find access to the second story through the large room of the first floor used as an auction room, and so up-stairs by a back stairway. I had been very many times on that second floor, but had never before known of the existence of this extra, possible exit. A large low-down window at the top of this enclosed staircase, looked out upon the roof of the first floor back extension, though in former years this was probably a high porch overlooking an ample, south-side garden. On this second floor and the floor above, THE FRIEND has been printed during a long course of years.

The old changed mansion is an historic one, having been the boarding house, a century ago, of John Marshall, Chief Justice of the Supreme Court of the United States. Only a few steps away is Independence Square, on the Chestnut Street side of which is the venerable State House or Independence Hall, with the old time offices and courts, and in one of these did the Chief Justice enter upon the duties of his high office a hundred and two years ago. When the centenary of this event was commemorated in Philadelphia in 1901, there were very high tributes paid to this "greatest of American jurists," and expounder of constitutional law. The listeners to these eulogies were, however, not told of the low estimation in which Marshall held *secret societies*. It would have been a benefit to the country generally could this opinion have been spread broadcast. Writing to Edward Everett he observed: "The institution of Masonry ought to be abandoned, as one capable of producing much evil, and incapable of producing any good, which might not be effected by safe and open means."

Marshall was an honored friend of George Washington, and wrote his Life, which was published in five volumes, but I do not find in this large work any allusion to Washington's connection with Masonry, notwithstanding such extravagant claims have of late years been made thereabout by the Order's adherents. "I do not recollect," said Marshall, in answering an inquiry upon the matter, "ever to have heard him utter a syllable upon the subject." Both Washington and Marshall, in their younger years, had, indeed, joined the lodge, but both wisely ceased attendance, while so lightly did they hold to the institution that it was not thought of sufficient importance to form the subject of conversation. To Jared Sparks, also a biographer of Washington, all the documents of the latter, Marshall believed, had been given, but Sparks failed to find any of the alleged letters of Washington to Freemasons, not even in his carefully kept letter-copying book which had been many times attended to.

The above matter of Washington's relation to the lodge was thought of sufficient moment some sixty-five years ago, at a time of much political excitement concerning Freemasonry, to form the subject of a communication from the Legislature of Pennsylvania to Governor Joseph

Ritner. Replying thereto the Governor published authentic documents, that Washington was thirty-six years old, had ceased regular attendance on the lodge; that thirty years (being the year before his death), his opinion continued the same; that he was never called "Master" or "Grand-Master;" that he was not agreeable to him to be addressed even as a private Mason, and that all the letters said to be written by Washington to lodges are spurious. As might be inferred the secret lodge had no attraction for Governor Ritner. This, however, does not seem to have been brought forward last autumn, when, at Mount Rock burying-ground, in Erie, a monument commemorative of the former Governor was "dedicated." These lines of Whittier's, cut in the granite, were said in the despatch, "to have been inspired by the Governor's message on behalf of public schools, in 1836," but the matter of the poem was that it was because of his opposition to slaveholding and the pursuit and reclamation of fugitive slaves—"the peeled and the maimed, and outcast of earth." The lines referred to, commending the Governor, and which are here introducing the poem read:

"Thank God for the token—One lip is still free,
One spirit untrammelled—unbending one knee.
Like the oak of the mountain, deep-rooted and true,
Erect, when the multitude bends to the sterner view."

In the Eleventh Month last, President Roosevelt being in Philadelphia, and being the guest of the Masons at a commemoration of Washington's initiation into the order of the masonry, expressed a regret in his address that President Lincoln had not been and heretofore. How little need there was for this regret may be inferred as we read the words of Lincoln's address to his old neighbors Springfield, Illinois, when about to leave in 1861, to enter upon the duties of the presidency. Alluding to Washington, he said: "He never would have succeeded, except for the aid of Divine Providence, upon which he has all times relied. I feel that I cannot succeed without the same Divine aid which sustained him, and on the same Almighty Being I rely for my reliance for support, and I hope your friends, will pray that I may receive that Divine assistance without which I cannot succeed, but with which success is certain."

It was a strange claim which was made by an Episcopal bishop at the banquet accompanying the celebration in Philadelphia in 1860, referred to, that "Freemasonry had brought [two ecclesiastics of differing denominational faiths who were present] together—something which the Christian Religion could not do. I want you all to widen your horizon and take a larger view of things. Many go first to the great principles of ones which President Roosevelt talked about in morning."

Why should this secret, oath-bound order thus exalted above Christ and his ones? We are sure that, however high the claim, the immaculate Lamb of God cannot but one with the blood curdling oaths and the horrible penalties invoked against those who reveal the secrets of the lodge of darkness. A system which requires such obligations cannot be founded on Christ, the true Cornerstone, and, if not, the building is destined to fall.

JOSIAH W. LEED

OUR CHURCH.

When they willingly received Him into the ship; and said the ship was at the land whither they went" (Mat. vi. 21).

What our path may be as the way of a ship in the which no deceit can follow or imitate."—*Epistle*, 18.

Nor is the rudder lost,
Nor is the helm forgot,
Of our ship tempest-tost,
That to the general lot
Fought with contribution large and pure,
By th' creative Word which ever shall endure.

By that exhaustless Word
In God's well-pleasing Son,
On true souls are conferred
Equipments, all in one,
Of rudder, ball, and freight, and sails and wind,
To lodge the broad communal element of mind.

The rule of God with man,
As ever present fact,
Past each coast-bugging plan
And mere memorial act,
With preventive grace our course controls
Through rationalistic reefs, and canalizing shoals.

Each soul regenerate
A minister ordained,
The mystery only great
Of godliness unfeigned—
The lesson of a Saviour crucified—
For ever all slip-shod faith and inly craven pride.

The spiritual ground
On which move outward things,
Through them in one sure sound
To ears attentive rings,
What hath let will let, till it be removed,
And then the source of sin and discord shall be proved."

All resting upon form
Beyond the child's estate,
Porsakes the heavenly norm
On which ripe blessings wait,
Perverts the doctrine of Christ's holy cross,
And changes his fine gold to unsubstantial dross.

The port for which we steer,
As ever held in sight,
With clear and yet more clear
Mention, doth invite

To an dependence on external things,
In instant waiting on a jealous King of kings.
R. R.

NOTWITHSTANDING Paul rejoiced in the spread of his gospel by the overruling of bad proclerators of it for good (Phil. i: 15-18), yet he never sanctioned any ministers as truly Christ's except such as had his spirit; yet remember, says Wetherbe, "that God's blessing did not fall upon those men who preached Christ through 'envy and strife.' God would bless his truth is belated by them, but He would withhold his blessing from the preachers themselves. There is a wide difference between the two things. No man, actuated by a bad purpose in preaching the Gospel, will be the subject of God's favor. It is such men as Paul, governed by the purest motives in preaching Christ, that receive the Lord's special favor and abiding support. Are you filled with the consuming desire which animated Paul in his eagerness to have Christ preached to a lost world?"

AFTER all, the great triumph of civilization in the past has been the substitution of judicial determination for the cold, cruel, crude arbitrament of war.—*Lord Salisbury*.

Science and Industry.

SAILORS have a very simple, and what is said to be a very effective way of determining the edible or nonedible qualities of any new varieties of fish they may happen to run across. In the water in which the fish is boiled is placed a bright silver coin. If the coin retains its natural color during the boiling process the fish is good to eat. But if it turns dark, the food is rejected.

TO TELL THE AGE OF EGGS.—A German scientist has discovered a method for making eggs tell their own age. It consists simply of immersing the egg in a solution of salt containing about eight ounces to the pint. When the salt has thoroughly dissolved the egg to be tested is dropped gently into the glass containing the solution. It is said if the egg is only one day old it sinks immediately to the bottom; if three days old it sinks just below the surface only, and from five days and upward it floats.

Another process has just been awarded a medal in Saxony by the national society of poultry breeders. It is well known that the air cavity at the blunt end of the egg enlarges as the age of the egg increases. Consequently, if the egg be placed in a solution similar to the one described above it will have an increasing tendency to float with the long axis vertical. A scale of angles is placed at the back of the vessel and from the inclination of the eggs to the horizontal the age can be gauged almost to a day. A new-laid egg lies horizontally at the bottom of the vessel. When three to five days old the egg raises itself from the horizontal, so that its long axis makes an angle of about twenty degrees with the horizontal. At eight days this angle increases to about forty-five degree; at fourteen days it is sixty degrees; at about three weeks it is about seventy-five degrees, while after four weeks it stands upright on the pointed end.

THE Black Sea differs in a most remarkable manner from other seas and oceans. A surface current flows continually from the Black Sea into the Mediterranean, and an undercurrent from the Mediterranean into the Black Sea. The latter current is salt, and being heavier than the fresh water above it, remains stagnant at the bottom. Being saturated with sulphuretted hydrogen, this water will not maintain life, and so the Black Sea contains no living inhabitants below the depth of about one hundred fathoms. The deeper water, when brought to the surface, smells exactly like decayed eggs.

EVEN with the modern ocean greyhounds and their sharp steel prows the whale must yet be accorded some rights at sea. They cannot be disregarded by seamen for to do so may invoke disaster as was demonstrated a short time ago by an incident that befell the ocean liner Sierra. The Sierra was speeding along between Auckland and Sydney at sixteen knots an hour when it was brought to a sudden stop. The passengers and crew received a severe jolt and for a time great alarm was felt. Investigation showed that the huge body of a sperm whale was stuck firmly on the vessel's

stem. The whale was struck squarely in the middle. Its back was broken and the stem had cut so deeply into its carcass that the levitation could not be thrown off until after much hard work on the part of the officers and crew, and the reversing of the engines.—*Popular Mechanics*.

"Do your buttons ever come off?"

"Ever? They're always doing it. They are ironed off, washed off and pulled off, until I despair. I seem to shed buttons day after day."

"Make use of these two hints when you are sewing them on, and see if they make any difference. When you begin, before you lay the button on the cloth, put the thread through so that the knot will be on the right side. This leaves it under the button and prevents it being worn or ironed away and thus beginning the loosening process. Then, before you begin sewing, lay a large pin across the button, so that all your threads will go over the pin. After you have finished filling the holes with thread, draw out your pin and wind your thread round and round beneath the button. That makes a compact stem to sustain the possible pulling and wear of the button-hole. It is no exaggeration to say that my buttons never come off, and I'm sure yours won't if you use my method of sewing."

ARID LAND RECLAMATION IN CALIFORNIA.—The greatest opportunity for the reclamation of arid lands in California, and perhaps in the entire Southwest, has been found to lie in the utilization of the waters of the Colorado River on its adjacent lands in California and southern Arizona. As a result of an investigation along this river made in First Month 1902, by the hydrographic branch of the United States Geological Survey, the extent of the alluvial bottom land between Camp Mohave and Yuma was found to be from four hundred thousand to five hundred thousand acres. This map, on which the topographic features are clearly and accurately shown, will be of great value in assisting engineers to locate the main canal lines, and is essential to a comprehensive knowledge of the river as a whole.

The demands for irrigation in the Colorado Valley are urgent. The average rainfall at Camp Mohave is only 5.99 inches per annum, and at Yuma it is 30.6 inches per annum, while the temperatures are such as to provide twelve growing months in the year. The Colorado River derives its principal source of water supply from the melting snow on the high mountains of Utah, Colorado and Wyoming. The opportunities for storage on this stream are very great.

The silts of the river are difficult to handle in canals, but the fertilizing properties which they have are such that lands irrigated with these muddy waters will never require further fertilization.

R. H. Forbes, of the Agricultural Experiment Station at Tucson, Arizona, who has made a study of the silt in the Colorado River, has pointed out that this stream resembles the Nile in many particulars. Like the great river of Egypt, the Colorado is subject to an annual summer rise sufficient to overflow the extensive areas of its borders and delta lands. These high waters are rich in fertilizing sedi-

ments, are exceptionally free from alkaline salts, and come at an opportune time for irrigation. R. H. Forbes maintains that when the Colorado is understood and utilized as successfully as the greater and better-known Egyptian stream, it will be recognized as the American Nile—the creator of a new country for the irrigator, the mother of an occidental Egypt.

TRADE UNIONISM IN ENGLAND.—Trade Unionism in England has gone farther and developed more power than in America or anywhere else. There are at this moment some thirteen hundred unions of workmen with a membership of about two million. In the United States, with double the population, there are less than half that number of unionists. Nor do numbers make up the only difference. In England the system of collective bargaining, especially in the coal and cotton trades, is carried much farther and on more methodical lines than in America.

Whether that fact points to a greater superiority in the mechanism of English over American industrialism is a much-argued question. It points, at any rate to a greater power in English trade unions. That power is further shown in the amount of control trade unions have contrived to gain over the management of business. It is a control that stretches beyond such questions as hours and wages and embraces the fundamental points of methods, internal discipline, the maximum output, the number of apprentices, the use of unskilled labor on work hitherto done by skilled labor, the introduction of a new machine, the employment of men not recognized by the unions, and so on. Broadly speaking, these demands have been resisted by Americans and yielded to by English employers. Americans have stood firm on the vital matter of "control" in a way that Englishmen are never tired of praising. Most employers here let the point go by default against them through lack either of prevision or of courage to force a decisive issue at the outset. The consequence is that the industrial machine in England is geared to a much lower efficiency than in America; the slowest workman sets the pace; "going easy" is their rule of labor, and work is distributed over the largest possible number of men.

Of course, it is absurd to ascribe, as many employers do, all the decline in British commerce to "the tyranny of trade-unionism." The employers themselves have much to answer for with their fatal complacency and conservatism, their lordly, unaccommodating ways of doing business, their myopia that will never unreservedly admit that British methods are not the best, and their short-sightedness in not risking a dollar to-day to earn five next week. In speculative pluck and energy they are to the Americans what the Italian is to the Englishman. But granting all this, it is still the fact that trade unionism has done more in England than in any other country to limit production, curb initiative and control output by the uniform, deadening rule of averages. There is something in the atmosphere of England that allows trade unions to thrive as they thrive nowhere else.—*Harper's Weekly*.

No great characters are formed in this world without suffering and self-denial.

Selected.

Robert Barrow.

Robert Barrow's account of the death and funeral of George Fox was given on page 303, in THE FRIEND for Fourth Month, 5th, 1902.

Some further account of Robert Barrows will appear in the following interesting selection which has been forwarded to us:—

Robert Barrow was born in Lancashire, England, but was removed in his infancy into the neighborhood of Kendal, in Westmoreland. He was convinced of the truth in 1652, soon after the first meetings of Friends were settled in that county; and, as did many others, he often suffered from fines, distraint of goods, and long imprisonments.

About the year 1668, he received a gift in the ministry, and was a zealous laborer in the gospel for twenty-six years. His wife was a daughter of Christopher Brishrown, who, for conscientiously refusing to pay tithes, was, at the age of seventy-seven, imprisoned (and even contrary to the law under which his persecutors pretended to act) kept in close confinement more than sixteen months, when he was released by death.

Robert Barrow, on his death-bed (in Philadelphia), often spoke most affectionately of his wife. On one occasion he said: "I married her for the truth's sake,—she was God's gift to me. When I left her, it was as if I was going to my grave. Neither gold nor silver, riches or honor, should have parted us,—nothing but that I might be obedient to the Lord, and keep my peace with God."

Notwithstanding the various fines collected from him, Robert Barrow had, by industry, accumulated an estate; and feeling himself called to more extensive travels for the truth's sake, he, about the year 1690, placed his property in the hands of his son, reserving therefrom an annuity sufficient for the comfortable maintenance of himself and family.

In the Eleventh Month, 1690, he was in London; and having attended many meetings with George Fox, he was with him during his short illness until "he sweetly fell asleep in the Lord," whose blessed truth he had living and powerfully preached in the meeting but two days before.

He travelled twice under a religious concern in Scotland and Ireland; and in 1694 he believed it right to visit in gospel love the American continent and adjacent islands. He felt it a trial at his age to cross the ocean and travel in a foreign land, but above all to take, probably a last farewell of the beloved companion of his life. In speaking of the expected difficulties and dangers of his way, he remarked, that he had rather immediately lay down his natural life, if by so doing he could keep his peace with God, than go to America.

In London he met with Robert Wardell, another ancient minister who was under a similar concern. There also were Samuel Jennings, and Thomas Duckett, of Philadelphia, who, having been on a religious service in England, were about returning home.

About the close of the year 1694, Robert Barrow and Robert Wardell arrived in America and travelled through the various provinces, attending three hundred and twenty-eight meetings in less than a year.

Near the end of the year 1695, they passed over to the West India Islands, and after

much service in Bermudas and Antigua, sailed to Jamaica, which they reached the four of the Second Month, 1696. Although at this time these ancient Friends were both infirm, they continued diligent in their good labors for about two weeks. Robert Wardell then rapidly sank under the effect of the climate, and after four days' confinement, died on the twenty-second of the same month. He departed in great peace, which condition appears to have been mercifully granted to him throughout his illness. To the wife of the Friend at whose house he lay, he said, "Lord reward thee for thy tender care; it is my dear wife. I know not what I may see her more; but, however, the will of God be done. I am, and was willing to be contented with the will of God, whether I live or die, before I came hither; and I blessed myself I am not afraid to die." He continued to the end giving pertinent exhortations to those who came to visit him, concerning the education of their children, and the support of prayer discipline in the church; having a desire to tell them, that Friends might walk agreeable to God's love to them.

Robert Barrow remained on the island for months after the decease of his companion. He was very unwell all the time of his stay, but was enabled to attend every meeting that came in course, except one. On the twenty-third of Sixth Month he embarked to return to Philadelphia. The other passengers were Jonathan Dickinson, wife, and infant son, Benjamin Allen. On board were seven Europeans, twelve negroes, and one Indian girl. They had calms for many days, loss of anchor, and deviations from their proper course, caused by the master's fears of encountering the French fleet. On the eighteenth of Seventh Month the master had his leg broken, and the Indian girl died. A northeast gale set in on the twenty-second, which, early on the morning of the twenty-third, drove the vessel on the coast of Florida. The storm subsided towards daylight, and they found themselves on a beach of sand, which was bare by every receding wave. There Robert Barrow, an aged man, who had been sick more than five months; the captain, whose leg had been recently broken; Benjamin Allen, who had been very ill most of the voyage; a delicate woman and sick child, besides several others.

They saw a country without trees, where only vegetation was the shrubby palm growing on the sand-hills. Under some of these bushes, which broke the violence of the wind, but gave no protection from the rain, they made a fire, and the invalids were placed around it. Most of the seamen and negroes were employed in carrying their chests of provisions on shore.

While thus employed, two Indians rapidly approached them foaming with their cut-throats in running and having Spanish knives in their hands. They each seized one of the seamen and dragged him towards the growing fire. Some of the crew would have killed the assailants but Jonathan Dickinson persuaded them to offer no resistance and advised them to put their trust in the Lord. He then whilst the Indians stood looking with wild and furious countenances on the invalids, offered them some pipes and tobacco which they

ized and departed rapidly as they came. Friends knew the Indians of Florida were noted cannibals and cruel usage and painful death awaited them. But some of them were favored to seek after and obtain position of deep quiet retirement of mind in which they were given some hope for which they blessed the name of the Lord who was their only trust.

Knowing that the Spanish nation had great force over the Florida Indians the greater part of the company agreed to endeavor to assist the Spaniards, one of the seamen being content to act as spokesman to that language. But Robert Barrow could not assent to falsehood.

Six great numbers of Indians arrived and with them commenced taking from the vessel that remained in it, but the cacique or chief with about thirty others, rushed upon the little band who were quietly sitting about the fire. The Indians were armed like the rest two who came except the cacique who had a bayonet. They cried out "Nicholeer," meaning English, but were not understood, and the captives were silent. They then saw "España," Spanish, to which some of the Spaniards assented. During this time the company sat calm and still, under the wing of the spirit of prayer; when the cacique placed himself behind Jonathan Dickinson and one of his band behind each of the Spaniards. Their knives were elevated, and they looked to their king, as if for a signal to commence the work of slaughter.

They were at first loud in words, but the meekness of their prisoners seemed to affect the Indians, and they also became silent; and they stood in the same threatening posture a quarter of an hour, their countenances had fallen. They then proceeded to open the chests, etc., and divided the contents among themselves. They stripped off their clothing all the prisoners except Barrow, the captain, and J. Dickinson's dead child.

The cacique appeared to feel some kindness for them, and at his suggestion they erected a tent, and gathered some leaves to cover it. They endeavored to obtain permission of the king to pass northward along the coast desiring to reach St. Augustine, but he said no, they should go southward with him. The Indians seemed to doubt the prisoners' words, and often asked if they meant "Nicholeer;" on the twenty-fifth day he addressed the question to Robert Barrow, who answered in the affirmative. On the next day the company were stripped of most of their clothing they had previously been allowed to retain. The prisoners were then ordered to march. One of the negroes was allowed to assist the captain, but J. Dickinson's wife was obliged to carry her child, each of the others being laden with the spoil. Their journey was south, and for five miles they waded through deep sand under an oppressive sun.

They were then ferried across an inlet to a Spanish town, where they passed the night. On the twenty-sixth, the little band were ordered into silence, and some of them, as they suffered other times, were favored to feel the presence of the Lord in the midst of them. On this occasion, R. Barrow was much aided in testimony, and also in supplication,

that if it was his Heavenly Father's will, they might be preserved from the perils around them. It was a season of refreshing and strengthening. The heart of the cacique was softened, and he told the prisoners they might depart; which they did twenty-eighth of Seventh Month, the cacique protecting them to the last. He furnished a boat and a small stock of provisions for the invalids and weak ones.

After various dangers, especially from a rough sea, they landed and passed the night of the 29th on shore, and met those of their companions who had come by land.

On the thirtieth, great numbers of Indians from St. Lucia, came fiercely upon them, crying "Nicholeer;" all who had any clothing were quickly stripped of it; the Indians appeared much enraged, and drew their arrows, but suddenly became calm, and R. Barrow, J. Dickinson, his wife and child, were sent in a canoe over an inlet into the town. The Indians there seemed even more enraged than the others. Those who had rowed them over, sprang into the water to save themselves. Arrows were shot towards them, but the wife of the cacique and some others interceded for the lives of the prisoners.

(To be continued.)

This will be a happy year if we learn in it to find a new interest in our fellow men. But for such a work we need a higher inspiration than that of human genius. We must be led by the Spirit. What a peace comes to us when we realize that there is such an inspiration always waiting for us; that we need only to consent to be led, and we shall have given us what to think and say and do. Then we are ready for all occasions; then no duty is too hard, for we have a well of water within the soul perpetually flowing—a guidance and influence sufficient for all things. Let us remember that we are never asked to do a duty but what power will be given us with which to do it. This year let us grow in grace. Let us lean more and more on this inward inspiration. Let us be sure that this comfort, this light, this guidance, this strength and peace, may always be ours.—James Freeman Clarke.

ONE of the most intelligent women I have ever known, the Christian mother of a large family of children, used to say that the education of children was eminently a work of faith. She never heard the tramping of her boy's feet as they came home from school, or listened to their noisy shouting in their play, or watched their unconscious slumbers, without an inward earnest exercise to God for wisdom to train them, and for the Holy Spirit to guide them. She mingled praying with counsel and restraint; and the counsel was the wiser, and the restraint the stronger, for this alliance of the human and Divine elements in her instructions and discipline. At length when her children became men and women, accustomed to the hard strife of the world, her name was the dearest one they could speak—her's who "had fed them through her own spirit's life."

THOUGH idleness be a sin which the devil loves to tempt men to, yet he is never guilty of it himself.—Dr. South.

THE ALABASTER BOX.

There is no life so void, so bare,
But that a box of ointment rare
Somewhere within may be;
This one a cheering song may sing,
This but a loving thought may bring,
So that for Christ it be,
Yet, dear as Mary's ointment, shed
So lovingly upon his head,
The smallest gift will be.

Why hold thy offering back, though small
It seems for Him, the Lord of all?
No gift is small to Him.
Whatever it may be in thee—
Ambition, pride, self-ministry—
That keeps thy gift from Him,
O, break it into pieces now,
As Mary broke above his brow
The alabaster box;
Then shall He for thy offering care,
Even as for Mary's ointment rare,
Within the costly box.

No pride of power, no height of fame,
Ambition's goal, nor boasted name,
Can lasting be to thee;
Yet shall thy smallest gift of love
Forever shine, all these above,
Within Christ's memory.
—Elsie M. Smith.

Has the Time Come?

We are happy in believing that an increasing number of people cherish in their minds ideas which, though old as to their truth, are new to human consciousness. Thoughtful minds of the age are pondering over conceptions which involve the abandonment of certain prejudices, the establishment of sounder principles, the adoption of better customs, the amelioration of evils, the promotion of improved conditions of health and welfare in almost all directions. We do not here allude to the multitude of vague theorists who have floating in their brains supposed panaceas for all human ills, untried experiments, unbalanced notions and hastily formed conclusions; but rather to the much smaller number of those whose opinions are the outcome of much thought, impartial examination, careful sifting; who neither abandon the old because it is old, nor endorse the new because it is new, but submit both to the dictates of sound reason and wise judgment.

Such persons, however firmly they hold their own well earned views, are seldom noisy or eager in heralding them. They see many difficulties which may prevent their acceptance, and perhaps feel unable to cope with the loud opposition which they are sure to meet. Moreover there is a widely spread feeling among thoughtful people that the time may not have come and the world may not be ready for the reception of the new truth or the institution of the new practice which they so warmly cherish. They well know how slow are the processes of unfolding, and how impossible it is to precipitate changes for which society is not yet prepared. Thus they remain silent, and bury within their own breasts the truths and ideas which they have tested and proved, and which they feel sure will at some future day be the heritage of all.

There is a certain confusion in this reasoning which spoils it for the purpose for which it is used. It is difficult, if not impossible, for any one to know exactly when society is

ready for a progressive step. The very fact that its necessity is felt at all affords a reasonable hope that it will be felt more and more, and win more and more adherents. But even if the time has not arrived for the general reception of a truth, or for the actual change in some common practice or some existing institution, that fact by no means proves that the time is not ripe for its announcement by one who firmly believes in it, and his authority to herald it, and for the natural discussion which such announcement would produce. It is only by such means that any step in human progress is made. If every one were silent as to his convictions until society were prepared to endorse them, that time could never arrive. There would be nothing to bring it on. The history of all ideas shows they have first dawned upon the minds of a few, and through them have, by slow degrees, become the property of the many. All inventions are thus popularized; all truths are thus disseminated; all real gains in civilization are thus made. But if those who first possessed these treasures had refused to share them; if they had hidden them away in silence, because they fancied no one was ready to welcome them, what advances would the world have made?

John Morley, in discussing the Realization of Opinion, says:

"Progress is not automatic, in the sense that if we were all to be cast into deep slumber, for a space of a generation, we should awake to find ourselves in a greatly improved social state. The world grows better, even in the moderate degree in which it does grow better, only because people wish that it should, and take the right steps to make it better. Development is not a force, but a process; not a cause, but a law. It explains the source and marks the immovable limits of social energy. But social energy itself can never be superseded either by evolution or by anything else."

We all admit that the rich man should hold his wealth in trust, and put it into circulation for the good of the community, and exactly the same is true of everyone who has the wealth of fresh openings of truth which he has tested, and tried and found reliable. He is entrusted with them, not for his own private benefit, but that he may be the means of opening them up to the world, and of thus in some way promoting its welfare. Nor is he at liberty to doubt that he can do this. He may very likely see that the time has not yet come when his thoughts can be fully realized; but he should also see whether to him belongs the responsibility of taking the first step towards this realization. If his thought is a true one, or his plan a wise one, it will grow and bear fruit, though he may never live to see it.

The architect pictures in his mind the beautiful structure which will take years to complete; the farmer has a vision of the plentiful crops the seed of which is not yet sown. Yet they know that if they do not take the initial steps their ideals will come to naught. The time has not yet arrived for the edifice to stand forth in its grand and massive proportions or for the fields of ripe grain to wave in the sunlight; but the time is fully at hand for the foundations to be laid and the seed

to be sown. So, although the time may be far distant when a new truth will be universally received, or a beneficial change be generally adopted, yet whoever faithful to the opened sight has earned the right to look forward to that future, should see if this is not inseparable from the witness for truth that the time is fully ripe for him to begin the good work by openly and faithfully supporting it by his words and his influence.—*Public Ledger (with some revision).*

Doukhobor Notes.

Taken from a letter to Jos. S. Elkinton, dated Good Spirit Lake, Second Month 12th, 1903.

Peter Verigin has been visiting the villages; when he arrived at our village I was pleased to see how he was received. There was a table with a white cloth over it, and on the top a huge loaf of bread, some salt and a knife; this was placed in front of the house where he was to stop, and the men and women lined right across the road, near the table, singing Psalms.

Peter arrived in a sleigh drawn by four good horses; there were five other teams with Doukhobors from other villages, and a visitor from Terpenie, Saskatchewan, whom I was glad to see. When Peter got out of the sleigh he bowed in the usual Doukhobor way, and exchanged a few words of greeting, which was returned by the people in their way of praising God for his arrival. Peter kissed the oldest man, after which he broke a piece off the huge loaf dipped it in the salt and ate it, then went into the house, the people singing all the time. I dined with them, and he asked many questions. Next day he visited Novotroitska, and called at Robert Buchanan's on his way, and came into our house. He told me that after the Doukhobors had taken up their land and got established that they would have their schools in their villages. His nephew acted as interpreter.

To-day there is a big meeting in Grandmother Verigin's village, two men from every village, also James Crerar (who is the Dominion land agent), and all the Doukhobors are taking up their land in one common lot, but if any of them prefer their own farms, are at liberty to take it.

I believe Peter used great tact in dealing with the Pilgrims, and he thought the government had been very good to them in not allowing their wives and children to go on in the late pilgrimage, and perhaps die; about the horses, he said, keep them, they do the work, and will get a share of the grain.

S. B. states that she has been kept very busy looking after the sick, many of whom she is thankful to say, are improving, and that she enjoys her work.

Bridget, wife of Michael Sherbinin, writes to a Friend under date of Second Month 11th, 1903: My time is much occupied in so many ways I could not respond earlier, but I hope thou wilt understand me.

Thy letters are welcome, witnessing in a warm and hearty way the unity of Christ.

I think it will be interesting to thee to know what we are doing here on the banks of the Saskatchewan river.

When we arrived here one year and a half ago, several women consulted us about their

weaknesses or injuries, much of which brought on by excessive hardships. We been able to help them by medicines, massage and hydropathy. We have just sent a medicine for two remote villages which visited in the beginning of first month.

We have on First-days a class of little dren coming to us to hear what we have say on Bible subjects. When we have we make trips to other villages where we reading the Bible and other edifying by these hours are very precious when we the privilege to read to these illiterate and to converse with and understand the

My husband continues his school work thou already knows, with this difference since the twelfth month of last year teaches his school in a large lofty and bright room with three big windows, a table benches for the children to sit upon; as children had been reading and writing standing position it took time to get them to sit in a class.

My husband had quite a hard time to from hut to hut last winter, but now I God they are coming to the additional building by which our house has been enlarged. My husband has besides his school work a deal of writing to do in the way of business letters and official writing for the Doukhobors.

This winter began about November 1st, continued until February 6th, with a continuous time of intense cold weather, but now we have been cheered by warmer days, and thank our Father the spring is approaching in its warm sunshine.

Our son Samuel is staying in Terpenie, and teaching his second season. I glad to say pupils make rapid progress.

"It is a great mistake to let any thing substitute for a genuine Christian experience. Some are apparently satisfied if they can get that they are honest or charitable or agreeable to those about them. Some let a knowledge of science or philosophy or literature stand in the place of a personal knowledge of God's saving grace. Some are willing to get a little money, or a little honor, or a little amusement in place of the eternal inheritance, or a part in the kingdom that passeth away. Anything substituted for that which the Holy Spirit presses upon us must be a delusion and a snare.—*Zion's Watchman*

It is never well to deliberate long in the doubtful propriety. The fact that it is doubtful propriety is to the discredit of the thing. There are to many things about which there is no doubt at all which one can do leave any time for things of even doubtful propriety. This is enough to settle the question, and at this point the way of safety is to dismiss the matter from any further consideration at all.—*Selected.*

Items Concerning the Society.

The total of American Yearly Meetings is brought to 93,299 members, a net increase of 7,000 for the year. The total throughout the world therefore stands as 114,090 members.

The total membership of Philadelphia Monthly Meeting for the Western District (Twelfth Street) is 768. This is a gain of 9 for the year, a

10 in the last five years. There have been 40 deaths against 16 deaths. Eighteen have been restored by request. There has been a steady increase in the number of children of school age. There were 136 reported, and last year

STRENGTH OF THE FRIENDS.—Philadelphia has ceased to have the outer aspect of a city undyed by Friends. Thirty, still more, fifty years ago often saw their costumes on the streets; their presence and personality were everywhere apparent, and the Philadelphia still daily redeemed stranger within her gates of the city's

to one-to-day goes below the passing surface, realizing how much of the silent security and beneficence of the city rests in the small population of Friends. A few scores of families in all they are—yet the Friends support colleges, and yearly increase their number, maintain the largest hospitals, conduct schools, yearly growing, and are perpetually banking and business at its best. This small population so leaves and influences a great city of one million four hundred souls, which has outgrown so many fold the town to which it owes its beginnings, becomes a plain and unmistakable when death sets in its earlier years of ascending manhood and character like that of Edward the town-builder, whose going was recorded a week to-day. Still young, at the head of a city of his faith, living by its serene and length, measuring the world's values by a more lasting than that of the day, maintaining the stainless repute of a long line of men of mind and meeting all the multifarious duties of business life with the fundamental accuracy which regards punctuality, fidelity, one word and a promise as but a part of the truth—these things all, when they are in a single life, reveal the strength of the strength which makes more numbers of all consequence.—*Philadelphia Press.*

Notes from Others.

dot doubt that the infants whom the Lord brought together from this life are regenerated at a secret operation of the Holy Spirit.—*John*

The Bishop Moule, who is still living in China has now first went there, only forty Protestants were to be found in the empire. Now there are 100,000.

Philadelphia pastor proposes to open the First school rooms of his church-building to the use of the street to play and study in during week-days, with a view to protecting them from the

The supreme Court of Nebraska has now decided that the reading of the Bible in the public schools of Nebraska is permissible so long as it does not take the form of sectarian instruction.

It is said that a sermon preached by Charles H. Hall recently in India, upon the theme "Disturbing and Calming Work in the Soul," made a great impression upon the people.

Payton Slosson, wife of the vice-president of the University of Wyoming, has been chaplain of the penitentiary in Waramie, Wyo., for over two years. Pay Slosson is the only woman chaplain in the United States.

Historians carried Christian teaching to America in the sixteenth century. The Roman Catholics and their work there in the thirteenth century.

The first Protestant missionary was Robert Morrison, who went to China in 1807.

Theodore Cuyler said in an address before a large audience of Christian workers and ministers: "Don't predict a revival. I never in my life knew a predicted revival that came to pass. The glorious revival of 1858 arrived without the slightest premonitory hint."

The *Examiner* (London), in writing of the evident failure of modern Christianity to win the great masses of the people, says, "The vision of what Newman used to call 'the dreary, hopeless irreligion' of great multitudes, is one to astonish and grieve the most careless observer."

"Christianity," says the *Christian Register*, "is even under the most unfavorable auspices doing the world untold good. Its spread over the globe will go on, in all probability, keeping step with the expansion of Anglo-Saxon power. It is a great world force, as it must now be looked upon, rather than a mere belief or creed."

The Bible used by Governor Bradford of the Pilgrim Fathers was recently presented to the Pilgrim Society of Plymouth by Asa W. Waters, a descendant of the governor in the eighth generation. The bible has never been out of the possession of the family. It was printed in London in 1692; taken by Bradford to Holland, and brought over in the *Mayflower*.

It is one of the saddest commentaries on our national ethics that those who have tried with all their might to live up to the best they know are looked upon as failures if they have not accumulated money, written a notable book, achieved distinction in science, art, music, or some other field, or done some high, heroic deeds that attracts the world's attention.—*Success.*

There are now three editions of the Revised Bible on the market. (1) The British revised version, which was begun in 1870 and completed in 1885, (2) In 1899 "a so-called American edition" of the revised version was issued by the Oxford and Cambridge presses through their American publishing house. (3) The American Standard edition, issued in 1901, under the auspices of American scholars.

A prominent Philadelphia clergyman strongly urges all young men who intend to enter the ministry to learn some trade either before or after their ordination. He has examined the statistics of the various Protestant denominations, and has been appalled by the number of ministers who are without a charge. He thinks a trade would be a good thing to fall back on in such cases, besides standing the preacher in good stead in many ways while still in the pulpit.

HOW TO PREPARE MANUSCRIPT.

Write upon pages of a single size;
Cross all your t's and neatly dot your i's;
On one side only let your lines be seen—
Both sides filled up announce a verdant green.
Correct—yes, recorrect—all that you write,
And let your ink be black, your paper white.
Punctuate carefully, for on this score
Nothing proclaims a practised writer more.
Then send it off. And, lest it merit lack,
Inclose a stamp with which to send it back.
But first pay all the postage on it, too,
For editors look blank at "six cents due,"
And murmur, as they run the effusion o'er,

Yet here it goes; retain a copy clean—
Writers should own a copying machine.
Little they know the time that's spent, and care,
In hunting "copy" vanished who knows where?
Bear this in mind, observe it to the end,
And you shall make the editor your friend.

—*Notes and Queries.*

"The Doukhobors," by Joseph Elkinton (Perris & Leach, 29 N. 7th St., Phila.; price \$2), contains an historical review of the Doukhobors from their first appearance in Russia 150 years ago to their exodus from the Caucasus in 1899, and also an account of their settlement in Canada, with the author's personal experience among them during the past summer. The volume is richly illustrated. All the returns from the sale of this book will go toward supporting the school now being started.

The text of the amendment of the new militia bill, as actually passed by both houses, is as follows:

"(3). *Provided*, That nothing in this Act shall be construed to require or compel any member of any well-recognized religious sect or organization at present organized and existing whose creed forbids its members to participate in war in any form, and whose religious convictions are against war or participation therein, in accordance with the creed of said religious organization, to serve in the militia or any other armed or volunteer force under the jurisdiction and authority of the United States."

A list of the States granting exemption in some form on account of conscientious scruples has been collected by Lindley D. Clark, of Washington. It is much larger than we had supposed, and is interesting in the States which it includes as well as those which it omits. One would hardly have expected Kentucky and South Carolina to be more advanced in this line than Maryland and New Jersey. The list is as follows:

Arizona, Arkansas, Colorado, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, New York, North Carolina, North Dakota, Ohio, Pennsylvania, Rhode Island, South Carolina, South Dakota, Texas, Washington and Wyoming.—*Interchange.*

A SALE OF WHITTIER'S LETTERS AND MANUSCRIPTS.—Some manuscript of John G. Whittier and letters formerly owned by him, were sold at auction in New York Second Month 6th, to secure funds for the maintenance of the old Whittier homestead. The 271 lots sold brought \$10,000. An original draft of a message by President Lincoln to Congress in regard to the Freedman's Aid Society, obtained by Charles Sumner from Lincoln and presented to Whittier, brought \$845, the highest figure of the sale.

A letter from Alfred Tennyson to Whittier went for \$400. Among the purely Whittier relics an original unpublished and last Stanza of the poem published in the '50s, "To My Sister"—a stanza which was signed in full by the author—was sold for \$23.

The original manuscript of the child poem, "In School Days," of nine stanzas, together with the additional stanzas composed afterward, brought \$540. Attached to the manuscript was a letter to Lucy Larcom, editor of *Our Young Folks*:

Dear Friend Lucy:—I could not make verses for the pictures, but I send thee herewith a bit, which I am sure is childish, if not childlike. Be honest with it, and if it seems too [trivial] for a grave Quaker like myself, don't compromise me by printing it. When I get a proof I may see something to mend or mar.

Thine truly,
J. G. W.

Almost without exception these purely Whittier relics were purchased, it is understood, on behalf of private individuals.

Original manuscript account of the Barbara Frietchie incident in the handwriting of Emma D. E. N. Southworth, Seventh Month, 1863, sent by her to Whittier and used by him as the basis for his celebrated poem, accompanied by a letter of Mary A. Quantrell, of Frederick, who claimed the honors of the incident, Seventh Month 15th, 1876, and asking the poet to do her justice, with other letters on the same subject, \$161.

Letter from Oliver Wendell Holmes to Whittier, giving praise to the latter's "In School Days," \$230.

An unpublished letter of John Bright, London, Third Month 18, 1885, to Whittier, remonstrating with the poet against his writing an ode in honor of General Gordon, \$29.

Original draft of Whittier's anniversary poem before the alumni of the Friends' Yearly Meeting School, Newport, 1863, containing many lines which have never appeared in print, \$50.

Original manuscript of Whittier's poem, "The Golden Wedding of Longwood," containing many lines that were afterward changed and one stanza that has never before appeared in print, \$15.

Manuscript of "The Deity," one of Whittier's earliest poems, \$167.50.

SUMMARY OF EVENTS.

UNITED STATES.—A new Department of the Government has lately been established to be called the Department of Commerce, the head of which will be a member of the Cabinet. The new Department will consist of the Bureau of Corporations, the Bureau of Labor, the Interstate Commerce Commission, the Bureau of the Census, the Bureau of Inspection Service, the Bureau of Navigation, the Bureau of Standards, the Coast and Geodetic Survey, the Commissioner General of Immigration, the Commissioners of Immigration, the Bureau of Immigration and the Immigration Service at Large, the Bureau of Statistics of the Treasury Department, the Shipping Commissioner, the Bureau of Foreign Commerce (now in the Department of State), the Census Bureau and the Fish Commission. The law declares "It shall be the province and duty of said Department to foster, promote and develop the foreign and domestic commerce, the mining, manufacturing, shipping and fishery industries, the labor interests, the transportation facilities and the insurance business of the United States." It will have also a partial control over the subject of trusts. A dispatch from Washington says: "The new Department of Commerce will have the distinction of dealing with the largest commercial interests of the world. In domestic exports, in manufactures, in transportation and in internal commerce the United States is at the head of the world's list of great nations."

The manufactures of the United States are now about double those of the United Kingdom, and nearly equal to those of France, Germany and Russia combined, while the value of the agricultural products of the United States far exceeds that of any other single country.

Attorney General Knox, speaking of laws lately enacted in regard to "Trusts," has said: "The legislation affecting the trusts passed at this session of Congress is satisfactory to the Administration and the prompt response to the President's requests is highly gratifying. A very long stride in advance has been accomplished, and the promises of last fall have been made good. The legislation is concise in its terms, but very comprehensive in its scope. Under its provisions a fair opportunity will be afforded to test the effect upon the tendency towards the great monopoly of its guarantee of no farther increase of the production of goods against the small one. Upon the whole, the situation is eminently satisfactory, and is the result of concessions, modifications of views and forms of expressions upon the part of many earnest and thoughtful men, who have endeavored within a very brief session to meet a rational public demand in a rational and effective way."

Railroad officials and others say that the coal famine is now practically ended.

The Anthracite Commission has closed investigations in this city on the 13th inst. The Commission will begin its private sessions for the consideration of the recorded testimony before it in Washington on the 19th inst. It is said that it would take at least a month to attain to a mastery of the mass of testimony received, which would enable it to make even a preliminary decision.

A despatch from Utah of the 13th says bitterly cold weather prevails over Nevada, Northern Utah, Southern Idaho and Western Wyoming. Wells, snow, reports a temperature of 42 degrees below zero last night.

In a recent address in New York respecting the colored race in this country, James J. Torbert, of Georgia, lately in the city, left only as 4,000,000. In 26 days we are to have 9,000,000. It is as if we were without a home, but well schooled in the exercise of the muscles, and, to some extent, with the desire to imitate the white man. Our homes to-day dot the hilltops, plains and valleys all the way from Virginia to Texas. Slavery left us illiterate, but with a passionate desire for knowledge, and to-day

we have 2,500,000 people in the public schools and 35,000 teachers trained from the rank and file of the race."

It is announced that the Pennsylvania Railroad engineers have completed plans for the bridge across the East River at Hell Gate, to connect the Long Island Railroad with the New York, New Haven and Hartford Railroad. The bridge will be two miles long, will be built of steel, on stone abutments and pillars. The connection with the New York, New Haven and Hartford will be made at Port Morris, and the Long Island connection will be at Astoria. The main span across the East River, at Hell Gate, will be 660 feet, making the longest railroad span in the world. The bridge at this point will be 135 feet above high tide at the clear. The steel to be used in the construction will weigh 61,000,000 pounds. It is proposed to complete it in three years.

In a recent report the Commissioner of Forestry in Pennsylvania states that there are now more than half a million acres in this State under the laws for forest preservation.

One of the Government reindeer herds, in Alaska, is being taken from Nulato, near the mouth of the Yukon River, to Tana River Valley, to be slaughtered for food. Natives along Tana River are reported to be dying of starvation, and even white miners are suffering because reindeer are scarce.

The use of carbolic acid injected into the veins is reported to have been useful in a case of lockjaw in St. Louis, Mo.

It is said that several thousand horses in Brooklyn are being fed on molasses. Dr. G. H. Berns, a veterinary surgeon, states that "molasses, if properly diluted and mixed with cut hay, and used in proper proportions, is in a degree a tonic and means for stimulation the moment it enters the mouth. Its nutritive value is, therefore, quite apparent. It is not only a better and a more nutritious food than oats, but is much cheaper in the end."

There were 548 deaths in this city last week, reported to the Board of Health. This is 35 less than the previous week, and 54 less than the corresponding week of 1902. Of the foregoing 294 were males and 254 females; 62 died of consumption of the lungs; 116 of inflammation of the lungs and surrounding membranes; 9 of diphtheria; 21 of cancer; 28 of apoplexy; 21 of typhoid fever; 5 of scarlet fever, and 2 of small pox.

FOREIGN.—A despatch from Washington of the 13th says: Herbert W. Down, Venezuela's representative at the Hague, has been notified that the United States might sign with each of the allies' representatives here a protocol providing for the immediate raising of the Venezuelan blockade, and for the reference of the question of preferential treatment of the claims of the allies against Venezuela to The Hague arbitration tribunal. The protocols provide for the payment of certain sums of money to Great Britain, Germany and Italy, which are to be derived from the customs collected at the ports of LaGuayra and Porto Cabello.

The protocols, in providing for reference of the question of preferential treatment to The Hague, do not state in detail the methods of procedure by which the case is to be laid before the tribunal. This will be done in a second set of protocols, the preparation of which is being hastened. It is provided, however, that not Venezuela alone, but all the other creditor nations shall be permitted to appear with her before the tribunal in opposition to the allies for preferential payment.

The British and German Governments telegraphed the commanders of the blockading squadrons off Venezuela to withdraw as the result of the signing of the protocol. In Berlin, Paris, Rome and London satisfaction was expressed by Government officials and the public in general over the signing of the protocol.

In Great Britain parcels weighing one pound are delivered anywhere for 3d through the post-offices. The weight limit is eleven pounds, and a parcel of that weight is carried for one guinea. The size of the parcel is regulated by law.

At Cuernavaca, in Mexico continues to report many and somewhat alarming earthquakes.

A despatch from London of the 11th says: When the steamship *Minneapolis* reached this port her passengers brought ashore copies of the *Intercontinental Wireless Daily*, the first newspaper ever published at sea. Those on board the *Minneapolis* got the news of the world in brief form each day by means of the wireless telegraph system. The liner left New York on First Month 31. For five days the station at Cape Cod flashed the bulletins that were edited in New York. After that communication was effected with the Cornwall station, and perfect success attended the experiments.

At Liverpool, in the course of a speech, Premier Balfour declared that international animosity was a great source of international weakness. If the peace of Europe were

to be preserved and the cause of civilization go without fatal shocks, it must be by the increased cause of co-operation between the European Powers. All those who had a common love of peace and of public opinion to refrain from indulging in a task of embittering the relations between nations, creating jealousies, so easily formed and so difficult to allay.

The steady increase of drunkenness in France; accompanying diseases has aroused anxiety in being a circle. The general interest in the subject revived when the Academy of Medicine was reconstituted by the Ministry of the Interior with the permission of a list of poisonous essences used in the manufacture of liquors.

Mail arrivals received from Hong Kong say the spread gripe exists at Canton and throughout S. China. In the case of the Hong Kong steamer *Wing* died during the last few years in New Zealand and Australia. Following the usual custom of the Chinese remains were taken home for final interment those of their ancestors in the British steamer *W* when it ran on rocks shortly after leaving New Zealand and sank.

In an address before the Bengal Chamber of Commerce the Viceroy of India stated that it was his belief that the natives of India possess, besides the mere circulation an amount of money valued at \$310,000,000 which is hoarded and mostly buried. He urged the need to bring out this wealth and invest it, especially in profit enterprises, and in that way themselves reaping profits which British capitalists are slow to appreciate. The possibility of such a vast treasure in India.

A dispute between Brazil and Bolivia respecting territory, known as the Acre territory, has referred to The Hague tribunal for settlement.

A gift of \$10,000 recently made by Henry P. the Carnegie Steel Co. for some practical object of the service of enduring benefit to India, it is stated to be devoted to the establishment of an agricultural school in Casmah, and a factory located in S. India. The Government will give the site and the institution.

It is stated that there are 100,000 persons in India who are entirely destitute. Efforts are being made to secure transportation across the ocean at reduced rates for grain and flour which is being contributed by the famine commission. Dr. Castellani, an eminent Italian physician, residing in Uganda, Africa, has sent some particulars concerning the "sleeping sickness," which rages among the natives in the Victoria Nyanza district. In one year 500 natives died of the disease. He says the malady lasts two to six months, and always ends fatally.

NOTICES.

WESTWON BOARDING SCHOOL.—For conversing persons coming to Westwton School, the stage will train leaving Philadelphia 7.16 and 8.18 A. M., at and 4.32 P. M. Other trains are met when required. Stage fare, 15 cents; when 7.30 P. M., 25 cents each. To reach the school by telegraph, write West O. Phone 1145. EDWARD G. SMEDLEY, S.

WESTWON BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in relation to instruction and discipline should be addressed to

WM. F. WICKESHAM, Principal.
Payments on account of board and tuition, and communications in regard to business should be forwarded to
EDWARD G. SMEDLEY, Superintendent,
Address, Westwton P. O., Chester Co.

DIED.—SARAH K. BRANTINGHAM, of Winona, wife of Cyrus Brantingham, departed this life 31st of Twelfth Month, 1902, in the 68th year of her age. The immediate cause of her death was tuberculosis. She was an older and more than New Garden Monthly Meeting of Friends. She led an active Christian life, ever much concerned for her own comfort than for the others. Through all her varied afflictions, her mind was sustained by an unchanging trust in protecting care and love of her Heavenly Father, which enabled her to live with comparative peace and cheerfulness. She frequently alluded to the peaceful prospect before her, thus adding strong testimony to the sufficiency of Divine support to sustain and carry the mind above the trials of death. Her family and friends, to whom she was much endeared, feel a comfortable assurance her spirit has entered into rest.

A World-wide Advertisment of Doctrine.

The confirmation of a cardinal principle of the Society has been received to hold, which formerly and often inwardly been revealed by the King of kings, has not been in these latter days, for the proclamation of an emperor; but it is sometimes a method to find individuals in the various churches, come out with an explicit acknowledgment of their church creeds have kept obscure of the immediate guidance and enlightenment of men by the Divine Spirit.

Emperor William's recent attempt to establish himself right as to doctrinal views before the church of Germany, of which he is ranked chief bishop, contains the following expression as regards Divine revelation both "distical" and Christian:

Regarding the former it must be said, for mankind does not admit of a doubt, not even a slightest, that God reveals himself continually in the race of men created by Him. He breathed into man the breath of his life and love with fatherly love and interest the revelation of the human race. In order to reveal and develop it He reveals himself to that or that great sage, whether priest or prophet, whether among the heathen, Jews or Christians. Hammurabi was one, so was Moses, Abraham, Homer, Charlemagne, Luther, Shakespeare, Goethe, Kant and Emperor William the Great. The one He sought out and entrusted with his grace to accomplish splendid, perhaps results for their people, in their spiritual and physical provinces, according to his will. How often my grandfather pointed out that he was only an instrument in the Lord's hands.

The second form of revelation, the more recent, is that which leads to the manifestation of our Lord. It was introduced with calm, slow, but forward-looking and optimistic, for humanity was lost without it.

So begins the most astonishing activity of Divine revelation. Abraham's race and the people developing from it regard faith in one of their holiest possession, and it fol-

lows, held fast to it with iron-like consistency. Split up during their Egyptian captivity, the divided elements were again welded together by Moses, ever trying to hold fast to their monotheism. It was the direct intervention of God that caused the rejuvenation of this people, thus proved through centuries, till the Messiah, heralded by prophets and psalmists, finally appeared, the greatest revelation of God in the world, for he appeared in the Son himself.

Christ is God, God in human form. He redeemed us and inspires us, entices us to follow Him. We feel his fire burning in us. His sympathy strengthens us. His discontent destroys us. But, also his intercession saves us. Conscious of victory, building solely upon his word, we go through labor, ridicule, sorrow, misery and death, for we have in Him God's revealed word, and He never lies.

"Is Saul among the prophets?" So far as visited and speaking under a measure of the same Spirit which he publicly confesses, we may be willing to trust that, for so lucid a moment, though flaws appear, he is; and are more willing to crave that one would there abide.

When the profession of the immediate spirit, life, and light of Christ in men's hearts, becomes a conversion to that living witness, so that rulers and all those in authority, by having the Spirit of Christ are entitled to be named as his, then shall nation thus headed "not lift up sword against nation, neither shall they learn war any more."

But what are they doing now?

And when also a religious Society becomes transfigured according to its *profession* of true doctrine concerning the immediate witness of the Holy Spirit, so as to be *converted* to that doctrine and witness, experimentally in its members' hearts and daily lives, then will that Society be a much more effective leaven to the nations of the kingdom of this world, in its process of becoming "the kingdom of our Lord and his Christ."

What the world wants and what we want, whether upon plain benches or upon thrones of dominion, is that the profession of, should be the outcome of a conversion to the Holy Spirit.

The Single Talent.

Lapse of time need not always be an excuse for avoiding to correct a mistake when it is discovered. We were long since informed by a Friend in England of an error, which on fur-

ther information we are now enabled to trace back to page 21 of our volume seventy-five, where it is stated that "The receiver of the five talents by use had gained five talents more, and he with the one talent was equally commended." Our correspondent writes: "This is quite untrue, as Matthew tells us, the one with the one talent was condemned to outer darkness and where is weeping and gnashing of teeth. See Matthew xxv., 14th to 30th verses."

The original writer's mind was evidently occupied with the faithfulness involved in the use and non-use of talents irrespective of their number, and so failed to hit the number "two" instead of "one," in the parable.

The detector of the error would, we believe, urge with us the view, that the possession of but one talent did not send a man to outer darkness, but the *non-use* of it did.

The world however, still daily condemns to the outer darkness of its society, even the faithful plodding upward of the one talent into two, because society would welcome to its appreciation chiefly the able and the brilliant.

That faithfulness in the little or in the few talents, which the parable holds up as under the same Divine commendation with the more, is proclaimed also in the incident of the widow's mites or farthing, and in that of the lad who had but five loaves and two small fishes, which when dedicated were made abundantly sufficient among so many thousands of hungry ones.

Let no one dishonor his one talent by fear to dedicate it to the divine service of his fellow-beings. And if the distinguishing doctrine of our religious Society is its one talent, committed to us for enlargement among men, and it be wrapped in a napkin or buried in earth, the Society is well advised beforehand of the Divine sentence which awaits it.

"What am I, the least of the flock, among so many?"—asks one who allies himself or herself with the one talent. Thou art one of the little whom if dedicated the Lord can bless, and will; in contrast with the ten undedicated talents of another which he can blast, and will, if abiding in any service away from him. "And who knoweth whether thou art come to the kingdom for such a time as this?"—whether thou art come into such a

Society as this, for such a time as this? and we will add, as once before, that when in a course of providence, we find ourselves bound to a situation, especially if it is not of our own choice, the first thought is not necessarily, "How shall I evade it?" but rather let it be, "What was I placed here for?" A Divine meaning may be found for us in the situation. What if I was not born into the Society of Friends by my own choice? Can I say therefore it was not my Maker's choice? Has He no part in the arrangement of our environment? Let us say less about our unchosen accidents of birth, and feel more of the Providence of birth; let us not make haste to resign or to ignore, but rather to fulfill our Divine environment. Only as our inheritance and legacy is used according to the intention of the Donor, can we get the blessing of it so as to testify,—what every faithful birthright member who realizes his measure of the rich fulness of his bequest under the gospel, may with uplifted thanksgiving acknowledge—I have a goodly heritage!"

A PROVISIONAL RETRACTION.—Since these columns were set up in type we have received a statement for which we expect to give space next week, tending to relieve the uneasiness of an esteemed aged Friend and others. We make room now to say that an illustrated article in the *Philadelphia Press*, dilating on the keeping up of Woodstown Meeting in New Jersey, by Priscilla M. Lippincott as its "sole" attendee, and giving a distorted and sensational view of the whole situation, found its way to England, and was condensed into an item in the *London Friend*, which was in undoubting confidence copied into this paper as by many others. It seemed to us of value as showing one of the few good examples in history of faithfulness in the solitary attendance of one of our meetings for worship. This served to eclipse from our view the less worthy motive unjustly implied in the extract, that of preventing the property from lapsing by disuse into other hands than Friends. That meeting is kept up by other attenders also. We regret the painful public given, and the misrepresentation of motive.

HAMBURG CHILDREN.—A curious and pretty custom is observed every year in the city of Hamburg to celebrate a famous victory which was won by little children more than four hundred years ago. In one of the numerous sieges, Hamburg was reduced to the last extremity, when it was suggested that all the children should be sent out unprotected into the camp of the besiegers as the mute appeal for mercy of the helpless and the innocent. This was done. The rough soldiery of the investing army saw with amazement, and then with pity, a long procession of little ones, clad in white, come out of the city and march boldly into their camp.

The sight melted their hearts. They threw down their arms, and plucking branches of fruit from the neighboring cherry orchards, they gave them to the children to take back to the city as a token of peace. This was a

great victory, which has ever since been commemorated at Hamburg by a procession of boys and girls dressed in white, and carrying branches of the cherry-tree in their hands.

FOR "THE FRIEND." SIMON THE CYRENE.

They acted rudely to the son of Ham,
They pressed a menial for a menial task,
Across the back they laid the transverse beam,
Involuntary fellowship of pain.
A fellow-feeling brought a ray of cheer
Unblanched by insults from the noisy crowd;
While Simon's burden brings him endless fame,
The white man's burden is the white man's shame.
BEAMSVILLE, Ont. H. T. MILLER.

Thomas Robinson.

Thomas Robinson, son of Thomas Robinson, of Bridge-end, Scotland, was convinced of the Truth about three years before his parents, when he was about thirteen years of age, and but few Friends in those parts; and he was so effectually converted, that although many endeavors were used, both by promises and threatenings, they were not able to overturn his faith.

He was a youth of a sober and religious conversation, inasmuch that he was a wonder to many; and by his faithfulness to the Truth, though a child, he was very instrumental to the conviction of his parents, who afterwards lived and died in the same faith. Many disputes he had with priests and others, and was so furnished with arguments, that they were often astonished at him. About the twentieth year of his age, God was pleased to call him to the work of the ministry; at which time he was concerned to go to public places of worship, and bear testimony to the people against their evil deeds. His ministry was living, and he had a clear discerning of the spirit of anti-Christ, that secretly worked for the heart of God's heritage, which he advised Friends to watch against.

He travelled through the northern countries of England, and also visited all the meetings of Friends in his own nation, and had several sights of things to come, some of which he saw come to pass; and also had a vision of his own death two years before he died.

He was visited with sickness, which continued about seventeen weeks, and in all that time he was not heard to repine, or speak frowardly, though his sickness was attended with much exercise. Many times he sung praises to the Lord, to the affecting of others who heard him; and declared that he valued not the pains and trouble of his body, if it was the Lord's will so to try him; but that the Lord's everlasting Truth might be raised over all; and all lets and hindrances be taken out of the way, and he to feel preservation in the Truth, to the end of his days. With many more good expressions.

The night before he died, he entreated his parents not to repine at the Lord's doings, saying it was his will to remove him from the evil to come. After a little silence his father asked him if he had anything more upon his mind to say. He answered, "Little more, but that all might be kept faithful who profess the Truth, the precious Truth." And further said, "Let me rest, I have done;" and fell asleep, and departed this life the second of the Eighth Month, 1678, about the twenty-third year of his age.

Robert Barrow.

(Concluded from page 253.)

They were taken on shore, when a contest arose among the Indians, some saying to kill, others to save them. Man-rows were shot; J. Dickinson's wife received several blows, and one Indian offered to cut her throat, but on the interference of her husband desisted. A handful of sand was put into the mouth of the babe, but the wife the cacique rescued them.

The chief Indians held a council, a close of which some articles by way of being were given to the prisoners.

Eighth Month 1st. The cacique and wife appeared kind, but they were told they should be taken to the next town, in which a company of "Nicholeers" who were killed.

At ten o'clock at night, they were brought away, with an Indian for a guide, while men and boys followed them for miles, pursuing them as they went. The night was cold, the day very hot, and they suffered much from fatigue, exhaustion and want of water. At length they met the cacique of the town of Jece, which they were approaching. He appeared kind, said he would be their friend, and send them to Augustine. When he entered his town, he brought water and washed R. Barrow's feet, which had suffered grievously from stumps and stones on the way; and were many holes in them in which a pest might be laid. On the third the cacique offered them to demand a share of the money understood was raised from the wreck of a vessel.

Then a storm of unusual fury occurred, which drove the sea into the town, and killed the inhabitants to leave it. For several days the prisoners had no food or fresh water. The infant received sustenance from Indian women, which sustained its life.

On the 11th the cacique returned; he appeared incensed against his prisoners, and on being reminded of his promise to send them to Augustine, made many excuses. At 12th, concluding to go thither himself, he came to take one of the company—the seaman who spoke Spanish—with him. They left on the 13th. Food was scarce, and the prisoners suffered much from hunger; they worked up the gills and entrails of fish, and fully drank the water in which the Indians had boiled their fish. Yet through all, the patience of some did not fail; they only trusted that the Lord would work their deliverance.

On the 2nd of Ninth Month the old cacique returned, accompanied by twelve Spaniards, sent by the governor of Augustine, who, having heard of shipwrecks, feared they might be of vessels he had recently dispatched; and he sent this force to protect the crews from orders to their captain to save those who had escaped from the wrecks, of whatever country they might be. The crew of another wrecked vessel was also at Jece. On 3rd, R. Barrow and thirteen others, accompanied by four Indians, set out in a boat for Augustine; they had been two days without food, when they were overtaken by those of the wrecks they had left behind them, but could spare them only a few berries; all were

of this journey, were frequently two days without anything to eat. On the 10th they reached a town, where, their Spanish guide informed them, the shipwrecked crew of a Dutch vessel had been killed and eaten twelve months before. The weather became very cold, and being obliged to encamp out at night, though he made large fires, they suffered severely. On the 13th they were forced to wade to their boats, and after going two leagues in them, were landed in a marsh, through which they had to pass a mile, and then walk five or six miles to the residence of a Spanish sentinel. The north-west wind was violent, and the stoutest thought they could not survive the day. After going two miles, Benjamin Allen became so that his speech failed, and he began to foam at the mouth. J. Dickinson ran on several miles to endeavor to obtain help, but it was in vain. When R. Barrow came to the place where he was laid, he stopped and spoke to him, but he was too far gone to answer, but he died pitifully. Five of the company perished that day, four of whom were well in the morning.

J. Dickinson, his wife and child, reached the sentinel's house, about an hour after nightfall. R. Barrow in less than two hours afterwards. Some of the company missed the boat and travelled thirty-six hours without admission. Those who reached the house were in great pain, their feet extremely raw, the skin entirely off, and a mass of blood and blood caked to them. After a night of suffering they were forced to proceed, though the wind was high as the previous day. The house of the next sentinel was on the north side of an inlet. He came across the canoe to them, would not suffer them to enter his house, but caused them to build a tender the lee of it; in half an hour gave each a cup of cassena, and two quarts of Ingham's to be divided among all, then bade them depart to the next sentinel's house, one mile farther. There they were kindly received, and furnished with a plentiful repast.

Next day a canoe arrived for them, sent by the governor of Augustine. The day was cold, and the company in a suffering condition, but before sundown they reached Augusta, and were taken to the governor's house. He sent Mary Dickinson to his wife's apartments, and kindly cared for the others. They were quartered among the inhabitants, where very kind to them, and clothed them with the best they could procure. R. Barrow was suffering severely from diarrhæa, which added him very low. After signing an obligation to pay for the provisions and clothing he had purchased, they parted from the governor with mutually kind feelings; and on the 9th of Tenth Month, with a captain and six others, sailed to Santa Cruz, where they passed the night, being supplied by the Indians with such provisions as they needed. On the 2nd of Tenth Month they reached the town of St. Mary, where they made such provisions as they could for their journey to Charleston. They left St. Mary on the 5th, with five large canoes, seven Spaniards, and more than thirty Indians to pilot and row them. After much wet and cold travelling, during which R. Barrow could neither be made warm, nor obtain natural rest, they reached the first settlement in Carolina on the 22nd.

This belonged to Richard Bennet, who received them very kindly, provided for them plentifully, and treated their Spanish conductors with great hospitality. On the 24th they reached the country-seat of Governor Blake, who showed them much kindness, and sent R. Barrow to the house of his neighbor, Margaret Bambers, an ancient Friend, who, he said, would be careful of him and nurse him. The others went to Charleston, where they separated.

R. Barrow continued very weak. Early in First Month, 1697, he was taken into Charleston, where he lay at the house of Mary Cross. In a letter to his wife he writes thus of his kind hostess:—

"At last we arrived at Ashley River; and it pleased God I had the great fortune to have a good nurse, one whose name you have heard of, a Yorkshire woman, born within two miles of York; her maiden name was Mary Fisher, she that spake to the great Turk; afterwards William Bayley's wife. She is now my landlady and nurse. She is a widow of a second husband; her name is now Mary Cross."

R. Barrow was anxious to reach Philadelphia, and though the captain who was to take J. Dickinson and family, was unwilling to receive him on board in his weak condition, his earnest entreaties prevailed. They embarked First Month 18th, and arrived 1st of Second Month. Many Friends went on board to see R. Barrow, he being too weak from his disorder (which had been on him fourteen weeks) to be removed that night. His mind was strong, and he rejoiced to meet his friends; expressed great satisfaction that the Lord had granted his request to bring him to that place, that he might lay down his body there. Next day, having wrapped him in a blanket, and placed him in a hammock, divers Friends assisted in carrying him to the dwelling of Samuel Carpenter, where, having many of his friends around him, his heart seemed to overflow with gratitude to his Creator. He said, "My heart is yet strong, and my memory and understanding good." He continued in a sweet, thankful frame of mind, saying, "The Lord has been very good to me all along, unto this very day; and this very morning had sweetly refreshed me." "It is a good thing to have a conscience void of offence towards God, and towards men." "The Lord, in bringing me hither hath given me the desire of my heart, and if I die here I am very well satisfied, and believe my wife will be very satisfied also, for as the Lord gave her to me, and gave me to her, even so have we given one another up." "The Lord is with me and all is well; I have nothing of guilt upon me, and have nothing to do but to die, and if I die now, I shall die like an innocent child;"—with much more of the same import, and he gave much solid advice to his friends. On the 4th he dictated a letter to his wife, after which he seemed gradually to sink. A friend who stood by his bedside, remarking in a low voice, he believed that Robert was sensible, he immediately said, "I have my senses very perfect, and thank the Lord that He hath not left me, but preserved me in my understanding to this mo-

"Mary Cross was married to her second husband, John Cross, of London, in the year 1678. They emigrated to South Carolina, where, it is supposed, she passed the remainder of her eventful life.

ment." The last sentence understood was, "God is good still." Then, after lying quietly for a time, he gently passed away, Second Month 4th, 1697.

Getting Rid of Hyacinths.

The Jacksonville correspondent of the New York Tribune says: To those who know of the hyacinth only as a pretty water plant it may seem strange that the government is devoting thousands of dollars toward destroying it, and that only after this State and scores of individuals and companies have devoted large sums to the same purpose. But it is true. The hyacinth that blooms in so lovely a manner and is a pretty household plant has become in Florida waters a terrible pest, a menace to the navigation of the rivers and creeks and has cost steamboat companies and lumbermen a large amount of money in the vain endeavor to clear out the St. John's and its tributaries.

The hyacinth was introduced here many years ago by a planter living near Palatka, on the St. John's, fifty-seven miles above here. It speedily flourished, and was the owner's admiration and delight. Later the plants began spreading, and soon covered the bayous in the St. John's, near his place, and later they spread to South Florida. Year by year the invasion increased, and soon the rivers and creeks became almost impassable for boats by reason of the immense beds of hyacinths clogging up the waters. Many were the schemes tried in the effort to rid the waters of this pest. Chemical solutions were sprinkled on them, but the hyacinths only grew the faster. Boats were tried that had sharp propellers to cut them down, and the plants were dragged out on the banks. This proved too costly.

After months of work and worry the general government was appealed to. An appropriation was secured, and the government engineers tackled the problem. Many were the ideas and suggestions given. Scores were tried and given up as impracticable. In Louisiana the same trouble was experienced, and in time the engineers here, taking lessons from those at work there, solved the problem, and in a few days the large steam tug La Reve started out in its first fight against the hyacinth pest, fully equipped for its work.

The tug was purchased for this work especially, and is strong and staunch, with extra heavy boilers and engines, so that power can be used to force the boat through the beds of the plant.

For the last year or more the St. John's has been covered with floating beds of the plant, varying from those of a few acres in area to those a mile or two long, and extending sometimes from shore to shore. As the plants became crowded together, they packed closely, almost solidly, and in many places on the upper St. John's, where the river is narrow, they are so solidly packed that people can cross the river on them. The roots extend down from four to ten feet, and the plants are so solidly and compactly packed that an ordinary steamer cannot force its way through them.

The tug is expected to clear this all away, and much interest has been awakened throughout the State by this work, as the losses entailed by this pest are felt on every hand.

Along with the tug, as a tender, will be a large barge, on which are two big tanks, with a capacity of five thousand gallons each, with a large boiler attached, the latter being necessary in preparing the chemical compound that is used. The capacity of the three tanks on the tug is thirty-five hundred gallons each. A huge spraying pump is set in the engine room of the tug. This pump forces the chemical solution through pipes to the bow of the boat, where large sprayers will distribute it broadcast over the beds of hyacinths. One sprayer is fastened at the bow, and the other two extend outward from the sides on long booms, thus enabling the workmen to give a wide distribution to the spray. The spray, in fact, will be thrown to a distance of ninety feet in an arc around the bow. By steaming along steadily into the bed of plants it is expected that the boat will be enabled to cover something like one hundred thousand square yards daily. It will be seen from this on what a large scale the war against the hyacinth is to be waged. It is expected that the boat will be at work all winter and next spring, and that when noticeable results of the success of the work will be observed. The work will be continued here for several years, possibly, before the hyacinth is entirely eradicated.

George Fox not a Negative Mystic.

The consciousness of the presence of God is the characteristic thing in George Fox's religion. His own life is in immediate contact with the Divine Life. It is this conviction which verifies and gives direction to all his activities. God has found him and he has found God. It is this experience which puts him among the mystics. But here we must not overlook the distinction in types of mysticism. There is a great group of mystics who have painfully striven to find God by a path of negation. They believe that every thing finite is a shadow, an illusion—nothing real. To find God, then, every vestige of the finite must be given up. The infinite can be reached only by wiping out all marks of the finite. The Absolute can be attained only when every "thing" and every "thought" have been reduced to zero. But the difficulty is that this kind of an Absolute becomes absolutely unknowable. From the nature of the case He could not be found, for to have any consciousness of Him at all would be to have a finite and illusory thought. George Fox belongs rather among the positive mystics who seek to realize the presence of God in this finite human life. That He transcends all finite experiences they fully realize, but the reality of any finite experience lies just in this fact, that the living God is in it and expresses some Divine purpose through it, so that a man may, as George Fox's friend, Isaac Penington, says, "become an organ of the life and power of God" and "propagate God's life in the world."

"The true wealth of States is men, not merchandise. The true function of government is to watch over the growth of good citizens"—Bishop Westcott.

The last day lies hid; therefore watch every day.

THREE THINGS.

Remember three things come not back,
The arrow sent upon its track—
It will not swerve, it will not stay,
It speeds; it flies to wound or slay.

The spoken word so soon forgot
By thee, but it has perished not;
In other hearts 'tis living still,
And doing work for good or ill.

And the lost opportunity
That cometh back no more to thee,
In vain thou weep'st, in vain dost yearn;
Those three will nevermore return.

—From the Arabic.

Science and Industry.

DWARFS.—"History has a curious way of repeating itself," writes a contributor in *The Sun*, in an interesting article entitled "The Dwarfs of the Congo," "and the dwarfs in the Congo forest apparently possess human characteristics, and practise some of them on their big black neighbors. Curiously enough, the tallest as well as the tiniest men in the British Empire are found in Central Africa. In the damp depths of the Congo forests, usually in little clearings between great moss-covered trees, are the tiny dwellings of the dwarfs. Their circular huts (one to each grown-up person, and a tiny hut for each child), made of leaves and sticks (their greatest height three feet, with a tiny hole as a doorway), are so difficult to distinguish in the general gloom that a passing traveller might miss them altogether. Although very timid, they will come to see a white man if one of their big friendly neighbors calls. These forest pigmies do no kind of agricultural work. Their food consists of the flesh of beasts, birds, reptiles and insects; but being very fond of bananas, they steal these at night from their neighbor's plantation. If no ill-feeling is shown them for this theft, another night the pigmies will leave, in return, some meat, or do some useful work. These little people seem to have no special language of their own, but are found to speak with a defective pronunciation the language of negro tribes surrounding them. They are very intelligent, and although under their natural conditions they are more degraded than many negro races, if living with Europeans they then quickly learn and speak correctly other languages."

FINSEN AND HIS LIGHT CURE.—The experiments and discoveries of Dr. Niel Finsen have done much to establish the therapeutic value of light and to provide for its practical use in the treatment of certain diseases. What he has accomplished, this Icelandic who struggled through early poverty to become a general benefactor, Cleveland Moffett tells in *McClure's* for Second Month.

First, Dr. Finsen found that, by keeping small-pox patients in rooms from which all light except red rays are excluded, the period of suppuration may be avoided and scarring is extremely rare.

"With so much done, Finsen went back to his general experiments," writes C. Moffett.

"Having pointed out a certain injury that the body may suffer from the chemical rays, he now hoped to discover in them some unsuspected virtues.

"It was well known at this time that nary sunlight will destroy bacteria if they are long enough exposed to its action. I now proceeded to show that this bacterial action of light is almost entirely limited to the blue, the violet, and the ultra-violet (the green, yellow, and red being practically useless), and that this action is greatly intensified by focusing the light through a lens. Thus Finsen found that while unfocused from a midsummer sun in Copenhagen kill plate cultures of the *bacillus prodigiosus* in an hour and a half, the same light concentrated through lenses, with the useless rays filtered out, would kill similar cultures in three or four seconds, and the same was true of other bacteria—they were almost instantly destroyed if exposed to concentrated actinic rays.

"Finsen's experiments furthermore demonstrated that a powerful electric light is as efficient as a bactericidal agent than ordinary sunlight, however concentrated, since the latter loses part of its ultra-violet rays passing through the earth's atmosphere, while the former has these in abundance. As to the matter of penetration he discovered that the actinic rays will go much deeper into tissues from which the blood had been pressed so that they are left white.

"Finsen began with lupus, a dreadful figuring disease, usually of the face, but comes when the bacteria of tubercles attack the surfaces of the body instead of the lungs or deeper parts. There was no cure for lupus, and thousands of sufferers over the world (there were some fifteen hundred in Denmark alone) were condemned without hope to endure its slow ravages. Surgeons might amputate away the affected parts, but some of the bacteria were almost sure to remain, so that the knife gave only temporary relief."

The treatment of the first case was entirely successful, and Dr. Finsen's discovery was met with prompt recognition. The use of the light treatment for this and other diseases has spread into various parts of the world within a few years.

And this man, who has done so much to relieve the sufferings of others, is himself a sufferer from constant bad health. He fully knows what a well day means.

OLD KING COAL.—Anthracite coal was not always of value to man, in fact, a little over a hundred years ago he even refused to use it, and sometimes, it has been said, denoted it as a fraud, calling it stone, and declaring that it could not possibly be burned.

Its properties as a fuel were discovered according to some good authorities, about the year 1770. It was some blacksmiths who made use of it at their own forges, but in the year 1775 a boat-load was sent to the United States armory at Carlisle.

The famous mines at Mauch Chunk were discovered in 1791, and the Lehigh Coal Company vainly tried to induce Philadelphia to use the product. The attempts to buy it were so unsatisfactory and there were so abundant forests from which wood and charcoal were obtainable, that as late as 1830 less than four hundred tons had been shipped to Philadelphia.

In 1808, a certain Judge Fell of W.

FOR "THE FRIEND."

By Precept and Example.

vented or contrived a kind of grate
the anthracite coal could be burned,
abling people to use it in warming
ruses. It was probably at the rolling
Schuylkill that the secret of using it
manufactures was found out in the year
b, his said to be the way it happened.
The workmen had been endeavoring to use
coal, and had stirred and raked the fire,
a little success. In anger they threw into
the grate all the black stones and went
on. On returning in a few hours they
saw the fire burning furiously and sending
out great heat. Thus the fact that anthra-
cites slow of ignition but capable of main-
taining heat beyond any other fuel, was made
known.

In the year 1822, a private citizen wrote a
paper that has lately been published. In it the
following occurs:

"We pushed forward our labors at
mining, hauling coal, building arks, etc., with
the greater difficulty to overcome of in-
forming the public to use our coal when brought
to the doors, much as it was needed. We
used handbills in English and German,
and made mode of burning the coal, either
in grates, smith's fires, or in stoves. Num-
bered certificates were obtained and printed
by blacksmiths and others who had success-
fully used the anthracite. Mr. Cist formed a
model of a coal stove and got a number cast.
When we went to the several houses in the
neighborhood, we prevailed on the masters to allow us
to mine fires of anthracite in their grates,
and to burn Liverpool coal. We attended
blacksmith's shops and persuaded some to
use it; 'too-iron,' so that they might burn
Liverpool coal, and we were sometimes
bribed to bribe the journeymen to try the ex-
periment fairly, so averse were they to learn-
ing these of a new sort of fuel so different
from what they were accustomed to."

It may, however, the rise in the price of
fuel had led the people to give the new fuel a
trial, and it has been so common a necessity
that it has taken a winter like the present one
to make us understand what a calamity it is
to be without coal, and to wonder what effect
the extravagant and wasteful use of it may
have on succeeding generations. No man liv-
es to himself, alone.

to be saved is to be freed from an accusing
conscience, the dominion of sin, its ill conse-
quence and the fear of them; to be content,
and even full of hope as to the great
future. It is to have the day of
triumph divested of terror. It is to have
the victory gain and peace of conscience, free-
dom from the mastery of the world, an abid-
ing, purifying, motive toward well-
being, which acts within, and is not depend-
ent on human observation, and a hope which
transcends present limitations, like grief, poverty,
sorrow, and actually converts them into
strength. It is to have a hope, realized in due
time, that is involved—and how much
of eternity can disclose—in "eternal

What matters how little the little door,
how little it lets us in?" And it is because
it is not great that they count any duty
at all.—Ex.

There may be many ways of teaching use-
ful lessons. Our discipline recognizes at least
two of the most important, "by precept and
example." Each has its beneficent use and
they often work best together. "Words fitly
spoken," when a consistent life lies back of
them, "are like apples of gold in pictures
of silver." And words, be they ever so finely
phrased or forcefully delivered, if they are not
the direct result of an honest concern of one
who is consistently struggling upward, and in
obedience to a divine call, how empty they are.

When Christopher Healy first attended a
Friends' Meeting it was a new experience to
him, and when he saw the solid demeanor of
some and the tears coursing down the
cheeks of others, although no words had been
spoken, he had to acknowledge that these had
something which he knew not yet for himself.
After meeting Friends were kind to him and
he a stranger among them was made witness
both to the effects of the Spirit and the fruits
of the Spirit. Their conduct and their kind-
ness toward him was preaching by example,
which bore fruit in his becoming a true Friend.

A few months ago two little girls entered a
street car in one of our larger cities and the
conduct of the older one toward her small sister
was so thoughtful and motherly, so full of
affectionate care, that when they left the car
a lady who saw and heard it all said, "That
little girl preached a whole sermon to me from
that beautiful text, 'Love one another.'"

That simple loving child taught more than
words could tell.

A Presbyterian minister told me he once
taught school near a Friends' neighborhood,
and became acquainted with a few Friends,
and that they had been kind and helpful to
him. He had learned to love them and their
ways, and now he was commending those of
his pastorate to imitate the virtues of the
Quakers. He had been impressed by their
kindness of heart and their persistence in go-
ing to meetings through all kinds of weather.
Their example had touched him, and now his
influence touches other lives, and thus the
circle of good widens and blesses as it goes.

A number of years ago two men came to
our house to perform some work which they
had been engaged to do. Their homes were
near Mentor, where Garfield lived. They were
his neighbors and attended the same meeting
he attended. They told me that James A.
Garfield was not a fair-weather Christian, but
that whenever he was at home and could
come, be the weather stormy or fair, Garfield
was in his accustomed place at meeting. His
example taught and still teaches many lessons,
and now after the lapse of years and all
their tragic happenings, the memory of Gar-
field is sweeter, nobler, in that he was not
only great, but good.

We can each, doubtless, remember some
whose lives have been their most convincing
sermon. They have been so full of goodness
and grace that even the faithless and the un-
believing have been made to acknowledge that
these "had been with Jesus." Christianity
can never become a failure as long as it con-
tinues to produce such men and women as
these, whose lives illustrate and adorn the
doctrines of God our Saviour.

Some men and some women are called and
qualified to teach by precept, and these must
enforce their teaching by a consistent, up-
right walking and example; then how beau-
tiful upon the mountains are the feet of them
that publish salvation and proclaim "thy God
reigneth." Some men's example is all the
preaching they ever do, all they are ever called
to do, and in some that speaks louder than
words. The spoken or the written words
derive most of their force from what lies
back of them. If they contain a true mes-
sage of Gospel love and are delivered in the
demonstration of the spirit and with Divine
power by one, the main bent of whose life is
right, that message will bear good fruit some-
where, even though unseen. Every divinely
inspired word, every consecrated life, bears
good fruit. There was Dorcas, a woman possi-
bly of few words, but with deft fingers and
a willing heart. Her capital, humanly speak-
ing, was small; just a needle and thread, but
following her example to-day there are the
Dorcas Societies and the other associations of
women who are doing so much to make less
bitter the lot of those lowly ones who wear
neither purple nor fine linen. Her life grows
more fruitful in beautiful, helpful deeds as
the years and the centuries roll away.

In the beginning one woman and her work
and consecration; now, a multitude with willing
fingers and sympathetic hearts doing the work
which she began. That is the kind of mul-
tiplication more of us need to learn. That
is the way a good word or a beneficent deed
ought to grow. And what is better, that is
the way a good word or a noble deed does
grow. Be as pessimistic as we will, the fact
remains that God's providences fit each other
part to part. If the need be in Galveston,
or Charleston or Chicago, the cities and the
counties unvisited by storm and destruction
pour out of their substance, and the needy
are helped. If a tried and persecuted people
are seeking new homes in a free land, some
with sympathy and help are at St. Johns to
bid them welcome, and to assist them in get-
ting settled in this better, more hospitable
country. If the starving be in Africa or in
India, or in the isles of the sea, some hearts
are filled with sympathy and an untiring pur-
pose to help those who have been unfortu-
nate; the widow's mite combined with the of-
ferings of larger amount, and the hungry are
fed.

In the world we have not only tribulation
and sorrow, but also much to be thankful for,
therefore "be of good cheer, for I have over-
come the world." When Ellen M. Stone and
her companion in travel were captive in the
mountains of Macedonia, they were at times
sustained by the thought that somehow there
was for them deliverance. Efforts unknown
to them were made that through God's bless-
ing procured their freedom. Deep as the need
was his power to save, to protect and to de-
liver.

When Leonardo da Vinci had nearly com-
pleted his masterpiece, "The Last Supper,"
he called his friends in to see and to criticize it.
They were silent before it for a time, then
one said, "How well that cup is painted." The
painter seized his brush and blotted out the
pictured cup, and said he was determined
not to mar his work with anything that would

attract attention from the central thought and figure, that of the Lord Jesus Christ. In that there ought to be a lesson for each of us. If we were so concerned that nothing in us or in our work should detract from Him, our work would be worth the doing. Consideration like that would bear fruit.

When some visitors were being shown the light in a lighthouse, one asked, "Does this light ever go out?" The keeper looked his astonishment at such a question, and said, "If this light went out, those ships out on the deep might go down." Let us do our part as faithful watchmen to keep our lamps trimmed and our lights burning.

G. G. MEGRAIL.

WINONA, O., Tenth Month 29th, 1902.

FOT "THE FRIEND."

The Living Word.

An Exercise for its members, felt but not uttered, in Philadelphia Quarterly Meeting.

The voice said cry, and he said what shall I cry? All flesh is as grass . . . The grass withereth, the flower fadeth; but the word of our God shall stand forever. . . Say unto the cities of Judah behold your God . . . He shall feed his flocks like a shepherd" (Isaiah, 40th chapter.)

We comprehend from this that men passed away. The eternal Word shall stand forever. This word was before the generations of men, and shall live and abide forever; is active in every generation, seeking to affect men and women, by its operation, which is quick and powerful, and sharper than any two-edged sword and completely discerns all the thoughts of our hearts. This same Word created the worlds and yet condescends to quicken and operate upon the hearts of poor fallen men. This same Word took flesh or was made flesh and dwelt among men, and John bore witness of Him (1st chapter John, verse 15).

Peter speaks of being born again, by the Word of God which liveth and abideth forever (see 1st Peter, 1st chapter, 23d, 24th and 25th verses).

We find men making offerings to their Lord, even so early as the sons of Adam.—Abel's was accepted, Cain's was not accepted; Noah when delivered from death by the floods and coming out of the ark made an offering unto God. Many other offerings were made among the generations of men, down to the time when, our blessed Lord appeared in an outward prepared body. The outward priests making offerings daily (Hebrews vi: 27), but our blessed Lord made an offering once for all, of his own body, ending all outward offerings, all outward priestly offices,—a High Priest, consecrated for evermore (Hebrews vi: 28), an eternal gospel, spiritually, and not outwardly discerned. E. L. P.

PERHAPS there is no form or evil so palpably bad as immoral literature. It will be read with avidity because it appeals to the lower passions and gross instincts. Like forbidden fruit, it is longed for. But it should be mercilessly suppressed because the motive that issues it is bad, being the desire for gain. Greed is at the very foundation of this evil. Then as it goes forth it blasts and ruins in all directions; and parents are as much called on to protect their children from this evil as from that of the saloon or gambling hell.

A Letter to a Schoolboy.

[By a Schoolmaster.]

The following article is from *The Journal of Education*. It is one of many indications that there is a strong reaction against much of the popular literature for children. It is reprinted in *THE FRIEND*, to encourage the care of committees in guarding our Friend's Libraries from improper juveniles.

My Dear Boy:—You wish to know why I do not like to have you read the cheap books that are passed about among the boys, and I will try to tell you enough of my reasons so that you will prefer a different kind of books.

Reading a book is very much like being in company with the people you are reading about, and choosing a book is like choosing your companions. Now, if some strangers should come to town dressed as the people are pictured in these books, and having the ways and manners described there, and should ask you to go and spend your evenings with them, would you go? I have asked a good many boys this question, and they all seem to think they would wait until they knew a little more about the strangers.

But suppose the strangers should come to you and boast that they were very good and very brave, would you not still ask some one you knew whether these were the kind of people they pretended to be? You do not wish to spend your time with companions who pretend to be something they are not, do you?

Now these people in the books are not what they pretend to be, and this is one of the worst things about them. There are no such people, and if you were to find the real men and women who are most like the ones you are reading about, and who live as near as any one does to the way these are represented as living, you would not like them at all. You would find that they were coarse and low, that their habits were not such as you admire, that their manner of life had no charm for you, and you would wish yourself back home again.

All this the book conceals from you. It covers up their bad side, just as a dangerous man hides his evil habits when he goes among respectable people, and it pretends that they do things which such people do not do. These companions are not what they pretend to be.

This is the difference between a good book and a poor one. The good ones are true. I do not mean that they always tell of something that really happened, but they give you a true picture of the life of such people as they describe, as I might tell you how we lived when I was a boy, without trying to give you word for word what we said, or telling exactly what occurred on any particular day.

In the next place, I wonder if you do not, after reading one of these books, spend a good deal of time in thinking what brave deeds you would do if things should happen to you as they do to the heroes of these stories? I think most boys do just that. Now you never will live as these heroes are represented as living, nor have the adventures they do. I do not suppose you expect to. The habit, then, of thinking what extraordinary things you would do if you were in a different kind of a world from the one you really live in, is not good for you. A man who spends his strength in planning for a world utterly different from the one he is to live in is unfitting

himself for successful life in the real world. When he is brought face to face with questions which must be decided, and he foresees to see things just as they are, a great misfortune to him to have all his imaginary circumstances come trooping upon his mind and confusing themselves with real ones. But this is just what they do if his mind is in the habit of letting it instead of deciding promptly what to begin to think what he would do if they were different. His judgment is not clear.

This is the reason we read so often, daily papers, about young men who do and foolish, sometimes even criminal, after reading such books as we are about. They have made their plans, world like the books, and we in this have to interfere with their plans, and to shut them up in prison because they are dangerous to us.

One more reason I think you will see. If a man becomes a drunkard or an opium addict it is not because he likes the taste of alcohol or of opium. It is because these excite his nerves in a certain way, and the effect has passed off, he feels dejected and discouraged, his nerves are unsteady, a loosened bowstring, and he really suffers. He can again tighten the string with a dose of his drug. This is what we mean when we say a man is becoming dissipated.

Just so one's mind may become dissipated. Do you not find, after you have read these books, that the every-day life seems very tame? Do you not find it to be interested in the simple plays of friends and the humble tasks your parents and teachers give you?

Whatever makes you discontented with as they are, and leads you to feel that it is worth while to do your best until some great occasion comes, is bad for you and endangers your future happiness and your future usefulness. The man who makes the most of every opportunity when all the world is looking on is not the one who has been waiting for it, but the one who has all along been busily making the best of small opportunities while nobody noticed him.

So, I say, choose your books as you choose your companions. Read only those which tell of people you really respect, which make you think more of your own life, not less, make you feel like being more useful and useful, more patient and earnest, playing fairer, doing your work better, finishing every task more faithfully. If you would not choose a friend until you knew something about him, so it will be with books. Do not begin a book until it has been recommended to you by somebody you have confidence in—your parents, school teacher, or some of your companions. Taste and habits you know to be as good as your own.

At any rate, do not read a book which is not considered fit to be placed in a public library (any more than you would spend your evenings with a boy who was not considered fit to be in a public school), or a book which gives you a hero that you would be ashamed to see at your home. Keep your mind clear and clean and strong, as you are your body. I know you mean to.

Idyllic Island Life.

Recent visit to the Colonial Office in
of a deputation representing the Pit-
Norfolk islanders has again served
attention to the descendants of the mu-
of the Bounty.

its own small way Pitcairn Island affords the most remarkable illustration of the progress of colonization which has built up the British Empire on which it is but an atom. The island is a mere dot in the Pacific, and measures only seven miles in circumference. It was discovered and colonized in 1790 by a ruffian and the mutineers of the *Bounty*. Yet it has remained isolated and never under any control of the British government, Pitcairn is now one of the most idyllic and utopian as well as the most remote communities on the face of the earth. Its inhabitants number about one hundred.

They are fine, tall specimens of humanity, rather dark, but favoring their European than Kanaka forbears. They are educated, and speak excellent English, free from any lingual corruption or slang. There is one of unbroken peace and ease, plantains, maize, bananas, oranges, pumpkins and coconut trees grow in luxuriance, with no wild animals to wreck the peace save swarms with fish, while goats and poultry thrive and multiply. The

perfect. And though all the possibilities, man is not vile. On the contrary, certain people constitute a very moral type. They are religious, and, adhering to the Fourth Commandment, observe the Sabbath. The original church building was presented to Queen Victoria. There is no poverty, no war for the common weal, and there is no prison nor policeman on the island. Each one of themselves to fill the post of mayor magistrate, but his office is practically sinecure. They have no money; alcohol and a beverage is not, being regarded as a medicine, nor is the smoke of tobacco in the land. Once a year the life of the island is excited by the visit of a ship, bringing the annual mail. The captain of the vessel any important matter referred for settlement, and his judgments are quietly accepted. Save for the holiday and the occasional call of a sailing vessel, the little community pursues its peaceful, complete isolation from the mainland.

the British Utopia, the only less unsocial Norfolk colony is an offshoot. In 1801, one hundred and ninety-six descendants of the thirty mutineers migrated from Pitcairn-Norfolk island, on account of the crowded state of the former. They have increased to seven hundred and fifty, and preserve the Edenic features of their parolous. Farming and whaling are industries, and steamers calling once a month to carry goods to Sydney, nine hundred miles. When the weather is rough the vessel approaches Norfolk, with the result that sometimes the islanders have been reduced to the verge of starvation.

The islanders are desiring of securing better communication with the outside world, and this was the principal subject discussed at the recent conference between the British and Colonial Secretary Chamberlain.

THE VISION FROM MT. LOWE

Looking southward to the sunlands on the ocean's
ebb and flow,

Keeping watch o'er Echo Mountain dwells the
presence of Mt. Lowe.

In the glowing light of noonday, in the midnight
calm and lone ;

Gazing outward from the summit like a ruler from
his throne.

At his feet sits Pasadena, framed with fields of
fruit and grain.

fruit and grain,
Where the valley of San Gabriel slopes in beauty
to the main;

Pasadena deck'd with roses, and with gems of gold
and green.

head like a crown

And the city of the Angels, on her hills of bronze

Stands amid her groves of olives like Jerusalem of

word of God, as is everything that enables us more fully to know God as he is revealed in Jesus Christ. A man or woman in the power of the Lord to-day and under his guidance, may speak forth the Word of God to others.

Notes from Others.

TRAFFICKING IN MANUSCRIPT SERMONS. A Baltimore firm has been sending out a circular to ministers, offering to sell them "carefully written sermons," prepared by "an earnest and able theological student in England." They are also assured: Our correspondent is desirous of sending us a regular supply of such, provided we can dispose of them advantageously in this country."

The acts of warfare of Germany on Venezuela, while awaiting arbitration, "only illustrate once more the truth that the cultivation of might leads inevitably to brutality among nations as among men. A good many people are getting their eyes open to this simple fact, and are beginning to see that our nation, as well as others, is getting nearer and nearer to the peril of war and unlimited disaster, the more it goes on making its peace and encasing its sides in steel."—*Advocate of Peace.*

Andrew Carnegie has lately said: "The great advance which all religious bodies are making, and must continue to make, or perish, is along this road, the recognition of the truth that the kingdom of God is within man here and now, and that in order to merit heaven in the future, or to be fit to exist there, it is necessary that we begin to make something of the real heaven here now on earth."

While we do not admit that we can "merit heaven," we are pleased to see thoughts of such a man turned heavenward.

Professor Delitzsch, of "Babel und Bibel" fame, informs the world that the Babylonian system of ethics was superior to that of the Jews as recorded in the Bible, and that the latter is in great part derived from the former. All this is very interesting, and highly important, if true. But the fact remains that the Jewish system is alive and in full force and effect at the present day—shaping the lives and moulding the actions of millions of men in every civilized country of the world, while the ethics of Babylonia are as dead as Babel himself, and have been so some thousands of years. If the doctrine of the "survival of the fittest" applies to anything, it applies to ethical systems. Measured by that test, Prof. Delitzsch's startling assertion will not pass muster."—*Jewish Exponent*.

"Not long ago I wandered one bright morning into the old church of St. Bartholomew the Great. In the Lady Chapel sat a score of women, young and old. Dead silence reigned, no word was spoken, some of the women were reading, some were lost in thought, some were bent in prayer. The scene in the old church, every stone of which is eloquent of the dead centuries, impressed me, and I sat down to weave my next prayer book. I was in the house of God. I remained an hour, and in that one hour of reverent thought, unbroken by the voice of priest or congregation, I found more comfort for the past, more courage for the present, more hope for the future, than I have ever found in the set services, grand or simple, of chapel, church, or cathedral. The good thoughts that come to men and women in the quiet hours of prayer, the power of prayer, the power of prayer more permanent in their effect, than all the emotions excited by music and song, by the dramatic efforts of the preacher, or by the droning repetition of printed words." Though the foregoing is

extracted from a sporting paper, there is so much sound truth in the thought, that it will not be felt out of place here. One is inclined to ask, with the Benjamites of old, "Is Saul also among the prophets?"—*London Friend.*

SUMMARY OF EVENTS.

UNITED STATES.—George B. Cortelyou, lately secretary to the President, has been appointed Secretary of the new Department of Commerce and Labor.

The United States Government has formally accepted the offer of the Panama Canal Company to sell to the United States the canal property for \$40,000,000, subject only to the ratification of the pending treaty with the Republic of Colombia.

Anthracite Coal Commission met in Washington on the 19th instant to begin the work of formulating its conclusions and preparing its report.

President Roosevelt has announced that he would call an extra session of the Senate soon after Third Month 14th unless both the Panama Canal treaty and the Cuban Reciprocity treaty are ratified by that date.

A bill has been agreed upon by both Houses of Congress in which the death penalty is provided for any one who shall wilfully or maliciously kill the President or Vice President, or any officer upon whom the duties of President may devolve under the Constitution; also for the willful killing of any officer of the Government in the line of succession to the Presidency, or the Ambassador or Minister accredited to the United States. An attempt to murder the officials named is made punishable by death or imprisonment for not less than ten years. Another section prohibits the entry into the United States of all persons opposed to all organized government, or who belong to any organization so opposed, and punishment is provided for any such person who attempts to enter the United States, and, lastly, no person disbelieving in organized government, or who is affiliated with any organization teaching such belief, shall be naturalized.

William R. Day, of Ohio, formerly Secretary of State under President McKinley, has been appointed a justice of the Supreme Court of the United States in the place of Justice Shiraz, resigned.

A decision has been made in the case of the "Beef Trust." Judge Grosscup, in which he held that there can be no doubt that the agreement of the defendants to refrain from bidding against each other in the purchase of cattle is combination in restraint of trade; so also their agreement to bid up prices to stimulate the shipments, intending to use the same means when the shipments have ceased. The same result follows when we turn to the combination of defendants to fix prices upon and restrict the quantities of meat shipped to their agents or their customers. Such agreements can be nothing less than restrictions upon competition, and, therefore, combination in restraint of trade, and thus viewed, the petition, as an entirety, makes out a case under the Sherman act.

A despatch from Wilkesbarre, Pa., says: There are now 3,000 women and girl members of labor unions in and about this city. They conduct their own business, and send delegates to the Federated Labor Convention. There is also a movement on foot to organize the servant girls in this city.

The severest storm of the winter, accompanied in many places by intense cold prevailed during the 16th and 17th instants throughout a large part of the United States. In certain localities in California a loss of ten to twenty per cent. of the entire fruit crop is reported. The temperature in Philadelphia on the 17th was the lowest for the past three winters.

Notice of an appeal by the Delaware Indian nation to the Supreme Court has been made. The decision of the Court in 1867, upholding the Cherokee Indians in the claim of the Delaware for their share of the Cherokee lands in Indian Territory, has been filed. The case involves lands and interests valued at more than \$2,000,000. It is based upon the terms of an agreement entered into between the Delaware and Cherokee in 1867.

The *Cedric*, the largest steamer in the world, arrived in New York on the 20th instant, having made her first voyage from Southampton in eight days and eight hours. The displacement of this vessel is stated to be 38,200 tons of water, or 15,000 tons more than that of the *Great Eastern*, which 45 years ago was considered as a modern wonder.

A course of instruction in the maintenance of health has been introduced in the Teacher's College of Columbia University, New York.

There were 582 deaths in this city last week, reported to the Board of Health. This is 24 more than the previous week and 14 more than the corresponding week of

1902. Of the foregoing 311 were male and 271 females; 61 died of consumption of the lungs; 96 of inflammation of the lungs and surrounding membranes; 11 of diphtheria; 17 of cancer; 23 of apoplexy; 27 of typhoid fever; 2 of scarlet fever, and 6 of small pox.

Foreign.—Secretary Hay, for the United States, and Herbert Bowen, for Venezuela, signed a protocol on the 17th providing for the adjustment of United States claims against Venezuela by a commission to meet at Caracas. This commission will consist of two members, a Venezuelan and an American, to be appointed respectively by Presidents Castro and Roosevelt, and in the event of disagreement an umpire to be appointed by the Queen of the Netherlands.

The *Times* correspondent at St. Petersburg says: "The belief of the peasantry in the divinity of Father John, of Kronstadt, is still largely held. Trustworthy newspaper reports say that 20 persons, living in Karpovka, in the Don territory, journeyed 1000 miles to Kronstadt, in the event that Father John, persisting in his attitude in maintaining that he was Christ, would be executed. They were discovered by the police, and sent home to be dealt with by the ecclesiastical authorities."

A novel idea in lighting trains by electricity, says the *Engineering News*, is the "Gullot" system, which has been experimented with successfully on a small scale on an important road and is now to be applied to an entire train. The motion of the train is used to generate the electricity by a rotary fan attached to the front end of the locomotive. No gale of wind is required to cause the fan to operate; the ordinary pressure of the train moves it sufficiently to generate the electrical energy required to light any train and leaves a large surplus for ventilating fans and other purposes.

A discovery of oil in the city of Dublin is announced. It was discovered in the basement of an ordinary house built on reclaimed bogland, and it is said that a copious flow has continued since the find was made five weeks ago. Experts attach much importance to the matter.

A dispatch says much indignation prevails in Hong Kong and Shanghai over evidence that the French traders in the New Hebrides Islands are forcing the natives into slavery. The natives of the New Hebrides, says friends in Hong Kong that regular trading in human beings is being conducted there by Frenchmen. An investigation shows that the French subjects in New Hebrides are allowed to buy and sell natives for a term of years, though the same privilege is not accorded to British subjects. When ill treated these slaves had no redress except to run away. British residents desire to see the slave trade stopped.

The Emperor of Germany, has lately written a letter to Admiral Hillman, Councillor of the German Oriental Society, which sets forth his views in regard to religion, which are accepted as satisfactory evidences of his orthodoxy, that for some months past had been somewhat in doubt. This statement of his views has been made in response to requests of some of his advisers in order to restore the confidence of the clergy and laity. After rejecting some of the assertions of "higher critics" he bears this testimony: "Christ is God, God in human form. He redeemed us and inspires us, entices us to follow Him. We feel His fire burning in us. His sympathy strengthens us. His discontent destroys us. But, also, His intercession saves us. His gracious victory, being ours, we feel His word, we go through labor, ridicule, sorrow, misery and death, for we have in Him God's revealed word, and He never lies."

The completion of the 25th year of the pontificate of Leo XIII was celebrated in Rome on the 20th inst., amid great display.

NOTICES.

AN APPOINTED Meeting for Worship for the members and attendants of the various meetings composing Abington Quarterly Meeting will be held in the Meeting-house at Germantown, Second-day afternoon, Third Month 2nd, 1903, at 4.30 o'clock.

This meeting is called at the wish of the Sub-Committee of the Yearly Meeting's Committee now under appointment to visit Abington Quarter and Subordinate Meetings. It is hoped that all our members will make an earnest effort to attend.

SAMUEL EMLEN,

HANNAH B. EVANS,

ALFRED C. GARRETT.

GERMANTOWN, Second Mo. 19, 1903.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will meet trains leaving Philadelphia 7.16 and 8.18 A. M., and 2.50 and 4.32 P. M. Other trains are met when requested. Stage fare, 15 cents; after 7.30 P. M., 25 cents each way. To reach the school by telegraph, wire West Chester, Phone 1144.

EDWARD G. SMEDLEY, Supt.

WESTTOWN BOARDING SCHOOL.—Application admission of pupils to the school, and letters to instruction and discipline should be addressed to—

Wm. F. WICKHAM, Principal.
Payments on account of board and tuition, and communications in regard to business should be forwarded to—
EDWARD G. SMEDLEY, Superintendent.
Address, Westtown P. O., Chester

DIED. Fifth Month 20th, 1902, ELIZABETH, daughter of John Q. and Mary K. Spencer, loved member of Coal Creek Monthly and of the meeting of Friends, Iowa, in the forty-year of her age.

—Seventh Month 6th, 1902, JOHN Q. SPENCER, a beloved member of Coal Creek Monthly and of the particular Meeting of Friends, Iowa, in the eighty-year of his age.

—First Month 11th, 1903, MARY R. SPENCER, a beloved member of Coal Creek Monthly and of the particular Meeting of Friends, Iowa, seventy-eighth year of her age.

—at her residence in Malvern, Ches. Co., Pa., First Month 17th, 1903, SARAH W. ROBERTS, an esteemed minister of Goshen Monthly Meeting of Friends, aged fifty-five years. Although she was sudden, she expressed a desire that her remains be laid to rest in quiet and peace. And quoted, "Yea, though I walk through the valley of the shadow of death, I will fear thee for thou art with me; thy rod and thy staff they comfort me."

—at Quaker Hill, New York, on the twentieth of First Month, 1903, RUBY OSBORNE, of Richmond, N. C., aged eighty-two years and six months; a beloved member and elder of the long Monthly Meeting. The sixtieth anniversary of their marriage was the twenty-third of First Month last. "Blessed are the dead which rest in the Lord from henceforth; yea, saith the Lord, that they may rest from their labors and their works do follow them."—First Month 19th, 1903, EDWARD R. STRAWBRIDGE, SON of JUSTUS MARY L. STRAWBRIDGE, in the thirty-eighth year of age; a member of Chester Monthly Meeting.

The taking away of this young man from the life, including the management of his household, and the probable loss of his inheritance, to a Christian integrity, was a sudden shock to the business community and to many members of our religious Society in whose welfare he bore an increasing interest; setting aside all his concerns regularly to attend the mid-week meeting for worship, and at times known to accept of a minister to meetings at long distances, and encouragement and help of gospel service.

To Divine Grace also belongs the credit of beneficence towards numerous employees, of deserving causes in the community; as will be understood by the presentation of the following testimonies from his lips:

To a friend several years ago he related, "When I am walking through the store at times feel almost overcome with the love of my Heavenly Father." And when laid upon proved to be his death-bed, suffering greatly from oppression, entirely at peace with God and with a conscience void of offence, awaited the outcome with a patience and resignation touching and wonderful. He was Rousing from his state of great prostration and heard to say words to this effect: "I thought Lord wanted me to go. If necessary I'll go and work as hard as ever, but I have met Him. And again, as if in prayer, 'Now, my Savior, has always been with me in my business, and in my home life, taking me by the hand, and pointing me in the right way.' When I was in Rhoads' I was so ready!" On asking to be daily verse read to him, his verse was revealed, "The Lord, will hold thy right hand unto thee, fear not. I will help thee, and in effect, 'Haven't we proved that, the Lord is with us?' When I thought of the passing of a little, and among other things many an articulate, repeating a part twice, 'Though I walk through the valley of the shadow of death, I will fear thee for thou art with me; thy rod and thy staff they comfort me.'"

Ear-Praying and Mouth-Praying.

A distinguished general of an army was accustomed, we are told, to put into daily practice the injunction, "Pray without ceasing." One said that he had so used himself to pray that he would never raise a glass of water to his lips without asking God's blessing for it. "He always closed a letter with prayer under the seal, and in the military service was in the habit of offering a petition for the cadets coming into and going out of his presence. The custom, said he, was almost as fixed as breathing. Prayer could be with us the linking of our lives to God and to Himself."

Will the general's honest concern to pray without ceasing we feel a sympathy, and with the first sentence of the quotation especially so. Prayer should indeed be with us the perpetual "linking of our lives to God and to Himself." That attitude of spirit towards God makes our lives a prayer. And where the Spirit of God and the human spirit are kept in such communion, one's deeds are made manifest that they are wrought in God.

If any one, however, judges that warfare with another general has stigmatized by the best of all names, embodying all sin is justified because a general while engaged in it could not habitually utter expressions of prayer—he might also judge that the slave-trade is justified because a writer of many names among the churches as precious, recorded, as we remember once reading, that he used to enjoy most blessed seasons of Divine communion in his private devotion at sea while serving as master of a ship. There are many such anomalies of prayer and practice which we prefer to leave the Searcher of hearts to reconcile in individual cases. The judgment of their

consistency with Christ's Spirit is beyond us. If the utterers of prayers went honestly, as we could prefer to trust they did, by such light as they had, God knoweth. But why were they not receiving clearer light? Doubtless eventually this came, and, we could hope, in mercy more than in judgment.

Leaving individual characters to their Judge, it is a popular short-coming in the theory of prayer, that we are concerned with. Throughout human literature and society there is much indiscriminating allusion to prayer, as if saying prayers was praying, and so to pray without ceasing would require the incessant uttering of words.

But when prayer is regarded in that second aspect, so rightly defined as "the linking of our lives to God Himself," it may continually be realized as that uplifted aspiration of spirit to Him "in whom we live and move and have our being," which proceeds from and blends with the inspiration of his own Holy Spirit and living grace. For of Him and through Him and to Him is all acceptable prayer,—in us the motion of a state of heart which He regards, and himself needs no formula of words devised for the help of man's intelligence, or for the relief of man's emotions.

Our question was, why are not devotees to the frequent utterances intended as prayer, more heard for their much speaking? Why are they not receiving clearer light while running their prayers side by side with anomalies to Christ's Spirit? How responsive are we ourselves to conversationalists who meet us, asking many questions, and absent minded to our answers? The continuous producing and hearing of our own sounds of voice in prayer, even at its sincerest, is but a one-sided exercise which leaves a prayer-hearing God out of hearing. Do we not forget that the effectual, fervent prayer of the righteous, to avail much, needs to be ear prayer as earnestly as mouth-prayer?—that the first command is "Watch," and then "Pray?" Let us give our first and foremost attention to his prayers and entreaties to us in secret, and then shall we on our part "know what to pray for as we ought." To watch, then, for the Holy Spirit's intercession with our spirit, is an integral part of praying without ceasing; a state of prayer that is a reciprocal exercise and intercourse between the Father of spirits and our

own hearts, in which He must take the lead. He always leads in prayer, if genuine praying is done. Bring no more vain oblations of accommodation-prayers, where man requests man to lead. The Divine prayers to us witnessed in the secret of our hearts,—a sense and witness ministered through any channel written or spoken as a felt request of his,—are the most important part of living and of every true devotion. How much have we a right to expect Him to answer us or enlighten us if we do all the talking, or without ceasing ask Him for a hearing without ever giving Him one? In vain are our telephones without an ear at both ends. Does not this account for some of our slave-trading and some of our man-killing, or whatever things done in the dark,—if we take upon ourselves to be men of prayer without watching unto and waiting on the inspeaking Word of God as his prayer to us? "If any man be a worshipper of God, and doeth his will, him he heareth."

FOR "THE FRIEND."

Our Mid-week and Perennial "Lent."

"Indifference to Truth and to Truth's service" is the only explanation I can arrive at in considering the oft-mentioned "neglect of our mid-week meetings." There is "such a cloud of witnesses" to their value as a great help to the best life, that it is difficult to understand how any that are truly in earnest in heavenly aspirations, can "neglect" opportunities for advancement in "the race set before them."

Doubtless some who do not regularly attend these meetings, can not because of circumstances beyond present control,—let not these be charged with "neglect."—they may have the life of God in them and are doing the best they can. If they are waiting in expectation of a larger liberty, do not judge them before the time; their case is vastly more hopeful than those who can attend our week-day meetings if they wanted to, but who do not because they care not; and what is this but indifference to Truth and Truth's service? The hearts of such go where their treasure is, and thus a breach is made in the body—a harmonious working of all the parts is made difficult, and our meetings suffer in proportion as the breach widens.

But why emphasize week-day meetings? Because of our needs and because the righteous of every generation have found them especially helpful in their heavenward journey.

Whence come "the noon-day prayer meeting" and "the morning and evening service?"

observed by others all through the Lenten season, if they be not to supply a felt need?

Let us have a Lenten season all the year and praise God for the privilege. There is not a single reason urged to live holly from "Ash Wednesday" to "Easter," that does not apply with equal force to the whole year.

LET the dignity of your calling provoke and encourage you to be diligent attenders upon his work and service you are called to, and let not your concerns in the world, draw you from observing the time and the seasons appointed to meet together . . . but when the time is come, leave your business for the Lord's work and He will take care your business shall not suffer, but will add a blessing upon it, which will do more for you, than the time can do that may be saved out of his service.—*Stephen Crisp.*

THE FAULTLESS CHRIST.—In looking at the character of Jesus Christ, one feature that stands out very prominently is that it is faultless. The evangelists no where say that He was faultless, but they never place him in an attitude in which we can detect a single flaw in his mental or moral life. We see Him under a great variety of aspects and in many different lights, but the picture is alike perfect in each. Sometimes He is presented to us as in private, surrounded by those whom He loved, and who loved Him, and in whose cherished society He could give free scope to the warmer and tenderer emotions of his soul. At other times we see Him in public, now attended by wondering crowds, and now exposed to the crafty assaults of bitter and spiteful enemies. At one time He is shown to us amid circumstances of joy and triumph; at another, amid scenes of deepest humiliation, the severest agony, and the most fearful sorrow. We see Him brought into conversation with people of every class and character—high, and low, rich and poor, young and old, learned and ignorant, soldier and priest, lawyer and rabbi, prince and peasant, Pharisee and Sadducee, the devotee of the temple, the student of the schools, the money changers of the market place, and the abandoned of the streets. Never was a life in all its phases more faithfully and fairly laid before us. And what is the impression left upon the mind of the reader as to His character. Is it not this? that there is One who is absolutely superior to circumstances; One on whose serene and lofty spirit the changes that effect earthly interests can produce no lasting or injurious impressions; One for whom we think his friends never had to make an apology, for whom the impartial critic needs not to ask any forbearance, and in whom the keenest sighted of his enemies find no fault; One whom no passing weakness from within, no cunning temptation or frowning terror from without, could divert for a single moment from his career of virtue, beneficence and purity; One in short, who, tried by the loftiest standard of spiritual excellence, must be pronounced without blemish and without spot."—*Selected.*

If Nature put not forth her power
About the opening of the flower,
Who is it that could live an hour!

—*Tennyson.*

Ebenezer Slocomb.

Ebenezer Slocomb, who departed this life in Jamestown, on Conanicut Island, the 14th of the Second Month, 1715, in the sixty-fourth year of his age, was born in Portsmouth, Rhode Island, the 25th day of the First Month, 1652, and had his education among those people called Baptists.

Being a man of great stature, and strong and nimble of body, he was given to those recreations that were in those days accounted civil; but about the twentieth year of his age, it pleased God to send his faithful servant, George Fox, into those parts, and he was willing to go to hear him preach, which he did. But being in that nature which understood not the things of the Spirit of God, he came to this conclusion in his mind, never to hear any of the Quakers again, boasting in himself that the Baptists were nearer the rule of the Scripture than they.

Thus he went on for some time, until God, who brings down the high, and scatters the proud in the imaginations of their own hearts, was thus pleased to manifest himself to him. He with two more of his company, were passing by a barn, where there was a meeting, at which was that eminent gospel minister, John Burnyeat, of Cumberland, England; and he being preaching as they were passing by, they all went to the outside, to hear two or three words, to talk of as they went on their way. It so pleased God that at that instant John Burnyeat was treating of that saying of John the Baptist, where speaking of Christ, he said, "He shall baptize you with the Holy Ghost and with fire;" which Ebenezer did not remember he had ever read, although he thought he knew more Scripture than any of the Quakers. He was willing to lean against the door-post to hear farther, although his companions jogged him to be gone. Yet he stayed, until through the powerful preaching of the gospel he was reached to the heart, and made in his own soul to confess, that all his Scripture knowledge and high notions of water baptism, had left him short of the new birth, and the baptism of Christ by the one Spirit into the Church which is his body. Yet he did not give up in obedience for some time, until the fire of God began to kindle in his own soul against the root of the corrupt tree, and every branch thereof; for he found that saying of the prophet fulfilled, that "There is no peace to the wicked."

About this time, being with his newly married wife at a merry-making, where they were pitching the bar, they persuaded him to pitch with them, but he refused, being sensible the Lord had appeared to him, to redeem him out of such vain delights. But they at last set his wife to work; and she, through much entreaty prevailed on him to pitch once. And although he outdid all the company, to their rejoicing who set him to work, yet the Lord, who requires obedience according to the understanding given, set his folly and shunning the cross so powerfully before him, that for a time he thought the day of his visitation was over. Yet He who in judgment remembers mercy, after some time, was graciously pleased to show him that he might come out of condemnation, by obeying the law of the Spirit of life which now, through Christ, was made mani-

Selected.

fest in his mortal body, to reprove sin in flesh; to which he gave up in faithfulness.

The Lord was near to him, both to comfort him in his exercises, and also to give him wisdom, and a Divine understanding in mysteries of his kingdom. After a few years He called him into the work of the ministry in which he approved himself a laborer needed not to be ashamed; for he rightly divided the word of Truth, being sound in doctrine, and his speech very often ministered grace to the hearers, and was sealed by Spirit of God to many of his auditors, to turning them home to Christ, the great Father and mediator of the new covenant which God hath made with his people in this latter age of the world. He was also made an officer of the church in these parts, by the Bishop of souls and Shepherd of the sheep in which he acquitted himself like a true servant of Christ, being a pattern to the flock his conversation and Christian humility also in his apparel and furniture.

He travelled much in the work of the ministry for the space of thirty-six years, both the colonies of New England, and also set times to Long Island, East and West Jersey and Pennsylvania, and in his latter years Maryland about five hundred miles from habitation; in which travels several were convinced of the everlasting Truth through ministry; also the convinced were built up in the most holy faith, which gives victory over all the works of the flesh.

He was also very serviceable in meeting business where he came, that the profession of Truth might in all their conversations brought to walk in the same, having an excellent gift in the service of the church.

In the latter part of the year 1714, he travelled to Boston, Lynn, Salem, Hampton, and Dover, taking his leave of Friends, saying never expected to see them again; for he had a sense that his time in this world was near a period; and was also very serviceable preaching the gospel of Christ with power, and with an audible voice, and in giving counsel to Friends. When he was at home he always delighted in the company of Friends who stood zealous for a godly discipline and good order in the church of Christ, which the Lord hath measurably established among Friends, that so the honest, though weak might be preserved, and all disorderly workers who would not be reclaimed, might be testified against, as professors who are gone out of our holy communion; in which good work this Friend was one of the first rank in the American parts of the world. As on the other hand he always accounted the disorderly workers, under profession of Truth, his enemies, and they often found from him a strong sound judgment, so on the other hand, he was a tender nursing father to the honest-hearted and young scholars in Christ's school, he ruled not with severity over any, because they were younger than he; but always delighted to see young men come up in the good order established amongst his people. And if at any time they were too zealous to be borne by old and loose professors of Truth, he would commend their zeal, but gently instruct them to use "wisdom," in which good work the Lord greatly blessed his labor to his people. He would also give way very much to the

ly called into the work of the ministry, if he kept to sound words and doctrines, which according to godliness, ministering from ability which God giveth. Thus he, with much sweetness, continued a faithful elder in the sixty-third year of his age, and then he was taken ill, and continued very weak all winter, very often expressing his willingness to submit to the will of God, either in life or death. He was concerned in the time of his sickness for his children, that they might walk in the way that is strait and narrow, and leads to eternal bliss; telling them he had done his duty in teaching and instructing them, as much as in him lay, and letting them know his earnest desire that they should rest in the unity of Friends; and that it would prove their utter ruin, if they went to it. He would in his sickness very often express his desire that Friends might be kept in love and unity, and so continued in a Divine sense of God's goodness with sweet peace; and he said he had done his day's work, having peace with God, and unity with his people. And then like a composed Christian, he had fought the good fight of faith, he had overcome of his family one by one; and after some time, departed very quietly, and doubtless entered into that rest which is prepared for the people of God.

FOR "THE FRIEND."

Motes and Beams.

Job Roberts, a deceased elder in the Society of Friends, was a man of a deep religious experience. He had the gift of expressing truth in an original manner, sometimes with a tinge of humor. I heard him say, "If a man keeps well on the lookout for sins he will find they will give him such a tussle, that the conceit will be pretty well shaken out, so that when he goes looking for notes, he will be apt to be quite gentle in his reiteration."

It is right at times to reprove our brother or sister, but if we have been watchful over our own sins, we will do it without any of the spirit "I am holier than thou," and if it is by the right direction, best wisdom will be given to make the caution effective. This is illustrated in the case of Jacob Roberts himself. I heard him some forty-five years of age say, "When young man I had a most ungovernable temper, but I have been able to bring it in a good degree under control, by the Holy Spirit affording a reproof I once received from an elderly Friend by the name of Jacob Roberts. I used to haul milk to the station some twenty carriages where I often met Jacob Roberts, who was there on the same errand. One morning I drove a young horse that scared at the motive, upset my wagon and spilled the milk. I started in to beat the poor beast in a merciful manner. A lady passing in a carriage threatened to have me arrested; this only made me more angry. After the distressed Jacob said as he patted the animal, 'Poor colt, did the ugly engine scare thee beyond mind, as thee gets older thee will learn to take the trying things of life more calmly, I hope.' I have never forgotten the lesson, and whenever I feel my temper rising I hold myself in check, for invariably the mild face of Jacob Roberts comes before me. I have thus come in a degree to take the trying things of life more calmly myself. P.

A Remarkable Work in Italy.

One of the most notable events in connection with gospel work in Italy, says the *Presbyterian*, has been its origin in the past few months in the Vatican itself. A society named the "Religious Society of St. Jerome, for the diffusion of the holy gospels," has been organized, its express purpose being outlined in its title. The name is an appropriate one, for Jerome was the translator of the Vulgate Bible, and for that work is still famous.

In order to accomplish their purpose, the society is distributing a new translation of the gospel with the Acts. An edition of one hundred thousand having the imprimatur of the Vatican press has been prepared, and is being advertised for sale in the chief Italian centers. In order to place this edition within the reach of all, the society has drawn largely upon its own funds, so the books are selling at two pence, unbound, and four pence, bound. One report states that the whole edition has been sold, and a new one ordered.

The volume contains five hundred and ten pages and in addition to the sacred books noted above, has a preface, the chapter from "The Imitation of Christ," entitled "The Spirit in Which Holy Scripture Should be Read," notes designed to clarify any obscure passages, maps and illustrations depicting Palestine and Paul's missionary journeys, a list of quotations from the Old Testament, and lastly, the names of those who have the publication for sale.

The translation has been made in the pure Italian of to-day, and is therefore perfectly intelligible to the common people. The text is closely followed, and the thought rendered with great fidelity. The notes are few but good, and while, of course, a distinct tone of Roman Catholicism is sounded occasionally, this does not often appear. The kindly manner in which the writer of the preface speaks of the Protestant Bible Society, the members of which are called "our Protestant brethren who differ from us," is a marked and encouraging feature of the work, indicating a great change of sentiment. Indeed, the issuance of this new translation is regarded by Italian Protestants as one of the most cheering "signs of the times." A writer in "A Voice from Italy" says:

"The Council of Trent forbade the reading of the Scripture in the vulgar tongue without written permission from spiritual superiors; but here, the first page of this volume recommends that it should be read and pondered daily both by single persons and by families."

But a still more advanced step than a mere "recommendation" to read this version of the gospels is taken, and this time by Pope Leo XIII himself, who grants an indulgence of three hundred days to all who shall spend fifteen minutes daily in the study of this book.

The words with which the writer of the preface closes his commendation of the publication, may well find an answering response among all classes of Christendom.

"Let the gospel," he says, "become together with the other Scriptures of God, the pasture of our souls, and under their sacred spell these shall indeed be nourished until life. As it enters our homes there shall

breathe there a new spirit of purity; the authority of parents and the subjection of children shall stand in new strength. The gospel shall lead in social questions among us, teaching the poor no longer to think themselves unhappy merely because they have less of this world's goods than the rich, and the rich to abound in the neglected duty of a discriminating charity, where heart and hand shall work together."

A PREPARED SERMON.—The following circumstance occurred while Thomas Shillitoe was on a religious visit at Geneva, Switzerland is given in his journal as follows: "My mind being thus set at rest about my proceeding, I spent part of the day with an interesting family, where I had the company of several religious young men. The evening I passed with a pious family, and two interesting young men, who were pastors; one of whom put the following question to me, 'Is it not possible that a sermon prepared beforehand, if the person who prepared it and was to preach it, was sincere in his desire of doing good, praying earnestly to Almighty God to assist him when writing it, would be profitable to his hearers?' I replied, 'I durst not pronounce the impossibilities of it; but it was a subject I had at times thought much upon, and it had uniformly closed thus with me, that what was offered in the way thus described, at best, could only be compared to hashed meat, which neither has the same savory taste, nor does it appear to possess the same nourishing quality as it would, had it been set before those who were to partake of it, when first prepared, or meat that has been warmed over again.' After pausing a while he feelingly expressed his full assent to the truth of my reply."

TWO LOVABLE THINGS.—There are two things exceedingly lovely in a disciple. The first is, a brokenness of spirit in himself for his own villainies. Though a man be pardoned for his sin, yet the sight of what he was, the remembrance of what was blotted out in him (nay of what is still in him and upon him, further than the Lord pleaseth of his own free goodness to blot it out continually), should keep him very low in his own eyes; even as low as if he were still lying under the guilt and condemnation of it. The second is, a pity and tenderness of spirit towards sinners. He who knoweth the bitterness of his own wound, although he be in part healed himself, yet cannot but yearn over those who remain still exposed to the bitterness of the same wound. How did Christ pity sinners, even the most stubborn sinners! "O, Jerusalem, Jerusalem, etc." The more men lie open to judgment, doth not afford us the more liberty of judging them; but the more it should excite our pity. It no way becomes a condemned person newly pardoned, to judge his fellow-offenders; but to pity them, and to lie abased under the sense of his own desert, which, by the mere mercy of the judge, he hath lately escaped the danger of.

ISAAC PENINGTON.

FORASMUCH as no man can bear to see himself as he is, therefore he should not think it strange that he cannot see God and live.

Science and Industry.

FOUR car loads of valentines were shipped from Worcester, Massachusetts, lately to a wholesale Chicago house. There were one million three hundred and sixty-two thousand valentines in the consignment.

THE highest point of latitude reached by Robert E. Peary, the American explorer, was eighty-four degrees, seventeen minutes northwest of Cape Hecla. The most northerly point thus far reached in the Arctic regions has been by the Norwegian explorer, Nansen, who penetrated to a latitude of eighty-six degrees and fourteen minutes.

THE two greatest manuscripts in America, according to the *Bookman*, are, the manuscript of the Declaration of Independence, which is in the government archives and which has become illegible, and the life of Benjamin Franklin, written by himself, the only manuscript entirely in his own handwriting, which changed hands and was added to a private collection in New York city. The Franklin manuscript was discovered in France some years ago in the possession of the descendants of M. Le Vaillart, to whom it had been given by William Temple Franklin, Franklin's grandson.

LEMON JUICE NOT A SURE TYPHOID PREVENTATIVE.—Much newspaper prominence having been given to the statement that lemon juice will completely destroy typhoid fever germs, Dr. W. H. Park, bacteriologist of the department of health of New York city, has made several experiments to determine the truth of the statement. Several microscopic examinations of cultures of typhoid bacilli which have been subjected to the action of lemon juice showed that although the acid killed the micro organisms it required too much acid and too much time for the chemical action to take place to render lemon juice as an agent practicable. Dr. Park's negative opinion in regard to the efficacy of the acid as a typhoid prophylactic was corroborated, for after the bacilli had been acted upon by a five per cent. solution of the acid for thirty minutes, it was found that all of them had not been destroyed. Dr. Park, when questioned regarding the experiment said: "My suspicions were confirmed by the tests. It is far safer to boil the water or filter it properly than to trust to lemon juice to destroy any typhoid bacilli that may be in it."

USES OF TURPENTINE.—Turpentine, either in resinous form or in spirits, has a household value. A child suffering with the croup or any throat or lung difficulty will be quickly relieved by inhaling the vapor and having the chest rubbed until the skin is red, and then being wrapped about with flannel moistened with fiery spirits. Afterwards sweet oil will save the skin from irritation. In the case of burns and scalds, turpentine has no equal. It is the best dressing for patent leather: it will remove paint from artist's clothes and workmen's garments; it will drive away moths if a few drops are put into closets and chests; it will persuade mice to find other quarters if a little is poured into the mouse holes; one

tablespoonful added to the water in which linens are boiled will make the goods wonderfully white; a few drops will prevent starch from sticking; mixed with beeswax, it makes the best floor polish, mixed with sweet oil it is unrivalled as a polish for fine furniture—the latter mixture should be two parts of sweet oil to one part of turpentine. Some physicians recommend spirits of turpentine, applied externally, for lumbago and rheumatism. It is also prescribed for neuralgia of the face.—*Woman's Home Companion*.

RECLAMATION OF THE HIGH PLAINS.—The efforts of the United States Geological Survey are being directed to the discovery of sufficient water to lead to the reclamation and habitation of that area of the Great Plains lying west of the prairies and east of the Rocky Mountains, commonly known as the High Plains. The section is admirably suited to agriculture and grazing except for its inadequate water supply, which is so uncertain that great areas of fertile land lie quite uninhabited. This is especially true of the regions lying between the river valleys which cross it at wide intervals. These broad interval plateaus are practically waterless, but it has been discovered that water may be had from underground sources by wells and windmills, and it has been demonstrated that, while the region may not be largely reclaimable by irrigation, it may be successfully used for grazing by creating stock watering points, at comparatively close intervals. It will, however, be difficult, if not impossible, for the grazers to raise anything besides fodder cane of the drought-resisting varieties, such as Kaffir corn. Vegetables and other products will, for the most part, probably have to be grown elsewhere. The river valleys, on the other hand, seem destined to be extensively cultivated by irrigation, the water for which will be pumped from the gravels of the river beds, where an underflow has been known to continue in the summer season after the rivers themselves have ceased to run. These areas will furnish garden produce for the ranches on the plateau, and in this manner make the region as a whole habitable. The details of this investigation, with exhaustive studies of the nature of the underground waters of the High Plains, appear in the Twenty-first and Twenty-second Annual Reports of the United States Geological Survey, the latter of which is now in press and will soon be issued.

THE MISSION OF THE SUB-MARINE.—The British battleship *Agamemnon*, which was built in 1883, was sold to a firm of metal brokers for one hundred thousand dollars. The cost of constructing this obsolete warship was two million five hundred thousand dollars. The government will get four per cent. of its original investment; the other ninety-six per cent. is lost.

All the big nations of the world are building warships, putting the money taken from taxpayers in investments which have no permanent value. The modern battleship represents an enormous outlay and costs more than twice as much as the *Agamemnon*. Such great progress has been made in naval construction in late years that ships built in the last decade are now practically out of date.

Furthermore, the submarine torpedo boat introduced an element into warfare which revolutionize the navies of the world. It should ever realize the expectations of its inventor there will be little use in the future for the stately warships of to-day. The nations which have invested hundreds of millions of dollars in floating fortresses will find fleets of no avail against a swarm of submarine torpedo boats. The battleship will no longer be the symbol of power, of irresistible might. The swift cruiser will be of no use except as a commerce destroyer. The little submarine will be the mistress of the sea. It seems a pity to waste money upon the construction of vessels which must be sent to the junk shop in a few years. Perhaps a world grows older it may become wiser. We may conclude that it is poor business policy to accumulate a large number of warships at enormous expenditure merely for the purpose of giving them away as old iron. It may be that the submarine will prove a blessing in disguise. It may relieve nations which are not prosperous of the burden of maintaining costly naval establishments. It may be that disarmament which has long been the dream of all who hate war and love peace. It is that is to be the mission of the submarine; nobody who believes that peace is the greatest blessing a nation can enjoy will regret this appearance of the battleship and cruiser at Baltimore Sun.

OUR SAFETY LAMP.—To some of us, indeed, who may have attained to nearly the two years allotted to man by the Psalmist, the teachings of life have brought many illusions. And not the least solemn of these is that which it has taught has been, that of our faith is an inevitable condition of our mundane existence; that our difficulties are never wholly cleared up on this side the grave, that our Almighty Creator has deigned to surround us with a dense veil of subtle enigmas and impenetrable mysteries; that we have been placed in a world of some light and much darkness; of some clearness and much fog; of some certainties and many uncertainties; of some fixed and many variable laws; of some harmony and much discord; of some realities and many dreams; of some objects distinctly seen, of many wholly unseen, of many more seen through a glass dimly; of some things well known, of many things wholly unknown, and many more wholly unknowable by beings like ourselves whose mental horizon is circumscribed and whose faculties are limited.

And yet surely we are never left without a kindly and Divine light bright enough to lead us in our worst periods of encircling gloom.—*M. Monier Williams*.

Many a vessel, richly freighted,
Sinks beneath the whelming deep,
For the watcher in the look-out,
Heedless, falls asleep.

Many a life goes out in darkness,
That might shine in endless day,
For the soul, bewitched by folly,
Barters it away. —*The Examiner*.

WE attract hearts by the qualities we display; we retain them by the qualities we possess.

Finer Work of Friends for Liberty, Peace and Social Reform.

Following is the *Rockhampton Bulletin's* account of a lecture by Joshua Rowntree:

Joshua Rowntree quoted from Fox's *Journal* reference to eight subjects greatly affecting the relation of man to man, in which Fox was ahead of his time; and with regard to four of them ahead of the present time. One of mind and conscience was Fox's first guiding principle. Men were beginning to understand the Divine right of conscience, and man bringing forth the best that was in him without having first to think whether it was "brandy" on this side and Public Opinion the other would approve of it. There had always been a stunted race of men while the limits of that kind prevailed. Fox said man was accountable to the Highest, and at times He should be approached or in a manner He should be approached was a matter for interference. Fox held that Almighty spoke to man direct in the inner consciousness, and that nothing should come between. But the laws of that day were not his way about. Everybody's religion was taken through the public office and to be corporate seal upon it. Fox said it was a matter of life and death, and he and his followers were prepared to pay the penalty. In those days the English law said that people must have the Governmental sanction. Fox said they would make a new law. The battle went on for two-and-a-half years, in which time 13,000 followers of Fox were confined in dungeons in England. In September, 400 died there. Many hundreds were sold away as slaves for seven years' servitude, because they met as some of the Friends in Rockhampton met the previous year. Fox said, "I have never feared death in my life," and in some remarkable way that spirit animated his followers. As the Friends became the ruling power in England, happily they held to their views, no persecution was recorded of any person on account of his religion in that State. As the courts had said that the Society of Friends had put down slavery, which was saying far too much. The Society did its best. Fox hoped that the Society was on a high point down war.

Fox looked at the sanctity of human life contrasted with the rights of property. The first time Fox was in prison he met a respectable young woman who was sentenced of death for one of the heinous offences under the English law. He visited with the death penalty. He visited her to the quick, and he endeavored to get the young woman reprieved. The discredited parliament that human life had longer be placed in jeopardy for the sake of attains. They were one hundred years of their time in that, for it was early in the century that the death penalty was abolished for crimes against property.

Fox agitated against war. Being a man of power and individuality, he was asked to join Cromwell's army as a captain. He was sent in Nottingham Gaol, and he was released if he would join. He said, "I will not put my men in gaol. I have a duty to perform that will not allow me to cut men's

throats and shoot them down. This was no mere fanaticism on the part of Fox. It was a carefully thought-out problem of the higher life. Some people thought it was a condition of perfection. They would say with George Eliot—

"Loving all men clearly is deferred
Till all men love each other."

That was a pleasant way of putting it, and imposed no obligation upon anyone; but that was not Fox's way. The Treaty with the Indians made by Friends, as had been said, was the only treaty made between different peoples without an oath and the only treaty that was never broken. Penn established a system by which six of the Indians and six of the Friends heard all questions in difference, and the decision was accepted on both sides. In the sixty or seventy years that Friends were the ruling power in Pennsylvania no lives were lost among the whites at the hand of the Indians.

Penn and another prepared, independently of each other, elaborate schemes for a high court of justice for the Powers of Europe. In very recent days a scheme of the sort had been adopted in the Hague Arbitration Court, which had already settled one dispute.

George Fox and his people held that there should be only one standard of truth—a man's word; in which also the lecturer thought they were ahead of the present day, bearing in mind the manner in which the oath was taken in the law courts.

Another view seldom credited to Fox was that he held very strongly that labor should always have its equitable reward. In those days the magistrates used to sit on the scale of wages, and as there were no labor magistrates, there was a fine freedom for one side, and the other had to be thankful. Fox went to the courts and told the justices that they were responsible to a higher Judge. No doubt he must have given a great deal of trouble to some of the magistrates. Friends appealed to Parliament to set up in every market town in the country, labor intelligence offices, for the registration of men who wanted employment and employers who wanted men. We are now just beginning to do something like that in England.

Friends worked for the establishment of work-houses, and two most elaborate schemes were sketched out. George Fox also gave a position to women, in which he was very daring, and had some trouble even with his own followers, because he let women take part in the work of the Church. He further altered the form of the marriage regulations, so that the woman no longer promised to obey. Fox was interested in education, and impressed upon Friends that they should teach their children "all things civil and useful in creation." To most of the schoolmasters such a proclamation by the Government would hardly be acceptable; but it showed the broadness of Fox's character.

"It seems to me," said J. Rowntree, in conclusion, "that the churches must have grievously curtailed the extent of their responsibilities. A sentence of Froude comes to my mind where he says, 'In the Middle Ages they painted the ceilings of their churches to imitate and shut out the sky.' I am afraid there has been a good deal of that. We

want to get at the sky itself, and at the source of light, and life, and love; and if we can do that, the fruit coming therefrom will spread more light and more love even in our generation amongst our fellow-men."

FOR "THE FRIEND."

A Trumpet With No Uncertain Sound.

The following from the pen of Edward Alexander of Limerick, Ireland, was found amongst his papers after his decease, and, as it appeared to be intended for circulation, was published in the thirty-ninth volume of *THE FRIEND*, 1865; what further publicity than this was ever given to it, the writer is not aware; so full and clear a vindication of our high and holy profession, as being entirely in accord with the Truth as it is in Jesus Christ our Saviour, is seldom met with in this our day of continued degeneracy and compromise. Then would it not be in a measure placing the "candle on the candlestick," again to give it a place on the pages of *THE FRIEND*? so it appears to the writer.

D. II.

COAL CREEK, Iowa, Second Month 13, 1903.

After a night of apostasy, it pleased the Lord to raise up our Society, in order that the Light, the life of men, might again shine forth. Our pious predecessors, feeling the power and efficacy of the Light of Christ in their souls, quickening them from their former state of death in trespasses and sins, and leading them from the form of godliness into its power, preached Christ the Light of life; but the world rejected their testimony; nevertheless their bow abode in strength, and the arms of their hands were made strong by the mighty God of Jacob;—in all their affliction He was afflicted, and the angel of his presence saved them, even from the midst of their persecutions, and deep sufferings; so they were experimental witnesses, that God gave them victory, through Christ their light and life. The light or Spirit of Christ always was the enemy's point of attack, because it is that by which his kingdom is to be destroyed; therefore his power has been exerted, from age to age, to divert the mind of man therefrom, and turn it to anything rather than to live with, and walk in the Spirit. Hence it is that we have so many covered with the form of godliness without the power. Deep sorrow and exercise cover my mind, on account of this state among us. Ought not the Scripture declaration to be deeply engraved even on each of our hearts,—one is "your Master even Christ, and all ye are brethren?"

It has appeared to me that the enemy of the Church of Christ is endeavoring to scatter the sheep, and to overthrow the faith once delivered to the saints in three ways, viz:—to lessen our estimation of the doctrine of the light of Christ; to set the Scriptures above the Spirit by which they were given forth, and to lower the standard of perfection. Now it is matter of heartfelt sorrow that any, who were once enlightened, had tasted of the heavenly gift and were made partakers of the Holy Ghost, should fall away. An awful pause covers the mind, whilst the query arises, What is the cause? I believe it to be this:—The eye was not kept where the wise man's ought to be, in the head, Christ; it looked out, and so in such as these it becomes dark-

ness. Notwithstanding this grievous departure from the light, there is abundant consolation for the humble, self denying follower of our Holy Redeemer to "trust in the name of the Lord and stay upon his God." Whilst these endeavor to abide under the cross, they will be made livingly sensible that, "in Him (Christ Jesus) was life, and the life was the light of men." "This is the true light which lighteth every man that cometh into the world," in which men must believe, and unto which they must be obedient, because it is their spiritual life; and those who reverence its appearance, and are willing to be led by it, the life that they live in the flesh, they live by faith in the Son of God who loved them, and gave himself for them. And thus believing in his inward, spiritual appearance does not in the least lessen or depreciate the value of the redeeming fact of universal love, the propitiatory sacrifice of the dear Son of God, without the gates of Jerusalem, and his there bearing our sins, in his own body on the tree. On the contrary it greatly enhances the value thereof, and so the children of the light cannot but render unto God, the Father, the tribute of adoration and praise, that He hath been pleased thus to open the way for our reconciliation, through our Lord and Saviour Jesus Christ. Now where Christ dwells in the heart by faith, there is a more ample confession hereof than any outward or literal confession can be; and truly this is the way in which He is to be confessed, "That the life also of Jesus might be made manifest in our mortal flesh." "If any man have not the Spirit of Christ, he is none of his;" thus He manifests Himself by his Holy Spirit. This is the point to which all who believe to the saving of the soul must be directed; for let us believe ever so fully of the outward coming, suffering and death of our Saviour, on the cross, without the gates of Jerusalem, and also in the wonderful work done by Him, while in that prepared body, yet if we believe not in Him, as Immanuel working in us, by his Holy Spirit, to will and to do of his own good pleasure, we do not believe to the saving of the soul."

As a religious body did God call us, out of darkness, out of gross and superstitious worship, into his marvelous light, and now it is at our very life that Satan is striking the inward revelation of the Lord Jesus, the true light, borne testimony to by many faithful martyrs, and preached again with power by our enlightened predecessors; and it is from among ourselves that the [enemy] is trying to take and make instruments to scit his purposes. The rock on which the Church is built, is Christ; and the revelation of Him to the soul is indispensable to every member of his body; "now ye are the body of Christ, and members in particular." If this revelation be not made to the soul, there can be no saving knowledge of God and of Christ; and this revelation can never come through any outward medium; flesh and blood do not reveal Christ unto the soul. The revelation of the Son of the living God, made to Peter, was not made through the blessed record which God has pleased, outwardly to give us in the Holy Scriptures. The Father revealed the Son, without any intermediate agent, thus establishing that Scripture "no man knoweth who the Son is but the Father, and who the Father is but the

Son, and to whom the Son will reveal Him." "There is a path which no fowl knoweth, which the vulture's eye hath not seen;" the King's highway to holiness; it is so contrary to flesh and blood, to the highly cultivated natural understanding, and to that which is on the wing, exploring the depths of science, that few there be that find it. In it through much tribulation and suffering, did our predecessors pursue their holy course, and [now] when so many things present in the garb of religion, to divert from it, we should be cautious of being drawn aside from the simplicity of the Truth as it is in Jesus. In the endeavor to set the Scriptures above the Spirit, by which they were given forth, the query put by our blessed Lord, seems pertinent: "Whether is greater, the gold or the temple that sanctifieth the gold?" That which sanctifies our bodies, and enables us to glorify God in them, is greater than our bodies; and that which sanctifieth the Holy Scriptures unto us is greater than the Scriptures; and that which opens them to the understanding is greater than they are. The Word which was in the beginning with God, and was God, gives life and gives it abundantly. This Word was before the Holy Scriptures were, and shall be, when the volume of the book shall be no more, in which was foretold the power and coming of the Word made flesh. The Holy Scriptures are a blessed testimony bearing witness to the Word, which was in the beginning with God and was God; so they direct to the fountain from which they emanate. And this is the testimony of Him whose name is called "The Word of God," concerning the Holy Scriptures. "They are they which testify of me." However we may find ourselves, compassed with infirmity, and manifold temptations, we must not dare to lower the standard of perfection, that mark for the prize of the high calling of God, that standard set up by our Saviour,—"Be ye perfect." "Grace and Truth came by Jesus Christ." He was and is manifest to keep us from temptation, to deliver us from evil, and "to destroy the works of the devil."

The law made nothing perfect; but we are saved by hope of that which we see not, under the power and influence of the Spirit of life in Him, by whom grace and Truth comes; who by the law of the Spirit of life in himself, sets free from the law of sin and death. "Ye are complete in Him." There is no imperfection in Him. After the fall of man, the world took possession of his heart, his affections became alienated from God, and the things of this world entered in, and took up their abode there; thus he lost the dominion which God has given him over the earth, and also the power by which he should have been able to subdue it, and so those things, which God commanded him to have dominion over, came to have the ascendancy, and to bear rule over him. Thus we died in Adam, and this is the state in which every unregenerate man is at this day; and he or she who is not sensible that this is or has been their state have not yet right thoughts respecting themselves; never knew that they died in Adam. This is a woful state. In order to redeem us therefore, Christ, the Son, and sent of the Father, came. According as we submit to the power of Christ, He leads on to perfection, and dur-

ing the course of his operations He is "ye perfect." So through his power vance toward it, and when complete subjection are made perfect.

"The carnal mind is enmity against it is not subject to the law of God, indeed, can be." Here is a lively ed of the distinction between the carnal which neither is, nor can be subject to of God, and the spiritual, which can be subject thereto. "To be carnally is death, but to be spiritually minded and peace."

Christ is the author of eternal salvation to all them that obey Him, and this must be through the power of his Holy Spirit. Great is the mystery of godliness, of the unregenerate hath not seen, heard, nor can his heart conceive these. Some who have got high in the notion, must come down, even to the cross, if ever they become exp witnesses of them.

Although there does at this time a spirit in many, which being exalted above Truth, looks with a supercilious eye upon a declaration, as that our Society was up after a night of apostasy, yet I am only not at all afraid, but I believe it is my duty to declare that it did please Him to cause the day-spring to know his place, who turneth the shadow of death in the morning, the "Lord of Hosts is his name, raise us up as a people; and if notwithstanding this glorious purpose concerning us may be many among us who have lost first love, are neither cold nor hot, but a name to live and are dead, it alters the foundation, it touches not those who are upon it, for it has still this seal, "I knoweth them that are his." "In affliction He was afflicted, and the angel his presence saved them." His promise is immutable, "Lo, I am with you always, we are witnesses that it is even so and the revelation of the spiritual appearance of Lord Jesus Christ is the very Truth of the Father, who hath sealed Him. This generation to generation the poor, that can recognize the spiritual manifestation of Christ, the Child born, and the Son who they can glory in having the govern of his shoulders, and are at times favored witnesses of his resurrection, and to proclaim adore his great and glorious Name.

THE MUSTARD TREE.—Prof. Hacke, a long and doubtful search, found on the side of Akka, on the way to Carmel, a little of mustard-trees, which he thus interestingly describes: "It was then in blossom, grown, in some cases six, seven, and eight high, with a stem or trunk an inch or more thickness, throwing out branches on one side. I was not satisfied in part. It is such a plant might well be called a tree, in comparison with the seed produced, great tree. But still the branches, of the branches, were not very large, apparently, very strong. Can the bird sit to myself, rest upon them? Are they slight and flexible? Will they not break beneath the superadded weight that very instant, as I stood and reflected, thought, lo! one of the fowls of the air, stopped in its flight through the air, and

one of its branches, which hardly beneath the shock, and then began, here before my eyes, to warble forth of the richest music. All my doubts were charmed away. I was delighted and content. It seemed to me at the moment I enjoyed enough to repay me for all the trouble of the whole journey."

Items Concerning the Society.

At several months ago reported, but do not remember to have noted it in these columns, I was reminded of it by the last number of the *Friend*, with additions, as follows: that Joel and Hannah E. Bean, "with others who were 'dropped' as members of Iowa Yearly Meeting some years ago, have been received by the Monthly Meeting in New Hampshire, where of them were born. We are thankful that Friends are once more technically members of the Society, which they have always been in. The letter in which this news is announced mentions that steps are being taken to reinstate Joel and Hannah E. Bean in the position of members."

FRIENDS.—If ever a religious body had real separate existence it is the Friends. It is one of the many of the positions taken toward religious men of other denominations that comparatively slight differences the same as held by Friends for two centuries, but all said and done we believe there is no other body but, for a people, who practically insist at no rite or ceremony has permanent place in Christian church, that every man and every right occupation may equally be a part of public ministry, that the gifts of the Holy Spirit are still given, that the Church is working on all hearts everywhere, that the whole of life is holy, and that Christian duty means the actual living in love with God, whether as between employer and employee, between citizen and citizen, or as between man and nation, and that there is to be no want of truthfulness for all men and that "yes" and "no" and "aye" and "nay" of the

Friends by any means fully realize all this. It is not, but it is in their inheritance, and it is in it also. It is well worth hearty effort of what we can come into the fullness of life, which men need to have shown to us. To work for this is not sectarianism, but broad-minded Christian duty. We are simply and spread these truths, and mould them to them, thankful if they come and help us, and help us; but thankful also, if they are reached and blessed, whether they come to us, or thank God for the help that others give us, and wishing God's blessing on all who are Lord.—*The Interchange.*

I am informed that our friend Esther, a approved minister in the Society of Friends, after a religious concern for gospel service in the House of Representatives at Washington last week for such an opportunity, offered to the Speaker, who answered that it was provided for a woman to appear on the floor of the House with liberty to address its members, and that he must deny the permission. Feeling thus released as having done his duty, she departed from the capitol in a carriage, with a peaceful heart.

I am recalled the memorable visit paid by anti-slavery ministers from England, Geo. Withy, at a public meeting was allowed in the house of Representatives in the year 1822. Friends' No. 45 gives the substance of Thomas' account of the scene as follows:

Arriving at the door of the House of Representatives, a large crowd had assembled, that

way had to be made through it for them to reach the seats it was intended they should occupy.

"After sitting some time in silence, George Withy arose with the text: 'For ye see ye calling, brethren: how that not many wise men after the flesh, not many mighty, not many noble are called: But God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty; and base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to naught things that are; that no flesh should glory in his presence.' Upon this he enlarged in a remarkable manner, the audience being much impressed and affected. Old men with white hair, and women dressed as dowagers, were equally broken down by their baptizing ministry, the tears streaming down their faces, so that, to use the language of Thomas Evans: 'The floor was literally strewn with tears, and it was one of the most remarkable meetings I had ever attended.'

"After the meeting the people crowded up to speak to G. W., expressing their satisfaction and approval of the sentiments delivered. As he was descending the steps of the Capitol, a Presbyterian minister embraced him, saying: 'My dear brother, you have preached the gospel this day!'

INJUSTICE DONE TO A MEMBER.—Some months ago there was printed in the First-day edition of a Philadelphia newspaper a lengthy article, quite sensational in its character, and accompanied by numerous illustrations, in which a valued and beloved Friend of Woodstown, N. J., was brought prominently into view, and motives altogether foreign to her nature attributed to her. It is much to be regretted that so respectable a journal should have allowed an article, personal in its character, and containing so many inaccuracies, to be published in its columns. It has been copied, in a more or less abridged form, by many newspapers in different parts of the United States, thus bringing into publicity, and placing in a false position a most worthy and unobtrusive woman.

As the article, much condensed, has been given still wider circulation by being published in No. 31 of the present volume of *THE FRIEND*, it seems proper that the facts in the case should be given. Priscilla M. Lippincott, the Friend referred to, was for many years connected with a leading retail dry goods store in Philadelphia, largely patronized by Friends, which caused her to be widely known by members of Philadelphia Yearly Meeting. About thirty years ago, not fifty, as stated in the article, she retired from business, and came to Woodstown and made her home with a brother. There were then sixteen members of the Society at that place, but about that time, or in 1871 the mid-week meetings were discontinued with the sanction of Salem Monthly and Quarterly Meetings, and what is known as an indulged meeting has been regularly held there on First-days ever since. Though death and removal have diminished the number above stated, there are yet five members of the Society living in and near the borough of Woodstown; and our friend P. M. L. does not remember being the "solitary worshipper" on more than two or three occasions: and for the last few months, during which the infirmities of age and disease have prevented her attendance, the meeting has been regularly kept up. A janitor takes care of the house, as is done at other places of worship, so that the "big brass key," if there is one, need not be used by the attenders of the meeting. The greatest injustice has been done our Friend by assuming that her primary object in so punctually attending this place of worship, is to prevent the loss to the Society of the house and lot in case the meetings should be discontinued. It is quite possible that the property may, for a provision in the deed, revert to the family from whence it came, in case it should no longer be needed for the purpose of public worship, but no one who knows Priscilla M.

Lippincott would for a moment attribute to her such an unworthy motive. A sincere and humble Christian, she believes the regular attendance of our meetings one of her religious duties, and one which she has not only faithfully performed herself, but a duty which by exhortation and the extension of pecuniary aid, when necessary, has often induced others to fulfil.

JOSIAH WISTAR.

Notes from Others.

The German Government has decided to readmit the Jesuits, who since 1872, have been excluded from Germany.

According to the official Catholic Directory for 1903 there are over 11,000,000 American Catholics in the United States.

It is said that eight of the olive trees in the historical garden of olives, in Jerusalem, are known to be over one thousand years old.

An observer says the Mormon "priesthood" is probably the most ecclesiastical system ever set in operation, not excepting Jesuitry.

The Methodist Churches are meeting the rapid rise in cost of living, by a generous increase in salaries for their ministers.

Second Month 20th was the twenty-fifth anniversary of the election of Pope Leo XIII., who in a few days will reach his ninety-third year.

The *Universalist Leader* says: "The Church of the future is builded not of books and theories, but of lives, and we are building or destroying it to-day in Sunday schools."

The *New York Observer* believes that while the men who were illustrious as masters of pulpit and platform a few years ago have all passed away, "the truth is more effectively proclaimed than it ever has been since the world began."

Professor Hilprecht's last excavations at Nippur brought to light a number of rooms in which were found hundreds of school books and students' exercises, which proved the existence of a school or college at Nippur in the days of Abraham.

The gospel boat that was built a few years ago for Robert W. McNeil and his wife, that the gospel might be carried to the towns and cities situated upon the twenty-thousand mile water-way formed by the rivers and canals of France, has been so successful in its mission that a second boat has been put into service. An automobile is to be constructed also to carry the missionaries where the boats and railroads do not reach.

MANANA.

My friends, have you heard of the town of Yawn, On the banks of the River Slow, Where blooms the Valtawhale flower fair, Where the Sometimeorther scents the air, And the soft Goosies grow? It lies in the valley of Whattheuse, In the province of Letherside; That tired feeling is native there, It's the home of the listless Idontcare, Where the Putitoffs abide. The Putitoffs' smile when asked to invest, And say they will do it to-morrow; And so they delay from day unto day, Till death cycles up and steals them away, And their families beg, steal or borrow.

—*Popular Mechanics.*

President Rush Rhees of Rochester University said at the Religious Education Convention, held in Chicago that the religion of to-day is not to be

the religion of a book, but Christianity is a religion with a book which discloses the springs for the development of knowledge of God, duty, destiny.

Annis Ford Eastman of Elmira, lately pastor of Park Church of that city, gave an address at the Brooklyn Congregational Club recently which was the feature of the evening. The universal verdict was "that, given all public women to be as she is, the question of a woman's equal claim to the pulpit with men to preach the gospel, was forever settled."

Alice Price Logan says that American race has wrought great changes in the island Guam for the betterment of the natives; but the utter shamelessness and undisguised sin, as seen in the lives of some of the white inhabitants, has a mighty and far-reaching influence for evil. However, the natives are beginning to feel the power of Christianity. It is difficult for them to realize that all who are not Catholics must not necessarily be Protestants, and that a man may be a Protestant and still be a very imperfect Christian. For generations they have known only a religion of form, and the idea of heart-service is wholly new. We thank God for the few Christians among the Americans, who, by their consistent lives help us in the struggle to lift these people from the blindness of their superstitions to a higher plane of Christian thought and morality. The priests, in their violent condemnation of the Protestants, have informed the Chamorros that there are no sacraments in the Protestant Church. The burial of Francesca Garrido, quietly performed in a spirit of loving sympathy, and, of course, free of charge, revealed to the natives the aim of the Protestant missionary, in sharp contrast to the grasping, mercenary oppression of the priests.

SUMMARY OF EVENTS.

UNITED STATES.—In a recent message to Congress urging the passage of legislation to reduce the tariff duties on merchandise passing between the United States and the Philippine Islands, President Roosevelt thus refers to the condition of these islands: "As Congress knows, a series of calamities has befallen the Philippine people. Just as they were emerging from nearly six years of devastating warfare, with the accompanying destruction of property and the breaking up of the bonds of social order and the habits of peaceful industry there occurred an epidemic of rinderpest which destroyed 90 per cent. of the carabao, the Philippine cattle, leaving the people without draught animals to till the lands or to aid in the ordinary work of farm and village life. At the same time a peculiar Oriental horse disease became epidemic, further crippling transportation. The rice crop, already reduced by various causes to but a fourth of its ordinary size, has been damaged by locusts, so that the price of rice has nearly doubled. Under these circumstances there is imminent danger of famine in the island."

President Roosevelt has lately written a letter defining his position in regard to appointing colored men to Federal positions in the South, in which he says: "I certainly cannot treat mere color as a bar to holding office any more than I could so treat creed or birthplace—always providing that in other respects the applicant or incumbent is a worthy and well-behaved American citizen. Just as little will I treat it as conferring a right to hold office. I may add that the proportion of colored men among the new appointees is only about one in a hundred. I am concerned at the attitude taken by so many of the Southern people; but I am not in the least angry; and still less will this attitude have the effect of making me swerve one hair-breadth to one side or the other from the duty which has been marked out—the course I have consistently followed in the past and shall consistently follow in the future."

Andrew Carnegie, it is stated, has decided to give \$100,000 to the Western Reserve University to establish a school for the training of librarians.

The International Wireless Telegraphy Co., with a nominal capital of \$7,500,000, has applied for incorporation in New Jersey.

An earthquake shock was felt in Lyman county, South Dakota, on the 25th ult., which lasted several minutes.

It is stated that the grand total of immigration into the United States during the six months that ended with Twelfth Month, 31, 1902, was 323,641. This is nearly 100,000 more than came in during the corresponding six

months of the preceding year. Italy, including Sicily and Sardinia, sent 77,845 persons. From Austria-Hungary came 73,275; from Russia, 57,189. Sweden and Germany contributed nearly 20,000 each, while England and Japan each sent about 10,000.

A jury in Kansas City has recently returned a verdict in favor of the heirs of Silas Armstrong, an Indian, for the recovery of certain lands along the Missouri River valued at \$1,000,000. The tract of land contains eighty-five acres and originally belonged to Silas Armstrong, a Wyandotte Indian, and was an island from 1860 to 1891.

Great floods from rains and melting snow have occurred in the Ohio and Mississippi valleys. On the 1st inst. the latter river was 10 miles wide opposite Memphis, Tenn.

A decision has recently been delivered by the United States Supreme Court that the lands of Indians who have received their allotments are not subject to taxation, nor the permanent improvements upon them, nor the personal property used for the cultivation of these lands.

It is stated that citizens of the United States now have investments in Mexico aggregating more than \$500,000,000.

A jury in the United States Court, at Trenton, awarded \$500 damages to Henry T. Johnson, of Camden, a negro, who sued the Pullman Car Company because he was refused service in a dining car.

A decision has lately been rendered by the United States Supreme Court that lottery tickets are subjects of property, and that Congress has no authority for prohibiting the carrying of such tickets from State to State, and that the anti lottery law is constitutional. The decision was rendered by a majority of one.

Funds to enable Yale University to collect phonographic records of American voices, especially those of the disappearing tribes of American Indians, have been granted by the Carnegie Institute.

A despatch from Utica, N. Y., says a Holstein Friesian cow has lately yielded during thirty days 2754.6 pounds of milk, producing 123 pounds 53 ounces of butter. The world's official record heretofore has been 112 pounds.

A physician in Williamsport claims to have successfully prevented hydrophobia by injecting formalin into the veins of a patient suffering from the bite of a mad dog.

There were 629 deaths in this city last week, according to the Board of Health. This is 57 more than the previous week and 47 more than the corresponding week of 1902. Of the foregoing 370 were males and 259 females. 69 died of consumption of the lungs; 114 of inflammation of the lungs and surrounding membranes; 12 of diphtheria; 8 of cancer; 22 of apoplexy; 22 of typhoid fever; 4 of scarlet fever, and 1 of small pox.

The importance of trade with China from European countries and from the United States has been the subject of representations to the State Department at Washington by the Russian Ambassador, in the hope that the United States will co-operate with the other Powers to stop the illegal importation of arms, which has reached an alarming stage of activity.

A despatch of the 24th ult. from H. Bowen, the Venezuelan plenipotentiary, has proposed to the allied Powers that the Czar of Russia be asked to name the three arbitrators who, as the Hague tribunal, shall decide the question of preferential treatment. The suggestion has been approved by the State Department at Washington.

A despatch from London of the 28th ult. says: "In spite of the efforts of several of the great Powers to avert the danger of a European war, the situation in the Balkans is growing more acute every day. The chief source of danger is the unmanageable character of the Albanians, who have an appetite for bloodshed, an overpowering repugnance to foreigners, and a religious fanaticism towards those whom they regard as enemies to the faith of Mohammed."

The great volcano of Popocatepetl, with its immense sulphur deposits, is reported to have been sold by its owner to an American syndicate. The price is said to have been \$5,000,000. It is further reported that the new owners intend to build a cog-wheel railway up the mountain, and operate the sulphur deposits on a large scale. Sulphur has been regularly worked from the crater for many years. The work is performed by a number of Indians, who have their huts at the foot of the cone, at an altitude of 12,000 feet.

A system of wireless telegraphy, it is announced, has been established between the islands of Martinique and Guadeloupe, as the only method now possible of sending telegraphic messages between them.

A despatch from London of the 26th ult. says: "Conferences between the consulting engineers of all the railroads of Great Britain are being held with the object of deciding on a uniform scheme for electric equipment, whereby the rolling stock and electric motors of the various companies may travel interchangeably on all the lines. All the trunk companies practically have decided

to use electric motors, and the suburban railways are awaiting an agreement on the subject of equipment."

A recent despatch says: "The creation of a Department of Commerce in the United States has great interest in other countries, and especially in Great Britain, where such a department is the world's market is a subject of much actual interest. The appointment of a Minister of Commerce for the Kingdom is being urged."

The Taft Vase Railroad case against the American Society of Railway Servants has been ended in favor of the railway company, but the decision of the court declares that trade unions are not responsible for their acts. All picketing, intimidation or molesting in actual damages to the companies to the penalties of the law.

The standing timber of Canada is said to be the entire continent of Europe, and is nearly equal to that of the United States.

The Governor of Guam states that recent prolonged earthquakes in that island have raised the level of the sea several inches.

On the 21st ult. the volcano of Colima, Mexico, had a violent eruption for some hours. Further action was feared that the people are fleeing from the stricken town. The terror is intensified by the severe earthquake which occurred on the 24th ult. and the interval between the eruption began. Many buildings at the town of Colima have been destroyed. Towns immediately situated have also suffered severe damage.

Sharp earthquake shocks were felt in Spain on the 23d ult. The Czar has personally intervened in behalf of famine stricken Finns, and has ordered that relief works be started without delay. It is believed that the proposed relief work will emphasize of the able bodied, and that, consequently, the committees responsibilities will be lightened; the necessities of the people will be satisfied with aid, which the Finns gratefully accepted, although they have never solicited it.

Cotton cultivation in West Africa is encouraged by cotton spinners. Lancashire, England. Fourteen shipments of American cotton seed have been sent to the Governors of West African colonies. The Commissioner is showing great interest in cotton.

Out of 1000 deaths in Germany of persons between ages of 15 and 60, 316 die of tuberculosis; 148 under 15 and over 60 are seldom affected. That the conditions in Germany averaged 242 per 1000 in 1901. The conditions in Germany averaged 242 per 1000 in 1901. The conditions in Germany averaged 242 per 1000 in 1901.

In France, Austria and Russia, but worse than in Belgium, Denmark, Norway and, especially in The Health Office has found that consumption is treated in special hospitals, in which German accommodation for 30,000 patients. The studies, 1896 to 1901 showed that, on the average, of cases treated, 87.7 were dismissed as cured good, 8.8 as no better; 3.1 as worse, and that 0.4 died.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For com-
pensation coming to Westtown School, the stage
trains leaving Philadelphia 7.16 and 8.18 A. M.
and 4.32 P. M. Other trains are met when the
Stage fare, 15 cents; after 7.30 P. M., 25 cents.
To reach the school by telegraph, wire West-
Phone 114-K. EDWARD G. SMEDLEY, Secy.

WESTTOWN BOARDING SCHOOL.—Applicant for
admission of pupils to the school, and letters
to instruction and discipline should be addressed
to Wm. F. WICKHAM, Westtown, Pa.

Payments on account of board and tuition
EDWARD G. SMEDLEY, Superintendent.
Address, Westtown P. O., Ches. Co., Pa.

NOTE.—In the account given last week concerning
the decease of ROBERT OSBORN, of Quaker Hill, N. J., his
name was misread as "RUBY."

DIED.—At her residence in West Chester, Pa.,
Month 16th, 1903, DEBORAH K. BRINTON, a
West Chester Particular and Birmingham Monthly
ing, aged seventy-one years and six days.

—, at Pasadena, Cal., Second Month 7, 1903,
MAURICE D. ENGLE, of Haddonfield, N. J., in his
fourth year, son of Margaret F. and the late
E. Engle. Deceased was a member of Haddonfield

Babylonianism is Babylon.

Supposing it proved, as some German historians begin to assert, that the same monotheism and moral code which appear in the Old Testament Scriptures, are traceable to Babylonian inscriptions lately brought to light, it is necessary that they should leap to the conclusion that the religion of the Old Testament was derived from Babylon? and were, — which is the effect of their insinuation — not given by inspiration of God?

The Friends' doctrine well reconciles the claims of Jesus as not rival, but pointing to one Origin, even the Spirit of Truth. It teaches the truths of religion as given, in both Testaments and in all quarters, to as many would receive them, by the same Divine inspiration and in speaking Word of God. Israel was abused and less refused these revelations, became the most conspicuous channel of the truth in human history, and her true sons of this advantage chiefly, that "unto them were committed the oracles of God," some of which are in their Scriptures been handed down to us, or may come to us immediately.

But even if the Sermon on the Mount were of human origin gathered up from all over the world outside of the gospel narrative, — here it is as found in Confucius, there a little in ancient Persia, here some elements in the Mexican Maya inscriptions of ancient Yucatan and much more in some yet undiscovered literature, — all this would take away nothing from the credit of Christ as being the original author and communicator of them to the minds of men from the beginning. These discoveries would but add lustre to the glory of the universal and saving light of Christ who was in the beginning the Word of God and remains "that true light which light-

eth every man," equally available for Babylonians and for Hebrews, and apparently finding pagans more generally than Israelites open to glimpses of the doctrine of the immortality of the soul.

The Truth revealed to Jerusalem is not jealous of the utmost of Truth that may be unearthed in Babylonia, but ever yearned that Babylon should have more of it than she now can ever show. "Yesterday, to-day, and forever," is Christ the same Word of God to as many in every place as would and will receive Him, and with Him power to become sons of God.

But Babylon is fallen, — a type of our carnal nature which has divorced the spiritual. Her name stands as the representative of worldliness and Mammon, — "the lust of the flesh, the lust of the eye and the pride of life." Jerusalem, — all that state which has submitted to redemption, — is risen with Christ and called the New Jerusalem, her old house on earth being left desolate, but her name standing in contrast with Babylon for Christ's spiritual Church. In the one name is represented "the church and synagogue of Satan," and in the other the Church and city of the living God.

Even under Christian names both as between separate churches and within single churches or societies, these two principles continue in conflict, making the Christian life on earth veritably a warfare. And Hilprecht's with other discoveries of Babylonian resemblances to Israel's religion, but give point to an old saying of the spiritually minded among Friends, that "all the things of Jerusalem have their counterfeits in Babylon."

A writer in the *Episcopal Recorder* who asks "Will Ancient Babylon be Restored?" judges that her restoration is *literally* to take place. He shows an interesting study of the thirteenth and fourteenth chapters of Isaiah in connection with the seventeenth and eighteenth of Revelation. But do we not see enough of Babylonianism in these latter days reasserting itself, overspreading men's hearts, and ambitious of the kingdom, dominion and wealth of this present world, to make us believe that the conflict between the spirit of Babylon and the New Jerusalem is daily waged in individual lives, and in national life is pressing hard to cover the earth?

Some of the signs of the times are collected by the writer, who finds in the book of Revelation that "the seventeenth chapter is Babylonianism, and the eighteenth Babylon, and these two are one. The one is the spirit of the other." This conclusion ought to satisfy one not to look further for Babylon than the pressing and oppressing worldliness and mammon of men's hearts. And he goes on to say:

It remains to inquire whether there is anything in the trend of affairs to-day affording corroboration for the thought that commerce is to dominate the nations, and that the East rather than the West is to witness her regal glory? To raise this question is to answer it and to answer it affirmatively, in the mind of every intelligent and thoughtful observer of the world's history. What explains the awakening of Japan? Why the resistance to an "open door" in China? Why the partition of Africa among the European nations; Why the increase of navies? Why does Great Britain assume a protectorate over Egypt? Why does she seek an alliance with the United States?

Why do we retain the Philippines? Why build the Panama canal? On what questions chiefly have our national elections of late turned? What is all this discussion about tariffs, and trusts and reciprocity? Does not the one word "Commerce" explain and account for all these things? On the other hand, who is the most influential man in the world to-day, the king on the throne or the king in the counting room? What parliament or legislature in the world could long resist the demands of its merchants and moneyed men for changes of national policy, no matter how radical they might be? Please understand that no charge is now made that commerce is necessarily sinful, or that it cannot develop the resources of the earth, or bring the nations together, or bind men in ties of amity and brotherhood after a certain sort. These questions demand separate and distinct treatment, while at present we are concerned only with the problem as to whether Babylon shall be rebuilt and become a centre of commerce in the last days.

In whatever way or region Babylon comes into dominion, whether worshipped as the star of Empire, or in the individual heart as god of this world, her fall is assured in prophecy, and the Lamb and they that are with Him, "tried and chosen and faithful," shall overcome her forces. "Be of good cheer," said he, "for I have overcome the world."

ESSAYING DISCIPLESHIP FOR ONE NINTH OF THE YEAR.—“If any man would be my disciple let him deny himself, take up his cross daily and follow me.”

This is the condition of Christian discipleship laid down by Jesus. And we will add these words from a valued correspondent:—

“Can the kingdom of God progress when sin appears to be one thing during Lent and something else at other times? and be so presented by professed ministers of the gospel?”

“A young Friend attending a noon-day service in the city thinks it good,—‘must do good’ he says. I query will the good continue after ‘Easter Sunday’—if not, then may we not look for the coming in of more (‘seven’) and stronger devils,—and hence an ever-increasing intensity of desire to fight for the world’s goods?”

RESPONSIBILITY OF “THE FRIEND.”—A correspondent says: “Thankful am I for the great privilege we, as brethren in the faith, have in these days, of speaking one to another, in the widely circulated pages of THE FRIEND. Surely it is a ‘ministry’ which as carefully and prayerfully conducted, will ever tend to strengthen the readers in our ‘most holy faith,’ and bring us more into the unity thereof. It enlarges the circle of our affections, and becomes a powerful bond in uniting us together in the brotherhood of the family, based as such on our relationship to Him who ever dwelleth in heaven.”

NOTE.—“The error adverted to in a recent editorial on ‘The Single Talent’ would not have appeared had the original manuscript been followed, which, we are informed, reads: ‘And had he with the one gained the one, both would have been equally commended, as were, etc.’”

The Magic Andirons.

It is a “far cry” from the Wilkesbarre coal mines to the Maine farm-house; but the shortage of coal has been a blessing to at least one New England family.

Mother Long had been ill for two years and the household had suffered accordingly. The boys had acquired the habit of going to the village every night to the detriment of their manners, if not of their morals. Jennie, the older daughter, was growing hard and fretful under the strain of nursing. Hattie the younger, was jealous and gloomy.

Last winter the family sitting-room was deserted in the evenings in spite of its genial warmth from the furnace which Farmer Long had put in when his wife was first taken sick.

Matters were in this case in Ninth Month of the present year, when the chilly conviction came to Farmer Long that the furnace would be empty and useless this winter. One rainy morning he went into his wife’s bedroom with an unusually bright face.

“Mother,” he said, “we’re going back to old times. I’ve opened up that big fireplace in the hall, that hasn’t been used since grand-

father’s day. It’s a great one! It’ll take a five-foot log easy. Now I’m going up attic to hunt out the andirons.”

He hurried away, and presently came down with the huge brass monsters. The boys polished them till they shone again, and at night the great fire was laid and lighted.

Then followed strange things. Suddenly the family feeling revived. The boys stayed at home to pop corn and roast apples in the new-old fire-place. The mother found courage to be brought into the hall to enjoy the good cheer. Hattie and Jennie had a long talk before the glowing coals after the rest had gone to bed, and it did them both good. There was a large store of dry cord wood in the shed, and more in the woods ready to haul out when snow fell; and Farmer Long soon believed that burning it would be better for his household than either medicine or reproof.

Now what wrought the change? Well, Jennie, the imaginative, believes it was the andirons! They were big and strong enough to work marvels. How old they were nobody knew, but they were said to have come from England on an early ship. What history they have seen in the making! An Indian chief had slept on the rug before them. Soldiers in both armies of the Revolution had had their wounds dressed by the light streaming from between their feet. Lovers had whispered vows in their hearing, and sweethearts and wives had mourned over their irreclaimable dead.

Possibly it might have been the andirons that wrought the modern miracle, but they would have had no chance for their magic except for the coal strike. Even good angels cannot bring cheer and health and love when they are shut up in a garret.—*Youth’s Companion*.

The Confessors of Peace from the Second Century to the Era of Mahomet.

I.

In a little book of some sixty pages entitled “The Primitive Christians’ Estimate of War and Self-Defence,” published in 1876 at New Vienna, Ohio, by the Peace Association of Friends in America, the undersigned writer gave the testimony of Justin Martyr, Cyprian, Tertullian, Lactantius, and a few others of the early Christians, in practical proof of the asseveration that *Christianity means Peace*. In the words of Judge Gripeke, of South Carolina, who had well studied the historical narrative: “The primitive Christians did not resist their oppressors by rebellion and with the sword, simply because they knew these to be unchristian means.” Sufficiently conclusive did those doomed valiants of the first three centuries after Christ deem to be the brief response made to their Imperial inquisitors: “I am a Christian—hence I cannot fight.” It is proposed here to continue the line of the narrative.

The noted Origen, of Alexandria, (A. D. 186-253), replying to the Epicurean philosopher, Celsus, admits the latter’s accusation that the Christians of his time would not bear arms, and justifies them for thus refusing, on the principle of its unlawfulness under the religion of Christ, the Prince of Peace. Of himself and his brethren in general, he says: “We no longer take up the sword against any nation, nor do we learn to make war any more.

We have become, for the sake of Jesus children of peace.” He also affirms that Christians are the most useful of subjects as much as they pray for their monarch—such means,” he continues, “we fight, king abundantly, but we take no part in wars, though he urge us.” And again: “The more eminent any man is for piety religion, he will be able to afford great assistance to his prince than a great many soldiers that stand ready to fight for him to destroy his enemies.”

It has been sometimes said, in deroga- tion of the constancy of many of the victims of the Roman persecutions, that they surrendered their lives too readily, self-glorifyingly. This may have attached to some, but not to all. Eusebius (Book V, c. 1) mentions this message, the reverse of self-glorifying spirit, immediately following period of persecution: “The servant of Christ dwelling at Lyons and Vienne to brethren in Asia, concerning those who feared death—‘They did not proclaim themselves martyrs, for it did not become us to apply this name to them; but if any of us, by letter or in conversation, called them martyrs they seriously reproved us. For cheerfully yielded the title of martyr to the true and faithful martyr (witness) first begotten from the dead, the Prince of Divine life.’”

It is excellent collateral testimony, as attested by Archelaus, who flourished under Emperor Probus, in the year 278, that Roman soldiers who had embraced Christianity after having witnessed the piety and courage of the martyred Marcellus, immediately foresook the profession of arms. What also by Eusebius (cited by Clarkson) told about the same time “Numbers laid down military life and became private persons rather than abjure their religion.”

Marcellus, above referred to, had been serving in the legion called Trajani, and on duty in that part of the Roman province of Mauritania in northwestern Africa, now called as the sultanate of Morocco. It happened on a certain day, the birthday celebration of the emperor, that the soldiers, according to custom, were offering sacrifices of meat to their idols. Persuaded that compliance in this, in other matters incident to his occupation as a warrior, was inconsistent with his profession, Marcellus, rising up, threw away his weapons and belt, and remarking to the soldier of Christ ought not to be thus troubled with the things of this world, rendered the service. “It is not lawful,” he declared, “for a Christian who is a servant of Christ, to bear arms for any earthly consideration.” Here was treason to the emperor, contumely to the gods of the State; yet upon, Marcellus, being hailed before the emperor, was by him remanded to the Deputy-governor of the Praetorium, and by the latter was ordered to be put to death.

The “Acts of Ruinart” to which we are indebted for the foregoing account, also contain the equally interesting narrative concerning the youthful Christian conscript Maximilian who was stationed (A. D. 295) at Tever, a city near the source of the Bagrada, a province of Numidia, now the French province of Algiers. Being brought before the

and, his measurement ordered to be made, he exclaimed, as he stepped forward—"I may not serve, because I am a Christian." The measurers proceeded to obey their order, "I cannot possibly serve," cried Maximilian, "I cannot do what is wrong, I am a Christian." Being tendered the leaden badge of service, to be displayed about his neck, he refused to accept the token of a worldly career, seeing that he had already known rejection by the Lord Jesus, who had given life for him. Finding him firm against all caresses, the august representative of Rome cast the young conscript on to the executioner, by whom he was quickly beheaded.

This broad claim has sometimes been made, that, during the first three centuries before Christ, there were no Christians, or at least those known as such, in the army. This claim, however, cannot be sustained. The position of the primitive church, the consensus of the best thought, was decidedly against it, as we will find by reading its most eminent writers, Justin Martyr, Tertullian, Cyprian, Lactantius, Origen, and others.

While the Christians, generally, of that day were probably animated in their refusal to embrace the military science by the motive that the words of Christ command it, they were likewise repelled by the play involved in the oath to the emperor, the sacrifices made to the idols and by the custom of laurel crowning. In his *Grona* ("The Soldiers' Wreath") Tertullian appally describes this ceremony, introducing a narrative of a Christian soldier's refusal to wear the crown. Out of this related incident arises Tertullian's inquiry into the soundness of the military crown, and whether war, even defensive warfare, is proper for Christians. Let this very important inquiry be stated in his own words, as it is taken as the mind of the primitive church upon this matter.

"What sense is there," he says, in turning away from the immediate subject of the laurel crowning, "in discussing the merely accidental when that on which it rests is to be condemned? Do we believe it lawful for a man to add to the divine, and for a man to come under promise to another master Christ? . . . Shall it be held lawful to have an occupation of the sword, when the Lord claims that he who uses the sword shall perish by the sword? And shall the son of God take part in the battle when it does not become him even to sue at law? And shall we apply the chain, and the prison, and the torture, and the punishment who is not a sinner even of his own wrongs? . . . Of those if faith comes later, and finds any precept with military service, their case is different. . . . Yet, at the same time, when a man becomes a believer, and faith has been established, there must either be an immediate abandonment of it, which has been the course of the church, or all sorts of quibbling will have to be resorted to in order to avoid offending God."

Not in so great degree has the ministry of the church, in the main, shifted its position concerning the permissibility of engagement in war, than that which was occupied by Tertullian and the Christian elders generally of that time, that even to quote the above

concluding sentence of the able presbyter of Carthage in deprecation of the brutality and wickedness of fighting, becomes an offence. I recall that a prominent "doctor of divinity" (now deceased), an able writer and excellent man, having encountered the aforesaid conclusion of Tertullian, as quoted in the writer's tract "The Dress Parade at West Point" was so greatly stirred thereby that he straightway enlarged upon the theme in a long and quite bellicose editorial which bore the alliterative title "A Quarrel with a Quaker." Doubtless, the "divine" felt he was justified in making his breezy onslaught, yet it did seem to the "quaker" offender that it couldn't be a naughty thing to do to quote the anti-war language of a Christian "father of the Church." As sustaining this position, it may be in place to put on record here the notable declaration upon war of one of the same denominational faith as my contemner. I refer to Charles H. Parkhurst, of New York city, who in a discourse at the time of our country's war with Spain, said:

"When all those matters [economics, etc.], are put one side and we come on to ground that it is distinctly *my* province as a representative of Jesus Christ, then I do not yield to you; and I am going to say to you, without any 'buts' or 'whosoever's,' that to promote civilization by the use of swords and artillery is false to the word, example and life of Jesus Christ and of all his apostles, and alien to the entire genius of Christianity. If you say to that, that there are places in the world where Christianity has sprung up as an aftergrowth of military conquest, undoubtedly; but that does not alter anything so far as relates to the point I have just made. It does not relieve filthy soil that flowers grow out of it. God is all the time doing that thing. . . . Or you may claim that the powder and shot method of extending civilization is more feasible, works with greater promptness. A Krupp gun does quick execution; a missionary and a Bible are slow. I do not dispute that. I am not here to claim that Christianity is feasible. A great many Christians, laymen and clergymen of our own and other denominations, have during the past year confessed that Christianity is not feasible. Thousands of ministers have practically been confessing to the world these twelve months that Christ's way of saving the world will not work. . . . I should be sorry to have to conclude that the gospel is inadequate without gunpowder to support it, and when I do conclude that, I shall stop preaching out of self-respect; at least I shall stop calling myself a preacher of the gospel. . . . I have simply dropped all questions of gold and diamonds and commercial perquisites, [operating as incentives to a war] of which I know little, and have stated to you the mind of Jesus Christ, of which I do know something. Now you can ignore that mind and promote civilization by killing,—which may be [thought to be] the best way, or you can adopt that mind and promote civilization by making alive, which is the only gospel way."

JOSIAH W. LEEDS.

(To be continued.)

The higher civilization becomes, the greater its risk in undertaking the work of barbarism.

Science and Industry.

BREAD as a daily article of food is used by only about one-third of the population of the earth.

PETRIFIED FORESTS.—Interest is awakened in the wonderful petrified forests in northwestern Arizona the efforts now being made to have the government set aside this place as a national park, and thus preserve to posterity one of the wonder spots of the world, which is being rapidly despoiled by curious hunters.

This great forest of petrified wood is the largest known deposit of the kind in existence. Several thousand acres are covered with immense agatized logs, some of them broken into a thousand pieces, some still unbroken. If all these were to be brought to civilization and utilized the value of them can scarcely be estimated. The beauty of the coloring in the broken fragments, especially when polished, is remarkable, and they are as enduring as precious gems. The nearest railway station to this wonderful place is Holbrook, Arizona, but within the past year a way station has been established at Adamanna, after Adam Hanna, an old guide and eccentric character, who spends his time piloting people to the forest.

The trip from the railway to the forest is without interest, unless one can find interest in wading through the desert sands, mile after mile. Without doubt there are thousands of the trunks of trees which have fallen and petrified in years gone by and been covered up by the sands and lost. The surface of the desert is constantly changing, and where was a hollow to-day may be a mound to-morrow.

On every hand are evidences of erosion that are almost remarkable, too. In places the country is quite like the "Bad Lands" of Dakota, though not on so large a scale. There are, of course, as many visitors expect, no petrified trees standing with leaves on the branches and birds' nests in the crotches. The petrified forest is, in fact, not a forest at all. From a short distance away it is not observable.

There are three large deposits, though for a hundred miles around petrifications may be found. The first deposit, covering about a thousand acres, is thickly covered with small pieces of shattered trunks of trees, but there are very few brilliant pieces to be found here now, the most being of a dull red color and uninteresting. The famous petrified bridge is in this deposit, however, and hence it is an objective point for visitors.

The bridge was formed by a huge tree which fell across an angle of the walls of a canyon, and it spans a gorge fifty feet wide and a hundred feet deep, its two ends resting upon natural abutments of limestone. The earth has washed away from beneath it and the ledges of the cliffs have crumbled and fallen, leaving the full length of the tree exposed. The tree is nearly a hundred feet in length, five feet in diameter at the butt, and is the most perfect petrified tree ever found. Billy Pitts, one of the dare-devil cowboys of Northern Arizona, recently rode his broncho across this narrow bridge just to display his skill to a party of tourists.

The second deposit, several miles southeast of the first, contains many large pieces, in a

much better state of preservation, if such a term is permissible in the case of a thing that grows constantly better with age. Some recent floods have uncovered many fine petrified logs here, the presence of which was unknown until the floods came. Nearly all of these logs are broken, and are from two to four feet long, showing the bark and the grain of the wood as natural as the trees cut in the great pine forests around Flagstaff to-day. This deposit comprises about four thousand acres of land, lying in the bottom of a wide canyon that winds its way to the south and widens out until the open desert is reached.

The third deposit is still farther to the south, in the mouth of this canyon, and this is the largest deposit and contains the most perfect specimens of all. Here are thousands upon thousands of agatized trees, lying broken and shattered by the elements. Sparkling and scintillating in the sunlight like jewels, showing all the colors of the rainbow, are millions of pieces of this wonderful mineral. The ends of the massive logs, where they have broken in two, present the most delicate combinations of exquisite colors imaginable, blending from pure white to pink, blue, red and yellow, set off by brilliant crystalline formations at the heart, all framed in a dark, rusty rim, once the bark of the tree. Gnarled limbs and knots may be found near the trunks of the trees, half buried in the sand, that are as perfect in grain as pieces cut from a live tree. These are very much valued as specimens by tourists, as they invariably say that these will convince their friends back home that the stones are really pieces of wood, which is hard to believe of the large pieces.

In this deposit one may walk for a quarter of a mile without stepping off the logs of petrified wood. Some of the stumps stand up ten or fifteen feet high, with roots showing underneath them. The forest was first discovered in the early 50's by government geological surveyors.

The Prayer of Agassiz.

The island of Penikese, in Buzzard's Bay, was given by John Anderson to Agassiz, the great naturalist, for the use of a summer school of natural history. A large barn was cleared and improvised as a lecture room. Here, on the first morning of the school, all the company was gathered. "Agassiz had arranged no program of exercises," says his widow, in "Louiz Agassiz: his Life and Correspondence," "trusting to the interest of the occasion to suggest what might best be said or done. But as he looked upon his pupils gathered there to study nature with him by an impulse as natural as it was unpremeditated, he called upon them to join in silently asking God's blessing on their work together. The pause was broken by the first words of an address no less fervent than its unspoken prelude."

This was in the summer of 1873, and Agassiz died the Twelfth Month following.

On the isle of Penikese,
Ringed about by sapphire seas,
Fanned by breezes salt and cool,
Stood the master with his school.

Said the master to the youth:
"We have come in search of truth,

Trying with uncertain key
Door by door of mystery;
We are reaching, through His laws,
To the garment-hem of Canse.

As with fingers of the blind,
We are groping here to find
What the hieroglyphics mean,
Of the Unseen in the seen;
What it is that hides beneath
Blight and bloom and birth and death.

Let us light and guidance ask,
Let us pause in silent prayer!

Then the master in his place
Bowed his head a little space
And the leaves by soft airs stirred,
Lapse of wave and cry of bird,
Left the solemn hush unbroken
Of that wordless prayer unspoken,
While its wish, on earth unsaid,
Rose to heaven interpreted.

Even the careless heart was moved,
And the doubting gave assent,
With a gesture reverent,
To the master well beloved.
As thin mists are glorified
By the light they cannot hide,
All who gazed upon him saw,
Through its veil of tender awe,
How his face was still uplift
By the old sweet look of it,
Hopeful, trustful, full of cheer,
And the love that casts out fear.
Who the secret may declare
Of that brief unuttered prayer?
Did the shade before him come
Of the inevitable doom,
Of the end of earth so near,
And Eternity's new year?

In the lap of sheltering seas
Rests the isle of Penikese;
But the lord of the domain
Comes not to his own again;

In all voices known to her,
Nature owns her worshipper,
Half in triumph, half lament,
Thither Love shall fearful turn,
Friendship pause uncovered there,
And the wisest reverence learn
From the master's silent prayer.

—1873, John G. Whittier.

DREADING THE FUTURE.—The most of our trouble is caused by dread of coming ills. Many of them never come at all, or rather when the trial that we have been dreading does come, it proves to be far more easy to bear than we expected. In fact, we are almost disappointed, when we get over some long expected trouble so easily, and immediately look for something else to worry over. We have abundant grace given for every need to-day; let us thankfully receive the blessing, and leave to-morrow, with all it may bring, in his care. After all, what He expects of you and me is faithful trust in Him, a trust that remains firm in the face of every possible calamity. Such faith as this is the only remedy for dread of the future, and such faith is the rightful heritage of every saved soul.—*The Presbyterian Journal.*

It is none of our business whether or not men recognize and praise our consecration, for consecration looks Godward, not manward. It is a life lived in the eye of Him who sees in secret.

Convincement Concerning Testimonies of Truth.

In the year 1793, William Lewis, of Col, England, a serious seeker after righteousness, who had been led by the dispensation of Divine Providence to feel and acknowledge the truth of many of the principles and testimonies of the Society of Friends, brought under close exercise in reference the adoption of plainness in his attire, manners and language.

Like many other individuals who disapproved the cross which a non-conformity to the custom of the world imposes, he found arguments against obedience. He gives an interesting account of the manner in which he was led to feel the importance of these testimonies. As respects using the plain language, he says, "The very idea of a change in particular caused such a shrinking, and a dread of mind as induced an attempt to prove groundless their arguments in its being genuine Christian testimony against that corruption in speech, which to the letter, I could not deny to be verdant, in that commonly adopted. . . . first passage that met and arrested my attention was the apostolic injunction to be 'use of 'sound speech that cannot be damned.' This pressed and pinched in degree at first, but I got from under weight by reasoning after this manner.

"Sound! that is surely so, which, proceeding from a heart without rottenness, is devoid of all deceit, seeks not to leave a false impression on the minds of hearers." But the fast form of sound words, 'came from the same authority and appeared to inculcate substantial rectitude of heart, with the other effect of the Light of Christ that should shine forth in its native garb to others, and that in the real possession of inwardly, every appearance of evil must be abstained from outwardly.

"This, for a time, lay with more weight on the former; but at length appeared to obtain in substance, nothing that added force. I came at last to the Lord's message unto his people through the prophet Malachi charging them with such withholding, as even robbery in his sight, and which was admitted by keeping back 'tithes of offerings.' Reflecting upon this charge and remembering that in these offerings, mint, anise, etc., included, things as insignificant in themselves when compared with the weighty matter of the law, as a form of sound words could be substantial truth in the inward parts, and that Divine wisdom made them of such importance as to condemn those who refused compliance with what was enjoined respecting them, in the awful manner noticed, I began to fear—I say, to fear—that Friends were not doing that it was my duty as an individual to them in testimony against the corruption which crept into modern language, and to go back to the primitive simplicity and plainness of speech. A sore exercise of mind now took place, and while under it, falling in concert with a ministering Friend from America, and communication from his lips was a comfort to me."

This minister was Samuel Emlen; and those assembled on the occasion William

le, to some had departed from and given testimonies of Friends. Samuel spoke its import: "Robbery, robbery! it is a crime of no small magnitude with respect to pertaining to men; how great then is its magnitude, when the rights of the Most High are invaded, and the creature holds back from due to the Creator!"

Some of old were charged with this atrocious crime, they had the impudence to query. Wherefore? An answer was ready, "In tithes and tithes." Samuel enlarged on the subject and addressed a person present. At the close of his testimony he inquired who William Lewis was. On being informed, he addressed this person to him, "Well, William! bring your tithes into the store-house." This communication, in connection with his previous exercises, had a powerfully convincing effect on the listener's mind. He gave up to be believed to be the Truth, and meekly crossed his Master laid upon him. After a while he was admitted into the Society of Friends, received a gift in the ministry and labored in the Light, experienced sweet fellowship with the brethren, and the favor of the Divine Master, to the close of his life. —*See 1, 55, 56, 57, of Biographical sketches* Thomas Scattergood.

We would it be if our members who are constant in their attire, were brought to participate in that kind of feeling which troubled Thomas Ellwood when he heard a persecutor of Friends say of him, because he wore a black, velvet cap, "Let him alone; trouble him with him: he is no Quaker, I'll tell you." This, he says, was worse to him if they had beaten him as they did the Quakers, and put him out of conceit of his friends, those who profess to be Quakers, and do not conform to the testimonies of the Society were blessed with a sound, discriminating judgment, they would not fail to perceive the incongruity of their conduct.

People who are not members among Friends often have a keen appreciation of what conscience requires. Robert Nesbit, in 1791, during the Yearly Meeting of Philadelphia, told an anecdote to this effect. During the war of the American Revolution, a number of the Society of Friends was laid out as a body of soldiers, who told him they must go with them to the war; in words, join the army. His clothes were adapted to a peaceable profession, or he would have been disturbed. He told them, however, that he was a Quaker, and said, "You a Quaker!" said they, "We have not got the marks of one." How often his repeated assurance that he was a Quaker, and earnest solicitation to be released, let him go, but not before they had taken his hair, which he wore tied behind his cross-pockets, and large fashionable breeches, in a summary way reducing him to the plainness of their idea of a true Quaker plainness than he had before. —*Pages 57 and 58, of Biographical sketches* Thomas Scattergood.

commission are the usual punishments of omission. He that leaves a crime well far that he will be left to suffer. —*Gurnall*.

FOR "THE FRIEND."

NOAH.

"The Lord shut him in."

O sad spectator of a wailing sea,
A remnant rescued from a race engulfed,
He fled with pain, and stemmed a hostile tide,
His iron nerve compressed to form a crown
Availed to lift him among the men of might.
Deep answers deep in agony that's dumb,
Shut in to safe seclusion and to tears,
With memory burdened with a drowned world!

H. T. MILLER.

BEAMSVILLE, Ont.

FOR "THE FRIEND."

Travelling Dick.

There was living in England, near the middle of the eighteenth century, an itinerant barber who was commonly known as Travelling Dick. The great want at that time among cotton manufacturers was for spun yarn. They could weave fast enough but where was the yarn to come from? A search at all the neighboring cottages where hand spinning was done could not keep the looms going. Now, Travelling Dick had imbibed the idea that a machine might be made which would transmit cotton into yarn. In fact he had what might be called cotton spinning on the brain, and would talk of it, in season and out of season, to any one who would listen. Moreover he carried certain sticks in his pocket, which when any one seemed interested—which was seldom—he would set up to illustrate how he thought the thing could be done. In pursuit of his trade he had stopped one evening at the house of a farmer of his acquaintance, purposing to stay till morning. A piece of great good fortune had fallen in the way of one of this farmer's sons, in that an uncle who was a cotton manufacturer at Manchester had taken the lad and initiated him in his art. At home on a visit he was among those country "bumpkins" the hero of the hour; for had he not been at the great city, and did he not understand the mystery of calico weaving? When Travelling Dick had sufficiently expatiated on his favorite theme—so much above their comprehension—and set up his sticks to prove its feasibility, all hands turned to this learned new arrival as the one competent to judge of its merits when thus appealed to. All the reply he vouchsafed was to break out into a loud and contemptuous laugh. At which the barber was so offended that, gathering up his sticks he indignantly left the house. When the father came in and found their guest gone, he administered a severe reproof for incivility.

A few years passed away. The uncle had deceased and left his business with all its perplexities—mainly the still and increasing lack of yarn—to the nephew. He on his part has learned that a certain great man had invented and was selling machines which would, it was said, really produce the desired article in abundance. Others were getting "water frames" as they were called, and if he kept up his business he must have one. They were expensive and his means limited, but the patentee was said to be accommodating, and perhaps if he took all the funds he could raise and offered security, he might succeed, at least he would try. On entering the office he

was at first surprised by the strange familiarity of features; another look convinced him that it could be no other than the barber whom he had so uncivilly driven from his father's house. No longer known as Travelling Dick, he was now Sir Richard Arkwright. The man who contributed far more—with the possible exception of James Watt—than any other ever did to the commercial supremacy of England. It would be interesting to know that the recognition was mutual.

Arkwright was knighted by George III. in 1786. It is stated that he left property (in 1792) valued at nearly half a million sterling. He was the founder and pioneer of the factory system,—a man of wonderful energy and perseverance. Great Britain has reaped much of her prosperity from his invention, and force of character in establishing them.

The Evils of Lynching and Convict Camps.

We have long labored in the advocacy of improvements in the penal systems of our own and other nations, and, although considerable progress has been made in this direction, we are conscious that there is still much room for improvement in many of the social and legislative conditions on this side of the Atlantic. Some of your own countrymen, both from the Northern and Southern States, have very usefully co-operated in furthering various reforms in the penal and prison systems of Europe. And their labors have specially deepened our interest in the extension of similar movements amongst your own people. With much satisfaction we have heard of the greatly increased public attention which, of late years, has been directed to the improvement of the prisons in many of the United States, and in particular to the extension of efforts to prevent juvenile crime.

At the same time, we may confess that this gratification at American progress has been accompanied by a strong and friendly desire that similar practical earnestness could be manifested in the Southern section of your country, in regard to the suppression of the evils of lynching and of the convict camps, especially those connected with the leasing-out system. The inhumanities of these camps, which have been acknowledged in some of the official reports issued by the authorities of certain Southern States, are peculiarly apt to elude public knowledge and attention, by reason both of the remote localities in which they are situated and the privacy of management which usually characterizes them. These conditions also render it very difficult to bring home to the perpetrators the cruelty and vice which are almost necessary accompaniments of the systems still prevalent in some of the Southern States.

But far more open to public cognizance are the cruelties attendant upon the lynching of offenders in the South, who, if brought to legal trial and proved guilty, would certainly be punished in accordance with the State laws. We learn that, since the year 1890, not fewer than one thousand eight hundred and sixty-two persons are known to have been lynched,—some of them only suspected of crime, and possibly innocent. Of these, some have been slowly burned to death, with horrible ingenuities of torment, and in the presence of multitudes of men, women and children, sometimes

brought together, from far and near, by excursion trains, as for a public holiday.

The people of the United States deservedly enjoy a very high position in the world's estimation; and it is precisely because we, with innumerable others, desire to see this honorable appreciation maintained and further exalted, that we venture thus to invite your special endeavors, gentlemen, as powerful moulders of the public opinion and action of your great country, to strengthen the influence of the more humane and intelligent class of your citizens who are opposed to the evils in question.

The Southern States have furnished some of the noblest types of character, such, for example, as those of George Washington, Henry Clay, "Stonewall" Jackson and others like-minded. The scenes connected with lynching horrors and convict camp vices should be strenuously suppressed by the compatriots and successors of those illustrious men.

The many excellent persons in the Southern States, to whom the profession of religion and the honor of God are heartfelt realities, will doubtless welcome, on the part of their own influential journalists, any measure of encouragement and co-operation which you may be willing to afford them. And you, yourselves, in rendering this needed service to God and to humanity, cannot fail to derive a solid satisfaction and reward.

Signed for the Committee of the Howard Association,

HENRY GURNEY, Chairman.

ALFRED F. EUSTON, Treasurer.

EDWARD GRUBE, Secretary.

DEVONSHIRE CHAMBERS,
BISHOPSGATE WITHOUT, LONDON,
February, 1903.

The Doukhobors Will Homestead.

Ex-Pilgrims Desire to Become Canadian Citizens Immediately—Balance of Stock Fund to be Applied in Paying Entries—Verigin's Influence a Potent Factor in the Settlement—Several Difficulties Remain.

Peter Verigin, the Doukhobor leader, has left for the Saskatchewan colonies, near Rosethorn.

Since his arrival in the west, some three months ago, he has accomplished a great work. Almost altogether, as the result of his efforts, the discontent and dissatisfaction that before his arrival were prevalent among a large section of Doukhobors, have altogether disappeared.

Henceforth the Doukhobors will have no other aim but to settle in Canada, and become Canadians. The erstwhile pilgrims will at once proceed to get out naturalization papers, and, like the Icelanders, Germans, Galicians, Swedes and the other European nationalities of the Dominion, will in a short time become merged in the Canadian people. They will at once enter for their homesteads, and in other respects conform to the requirements of Canadian departmental regulations.

These things were finally decided on at a meeting of delegates from all the Yorkton and Swan River colonies, held on February 10th. Agents Crerar and Harley were present, representing the government. They explained fully the Dominion regulations as to the settlement of land, that they were designed solely with a view to the safety of the State

and for the benefit of the settler, and without any intention of harshness or oppression, and were identical for all who desired land, whether British, Canadian or Doukhobor.

The meeting was very lengthy, and every aspect of every question agitating the Doukhobors was thoroughly discussed. Throughout it was evident that Verigin was in absolute control of the gathering, his every suggestion and recommendation being immediately and cordially adopted. Verigin assumed no show of authority—in fact, he created the contrary impression, that of following where in reality he led. But his every suggestion showed so much more knowledge of the matters at issue than those who waited on his counsel, that by virtue of this they were in every case adopted.

The government agents informed the assembly that, in regard to the fund realized from the sale of the Doukhobor stock, a committee was to be appointed to deal with the matter. Of this committee Verigin was to be one. The others elected were Paul Planidan and Nicolai Ziloff, and Simeon Rieben was appointed interpreter. This committee has spent four days in the city and has had numerous interviews with Commissioner of Immigration J. O. Smith. The all-important question discussed was the taking up of the homesteads. The committee stated that, owing to the disturbance created by the recent pilgrimage, there was not as much money among the Doukhobors as there would otherwise have been. It was decided that the balance of the fund, after paying for all charges caused by the pilgrimage, should be applied to the entry fees of the Doukhobors for their homesteads. The remainder of this fund will be in the neighborhood of nine thousand dollars, all of which will be devoted to this purpose. About two thousand homesteads will be required in order that each adult Doukhobor may have his own farm. The Saskatchewan Doukhobors, who were unaffected by the pilgrimage, have, as is generally known, all taken up their land, and otherwise conformed to departmental regulations.

Verigin desires to assure the people of Canada—and in this he is corroborated by Ziloff, the real leader of the pilgrimage—that the spirit wrestlers had no malicious or injurious intent in that movement. They honestly believed they were right in going out to preach. Verigin assured Mr. Smith that he felt deeply the kindness and sympathy extended to the pilgrims by everyone on their line of march, and by the government since their return to their homes, and he has assured the commissioner that the Doukhobors would in future show by their behaviour that they merited the confidence of Canadians. They are now all willing to admit that the pilgrimage was a mistake—at least in this sense that it was not necessary for so many to have gone. They now admit that, for the purpose of preaching, a dozen would have been as effective as the eight hundred who started.

Commissioner Smith and the officials of the department are, naturally, pleased with the turn affairs have taken. This is the first committee having power to act for the Doukhobors that has approached the government for two years. There are still matters to be adjusted, but the main question was that of land entry. This is now settled. The Doukhobors

will locate on the land. They will each pay up ten dollars entry fee. They will stake and interest in the country. They have given up all idea of moving out of Canada. Then another difficulty, the fund realized from the sale of the Doukhobor stock, has been disposed of, to the mutual satisfaction of the government and the Doukhobors. The questions of schools and vital statistics registration have yet to be dealt with, but there is a slightest doubt but that these things will, of course, be settled as satisfactorily as the land question has been. Two factors entered into this settlement—the mobility and firmness of the department, and the personality of Verigin. It is fortunate that when the crisis came the man who could control the situation, had it not been for the limitations placed on the Doukhobors had in Verigin. The present satisfactory conditions would have been long in coming.—*Manitoba Free Press of Third Month 2nd.*

An Exoneration of the Speaker of the House.

Although not having a wish to make a public statement in regard to the late attack on Washington, since reading the account of the same in *THE FRIEND* of last week, a feeling has been entertained that a little explanation might be in place. We were furnished with a letter of introduction to a Representative from our district, who we could have expected in introducing him, commending us to the "Chaplain of the House." We had an interview with him, and he expressed that he would be glad to help us. And after further information on the subject, informed us, that there was no way such a privilege could be obtained under the existing regulations; and after informing us that all the way it could be obtained by a special resolution, but we were released without going further in the matter. Through favor a comfortable reflection on the result of this exercise has been made, a desire to leave it in the hands of the Lord can only prosper either this or the blessing resting upon our exercises.

But that which comes up and lives in the heart of the writer is, "That first of all, supplications, intercessions, and giving ought to be made for all men; for kings, and all who are in authority; that we may lead a peaceful life in all godliness and honesty."

How greatly does it behoove the Doukhobors to have been favored to see in what the Prince of Peace consists, to dwell alone in a prayerful spirit that He who alone knows the hearts of all men in his hands, may spread of his glorious kingdom, may have the knowledge of the Lord may so prevail, "the kingdoms of this world may become the kingdoms of our Lord and his Christ."

JOHN S. FOLK

Third Month 9th, 1903.

WHY I MEMORIZE THE BIBLE.—A brother keeper thus tells how she began to study the Bible:

At first, being long unused to study, it was difficult for me to learn even a few verses correctly, but, with determination, every "and" and "the" right, I can now commit to memory accurately and rapidly.

id, too, that the constant repetition of thoughts and noble language improves my thought and expression, especially in

committing the Bible to memory, worries, bitter thoughts, vain regrets, fancies and all the jumble of things number an unoccupied mind are crowded. By frequent repetition, rich meanings stand out clearly in the lines, which otherwise escape my notice.

growing familiarity with the Bible is ready for use in guiding my own way in helping others. How can I walk with God unless I have in mind some word to which I can respond, or which satisfies my own questions and aspirations?

ometimes I may be deprived of reading when what riches I shall have in this storehouse verse hid in my heart! Often at twilight in helpless hours I say the sweet words with a sense of comfort and companionship at otherwise I should miss.

CALL TO BE WARRIORS

Or fathers to their graves have gone,
Their strife is past, their triumphs won;
It sterner trials wait the race
Which rises in their honored place
Anoral warfare with the crime
All folly of an evil time.

Slet it be. In God's own might
I guard us for the coming fight,
All strong in Him whose cause is ours,
I confront with unholly powers,
I grasp the weapons He has given
To fight and truth and love of heaven.

—John Greenleaf Whittier.

ore so to live in the strength of Christ
are to be able to teach men with bap-
tism and bring them to be disciples of
Christ. We are to teach that to be his dis-
ciple are really to follow him and live ac-
cording to his Spirit. We are to understand
that this is our first business and that
everything is to bend to it. Then we shall be-
hold our right place both as individuals
and as a Christian body.—*Interchange*.

Items Concerning the Society.

Committee of Philadelphia Yearly Meeting
looking towards the holding of appointed meet-
ings within the city limits, have settled on Sixth
street at 4.30 p. m. as the time, and the meet-
ings at Fourth and Arch Streets as the place to
hold members and attenders generally are in-
vited to a season of Divine worship. We hope a
large number will attend.

General meeting for worship called together
at the North Meeting-house on Fourth-day
at 4.30 p. m. on the second instant was
well attended, and evidently enjoyed throughout
the season of Assemblies. "That Christ should
have the pre-eminence," was the man-
ifestation of the many brief but lively ex-
pressions of his Spirit in all things, the
testimony of Him for self as well as for sin, the
testimony of his power for service and for suffer-
ing, the ally living for Him who for our sakes
suffered, Him who rose again, were pressed to
attention, in sermons which by being little in
and confined to their simple message, al-
though occasion to be great.

Similar effect seemed to be the covering of the
the North Meeting-house on Fourth-day
in the presence of the remains of EDWARD
devoted and conscientious elder, gathered

near the age of ninety-one, like a shock of corn fully
ripe in his season.

Notes from Others.

Almost all the great preachers in and around
London are said to be laid aside for a time on ac-
count of ill-health because of overwork.

A writer in the *Christian Register* says: "No reli-
gious faith can prosper and grow, or even con-
tinue alive, unless it have the motive that is wil-
ling to do hard, necessary and self-sacrificing things
for the sake of the truths and principles it holds."

W. Robertson Nicoll is quoted by the *British
Weekly* as saying: "If there is one thing beyond
another that is the weakness of the Christian
Church in these days, it is the abandonment of the
crowded and wretched parts of towns for rich and
fashionable suburbs. No church is a living church
that excludes the poor."

Hugh M. Scott, in an article written for the
Advance, says that on all hands in Germany the
decline in religion is deplored and this "eclipse of
faith" is recognized by all classes of German the-
ologians, and however much they may differ among
themselves, they all agree that what is positive
and constructive in Christian teachings should be
given the first place.

I do not know whether I most pity or most de-
spise the foolish and selfish man or woman who does
not understand that the only things really worth
having in life are those the acquirement of which
normally means cost and effort. If a man or
woman, through no fault of his or hers goes through-
out life denied those highest of all joys which spring
only from home life, from the having and bringing
up of many healthy children, I feel for them deep
and respectful sympathy.—*President Roosevelt*.

Pastor Scott, at a meeting of Edinburgh Es-
tablished Presbytery, said the visit of the Arch-
bishop of Canterbury to their General Assembly
would long be remembered. It was the first visi-
ble recognition they ever received from a dignitary
of the Church of England that they were indeed
one of the Churches of the Lord Jesus Christ.
They had had bishops in the Assembly before that,
but so outstanding a representative of the Church
of England had never come down to their General
Assembly, greeting them and encouraging them in
the work in which he and they were engaged.

"There are some things in our civilization that
are breeding disaster for future generations. The
dance, the card game, the theatre are among these
things, and the greatest joy of my life has been
that I have had the courage to resist such worldly
temptations. How would I have appeared to my
children had I permitted and sanctioned such things
when for their infancy I have warned them against
such follies. I find that the great outside world
is hungering for a genesis in these things, and most
of the commendations I have received for my stand
in such matters have come from outside the church."
—*Governor Mickey of Nebraska*.

A nation is indeed in danger of national dis-
aster which, though rich, has lost faith in a God
of justice, mercy, and truth; which is "aggressive"
in ignoring and trampling upon the God-given
rights of other men; and which is unarmed with
those moral principles that are the only real
safeguard of men and of nations. Many another
nation, ancient and modern, has courted disaster
and has been overtaken and destroyed by it, from
the failure to see this simple truth. Just this, and
this only, is the danger of the United States. We
are safe if we have this safeguard without any
more "war colleges," and we are in danger of dis-
aster, more than that, we are certain to incur dis-
aster, if we are without it.—*City and State*.

The Independent or "Quaker" Methodists carry
the voluntary principle so far that they not only
decline financial support for ministers (except
when traveling), but they do not even appoint a
paid secretary for purposes of society organization.
All work for "the cause" is a labor of love. The
editor of their monthly organ, the *Independent
Methodist*, gets no remuneration for his services,
which are rendered after his day's work, when
business is over. In addition to this, he usually
preaches twice on First-day, sometimes oftener. A
society that can secure such devoted service de-
serves to grow—if only it does not kill its servants
in the process. It is refreshing to hear that it is
increasing so fast as, if the present rate is main-
tained, to double itself in six or seven years.—
British Friend.

Here is a list of words and phrases in common
use the boys and girls should avoid. They may be
easily remembered. Don't say:

- Guess for suppose or think.
- Fix for arrange or prepare.
- Ride when you mean drive.
- Real good for really good.
- Not as I know for not that I know.
- Try an experiment for make an experiment.
- She don't read well for she doesn't read well.
- Party for person.
- Posted for informed.
- Depot for station.
- Stopping for staying.
- Like I do for as I do.

OVER-STUDY. — At a joint meeting of school
superintendents and the State Board of Health in
Ohio, the question of overstudy was a topic under
discussion. The superintendents appeared to take
the position that there was no such overworking
of the pupils. The superintendent of public schools
in Cincinnati said:

"It is not mental activity that hurts. It is
the foul air, the bad seat, the unequal heating of
the room, the poor lighting. Study doesn't hurt.
A few days ago we had a case of a child not yet
ten years old, who was suffering with headache
and seemed to be unable to give attention to the
lessons. On investigation it was found that the
child had been up four nights until eleven o'clock.
We have thousands of such cases in Cincinnati, in
which the bad eating, bad hours and irregular
sleeping at home produce these results. . . . But
hard work is what the child needs; not rest, not
recreation, not release from task, but infusing the
task with a purpose, so that in pursuing it the
child grows strong in mind as in body. Of course,
mental exercise as well as physical can be carried
to excess. . . . But the work of the schoolroom
which shows a stultifying process has to do with the
formal text-book side of the schooling."—*American
Medicine*.

THE JEWS IN CHINA. — Chauncey Goodrich, now
of Oberlin, O., formerly of the North China Mis-
sion of the American Board, says that the Jews in
China wear queues and they speak the language,
follow the customs and wear the dress of the
Chinese. There is a small colony in Kaifengfu,
Honan, possibly numbering a few thousand. I can-
not think they came to China as far back as in
the reign of Saul. Their synagogue is gone, their
Hebrew Bible, which they were unable to read, was
given to Bishop Schereschewsky thirty-five years
ago, at which time he brought several young men
to Peking to study. These young Jews were a sad
failure, "worse than the heathen." Two of them
were in my school, but for a few weeks only, as I
felt it unsafe to keep them longer.

The Jew is not honored in China and he has no
influence with the Chinese officials. No Chinese
are converted to the Jewish religion, a cult which
is practically unknown in the land of Confucius.
I have been many times in Shanghai, but never
heard of a synagogue there. It is not impossible

that there may be a few Jews of respectable standing in that metropolitan city, merchants who have been in China a few decades. But if there are it is practically certain that they cannot speak the Hebrew language.

SUMMARY OF EVENTS.

UNITED STATES.—The Fifty-seventh Congress ended on the 4th inst. In addition to the usual appropriation bills but little legislation of great public importance was accomplished during the second session. Of this character is the militia act, the act establishing a Department of Commerce, an amendment of the immigration laws, and act for the improvement of arid lands—and an act to establish civil government in the Philippines. The amount of money appropriated during its two sessions exceeds that of any previous Congress, amounting to more than a billion and a half of dollars (\$1,554,108,518). The number of bills introduced during the Fifty-seventh Congress aggregated 17,560, of which 2018 were reported and 360 more than 2000 passed, of which about 1200 were private bills, mostly for pensions. The money appropriated for the army and navy and for fortifications exceeds 167 millions; for pensions, nearly 140 millions; for the Post Office, 153 millions; for agriculture, nearly six millions; for the Indians, over eight millions. While it appears that the appropriations of this Congress have been largely in excess of those of the last Congress, it is stated that the increase is chiefly made up of three items, namely, the \$50,000,000 for the Panama Canal, the increased appropriation of \$50,000,000 for the postal service and the river and harbor appropriations. A number of important bills failed of passage. On the 6th inst. the Senate was convulsed by the President in extra session, and a message was received from him asking special attention to the treaty with the Republic of Colombia securing to the United States the right to build an isthmian canal, and to the treaty with the Republic of Cuba for securing a measure of commercial reciprocity between the two countries.

A bill recently passed by Congress contains the following clause: "No intoxicating liquors of any character shall be sold within the limits of the Capitol Building of the United States."

The new Immigration act provides that a tax of two dollars shall be collected for every alien immigrant who enters the United States. The money thus collected shall constitute a permanent appropriation, to be called the "Immigrant Fund," and used to defray the expenses of examining the immigrants under the law. The classes excluded from admission are idiots, insane persons, epileptics and persons who have been insane within five years previous; paupers, persons likely to become public charge, persons afflicted with a loathsome, dangerous or contagious disease; persons who have been convicted of crime or misdemeanor involving moral turpitude; polygamists, anarchists or persons who believe in, or advocate the overthrow by force or violence of all government or the assassination of public officials and some others known to be immoral persons.

What are stated to be the greatest deposits of iron ore in the West have been found on Prince of Wales Island, Southeastern Alaska. The deposits comprise both magnetic and hematite ore, and lie within a short distance of the water, making them readily accessible to water transportation.

The Superintendent of Forestry, in his report for 1902, calls attention to the great demand for wood pulp by the paper makers in this country, and says: "The rapid exhaustion of the supply of standard pulp woods renders it imperative to discover, if possible, other equally useful species. To demonstrate the usefulness for pulp of certain plentiful timbers not yet used for that purpose will be exceedingly valuable if it can be done. Wherever supplies of such timber are present the life of the wood pulp industry may be greatly extended."

An act recently passed in North Carolina makes it lawful for Christian Scientists to practice their methods of treating diseases in that State.

A prohibitory bill to marry was passed by the Legislature of Pennsylvania in 1901. A despatch from Wilkes Barre, Pa., of the 4th, says: "What is believed to be the first suit in the State since the passage of the act forbidding the marriage of first cousins, for the annulment of such a marriage, was instituted here to-day, when District Attorney Jones filed a bill in equity asking for the annulment of a marriage between Clara C. Jones, Edgar Tiers, be annulled. Both are under nineteen, and were married in New Jersey. When they returned they were separated by their parents."

A despatch from Portland, Me., of the 5th, says: The steamship *Montauk* carried the largest cargo of oats ever taken out of this port—about 300,000 bushels. This

cargo goes to Hango-Udde, for the relief of the starving Finns.

Helen Keller, who, although deaf, dumb and blind, is a student at Radcliffe College, lately addressed through an attendant, the Legislative Committee on Education, in support of a bill for the relief of the adult blind. Her message to the Committee was a feeling one. She said that the blind did not need the higher education, but did require help in order to take their places in the industrial world.

A bill has lately been enacted in Pennsylvania designed to permit the loaning of money at a higher rate of interest than 6 per cent. in the event of a stringency in the money market.

A deposit of crude nitrate of soda is said to exist in the Death Valley in California in a tract twenty-five miles long and fifteen miles wide, an area larger than that in Chile, which has long been a source of supply.

A number of leading citizens of Washington have organized a propagandist against tuberculosis and have undertaken the spread of intelligence that will tend to minimize the conditions which produce the disease. The society accepts the belief that the disease may be prevented, that its spread may be checked and that persons who have it may be cured. The work will from time to time be made the subject of lectures and special study in the public schools.

During the year 1901 the records of the police in London show that but 24 murders occurred in a population of about 6,000,000. In England a trial for murder is completed generally within a few weeks after the accused is arrested, and it is stated that there is no appeal to a higher court.

A despatch from Berlin states that the country medical practitioner in Germany is to have an opportunity to learn the latest developments in surgery and general medicine from a traveling university that will bring postgraduate instruction to the nearest large town in his vicinity free of charge. The country doctor can thus come to his neighboring city for a week or two once a year and hear the leaders of his profession explain the latest processes for treatment or see celebrated surgeons operate.

Information from China is to the effect that a revolutionary movement appears to be growing more serious, and that it has for its object the massacre of foreigners and the placing of a new Emperor on the throne.

Terrible snow storms are reported to have been raging in the Government of Samara, in S. E. Russia, which have caused hundreds of deaths. Heavy driving sleighs have returned to villages with the passengers frozen to death. The village bells are rung nightly by able-bodied travelers to find their way to shelter. Many persons have been frozen to death within the villages while searching for the doors of their own homes.

A despatch of the 20d inst. from Guadalajara, Mexico, says: There is no indication of any decrease in the violence of the eruptions of Mont Colima, and the showers of ash are devastating the fertile plantations in the rich valleys to the eastward. The ground is covered to a depth of several feet. Lava is pouring down the eastern slope of the mountain. Natives are terror stricken by the terrific earthquake shocks. A pall of smoke that hangs close to the earth and is almost stifling covers the country for fifty miles around the volcano. The light of the sun is shut out on highland places are required throughout the day. The place of worship are crowded with worshippers day and night.

A despatch from Costa Rica reports frequent earthquake shocks on the 4th instant. Similar shocks were felt in Dominica on the 5th instant. The La Soufriere volcano in the island of St. Vincent, is again active, though the eruptions are not violent.

A despatch of the 6th from Berlin says: "Earth shocks have been felt for two days in the district of Voigtland, Saxony, and in the Erzgebirge. Yesterday's shocks were slight, but those of to-day were violent."

A movement has been started to transfer large numbers of expatriated members of Catholic societies from France to America.

NOTICES.

The portion of the Yearly Meeting's Committee apart for service within the limits of Abington is arranged for an appointed meeting, to be held at Meeting-house at Frankford, on Fourth-day even 18th inst. at 7.45 o'clock. The members of Friends Meeting in particular, and Friends generally, are to attend.

The sub-committee of the Yearly Meeting's Committee assigned to Philadelphia Quarter propose holding a part for Divine worship at the Meeting-house, at Arch and Arch Streets, on Sixth-day, the 20th inst. P. M., for Friends of Philadelphia and vicinity, and our young Friends are invited.

Traut Association of Friends.—The meeting of the Association will be held in the C. Room of Arch Street Meeting-house, on Fourth-day, the 25th inst. at 8 o'clock. Reports of A. Associations and an interesting report of the M. will be read. All are invited to attend.

HENRY B. ABBOTT.

Westtown Boarding School.—The Spring will open on Second-day, Third Month 16th, 1903. Pupils should arrive at the School early in the afternoon.

WM. F. WICKESHAM, Principal.

WESTTOWN BOARDING SCHOOL.—For convenient persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when the stage Stage, 15 cents; after 7.30 P. M., 35 cents. To reach the school by telegraph, wire West to Phone 114x.

EDWARD G. SMEDLEY.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters in relation to instruction and discipline should be addressed to

WM. F. WICKESHAM, Principal.

Payments on account of board and tuition communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

Friends' Library, 142 N. 16th Street.

—Open on week-days from 11.30 A. M. to 2 P. M., and 3 P. M. to 6 P. M. Also on evenings from 7 P. M. to 9 P. M. The following are recent additions: *THE FRIENDS' LIBRARY*, by C. C. Loomis; *CHARACTER*, by CRAWFORD, M. C.—Romance of Old New England times.

FOLKS, Homer—Care of Destitute, Neglected, and Lingering Children.

GIBSON, E. C. S.—John Howard.

HALL, C. C.—Lords Baltimore and the Marjory of the Atlantic.

HANSON, Frederic—John Ruskin.

LANG, Andrew—Alfred Tennyson.

LOWELL, Isabel—Stories in Stone from the Forum.

VILLARI, Luigi—Italian Life in Town in Country of Dead and Peace.

DIED, at his residence in Haddonfield, N. J., Third Month 26th, 1902, ALBERT H. HILLMAN, in the 70th year of his age; a member of Haddonfield Monthly Meeting of Friends, N. J. He was for many years a member and frequently had to endure severe suffering, but bore with true Christian fortitude, and the Lord loved and heard it, and a book of remembrance was entered into that rest which remaineth for those of God.

—at her home in Haddonfield, N. J., Twelfth Month 29th, 1902, ELMA E. M. HAMLIN, aged seventy-one years, a member of the Monthly Meeting of Friends of Philadelphia for the Western District. "Then they said the Lord spoke often one to another, and the Lord loved and heard it, and a book of remembrance was entered into that rest which remaineth for those of God."

—at her home in Haddonfield, N. J., Twelfth Month 29th, 1902, ELMA E. M. HAMLIN, aged seventy-one years, a member of the Monthly Meeting of Friends of Philadelphia for the Western District. "Then they said the Lord spoke often one to another, and the Lord loved and heard it, and a book of remembrance was entered into that rest which remaineth for those of God."

NOTE.—The decease of JOHN Q. SPENCER, meet page 264, occurred on Sixth Month 7th, 1902.

In the Library of Congress, wisdom is represented by Minerva. In the Library of our sacred Scripture, wisdom is represented by Maria. In that marble hall the statue of the goddess of wisdom holds aloft an electric light. But in the presence of the light of the electric light and the statue cast a radiance upon the pearly marble of the hall. So in the presence of the wisdom which shines above, our intellectual wisdom is a shadow. It adds no light, but only a shadow, to the sacred page or the things of God.

A Gain for Truth in Russia.

The Czar's proclamation in promise of freedom throughout Russia is cheering us, even though for a season it may be repudiated by ministers wedded to oppression. The moral effect of such an announcement, the fact of the same Czar's historic appeal to the nations against militarism, must be found in its future fruit in public opinion thus awakened into mercy.

Probably the way was made more open for the liberal movement of Nicholas II. by the arrest of the late Procurator General Podoynitsky, whose intolerance of the liberty of the spirit in men has, he ought now to fear, been for itself a lasting monument in the Doukhobor region of Canada. The passive resistance and long-suffering of this oppressed people was doubtless long since secretly working as one among several factors in producing a conviction that intolerance of content in religion should be a thing of the past.

And more decisively for America, however, as religious toleration procured by the efforts of the Quakers in Massachusetts and New York by their blood. Of that great battle for religious liberty, Friends took the brunt

in their own non-resisting persons. Against the Puritans of the Bay Colony the warfare was worn out by the passive resistance of scourged and imprisoned Friends, the weapons of whose warfare were not carnal, but mighty through God. The blood of the four Friends executed on Boston Common, sealed the victory for religious liberty in America.

But they in Russia whose recourse has been to the sword and bombs for forcing freedom from their government, have but delayed its coming. It is pronounced an open secret that Alexander II. was on the point of giving the Russians a constitution when he was assassinated by claimants of liberty. This criminal mistake discouraged the next emperor, and fastened a repressive government on Russia throughout his reign.

Inasmuch as ideas of religious liberty have been constantly ministered to other nations through the example of America, and her colonies or states might not soon have been solid for that principle but for the martyr-service of the Quakers, we will claim the early Friends also, as well as the faithful in Russia, as having part in the genesis of this late proclamation.

May the improved and tender spirit which seems to animate the present Czar be permitted a freer course than has hitherto been evident in his empire, and liberty be no longer killed in the house of its friends, nor thwarted by the reactionary spirit of its enemies. We believe the faithful spiritual sects, including the Doukhobors, have not lived in vain in Russia; and we strongly hope that those "Spirit-wrestlers" of whom the mother country was not worthy, will, if the times of some present ignorance among them are judiciously winked at by the Canadian Government,—yet be found a mighty host for peace and spirituality in a land which, not forgetful to receive strangers, has entertained angels unawares.

FOR "THE FRIEND."

A Church-and-World Testimony Against Euchre.

Referring to our "Mid-week and Perennial Lent"—in THE FRIEND, Fourth Month 7th, the following shows the practical working of setting apart a portion of time in the year for self-denial.

"S. P. E. EUCHRE."

"The last social meeting of the S. P. E. Euchre met at the home of Misses Schappat,

on February 26th. Gentleman's prize was won by Mr. Daniel Maguire. Ladies' prize by Miss Florence Schappat.

The members partook of refreshments and after a very pleasant evening adjourned.

During Lent the euchre will be discontinued, and on April 15, the members will reunite to continue their enjoyment."

This is not an exceptional case,—generally, diversions deemed unbecoming a churchman during "the Lenten Season" are restored to unbridled swing for the rest of the year, immediately that season is over.

How can righteousness grow and increase in the land with such apportionment of time and talent between God and the world? Surely now as of old "the leaders of the people cause them to err."

A VOICE FOR THE TIMES.—"According to my apprehension it is a day of especial mercy to many both in these Islands, and on the Continent, in which the Great Over-ruler of events is exercising the nations with judgments mixed with mercy, in order to bring down the power of Antichrist, his corrupt doctrines and worship; and to enlarge the spiritual kingdom of our Lord Jesus Christ. Abundance of people seem prepared to receive the Word with gladness, and yet there seems something wanting to deepen them in the root and power of godliness, so as to be able to be *tr* tribulation and reproaches for his gracious name's sake; and I do believe one of the means by which this is to be brought about, is the sending forth of a cloud of witnesses with diversity of gifts, yet all by the same Spirit;—and these simply minding their own callings, and not that of another, the work will be carried on harmoniously both within and without the pale of our Society, and we shall be bound together in the bonds of gospel love and enabled to strengthen one another's hands to do whatsoever He bids us do, nothing doubting."—*From a letter of William Savery to Charity Cook and Mary Sweet, dated London, Third Month 10th, 1798.*

Doukhobor Notes.

A correspondent from the Saskatchewan Colony writes thus:—

"Peter Verigin was here on the third inst. Great preparation had been made for him, in house-cleaning and cooking. The whole village gathered together to meet his appearing sleigh: as he and his escorts went into the house the younger people stood outside singing, after which the Psalm was rehearsed, then he went out and after greeting them, and speaking a few words, he asked them to go into the houses and warm themselves; he afterwards went from one house to another, accompanied by his niece, also Nicholas Zibraff, Paulo Planden and Simon Riban."

The correspondent says that Peter is a de-

cided man, with a fair share of common sense and disposed to use it, and not one to be led about by such things as upset the Doukhobors last summer. He dresses like a Russian country gentleman, has no scruple about wearing leather, does not favor Doukhobor style of dress, and seemed likely to be a great help in influencing the dress, manners and thoughts of the Doukhobors in the right direction.

He said he would not advise the removal of that colony to the Yorkton district, as had been proposed, as it would be of too great a sacrifice: that should have been considered when they first came to the country; to move now would be a loss and expense. He seemed to enjoy the time spent in that village (Shasofka), and confirmed the report that two thousand homesteads were likely to be taken up.

An official of the Interior Department at Ottawa writes on the 11th inst. a letter which contains the following.

"The information that we have, and which the officials of the department are inclined to rely upon, is, that the Doukhobors are settling down to a recognition of the land laws, etc., of this country. I had a good many talks with them when I was up there last fall, and showed as clearly as I could that the proper course for them to pursue was to conform to the government regulations, which were intended for the benefit of citizens, and would not at all interfere with any reasonable religious views. I think they are beginning to realize that such advice was not out of the way, and I hope that from this time forward any news that you will have of them will be to the effect that common sense is guiding their actions."

JOSEPH S. ELKINTON.

Reward of Learning in Antiquity.

In ancient Greece and Rome, men distinguished by their learning were esteemed by kings and emperors and often more honored by the people than the first of the republic, which cannot be said to be the rule in our days. To realize the miserable condition of our men of learning, as compared with those of antiquity, we need but to read of the honors and rewards heaped upon almost all ancient authors. Plato was honored by the tyrant Dionysius of Syracuse with a seat in his own chariot. When Alexander the Great had the city of Thebes destroyed (336 B. C.) he gave special orders that the house of the poet Pindar should be spared. Such consideration is certainly not shown to the poets of to-day. The Syracusans, who had made some Athenians prisoners of war, gave them back their liberty after hearing them recite some scenes of Euripides. The great Scipio Africanus carried away with him a small bust of the poet Ennius (239-204 B. C.), which, before his death, he ordered to be placed beside his tomb. Mithridates showed his great veneration of Plato by ordering the latter's statue to be placed among those of the greatest kings of Pontus. The Athenians paid the same honor to Demosthenes. The Romans went even further in this respect. When, after the siege of Jerusalem, Josephus was brought a prisoner to Rome, they not only set him free again but, in appreciation of his work, "Antiquities of the Jews," erected a statue in his honor. The pecuniary rewards received by the an-

cients were in their way not less considerable than the honors accorded. For his "History of the Animals" Aristotle received from Alexander eight hundred talents, which equalled about eight hundred thousand dollars of our money. The son of the Emperor Severus rewarded a poet with as many gold pieces as his rather long poem on the nature and properties on the fishes contained lines. The Emperor Gratian conferred upon the poet Ausonius the consulship and other distinctions. It is well known that all learned men at the court of Augustus were loaded with benefits. Virgil, Horace and many others had every reason to praise his generosity. It is said that when Virgil recited the sixth book of his *Æneid* before Augustus and his wife Livia, the latter was so overcome with emotion that she fainted, and after coming to herself again she ordered that the poet should receive ten sestercies for every line still unrecited of the praise of Marcellus. This gift amounted to about fifteen thousand dollars of our money. Even the worst and most cruel princes of antiquity would have felt ashamed to suffer the learned to live in indigence. Nero gave considerable property to Seneca. Domitian, whose character was almost as bad as Nero's, bestowed great gifts upon a poet of little merit. Even avarice and stinginess did not prevent the ancients from rewarding the men of talent and learning. Vespasian, who was accused of great avarice, rewarded nobly the sciences and fine arts. The salary which he fixed for each professor was more considerable than the revenues of some of our colleges, viz: two thousand five hundred gold pieces, of the value of about five dollars each.—*Tribune Farmer*.

FOR "THE FRIEND."

The Confessors of Peace from the Second Century to the Era of Mahomet.

II.

Before referring to evidence of the fact that in the first three centuries of our era, not a few known as Christians were enrolled in the Roman armies, let us consider testimony to show that it was not merely aggressive warfare that was then declared unlawful, but likewise that warfare for self-defense which is now generally looked upon as both allowable and praiseworthy.

Ireneus, referring to the New Testament disallowance of retaliation, speaks of the Christians of his day as "now unaccustomed to fighting, but when smitten they offer also the other cheek." He alludes to the prophecy concerning the inoffensiveness that should appear in the Messiah toward his enemies, as having been "accomplished in the Lord's person," and adds that "the same is still true with regard to us, the body following the example of the Lord."

In Cyprian we find many confirmatory passages, but a single one only will be cited, in which, speaking of the non-carnally equipped "soldiers of Christ," he says: "They do not in turn assail their assailants, since it is not lawful for the innocent even to kill the guilty," and again, (he is addressing Demetrius, the Roman proconsul of Africa), in certifying to the willingness of Christians to await the Divine amend for injuries, he continues: "For this reason it is that none of

us, when he is apprehended, makes resistance, nor avenges himself against you righteous violence, although our people numerous and powerful."

Tertullian, already quoted as testifying fully against the military service, refers faithfully as "yielding themselves up in their own places of duty with patience, rather fighting in self-defense."

Lactantius, in delineating true bravery, shows how incumbent it is upon the follower of Christ not to answer reviling in the same manner, and when injured not to retaliate; that such a one should not merely inflict injury, but he should not even when inflicted on himself. A just man, in this order, he admits, may be an object of contempt, and, "because it will be that he is unable to defend himself, he is regarded as slothful and inactive," the most estimate of one who avenged him upon his enemy being that he is a man of spirit and activity. When it is remembered that Lactantius became preceptor to the son of Constantine, called "the first Christian emperor," one is inclined to wonder whether precepts such as the above were imparted to the heir expectant, who, "earned his spurs" in the wars against the Franks, and eventually was put to death (A. D. 326) by his father's order, upon what alleged to have been a baseless accusation.

According to Lactantius, who died in the year before his one-time pupil was beheaded, there had at that time been so much an increase in the standing army that there were not men enough left to till the ground, and he was allowed to run wild; and the army suffered in consequence, as the supply of provisions was inadequate to their demands. Thus Th. J. Mason, in his "Persecution of Diocletian" (A. D. 303) alluding to the great wealth of the church, remarks,—"The wealth which was now in her hands might well have excited the covetousness of a less honest sovereign than Diocletian. Bishops, like Eusebius of Antioch, lived in greater state than Augustus himself. According to Eusebius, even the errors of provinces and great states were vain to court the good will and support of the prelates."

It was clearly a time of decadence in Church and State. Humility, simplicity, steadiness, the non-resistant principle taught in the Sermon on the Mount, were giving way before the inroads of riches and luxury on the part of ecclesiastics, to be presently followed by the unseemly and unblest union of Church and State.

The persecuting edicts of Diocletian, as told by Anthon, had been much mitigated by the forbearance and leniency of Constantine and Constantine not only followed his father's example in being merciful to the persecuted Christians, but even showed them some measure of positive favor. Very considerable numbers of them, in consequence, flocked to his standard, and swelled the ranks of his army. Peaceful, orderly and faithful conduct, contrasting most favorably with the turbulent and dissolute behavior of those who formed the mass of common armies, won his entire confidence. "To what extent," cautiously remarks the author above quoted this satisfactory accession led Constantine to form

opinion of Christianity, or inclined to view with esteem and respect the tenets which produced such results, cannot be assumed. How far his avowed reception of Christianity was influenced by the prudence of the politician, how far by the conviction of the convert, it is impossible to determine."

We may take it for granted, nevertheless, that Justin Martyr (2nd century), who, in his apology for the Christian religion, addressed to the pacific emperor Antoninus Pius, highly appreciated the record of that sovereign long reign undisturbed by any war, was not rendered a like gracious tribute to the perpetually fighting Constantine, though the latter was known as "Christian," and Antonine was not. In the Edict of Milan (A. D. 312), promulgated by Constantine, the latter declares: "We have long known that we have no business to refuse freedom of religion, and that to the judgment and opinion of each individual man must be left the way of seeing to matters of belief according to his own free will." Yet this concession cannot be made because of the emperor's policy, for his acts were far from showing wisdom, rather, was declared at the dictate of policy and expediency. A pagan he died until his death in 337, although he had received the rite of water baptism to be admitted shortly before he passed away.

It did not become notably easier for the heathen Christian to enter the military service, being that the accommodating emperor, Constantine, swore the oath so that it read—"By the Father, the Son, and the Holy Spirit, and the Majesty of the emperor, which next to God is to be loved and honored by mankind." The people, who thought that persecution for the sake had ceased and the empire was at peace! How little did most of them understand that Constantine had brought Paganism forward, incorporated it—its ceremonies, superstitions, even its idolatries—into the Christian faith, whilst he himself retained the pompous title of Divinity and Pontifex Maximus which had been bestowed upon his predecessors!

(To be continued.)

THE GOSPEL IN A BARREL—I stood in a barrel factory the other day and watched a man who inspects the barrels just before they are started down the inclined plane to the shipping rooms. He would whirl the barrel round a few times to inspect the outside, then, rolling it over, thrust a small incandescent light into the hole in the side, and the light at the opening, stand quietly gazing at the moment, as if looking for something. "What do you do that for?" I asked. "To see inside's O. K., charged all right, no glue, etc.," he answered. "I put my eye to the hole in one of the barrels," he said, pushing me aside, and the little electric lamp through the hole. "Now look."

And the inside of the barrel was as plain as day. Every joint and irregularity was plain as could be. "We never know our lives," he said, "until Jesus holds the light. How we are inspected, even after we are his."

FOR "THE FRIEND."

Copy of a Letter from Alexander Wilson to His Partner, Thomas Rogers.

An Account of the Decease of John Pemberton, Supposed not to have been heretofore printed.

PLYMONT, Second Month 5th, 1795.

Dear Thomas.—

When I wrote thee from this place on Twelfth Month 20th, 1794, I little thought my next would be the medium of such heavy tidings, but we are sometimes kept in the dark, and affecting circumstances which are near at hand are hid from our view, for wise and good purposes that we poor finite creatures cannot comprehend; this has been much my situation of late, when a deeply trying season was nigh, I knew it not—but I know that the Judge of all the earth, can only, and will undoubtedly, in all his ways do what is right; this tends to silence every murmuring thought that would arise, and engages to labor after a patient resignation to his holy will.

After date of mine, (No. 11), dear J. Pemberton kept poor and weak until the latter end of the twelfth and beginning on the first month, but towards the middle of the month, he had gathered so much strength as to walk about in his chamber, and the physician thought him pretty much out of danger; but on the twenty-third, immediately after dinner, he was suddenly seized with a chill and fever, and being much reduced by the former attacks, it turned to an inflammatory fever, and the disorder settling on his lungs (his weak part), nature gave way and on the ninth day his gentle and patient spirit was released from his habitation of clay, and was wafted, I firmly believe, on the wings of faith and love divine to the mansion of eternal rest and peace.

Throughout his sickness, which was at times very painful and trying to nature, he was mercifully favored with uncommon patience and resignation, which struck those who saw him with admiration, and the physician, (who constantly and carefully attended him), said that he never attended such a patient in his life, and he also remarked to one of the friends that he believed he had made a glorious end.

Yesterday his remains were, I think, solemnly interred in the center of Friends' burying grounds, (I having previously obtained leave of them for that purpose,) in a plain simple way, conformable to written directions of his own, dated in the Eleventh Month last, directed to me, "to be opened," says he, "after my decease;" and also agreeable to the manner of our friends at home.

It was remarked by the Friends here, that the inhabitants were in the general sober, whilst we passed along, and some being struck with astonishment, not, I suppose, having seen the like before, and said, "There they come and verily it is a beautiful sight;" and a few of them who attended with us behaved soberly.

Thou must, dear Thomas, naturally conclude that this has been and is to me a deep and heavy trial; being now left alone in a strange land, among a people of a strange language, four thousand miles from home—and losing in him a father and a friend whose paternal care over me was great; and his humble, circumspect walking has conveyed

deep, and I hope lasting instruction to my mind. May the God of all grace, mercy and peace bestow on me a double portion of that Spirit which rested on him, so that when the curtain of the evening is drawn over my spirit, and eternity opens to view, I also may, as he did, gloriously and victoriously triumph over death, hell, and the grave; having an unshaken assurance that an entrance was administered unto him, into the realms of never ending felicity, there with saints and angels and the spirits of the just made perfect ever to live, praise, magnify and extol, the Lord God and the Lamb, world without end, Amen and Amen!—

And now, dear Thomas, I may remark for thee and the encouragement of all who may be hereafter tried in like manner as I have been, that the holy Helper of his people, even God, who is great in mercy and abundant in his loving kindness, even to the unworthy, has been graciously near on this trying occasion, when the floods of affliction have been ready to overwhelm my distressed soul, proving himself indeed a God nigh at hand, and a present help in this needful time, saying to the raging waves, "Thus far thou shalt come and no farther," and to the boisterous winds, "be still."

And I have a hope that the mercies now experienced will engage my soul with all its might evermore to trust in him, and this is the portion which it desires and craves more than riches, honor, or length of day.

He had frequently remarked to me on my way through Germany, that going to Plymouth appeared very gloomy to him, and thou mayest remember that in some of my former letters I remarked that after we got here his mind felt pretty much as if he had been at home and among his friends; the prospect also, of visiting Kintlen, Minden, etc. died away, and he could not see his way clearly from hence, which circumstance made us frequently say to each other, what can be the reason that we are detained here so long?

I have enclosed thee a copy of his dying expressions, which I took down at sundry times, when relieved a few minutes from his bed, which contains a demonstrative proof of the happy state of mind he had through holy help attained to, and that his exit was indeed glorious. May it prove an incitement to us who remain earnestly to seek after a like experience.

A question has sometimes arisen, whether Friends here would not have to lay me by his side, as I feel my health considerably impaired by being so much confined these four or five months past, and for the greatest part of the time but few nights that I have had all my clothes off. And if infinite wisdom sees meet to spare me a little longer, my way off the continent seems at present difficult, as I am nearly surrounded by contending parties, and the French having overrun and taken Holland. Although I have of latter times considered the French as a generous people, and my being from a nation that is at peace and in a league of friendship with them, and also they not being altogether unacquainted with our peaceable principles as a religious Society; all these things corroborate to strengthen me in a belief that my way even through the French by way of Holland might be practicable; nevertheless, I desire to act with prudence and not

run any improper risk, but take advice on this subject.

If I should be spared to get off the continent and reach England without any accident, I have a desire to visit my native country and relatives there; I would be glad if thou would take an opportunity with John James, James Pemberton, etc., and know if possible whether I might be indulged in this thing, and meet me with a letter in England as soon as possible informing me of the result and of Friends' sentiments on the subject.

I wrote to Hannah Pemberton under date of First Month 2nd, giving a pretty full account of her dear husband's last illness and dying expressions, etc, which I enclosed to William Dillwyn to forward to her, but if this should reach thy hands first, — — — to advise with some friends how the effecting tidings can be opened with the greatest safety.

After the burial of my dear companion, the avaricious and ungodly priest sent his clerk to demand money of me as his due for suffering the corpse to be buried, etc. I spoke kindly to the man and desired him to give my love to the priest and tell him that I would take it kindly if he would come and see me, and sympathize a little with me in my afflicted situation, and that we might also converse together respecting his present demand, and if he could convince me of the propriety of it I would willingly pay him. He came not but I suppose, went and complained to the magistrate, for in the afternoon the constable came and brought me an order directing the payment of the money within ten days of the date, at same time granting me privilege of making my defence within that time. After some consideration I felt a little matter to arise in my mind explaining the ground of my refusal, etc; which I penned and addressed to the magistrate, to be by him communicated to the priest, and which my kind friend Lewis Seeborn, translated into German language, but I have not yet heard what effect it has had.

My dear love to thee, thy mother and family and all other friends as if named.

ALEXANDER WILSON.

PRYEMONT, 20th of the Second Month, 1795.

This morning Frederick Seeborn being with the chief magistrate on some business, the conversation turned a little to my situation, the priest and his demand for the burial of my dear companion, etc., in the course of which the magistrate intimated that the injustice of the priest's demand appeared now so glaring to him that he had informed the priest he could not, nor would not compel me to pay him;—which answer so chagrined the priest, that he expected he would complain of him to the ecclesiastical court. But the magistrate, who is a man of resolution and experience, and having justice and sound reason on his side, did not appear concerned for anything the priest could or might do.

I expect in a few days to leave this place for Amsterdam, although my way seems more and more difficult.

"ONE can do a great deal of good in this world if one doesn't care who gets the credit for it."

Science and Industry.

IRON and stone utensils may be repaired by using a cement in the form of a paste composed of litharge and glycerin. This cement is not affected by changes of temperature.

I DON'T wonder that many boys leave the old home and farm for the professions and the cities. If fathers would encourage them more and give them a little chance on the old farm, and get them interested and attached more to it, thousands of our sons would remain on the farms. The farm and its occupants are a safety power of this country and government. —Purdy.

ENGLAND'S foremost farmer is a woman, the widow of Murray Smith. On her estate at Gurnley Hall she raises the finest Jersey cattle bred anywhere. She personally supervises all details and provides every modern improvement. Her cattle take many prizes throughout England. One cow gives nine hundred gallons of milk a year. She attends to all correspondence and bookkeeping, besides managing the dairy. She also keeps the pedigree of every animal.

THE cause of the stars' twinkling is said to be the presence in the atmosphere of innumerable little currents or waves, which dart through the air and cause a break in the light from the star. The result is that to a beholder on the earth the star has the familiar appearance of twinkling. These little air currents can be distinguished through the twenty-four inch telescope very plainly on nights when this twinkling is observed most, by the simple process of removing the eye-piece of the instrument.

THE OIL FIELDS OF TEXAS.—A scientific examination of the oil deposits in the great coastal prairie extending from Louisiana through Texas to Mexico, a distance of several hundred miles, has recently been made by Professor R. T. Hill, who describes his results in the Journal of the Franklin Institute. The oil was first struck in 1901 by a drill hole driven one thousand one hundred feet, through clay and quicksand. More than two hundred wells are now in operation, and one has been sunk to a depth of more than three thousand feet. Sometimes hot water is struck below the oil, and sometimes the oil itself is hot. The deeper it is found the more salt the water is.

EVERY one who owns an umbrella has wondered at some time or other why it is that he can never roll it up as compactly and neatly as it was rolled when he bought it. Instead of twisting with the handle, you should take hold of the umbrella just above the points of the cover ribs. These points naturally lie evenly round the stick. Keep hold of these, pressing them tightly against the stick, and then roll up the cover. Holding the ribs prevents them from getting twisted out of place or bending out of shape. Then the silk is bound to fold evenly and roll smooth and tight. When the umbrella is rolled in this way it will last twice as long. And until it gets very, very old it will always look just as good as it did on the day it was bought.

CHANGING A RIVER'S COURSE.—In accordance with the message of President Roosevelt our government is taking its first step to reclaiming the arid lands of the West States. One of the greatest feats of man is already under way. The Gunnison river in Colorado is to be diverted from its course, through a sixteen-mile tunnel, so that the stream will water an immense valley. The result will be that a whole farming community will be reclaimed and a fertile field now parched and dry, will blossom as the snow melts. Before setting out on their labors the government employees planned to have provisions lowered to them by ropes from above, so that they would have as few things to carry as possible in their arduous labors.

QUESTIONS FOR BOYS AND GIRLS.—[We are good at guessing or answering, here are a few questions put by the Wesleyan Association you can wrestle with: You can see any white horse, but did you ever see a white cow? How many different kinds of trees grow in your neighborhood, and what are they called? Why does a horse eat grass backward and a cow forward? Why does a hopvine grow one way and a bean vine the other? Should a chimney be the larger, at the top or bottom, and why? Can you tell why a man when tethered with a rope, always unravels while a cow always twists it into a knot? How old must a grape vine be before it begins to bear? Can you tell why a nut turns upside down just before a rain? How would wood bear the greatest weight without breaking? Why are all cow paths crooked and none straight?]

BIRDS AS OMENS.—The American Farmer records as a fact that, when an epidemic of cholera threatens a certain locality, the birds leave the neighborhood a few days before the appearance of the scourge. This was noted in connection with the recent outbreak of cholera epidemic at Hamburg. In 1884, the same phenomenon occurred at Marseilles and London, where all the birds, as if actuated by a common impulse, abandoned the plague-stricken cities, and took up their abode at Exeter, which was fortunate in escaping the plague. The great influx of birds at the time was much commented upon by the inhabitants. In 1872 all the sparrows left the town of Zamosyl, Galicia, two days before the outbreak of the pest, and not a single bird was turned before the end of Autumn, when cholera had entirely disappeared. Let us hope that the birds may remain with us this summer.

A CURIOUS TREE.—There is a tree in West India that the natives say "grows dishes!" It looks like an apple tree. They call it the calabash.

It bears very queer leaves and large blossoms that grow right from the trunk and larger branches. After the flower comes the fruit, just as our apples or peaches do. This fruit is in the shape of a gourd, but stronger and much larger, sometimes a diameter.

Now, see what a use the people of that country make of this fruit. The shell is so hard that all sorts of big and little dishes

ing cups can be carved out of it. Even
and kettles are made and used over the
out of course they cannot last as long as
on ones. Is not this a serviceable tree?
under the natives are proud of it.—*Mon-
Star.*

A PRINCE IN OVERALLS.—In jumper and
ells a real Prince of the Imperial family
is working side by side with dollar
d laborers in the Pennsylvania Railroad
or, and at the same work. He is Prince
o Yamanoto, and this is the beginning
h training to enter the imperial railway
ve. He intends to spend three years in
shops here to study locomotive building
pairs. Then he will spend two years in
ansportation, freight, civil engineering
diting departments before his return.
Has two servants and lives in a modest
arg house. It was the prince's wish to
arin at the bottom. Touching his work
s he has written the following:

"I already know how to build a locomotive,
I want to discover how the Americans do
also want to know how repairs are made
and parts wear out first, with a view to
rting the original piece.

"After a month in your country I must say
am delighted with American methods,
hough it is sometimes hard for me to find
t the English words to express myself
sly."

"Mechanical engineers in Japan prefer
igh locomotives because they consume less
oil, though American locomotives are sev-
eral hundred pounds cheaper. But the Amer-
ican engines are best on heavy grades.
igh locomotives lack power in a test of
nd.

"I am also astonished at the marvelous uses
h which electricity is put in this country.

"Since my visit here I have been made to
uch at home. Only once was I mis-
take, and that was when I was mistaken
a pianoman.

"Like your social conditions. Every one
on an equal footing and has a chance to
e name. I have no doubt that is why
is so progressive. I expect to be a
nked before I go home.

"My fourteen-year-old brother is with me.
ach him English at night. He intends to
nother fourteen years and get a univer-
sity education. I don't mind the hard work.
ran to learn.—*Altoona, Penn., correspon-
dence St. Louis Republic, in The Lutheran.*

WORKMANSHIP.—A writer in *Murray's*
gaze, gives the following account of an
instrument which, according to our
mantic skeptics, was invented and con-
ducted by no one in particular, and without
thought, foresight or design, simply by the
of the circumstances, the operation of nat-
ure which no one made and no one en-
gines applies:

"Any one who will take the trouble to ex-
amine with a lens the head of a bee, will see
either side the large, rounded compound
all on the forehead or vortex three
little simple eyes. The latter are,
the name implies, comparatively simple
structure, each with a single lens. But
compound eyes have a complex structure.

Externally the surface is seen to be divided
up into a great number of hexagonal areas,
each of which is called a facet, and forms a
little lens. Of these the queen bee has on
each side nearly five thousand, the worker
some six thousand, and the drone upward of
twelve thousand. Beneath each facet is a
crystalline cone, a so-called nerve-rod, and
other structures too complex to be here de-
scribed, which pass inward toward the brain.
It will be seen, then, that the so-called com-
pound eye, with its thousands of crystalline
cones, its thousands of 'nerve rods' and other
elements, is a structure of no little com-
plexity. The question now arises: Is it one struc-
ture or many? Is it an eye or an aggregate
of eyes? To this question the older naturalist
answered confidently—an aggregate. And a
simple experiment seems to warrant this con-
clusion. Puget, quoted in Goldsmith's 'Ani-
mated Nature,' adapted the facets of the eye
of a fly, so as to see objects through it under
the microscope. 'A soldier thus seen appeared
like an army of pigmies, for while it multi-
plied it also diminished the object; the arch
of a bridge exhibited a spectacle more magnif-
icent than human skill could perform, and the
flame of a candle seemed the illumination of
thousands of lamps.' Although Cheshire, in
his book on the bee, adopts this view, and
supports it by reference to a similar experi-
ence, it numbers to-day but few supporters.
One is tempted to marvel at the ability of
the drone to co-ordinate twenty-four thousand
separate images into a single object. Picture
the confusion of images of one who had sipped
too freely of the sweet but delusive dregs of
the punch-bowl! Under similar circumstances
human folks are reported to see double.
Think of the appalling condition of an inebri-
ate drone! Those who believe the faceted eye
to be one organ with many parts contend that
each facet and its underlying structures give
not a complete image of the external object
as a whole, but the image of a single point of
that object. Thus there is formed, by a jux-
taposition of contiguous points, a stippled im-
age or an image in mosaic. Hence this view
is known as Miller's mosaic hypothesis. Lowne
has experimented with fine glass threads ar-
ranged like the cones and nerve-rods of the
bee's eye, and finds that (even when they are
not surrounded by pigment, as are the ele-
ments in an insect's eye) all oblique rays are
got rid of by numerous reflections and the in-
terference due to the different lengths of the
rays. Some modification of the mosaic hypo-
thesis is now generally adopted, and Dr. Hic-
kison has recently worked out with great care
the structure of the optic tract which lies be-
tween the crystalline cones and the brain."

These are the things which skeptical sci-
entists think make themselves, without the aid
of a Creator. O sceptic, "great is thy faith!"

Selected.

Elizabeth Braithwait.

Elizabeth Braithwait, a young maid of sev-
enteen years of age, died in prison for the tes-
timony of a good conscience, at Kendal, in
Westmoreland. From a child God by his
grace inclined her heart to love, fear and
serve Him and she was truly obedient to her
parents, sober and chaste in her life and con-
versation, kind to all, and of a meek and quiet
spirit. She was with several others of the

people called Quakers, taken up by a warrant,
dated the Twenty-fifth of the Fifth Month,
1684, for not going to church, (so called) and
carried to Kendal jail.

After some time she had liberty for a few
days to be at her brother's house; but com-
plaint being made against the keeper, she was
sent for, and she was not easy until she re-
turned to prison, for she said "That is my
place, and my present home; there I have
most peace and comfort."

About two months after her commitment,
viz: the seventeenth of Seventh Month, she
was taken sick in prison, and her mother com-
ing to visit her, asked if she had a mind to
go home; she replied, "No, no. I am at
home in my place, to my full content; and if
my God so order it that I be dissolved, I had
rather die here than in any other place. I am
glad that I got to this place before I began to
be sick; here I have peace and true content
in the will of God, whether life or death. I
am only grieved that there should be so little
tenderness or pity in the hearts of my per-
secutors, to keep such a poor young one as I am
in prison. The Lord forgive them, I can
freely." She further said, that "her impris-
onment was by the permission of the Al-
mighty, who is greater, and above the greatest
of my persecutors, who I believe will shortly
set me free from these, and all other bonds,
over all their heads and in his peace in true
patience I possess my soul, and am contented
if it be his will, to be dissolved."

A friend asked her why she was so willing to
die. "Oh," said she, "I have seen glorious
sights of good things." The friend queried,
"What things?" she answered, "They are so
excellent and glorious that it is not utterable
and now I have nothing but love and good
will to all." But more especially she was
glad in the love and unity she felt with
Friends, "with whom," said she, "I have been
often refreshed in our meetings together,
with the refreshment that comes from the
presence of the Lord. Oh! the good evening
meetings we have had." Another time she
said to her mother, "They say that we shall
spend all our riches with lying here in prison;
nay our riches are durable, and our treasure
hidden, laid up in heaven." Her mother see-
ing her lie under great weight of sickness,
would sometimes weep, but she was always
troubled at it, and said, "Dear mother, do
not weep, but resign me freely up into the
hand of the Lord. Weep not for me, for I
am well, Christ my Redeemer is with me." And to her sister she said, "Come sister, lie
down by me, do not sorrow for me, I am well
content to live or die; for my God hath
blessed me, and will bless me, and his bless-
ings rest upon me." A little before she de-
parted, her speech failed; after which she
would sing in her heart, lifting up her hands
with a cheerful countenance and taking her
friends by the hand with great affection, she
fell asleep in the Lord on the Twenty-eighth
of the Seventh Month, in the year 1684, in the
seventeenth year of her age.

LIFE, misfortune, isolation, abandonment,
poverty, are the fields of battle which have
their heroes—obscure heroes, who are some-
times grander than those who win renown.—
Victor Hugo.

FOR "THE FRIEND."
"WITH ONE EYE TO ENTER INTO LIFE."

"Making much of the socket even when the candle was put out," is said of Constantine when he had kissed the place where Poppunius's eye had, for the profession of his faith, been put out by Maximinus.

He kissed the lampstand when the light had flown
Back to its primal source of central fire.
Oh hands of cruel men what marks ye make,
Blotting the glory from the face of man
Which like a mirror bore the face of Christ.
The fragile lantern lost its power to bless,
But light internal reached superior bliss,
And mingled in the rays of glory of the Lord.

H. T. MILLER.

BEAMSVILLE, Ont.

Card Playing and Lemonade with Alcoholic
Mixtures.

Social gambling and the drinking of intoxicating liquors are greatly on the increase, says the *Pittsburg Christian Advocate*. They constitute one of the greatest perils of the day. Women are in the greatest danger, for it is among them that these vices are on the increase, and these chiefly women in what are called the higher classes of society—the more wealthy and aristocratic. Among them at this time card-playing is a craze. Card-parties are the fashionable social events. Women spend at these a whole afternoon engaged at nothing else but playing cards and that for prizes; that is for stakes. It is gambling pure and simple, and has been so decided by the courts. In principle it does not differ in any manner from the gambling men do in the dens of vice. The only difference is the social surroundings. Card-parties in fashionable homes have about them an air of respectability which does not belong to a gambling den, but the business carried on in the two is precisely the same.

Women become so infatuated by the game that they are what are known in society as "card fiends." They become not only interested and excited, but they are actually infatuated and absorbed in the game. They are restless to be at it, and are most at home when in the excitement of the game. Some almost lose sight of the ordinary duties of life, and spend all the time they are in gambling.

The other vice of which we have spoken is the social drinking of intoxicants. Lately we have heard, and the papers of the country have commented on the rapid increase of drinking among women in the older countries across the sea. We have held up our hands in horror, and wondered what the world is to come to when its women become drunkards. But we need not go so far from home to find the beginning of this vice. We need not go even to New York and its famous "Four Hundred." The thing is here, right at our own doors and in our own cities. Comparatively few receptions or parties are now given among wealthier people at which strong drink is not literally forced upon the guests. It is not set out in bottles or decanters, as of old, but is put into the lemonade or punch. Simple wholesome lemonade has been tabooed on such occasions. It is quite too old fashioned and tame. It must be fired up with claret, or some other thing which has a twang to it. A lady who would serve lemonade plain now would be re-

garded as narrow and puritanical. And these fashionable dames and maidens have come to expect their stimulant at these gatherings, and have been known to turn up their fashionable noses in disdain when they found "only lemonade." So strong drink has come to be the order of the day, and it is often so strong in the open punch bowl as to perfume the whole house. Not long since a Christian woman of Pittsburg remonstrated with her caterer after her reception was over for having put spirits in the lemonade without her knowledge, when he replied that he would have been afraid not to do it when all other ladies ordered it. There is no mistake about it—this is the ruling fashion. Its effects may easily be known. Women are thus being trained to strong drink, and their sons and brothers will readily follow their example.

And let it not be supposed that these vices are confined to the homes of what are called "worldly people." They are not; they are practised in nominally Christian homes. That is to say, in plain words, that gambling and drinking take place among those who are members in good standing in Christian churches. Women who on the set-day receive the "Holy Communion" may be seen during the week with faces already flushed with drink repeating their cups at the social punch bowl, and under great excitement struggling for prizes at the card-table.

That many of them do not realize the enormity of the evil in which they engage may be admitted. They would be shocked if asked to stand up at a public bar and drink wine with common drunkards, or to enter a gambling den and play cards for stakes. That to their minds would be drinking and gambling, things too horrible to be thought of. They do not stop to consider that that is exactly what they are doing now, only under different surroundings. The glamour of wealth and fashion deceive them. The vice is sugar-coated, and has a pleasant, and not a bitter taste.

The pulpit and the press should cry out against these evils, says the *Advocate*. They are real, and they are growing. They threaten the very fountains of our social and domestic life. Woman is the conservator of the very best there is in the world. If she becomes evil, the fountain is corrupted, and all life will follow in the ruin. We must protect our women. We must warn them of the dangers into which they run, and we must entreat them for their own sakes and for the sake of the race to mend their ways. And we must warn others to avoid these perils.

Christy Davis.

In attempting a brief tribute to the memory of our departed friend, there is little to add from any record which his pen has left, or from any expression of his religious feelings.

The inner sanctuary of his life was guarded by a reserve which scarcely admitted the intimacy of his nearest friends.

And yet, notwithstanding this, Christy Davis has left with us the impress not only of a strong personality and a sterling manhood, but of a positive religious character.

His long business career was marked both in prosperity and adversity, by an unwavering integrity, ensuring the entire confidence of those who knew him best in this relation.

In manners, he was a gentleman of the school. His nearest neighbors saw much of his knightly courtesy, as they received his attentions in his home or his calls at their homes.

When business drew Christy Davis to Francisco years ago, being far removed from the meetings and privileges of his own society, he did not shrink from the responsibility of holding a Friends' Meeting in that city in company with a few others. For a number of years—so long as he resided there—he was the mainstay of it, and his place at the head of it was seldom vacant.

He was so thoroughly imbued with Friends' ideas of the possibility of a true world-silence, that he never seemed anxious for the presence of a preacher or of vocal seers, though always ready to welcome the visit of the gospel messengers. One would like to know more of the inner experience of which those convictions grew so deep and strong as to make a business man willing thus publicly in the face of a great city to avow his faith and dependence in spiritual Christianity, and to assume a position of weighty responsibility.

Of his later years, since his removal to the Park, little need be written for those who will hear this paper. We know how regular and punctually he was in his seat in our meetings for worship, and the dignity and reverence of his manner as a worshipper must have impressed all who attended with us. Conservative to an extreme, it was not easy for him to tolerate innovation and revolution in the old long approved and established by the Society. This attitude, joined with his reserve and dignity, gave to his bearing a seeming austerity that prevented the easy access and familiarity of strangers. But to those who knew him, it was touching to see his last days, the yielding and tendering of a strong nature under the subduing power of Divine Grace, and the training of his spirit to patience and thankful appreciation of the blessings of his lot. Through his lingering illness of many months there was no murmuring, but unvarying cheerfulness; and his mental faculties waned and memory failed, his native Irish wit and humor sparkled the last. He was a child again, imagining the presence of his mother at his bedside, caring for her boy.

With his marked individuality and plainness, he had the humility that exacted no claim of deference or attention from his friends, but he commanded the respect and honor which he did not demand, and among his young friends and little children, who were near to him, there are those who dearly love him and who venerate his memory.

We miss him here and register in our hearts his name among those gone before, whose presence hallowed this place of worship in their day, and whose lives have been a blessing to our own by many sacred ties.

JOEL BE...

ANYTHING which makes religion its own object, makes religion no object. God put up with a great many things in the heart, but there is one thing he will not put up with in it—a second place. He who has God a second place, offers Him no place at all. *Ruskin.*

Selected for "THE FRIEND."

Thomas Aldam.

Thomas Aldam, of Warningsworth, in Yorkshire, received the glad tidings of the gospel of salvation in the year 1651, by the preaching of that eminent and faithful servant of Jesus, George Fox, soon after he had been delivered out of the dungeon in Derby. At this time John Kellam, Thomas Aldam, Richard Farnsworth, Thomas Gooden and several others of note, received the same, and many sufferings, beatings, reverses, spoiling of goods and imprisonments were endured for Christ's sake and the gospel's sake. They were then concerned to go into market-places and public places of worship, bearing testimony to the wickedness of the world, and against its teachers and leaders as caused them to live in unrighteousness, pride and covetousness. When he was convinced, he was a great blessing to the priests and teachers of those times, as his hungering and thirsty soul not only testified amongst them, he left them; and as alone, until it pleased the Lord to send his servant George Fox, as aforesaid, to the parts of the country. And he having received the Truth, was valiant for the same on earth, and gave up his strength and life to serve the Lord. He was very meek and fervent in spirit, severe against sin, but tender to the least appearance of sin, which was good, watching over his children in the fear of God; giving to charity, and giving to all.

He was one of the first called a Quaker, and was imprisoned in York Castle upon that account in the year 1652. It was for going to a meeting-house, and speaking of the Lord Rookbey, a priest of that place, who had procured his imprisonment at York, where he was kept two years and six months so that he was not suffered once to come into the sight of any of his children; and it was not permitted to see his wife and children when they went to visit him. He also endured during that imprisonment forty stripes, the assizes, for appearing before the judges with his hat on his head, and for speaking thus to him. During the same imprisonment his adversary Rookbey tried to get the law for treble damages and made him spoil of his goods to the value of £100,000; not leaving one cow to give milk for his young children and family. Thus he bore his faithful testimony to the coming of the Lord Jesus Christ in the flesh, and to the ministry; at other times also he endured the loss of goods for his testimony to the Truth. As he had been a sufferer himself, so he had a tender sympathy for the same in his brethren, who were sufferers for the Truth, and would go oftentimes to the prisons, and others, the rulers of the land, and lay the sufferings of Friends upon their hearts. He also travelled into Scotland, Ireland, and went to the chief rulers of the same account. He went to the prisons in England, where many of the people called Quakers, were kept, to get a more capable to advocate the cause before the government, being at assizes, sessions, or elsewhere, to the use of God's people.

He had a tender regard to love and unity among brethren, bearing good esteem in his mind for such as labored in the gospel.

When he was about to undertake any journey upon Truth's account, he would call his family together, and in much humility pour out his supplication to God to preserve them.

After thus having served his generation in faithfulness, he was visited with sickness, in which time he set his house in order; and in the time of his weakness, the Lord was good to him, and eminently appeared with him, so that he said to his sister, near his latter end, that he found his strength so renewed, that he believed he could get to London if the Lord required it; but he answered again, "I am clear of the blood of all men. I find nothing to this man," meaning King Charles the Second, then lately restored to his kingdom.

He was very sensible of his latter end; and the day he died he called for his children, and exhorted them to live in the fear of God, and to love and obey their mother; and so, being freely resigned into the hands of God his Creator, he departed this life in the Fourth Month in the year 1660.

His wife, Mary Aldam, survived him but three months. She was a woman fearing God, and served Him in her generation. In all the exercises which her husband passed through in those early days, she was never heard to grudge or repine, but was given up in all things to God's disposing. Her remembrance is sweet, and her name to be recorded amongst the faithful of God's people. She received Truth by the ministry of George Fox, at the same time her husband did, and bore testimony to the same Truth, according to her measure.

Items Concerning the Society.

An appointed meeting was held on the afternoon of last First-day, at Moorestown, N. J., at the desire of Cyrus Cooper and others, which was a solemnized occasion wherein the hearts of many were touched, and the truth of our high calling as a Society brought home in clearness and tenderness to the strengthening, it is believed, of our youth in their religious life.

AN ATTITUDE DEVELOPED IN EASTERN QUARTERLY MEETING, NORTH CAROLINA. In a desire not to advertise prematurely what might be a local or temporary difference, the following information offered to us in last Eleventh Month was not published, pending such issue or settlement as might appear in the next Quarterly Meeting. That having lately been held, and members of it now seeming to see their way pretty clearly in view the tendencies of the new Discipline which they had protested against, the information may now be due to our readers, as of concern to the Society at large.

Eastern Quarterly Meeting of Friends, held at Piney Woods the twenty-eighth of Eleventh Mo., 1902. The Meeting for Ministry and Oversight was well attended, and at it there were two sets of Queries and Answers presented and read. One under the old Discipline from Rich Square Monthly Meeting, the other under the proposed new from Piney Woods which simply referred to them as a whole. They were both spoken to, and a proposal made to refer to the permanent board was not approved. Next day the meeting for business convened, when the Queries and Answers were treated in the same way as the day before. There were a few members favorable to the new, but the bulk were for the old ways and practices of the Society.

"When the question of Rich Square Monthly Meeting paying the usual proportion towards the Yearly Meeting expenses came up, it was at first disapproved, but afterwards Friends agreed to the request on the understanding that it was not to involve any sanction of the proposed changes. A minute was sent to the Permanent Board, though it met with little support. Our meetings for Divine worship were much favored and very well attended. A. FISHER."

Information from other sources is given that the late sitting of the same Quarterly Meeting at Rich Square was held in much earnest exercise and with seasons of impressive solemnity. The attendance of our friends, Lloyd Balderston and Charles Kirscht was seasonable and acceptable. Cyrus Cooper has a minute liberating him for some service in North Carolina.

Notes from Others.

The triple crown presented to Pope Leo XIII. by the Catholic world as a jubilee present cost \$25,000. The gold tiara was worn by the pope at his jubilee reception.

The Christian religion is something simple and sublime; it means one thing, and one thing only—eternal life in the midst of time, by the strength and under the eyes of God.—HARNACK.

The fact is stated that fifty-six per cent. of the personages, all presumably distinguished, mentioned in the "Dictionary of National Biography," published in England, were the children of clergymen.

Dr. Hamilton, in a lecture on "Preparation for the Work of the Preacher," said that the preparation must go on as long as the work goes on, and that preparation is inseparable from the growing man.

The Leader says: "Be true to your church. Not bigoted towards others. Do not discredit them. Make your own creditable. Give the hand of fellowship, but let it be the hand of one true conviction."

Edward S. Tead, secretary of the Congregational Education Society, states that there is an urgent demand for an industrial school among the Spanish-speaking Mexicans of New Mexico, of the same kind as that for the Negroes at Tuskegee and Hampton.

The two hundredth anniversary of the founding of St. Petersburg, by Peter the Great, is soon to be celebrated. The Russian Academy of Science offers a prize of twelve thousand rubles for the best history of that city. (A ruble is seventy-seven cents in gold and sixty cents in silver).

In Newark, N. J., the mother of Bishop Fitzgerald, of the M. E. Church, reached her ninetieth birthday the 1st inst. She has read the Bible through ninety times during her life. She has read all editions of the Bible in German, French and Spanish, as well as in English.

John Watson, in a sermon recently preached on "The Attitude of the Church to those Without," said: "It is no use to stand on platforms and talk about the church and the masses, when the fact remains that those who 'labor and are heavily laden,' do not to-day hear the gospel gladly."

John Huske, who has charge of the work among the whites in the mountains of North Carolina under the auspices of Episcopalians, states that there are 350,000 whites of that section who are cut off from communication with the outside world, who for the most part are unable to write their own names, and are devoid of the knowledge of God.

Chancellor James R. Day, of Syracuse University, in his address before the vast audience assembled in Carnegie Hall at the celebration of the bicentennial of John Wesley said: "The genius of Wesley shone in nothing more clearly and splendidly than in his appreciation of the fact that the gospel was a mighty life and not a formulated statement or a fixed system."

The entire conference of the Library Association for Pennsylvania and New Jersey, to meet at Atlantic City on the 27th and 28th instants will be given to the discussion of the various phases of the perennial problem "How to Encourage Serious Reading." The theme, as presented, will bring out how this can be done through university extension methods, through women's clubs, through public libraries, through universities, and through bibliographical enterprises.

Spectacularism in church service draws the crowd for awhile, but rarely holds it. It makes heavy demands on the pulpit and the purse to keep it up to the exciting point. It sooner or later fails of its purpose. It interferes with true worship and sends the people away entertained rather than benefited. It affords food for light talk, not for serious reflection. It brings into play the showy and ephemeral, not the substantial and enduring. It magnifies the human, not the divine. It appeals to the natural, not to the spiritual.—*Presbyterian*.

SUMMARY OF EVENTS.

UNITED STATES—Secretary Hitchcock, of the Interior Department, has granted authority for the acquisition of necessary property, rights of way, etc. prior to the construction of irrigation works in five localities in Wyoming, Montana, Colorado, Nevada and Arizona. These projects are estimated to cost \$7,000,000, and will provide for the irrigation of about 600,000 acres of arid land.

The Department of Agriculture has issued a bulletin on the relations of population and food products in the United States, exclusive of Alaska and the insular possessions. The food resources per capita in the census year 1900 follow: Wheat, 8.66 bushels; oats, 12.40 bushels; Indian corn, 34.94 bushels; barley, 1.57 bushels; buckwheat, 15 bushels; rye, 3.34 bushels; rice, 3.29 bushels; potatoes, 35.60 bushels; sweet potatoes, 1.57 bushels; sugar, 6.54 pounds; syrup and molasses, 5.88 gallons; poultry, 1.9 bushels; cattle, 69 head; swine, 83 head; sheep, 52 head; orchard products, 2.79 bushels; onions, 15 bushels; market gardening, including small fruits, \$1.30; semi-tropical products, 11 cents; poultry, 3.29 head; eggs, 17 dozen; honey, .80 pounds; fishery products, 16.35 pounds.

The Census Bureau has issued a bulletin on the geographical distribution of population in the United States. It shows that almost 96 per cent. of the total population lives in the country drained by the Atlantic Ocean; over 53 per cent. in that drained by the Gulf of Mexico; 44 in the drainage area of the Mississippi River; almost 10 per cent. in the area drained by the Great Lakes; 4 per cent. on the Pacific Coast, and half of 1 per cent. in the Great Basin. The proportion living in the region drained to the Atlantic Ocean is steadily diminishing, while the part drained to the Gulf of Mexico is becoming relatively more populous, as is the case, in a still more marked degree, in the Great Basin and in the Pacific Ocean region. Of the foreign born, 93 per cent. live in the region drained to the Atlantic Ocean, 36.4 per cent. in the region drained to the Gulf of Mexico, and 15 per cent. in that drained to the Great Lakes. The proportion living in the region drained to the Pacific Ocean is 6.1 per cent. Out of every 1000 negroes, 998 are found in the regions drained to the Atlantic Ocean and 61.4 per cent. are in the lands drained to the Gulf of Mexico.

The continued heavy rains have resulted in rising and flooded rivers all over the country, and reports of damage from places centered from New England to the Mississippi. Reports from Mississippi and Arkansas indicate that the gravest apprehensions prevail. All streams and rivers in Arkansas are overflowing.

On the 15th the gauge at Memphis, Tenn., marked a rise of water in the Mississippi of 38.5 feet, the highest ever recorded.

A dispatch of the 15th, says: Captain Douglas, of the United States Engineer Corps, has ordered 75,000 feet of lumber, 40,000 sacks and a carload of wheelbarrows and shovels for use on the levees between Vicksburg and

Natchez. The Government is furnishing the material, but the local authorities must furnish the labor.

A communication on cacao culture in the Philippine Islands, says: "The cacao grows in the Philippines is of such excellent quality that there is keen rivalry among buyers to procure it. So far as known, the areas where cacao prospers in the great equatorial zone are small. Cacao is cultivated nearly everywhere in the archipelago."

Machinery for a manufactory of broomsticks in North Dakota is to be imported from Germany. It is estimated that 55,000 square miles of ligule underlie the Dakotas and Montana, while another wide belt extends through the Gulf States from Florida to Texas. It is stated that German geologists have long believed that the American cities would solve the smokeless fuel question by the use of lignite.

The Mayor of Philadelphia has approved the ordinances recently passed by Council prohibiting expectoration on the city sidewalks, in public conveyances and other places resorted to by the public. The fine for the violation of the ordinance and incidental costs of an arrest amount to \$3.50.

The Secretary of the Treasury has approved an agreement entered into by Commissioner General Shergill with the Canadian Pacific Railway Company, whereby all ports along the Canadian border which heretofore have been open for the admission of Chinese persons are closed, except Richmond, Vt.; Malone, N. Y.; Portal, N. D., and Sumas, Wash. Detention stations will be established by the Government for the care and maintenance, as well as the examination of Chinese persons at these places.

Secretary Wilson has pronounced an order placing a quarantine on the State of New Hampshire on account of foot and mouth disease. This order prohibits the shipment of cattle, sheep or other ruminants or swine from or across New Hampshire into other States or foreign countries.

Howard M. Kutchn, special agent of the Treasury Department in supervising the salmon packing-houses in Alaska, bears testimony to the exceeding abundance of this fish in these waters from whence about one-half of the world's supply is derived. He says: "Though it is a statement greatly at variance with prevalent ideas, I do not hesitate to affirm that all existing lawless practices could never materially affect the Alaska salmon fisheries. It is not to be understood that they may not be endangered by the improper handling of the fish upon men by processes of curing and packing which are entirely lawful. Some persons have estimated that every square mile of sea water contains 3,000,000 fishes of all varieties, and in the North Pacific one sees things that almost make him think the greater part of these are salmon."

Dr. L. F. Flick has stated that if every consumptive case in Pennsylvania could be isolated in sanatoria and hospitals as soon as these have been discovered or died, we would practically be no more tuberculosis in this State. There are 20,000 poor people in Pennsylvania suffering from tuberculosis, and of these probably 6,000 will never recover. There are between 10,000 and 16,000 incipient cases which can be saved."

The Clerk of the House of Representatives, who is charged with the care and custody of the House wing of the Capitol during the intervals between sessions of Congress, has made an order that the law forbidding the sale of liquors be rigidly and immediately enforced.

The Pennsylvania Rail Road Co. has lately authorized the increase of its capital stock from \$250,000,000 to \$400,000,000. This company now operates 10,783 miles of road, and has 70,307 employees. It is owned by 29,000 stockholders.

There were 577 deaths in this city last week, reported to the Board of Health. This is 37 less than the previous week and 49 more than the corresponding week of 1902. Of the foregoing 299 were males and 278 females: 57 died of consumption of the lungs; 103 of inflammation of the lungs and surrounding membranes; 10 of diphtheria; 17 of cancer; 22 of apoplexy; 38 of typhoid fever; 2 of scarlet fever; 2 of smallpox.

FOREIGN.—A despatch from Russia of the 12th says: The Czar has issued a decree providing for freedom of religion throughout his dominions, establishing to some degree local self-government, and making other concessions to the village committees. After referring to the efforts of his predecessors, particularly his father, to add to the welfare of the Russian people, the Czar announces his decision to grant freedom of religion to all subjects who profess non-orthodox creeds, and to improve the conditions of village life and those of the local nobility and peasantry. In this decree he says: "We are irrevocably decided to satisfy the needs for which the State has become ripe, and have deemed it expedient to strengthen and decree the undeviating observance of the principles of tolerance laid down by the fathers of our Empire, the Russian Empire, which, recognizing the Orthodox Church as the ruling one, grant to all our subjects of other religions

and to all foreign persuasions freedom of creed and ship in accordance with other rites, and we are resolved to continue the active carrying out of for the improvement of the material position of the orthodox rural clergy, while enabling them to take share in the intellectual and public life."

The practical application of the sentiments in this decree are awaited with great interest.

A protractor has been taken into the House of Commons in England upon the Church bill, which passed its second reading by a vote of 51 votes. The debate, which was strictly on a lines, brought out a strong sentiment on both sides House against extreme ritualism. The bill proposing the civil courts the right to take cognizance of proceedings brought by laymen to prevent the practice of extreme ritualism, abolishes the Bishop's right provides that offending clergymen may be deprived of their livings. Harcourt, Liberal, in supporting the bill said the conditions had reached a stage when if right of veto was left to the Bishops, and laymen were given rights in ecclesiastical as well as in civil law, would be better to disestablish the Church.

The British Government has granted Marconi to connect his wireless station at Poldhu with Glasgow by ship.

It is said that nearly as many people use the language as speak Welsh, Greek, Serbian, Bulgarian, or Danish. In Galway alone are 17,833 who can speak nothing but Irish.

Headings brought by laymen to Naples say: "The continues to cast forth colossal columns of thick clouds of smoke, accompanied by subterranean thumps and slight shocks of earthquake."

The Turkish Government has agreed to grant recognition of diplomas issued by the American College at Beirut, and also to recognize the rights of wives and children of Armenians, who have been naturalized Americans to leave Turkey.

NOTICES.

NOTICE.—Situation wanted by a Westonian at Address S. EMLEN STOKES, Medford.

Tract Association of Friends.—The meeting of the Association will be held in the room of Arch Street Meeting-house, on Fourth street, the 25th inst., at 8 o'clock. Reports of all Associations and an interesting report of the will be read. All are invited to attend.

HENRY B. ARBOTHNOT.

DIED, on the twenty-second of First Month, 1903, home near Jacksonville, N. Y., ARON MEKEI, aged eighty-sixth year of his age; a member of Hebrew Society of Friends. He left the consoling services of his end was peace.

—, at his residence in West Grove, Pa., 23rd, LUKA F. REID, in the fifty-eighth year of his age, of New York and West Grove, Pa. Meetings. His frank, open character and cheerful disposition, endeared him to his family and friends. He was a man of great strength of character, and contracted weakness was borne with Christian peace and fortitude. His already enfeebled system received a shock in the sudden death of a beloved brother, who he was devotedly attached, and rapidly succumbed to disease. Nearing the close he expressed a desire to be buried in the West Grove Friends' Burial Ground, which seemed mercifully granted, not a sigh escaped him, so peacefully and gently his spirit took leave of us and he humbly trust through redeeming love is safely lodged in the Eden of Love, our loss is an infinite gain.

—, at his residence in Greenwood, Columbia, Pa., on the thirtieth of First Mo., 1903, JESSIE M. MCKAY, in the eighty-third year of his age; a descendant of the first Friends in America. He was a man of great strength of character, and a devoted and tedious illness patiently, while from the disease (paralysis), he could express but little. He was one who firmly maintained the doctrines and tenets of Friends, and we trust received the same. He was a good and faithful servant; enter into the life of his Lord.

—, at his residence in Pittsburgh, Second Mo., 1903, BENJAMIN H. LIGHTFOOT, in the seventy-third year of his age, a member of the Monthly Meeting of Philadelphia.

CORRECTION.—The decease of Deborah G. noted on page 272, in No. 34, occurred on the 16th, 1903, instead of Second Month, as there printed.

Entered as second-class matter at Philadelphia P. O.

My creed's the view I hold as true,
My creed in fact is that I do.

The Holy Spirit is a holy power of action.

Are we resting on our ancient doctrine concerning the Holy Spirit,—or living to-day by the Holy Spirit himself?

In our annual income, some have by Providence a larger salary to be good on than others; therefore a larger goodness should be expected.

We cannot overcome evil with itself. Give a good man "as good as he sent" and no more; and we shall but add to his badness to establish our own.

CONSIDERING it is the favorite habit of so many to squander the possible spiritual means of Scripture texts by drawing them forth in speculations before they are called out by any occasion, it may be doubted whether attempts to ferret out the hidden, spiritual, symbolic meanings possibly underlying a narrative or statement of Scripture, are proper. These all we may most safely leave to the working thereunto) to the opening and realizing grace of the very Spirit who moved the inspired penmen, and filled the height and depth of Holy Writ with all the fulness of which it contains.

I guess, who not many days ago, listened to a Hebrew Christian proclaiming "the unsearchable riches of Christ," wrote to the Editor, in her perplexity, a letter of many queries, of which the following is the substance: "Where shall I find the whole truth? Which of these sects are the Church of God? Whom shall I believe? If I believe in Christ I have to join a Christian church. Which shall I join, and why must I

be baptized when I believe that Jesus is the Messiah? Allow me to say that when the time comes and those questions or hindrances shall not be in our way, then and only then the Jewish nation as a whole will consider the claims of Christianity; but until then I would plead with you to cease preaching to women; enough for you to break men's hearts, but you have no right to break the hearts of women with the Christianity of to-day." L.

THE PRIESTLESS TELEGRAPHY OF THE NEW DISPENSATION.—A link of connection was lately thought to be discovered between William Penn and wireless telegraphy by D. G. Sutherland, writing in the London *Friend*, in the fact that the mother of Helmholtz, the distinguished German physiologist and scientist, was a lineal descendant of William Penn. The writer concludes by saying:—

Believing that the kingdom of heaven is not so much an *institution* as an *inspiration*, and believing also that each attuned individual Christian can be a spiritual receiver and radiator, what becomes of the numerous questions as to machinery and millinery, which to many people alas! are synonymous with religion? Science will explain that superfluous organs, having served their purpose, simply atrophy and fall into disuse; and it would seem that the Friends as an organized body again have for one of their chief functions, the duty of leading the minds of all classes away from what is mechanical and material in Christianity to what is essential and spiritual. Of course there will always exist a need for the prophet, the seer, the interpreter, the spiritual physician of souls, but where is the need for the human priest, who so frequently arrogates to himself the position of being the sole channel of communication between the Saviour and the sinner?

In the same number an abstract of remarks by Anne W. Richardson, on the "Message of Quakerism for To-day," contains the following:

The principles which the early Friends proclaimed were these: God deals himself with each individual spirit. No creed or belief without obedience, and surrender of the Spirit to God, can really be religious belief at all. All forms are of secondary value. The Bible was a part of the living revelation, which is going on now, and comes from God himself. Sin rather than punishment was the abhorrent thing. All men were illumined by the same Spirit. William Penn has a remarkable description of George Fox: "So meek, contented, modest, easy, steady, tender." George

Fox and Isaac Penington are two great instances of the kind of character which the principles of Quakerism produced.

HOUSES OF MERCHANDISE AS ANNEXES TO THE HOUSE OF PRAYER. We have seen in our meetings for worship, strangers of no common character in attendance, just because one of our members who stands in a store is willing to let himself be known as a Friend, and their conversation results in an invitation to attend one of our meetings. They go away from the meeting acknowledging singular impressions of good received, above what was expected.

Are there not many more such loyal members who need not stand idle in the marketplace?—who may stand in their week-day services as index-fingers to Truth, and to a spiritual worship?

The late William U. Ditzler acknowledged that he could make more money by letting his business-room in the heart of the City for rent than by conducting his trade in it. But he felt he ought daily to occupy that room as a mission-station, so accessible to his numerous callers of many denominations. So in natural,—that is, unaffected and unforced—conversation, with an eye to the pointings of Truth, many were turned to a conviction of principles of true life, who might have gone away as unconcerned as they came in. No matter if it seemed a loafing-place for some. It was a loafing that meant business for him,—even "wist ye not that I must be about my Father's business?"

Customers also, in their turn, have much influence with those who stand behind counters to serve them. It has seemed pathetic at times to see the longing of waiters, who have learned to expect customers to treat them as machines, to draw towards one who has noticed them with the fellow-feeling of a fellow-being, or has expressed an interest in their reading or evening study. This has led to church matters, and to an asking for the privilege of attending our meeting for worship. One of these discoveries was a waiter in a restaurant, formerly educated in the University of Dublin, and now studying law by evening reading and lectures. But it is to our employees at home that a crucial test of our Quakerism as of Christ's spirit appears. How many servants are won to membership by the savor of our lives?

A STATEMENT AS TO AUTHORSHIP.—The interesting extract in the issue of Third Month 14th, entitled "Convincement concerning Testimonies for Truth" is there stated to have been taken from "Biographical sketches and Anecdotes of Friends" by Thomas Scattergood. It seems proper to correct this error in relation to its authorship, by mentioning that this book was compiled from a series of articles contributed to THE FRIEND by the late Nathan Kite*, of this city, and published in it during the year 1847 and some subsequent years, under the title of "Thomas Scattergood and His Times." The compilation was made by his nephew our friend William Kite, of Germantown, Phila., lately deceased. G. J. S.
PHILADELPHIA, Third Month 16th, 1903.

History of the Friends' Registers.

Extracts from Papers by John S. Rountree.

The very early establishment of the Friends' registration system appears to have been principally due to the sagacity of George Fox. It was a striking piece of constructive legislation. The Friends of the Commonwealth period do not formally assign, in documents that have come down to us, many reasons for establishing these registers; in a memorandum presently to be quoted it will be observed that the example of Scripture is appealed to. There is, however, no difficulty in seeing that a register of births, deaths, and marriages, was a virtual necessity for a Society then in process of organization upon the principles proclaimed by Fox and his colleagues. As an outcome of their spiritual apprehension of Christian truth, the Friends had ceased to have their children christened, their weddings celebrated, and their funerals conducted by the clergy, and consequently these great events in human life had ceased to be recorded in the parochial registers. It was of prime moment for securing the validity of marriages solemnized by the Friends' ceremonial that authentic registers of property, and the security of the legal status of children demanded that proofs of births and deaths should be easily accessible.

In the following passage from documents of the Commonwealth era, enjoining the registration of births, deaths, and marriages, the use of the term "members" is observable.

"16thly. And also that Friends buy necessary Books for the registering of Births, Marriages and Burials as the holy men of God did of old, as you may read through the Scriptures that every one may be ready to give testimony and certificate thereof if need require or any be called thereunto. From paper signed "G. F." with note—"Copies of this to be sent all abroad among Friends in their men's meetings."

"3. That a record be kept, as (Friends are moved) of the births and children of such as are members or Friends or of the burial of the body, which die in the Lord (as they depart out of the body), which be done after the manner of the Holy men of God recorded in the Scriptures and not after the custom of the heathen that know not God." Third Month, 1659. (Meeting of Friends of four counties.)

*Nathan Kite was a frequent and valuable contributor to THE FRIEND for many years. Besides the series referred to in this article, he wrote that entitled "Biographical sketches of Ministers, Elders and other concerned members of Philadelphia Yearly Meeting," published in the years 1853 to 1862, and that entitled "Musings and Memories" 1861-1865. His death occurred First Month 4th, 1867, in his sixty-third year.

The period over which the Friends' registers in England and Wales extend may be taken at two hundred and fifty years. The earliest entries antedate the appointment of the Lord Protector, and they have since been uninterruptedly maintained down to the reign of Edward VII. The entries in these registers rapidly increased in number after the Monthly and Quarterly Meetings were established 1660-1670, attaining their maximum just prior to the colonization of Pennsylvania. In their subsequent history two dates stand out conspicuously,—1737 and 1837—the former because the line of membership in the Society was then more clearly defined by London Yearly Meeting, the latter because the State then established a complete system of civil registration throughout England and Wales. It is hardly correct to say, as is sometimes done, that membership did not exist among Friends before 1737; we have seen that the word "member" occurs in the official documents of the Commonwealth period, and—that is more important—the substance of membership, community in a body, carrying with it reciprocal duties between the individual and the congregation, had been long recognized. For eighty or ninety years this membership was determined almost automatically by union in worship, in manner of life, by pecuniary contributions to common objects, by participation in suffering, and when the need arose, by participation in the charity so generously extended to the poor and the persecuted of "the people called Quakers."

As years passed the relief of the poor became attended with growing difficulty. It is a curious illustration of the perversity of human nature that even when persecution was hottest there were persons who preferred to live upon alms, though in a prison, to doing honest work; and when persecution was relaxed the same spirit manifested itself in an aggravated form. In 1710 the records of the Yearly Meeting contain a long document, introduced by John Wyeth, showing the difficulty there was both in determining who were entitled to receive the relief of the Society, and, in some cases, upon whom the obligation of giving relief rested. Persons claimed relief who were not thought deserving by their Monthly Meetings, and these Meetings sometimes [questioned] among themselves as to which was liable to give relief. Hence grew up a body of legislation, and of practice, determined sometimes by appeals to superior meetings. . . . The results of this legislation have been far-reaching; as respects registration, they became apparent only gradually. Previous to 1737 the births of all the children of Friends whose parents so desired, had been registered in the Society's books. Henceforth those not in membership were marked "N. M." . . . On the establishment of the civil registration in 1837 the Friends' registration of non-member children entirely ceased, conformably with the regulation of the Yearly Meeting of 1836 . . .

In conformity with this regulation the birth-register, since mid-summer 1837, has been exclusively one of members, an alteration which reduced the annual entries by more than one-third. The change in respect to deaths was less abrupt. The register of mortality after 1837, so far as non-members were con-

cerned, became virtually a register of but a considerable but diminishing number of non-member entries are still made, of persons not in membership, interred in Friends' grounds.

In 1840 the Friends' registers were surrendered to Government. They were stated round figures to contain entries of two hundred and sixty thousand births, three hundred and ten thousand burials and forty thousand marriages. Subsequently other registers were discovered, and in 1857, a further render of volumes was made.

Two questions of historical interest present themselves in connection with the registers surrendered to government—first, what these registers practically represent the of Friends' registers for England and Wales, 1650-1837? Secondly, how far was the Society successful in securing complete and national registration of the births, deaths, and marriages of the people?

1. It is known that other registers must have existed besides those which have been surrendered. In certain districts the records are obviously incomplete. In the latter years of the seventeenth century, and all the Friends in a rural district would sometimes emigrate, taking, it is believed, registers with them. It is obvious that documents now in the possession of the Government do not include all the registers at one time or another have existed, but proportion have been lost must be a matter of conjecture; we believe those best qualified to judge are of the opinion that the lost registers do not form any large proportion whole number.

2. The answer to the second question likewise be based largely upon conjecture; it is clear that the seventeenth century Friends registers do not indicate the presence of a Friend population nearly so large as there is reason to believe it did exist. It is patent that the number of entries in the relaxed church government, e.g. 1740-1750, diminished, and again recovered when the discipline was re-established. We see that in the present time, of the whole number of persons who would have been accounted Friends in the latter part of the seventeenth and the first part of the eighteenth centuries about a third are not so closely identified with the Society as to be "in membership." In a religious community there is a margin of adherents, persons more or less sympathetic. Judge Fell in the days of the Commonwealth yet not fully identified with the body. It is doubtfully many persons occupied this position in the seventeenth century, and it is doubtful how far this class employed Friends' registers. A close examination of the early registration entries shows that record of births is less complete than that of burials. It is, however, wonderful that the seventeenth century registers are as complete as they are; they are a monument to the Friends in those days, especially in view of the constant and terrible persecution during the Commonwealth and the reign of Charles the Second, a period of nearly two years, was constantly consigning to those upon whom the care of registration would naturally devolve. We do not, however, think that these registers represent

statistics of the whole Friend population in the same sense in which those of the Registrar General now represent births, deaths and marriages of the whole English population.

(To be continued.)

Confessors of Peace from the Second Century to the Era of Mahomet.

III.

That Christians were enrolled in the army at the advent of Constantine is apparent from references made by Tertullian, Eusebius, and other contemporary writers. That however there are great numbers, so as to form a separate legion, is not at all to be credited, but the story of the "Thundering Legion" of the second century, as applied to a distinct body of Christians soldiers, may be set down as a myth. According to this legend, as we improperly term it, the Emperor, Marcus Aurelius, being at war with the Germans and Marcomans (A. D. 174), his army was found to replace a great peril, suffering the torture of intolerable thirst, and at the same time threatened with overthrow by the enemy. At this juncture, we are told, the Twelfth Legion composed entirely of Christians, fell on their knees, and, putting up a prayer for aid, a great thunder storm arose, whereby the thirst of the Romans was relieved and the barbarians were utterly terrified and fled a signal defeat. And so, says the legend, the emperor out of gratitude gave the name of "Thundering" to the legion, while he ended the persecution of the Christians to them. But this same Twelfth Legion had the name of "Thundering" from the chief of the Emperor Augustus; and although a pledge of deliverance from remarkable peril is spoken of by heathen writers, the Christians do not appear as participants in the event. Furthermore, there was no persecution prevailing at that time in Gaul, not, indeed, until three years after the emperor's undoubted victory.

We may now refer to the first war said to have been fought under the banner of the cross. This occurred in the year 311, when Maximilian, the associate of Diocletian in the empire, made an attempt to force the Christians to renounce their faith to sacrifice to the Roman gods. Resenting the indignity in a forcible manner than had their predecessors in the faith, war followed; but, because of pestilence and famine in his army, Maximilian not being able to bring his force promptly forward, suffered a disastrous defeat. It is related that Maximilian died at the same year of a loathsome disease, visited by his contemporaries to be a punishment from heaven for his persecution of the Christians.

The reply of Jonathan Dymond to the query, "Why did Christians become soldiers?" is given: "When their general fidelity to Christianity became relaxed; when in other respects, they violated its principles; when they began to 'dissemble,' and to 'falsify the sword,' and to 'cheat,' when Christian precepts had persuaded them that they might eat meat in the idol's temple; when Christians accepted even the priesthoods of idolatry; in a word, they became soldiers, when

they ceased to be Christians. The departure from original faithfulness, was, however, not suddenly general. Like every other corruption, war obtained by degrees. During the first two hundred years, not a Christian soldier is upon record [or, if there were those who claimed to be such, it is likely they had largely forsaken the pure faith, were backsliders, as will be shown a little farther on.] In the third century, when Christianity became partially corrupted, Christian soldiers were common. The number increased with the increase of general profligacy; until at last, in the fourth century, Christians became soldiers without hesitation, and, perhaps, without remorse. Here and there, however, an ancient father still lifted up his voice for peace; but these, one after another, dropping from the world, the tenet that war is unlawful, ceased at length to be a tenet of the church.

In Backhouse and Tylor's "Early Church History, to the Death of Constantine," (4th edition, 1839) this so momentous epoch in the history of Christendom is adverted to as follows:

"If the testimony committed by Christ to his disciples against all use of the sword was upheld more feebly in the third century than in the second, it may be considered to have fallen entirely out of sight after the victories of Constantine. Then began that unhallowed union of the worship of Mars with the worship of the God of peace, that fatal encircling of the cross with the laurel, by which the church has been dazzled and disgraced down to the present day. From this time the Christian conscience on this great question is silent, or all but silent. Augustine speaks the mind of the Church when he says: 'Sometimes the powers of this world fear God; sometimes they fear Him not.' The Emperor Julian [who reigned 361-363] was an unbeliever, an apostate, an idolater; and yet Christian soldiers served under him. When, indeed, a question arose as to their obedience to Christ, they acknowledged Him only who is in heaven. Whenever the emperor ordered them to worship idols, or to offer incense, they preferred God to him. But [mark the guilty and disastrous severance!] when he said, 'Draw out the line of battle, march against this or that nation,—forthwith they obeyed their king.'"

Continuing the remark in the first section of this essay concerning those who surrendered their lives in martyrdom, it may be said that the self-sacrifice of the Christians of this later period appears not to have been actuated by the pure spirit which animated the Christians of the two preceding centuries. A tendency to self-immolation—as remarked by Mason in his "Persecution of Diocletian"—began to be manifest, a too ready offering of the body to the rack and torture, that the crown of martyrdom might be won. Hence, following the persecutions, arose the unhealthy tendency to make saints of martyrs, to collect and even worship their bones, clothes, books and other relics, and to visit their tombs, invoking their intercession. The *Acts* and *Passions* of the martyrs of that and succeeding times have been preserved, the great majority of them exhibiting the effects of this degenerate spirit.

After this glance forward at the generally prevailing conditions, we will now need to turn backward in the narrative.

Pliny, the younger, who was sent (A. D. 103) as proconsul to the Asiatic provinces of Bithynia and Pontus, in the reign of the Emperor Trajan, observed that many of the temples were deserted, that the ordained rites of worship were being singularly neglected and that victims for sacrifices were rarely purchased. The cause, he soon found, was owing to the contagion of the new "superstition." Writing to the emperor some particulars of the belief and practices of these errant people, as he understood them, he proceeded to state what steps he had already inaugurated to stamp out the dangerous heresy, and then asked for definite instructions how further to proceed in the matter. It was his method, with those brought before him for neglect of the temple service, first to ask whether they were Christians. Should they confess to the charge, they were threatened with capital punishment. "In case of obstinate perseverance," he goes on to say, "I ordered them to be executed; for this I had no doubt, whatever was the nature of their religion, that stubbornness and inflexible obstinacy ought to be punished. . . . Many repeated after me an invocation to the gods, and offered worship with wine and frankincense to your image (which for this purpose I had ordered to be brought with the images of the divinities), and also reviled the name of Christ,—none of which things, I am told, a real Christian can be induced to do."

The emperor's reply was a general approval of the course adopted by his deputy, that punishment was to be visited upon the Christians unless they recanted and performed sacrifice to the gods, though he did not encourage their being directly sought out by the police. Soon it became evident that many were not thoroughly established in the faith, yielding unconditional submission. The temples were again frequented, the pagan sacrifices were offered, the festivals were thronged. A little later, Trajan himself, victorious against his enemies, came to Antioch in Syria, where the Christians were numerous, and where the aged Ignatius, who had been a disciple of the Apostle John, was chief elder or bishop. Incensed that this Christ, so much spoken of, should divide his imperial authority, Trajan commanded anew the worship of the Roman gods, threatening with death those who continued obdurate in their refusal. To avert the storm, Ignatius requested to be brought into the presence of the emperor, who now himself conducted the inquisition, and who at the end pronounced this sentence: "We command that Ignatius, who affirms that he carries within him Him who was crucified, be put in chains and taken to great Rome, there to be devoured by the beasts for the gratification of the people." The joyful reply of Ignatius, to the sentence was: "I thank thee, O Lord, that thou hast vouchsafed to honor me with a perfect love toward thee, and hast made me to be bound with iron chains like thy Apostle Paul." The martyrdom of Ignatius in the Coliseum, a lone, supplicating, most venerable figure, the prey of wild beasts in the arena,—a multitude of tens of thousands of onlookers tier above tier witnessing

the savage spectacle—has been often pathetically described. It was a testimony unto death that doubtless strengthened very many.

(To be continued.)

FOR "THE FRIEND."

When Home is Sweet.

Home is not merely four square walls,
Though with pictures hung and gilded;
Home is where affection calls—
Fill'd with shrines the heart has builded!

Home!—go watch the faithful dove
Sailing 'neath the heaven above us—
Home is where there's one to love!
Home is where there's one to love us!

Home's not merely roof and room—
It needs something to endear it;
Home is where the heart can bloom,
Where there's some kind lip to cheer it!

What is home with none to meet?
None to welcome, none to greet us?
Home is sweet, and only sweet,
Where there's one we love to meet us.

—Selected.

Even birds have nests and beasts have dens, which are the dearest spots on earth to them. It is not then surprising that man whose perceptions and affections are many fold brighter, should delight to speak of home, sweet home. Man's Creator knew and said, "It is not good that the man should be alone," and in his wisdom the Lord made woman to be a help-mate to him. And though sin as a dark cloud obscured man's bright hopes of heaven, it robbed him not of every eternal bliss. Yea, the tempter would, if he could, make man believe that man must now forfeit these, if once he turn his steps into the straight and narrow way. But this is not true. God designed and formed the family ere man fell. His blessing rested thereupon. And nowhere else on earth are found sweeter earthly joys and flowing streams of comfort than those that like perennial springs are found in Christian homes. And what sweetens every bitter cup, for such at times must come to all, is this, that even though death itself may enter and make his inexorable demand, the inmates of that home rejoice in an assured hope of a home beyond the grave, where neither sorrow, pain nor death can ever come.

Who would not have a happy home? It is a thought that quickens the step of young men in the race of life, and oftentimes gives them steadiness of purpose. It lies deeply seated in the bosom of the maiden, gently prompting her to cultivate every grace that would be conducive to such a desirable consummation. And yet it may appear strange, but it is true, that whoever in earnest starts with this high and noble aim, must take like steps to those of the would-be Christian. And so much is this the case, that it is easy for the Christian to have a happy home. A Christian home and a happy home, should always be, and mostly are, interchangeable terms. What then is this happiness-producing elixir? It is the denial of self, and the earnest desire and endeavor to minister to other's comfort and joy. This is a never-failing lubricant of the machinery of life, causing everything to run smoothly and well.

Palaces, paintings, costly articles of virtue—yes, all that wealth could buy, have time

and again been tried, all producing no appreciable effect in the all-to-be-desired end, to have a happy home. If love and virtue rest not there, happiness remains a stranger, too.

It is true the world is beautiful, and God's work in nature pleases to the eye, but what avails all this to the man in whose heart hatred, jealousy or discontent find a lodgment? He carries the cause of his unhappiness in his own bosom. The eye is never satisfied with seeing, nor the ear with hearing, but always lusts for more.

We as men, drink in pleasure, when in good health and of sound mind we behold the beauties of nature; and even the copies of them by art are held in esteem, but these all are a thousand times enhanced as men become, so that they may with "humble, unpretentious eye" look on all these beautiful creations, and feel, if not express that feeling, "My Father made them all." Herein lies man's happiness complete; in a humble, watchful, prayerful walk with God.

He who first ordained and blessed the family union, now to those who seek Divine guidance, unites heart to heart in a heavenly union and ever remains to cement and bless the tie that binds.

As Christ rules in the heart and is head over the man, so is the man the head of his household ruling in God's fear. And as Christ Jesus loved to minister to the needs of his servants, so do these as helpmeets know how to serve one another in love; gentle to the erring, steadfast and firm in the right, having a unity of purpose and aim, placing their eternal interests and duties first, constant in love and fervent in spirit, loving God above all earthly blessings, for He alone is the source and fountain of all our joys and the giver of all good.

As these together draw near in spirit to worship and adore the God of all the families of the earth He will make his presence known; He will throw around them his mantle of love, tender their spirits, and kindle a flame of prayer or praise, when on bended knee they will be constrained to say, "Come let us bow down, let us kneel before the Lord our Maker." "The blessing of the Lord which maketh rich, and to which no sorrow is added" will rest upon them and theirs, and rejoicing in the Lord, their cup at times will overflow.

In the love, peace and harmony found in such a home, the inmates have a foretaste of their more glorious home in heaven, and even the cares and trials of life are but as waves, ever wafting them nearer to that eternal shore.

W. W. B.

SOME men are surprised, when they retire from business late in life, to find that they have nothing to retire to, that they have destroyed the capacity for appreciating the things they thought they would enjoy.—*Success.*

THERE is no nobler sight anywhere than to behold a man quietly and resolutely put aside the lower things that the higher may come in to him. . . . To put aside everything that hinders the highest from coming to us, and then to call to us that highest, which—nay, who—is waiting always to come—this is the habit of a life that is noble.—*Phillips Brooks.*

Science and Industry.

THE windmills of Holland are on the verge of being superseded by steam engines. All now standing are old and no new ones are being built. The gas engine and the steam engine have taken their places and we may yet have a Holland without windmills.

THE Pennsylvania railroad will build a bridge across the East River at New York City to cost over eight million dollars and will require three years to complete. The bridge with its approaches will be eight miles long, the central span will be eight hundred and forty feet in length, and the bridge will be one hundred and thirty-five feet above the river. The structure will contain six million pounds of steel.

A CORRESPONDENT asks:—"Would it be desirable to call attention of readers of THE FRIEND to the fact that the interesting article in No. 33 on 'Getting Rid of Hyacinths' quoted from a contemporary, refers to water-hyacinth (*Pontederia*), and not to common hyacinth with a bulb? Both are cultivated for their flowers."

Sincerely,
HENRY S. CONANT

"If I were a farmer," said John in his mother, "I wouldn't let any old thistles grow in my field."

"But how about the field you do own?" asked his mother, very seriously. "I thought I saw a thistle sprouting up in it the other day."

"The field I do own?" asked John in surprise.

"The other day I heard you say, 'please take it,' an expression I never heard you use before. I said, 'some one has sown a thistle in John's heart.'"

"A SINGLE Treasury note measures one and one-eighth inches wide by seven and one-fourth inches long, and will suspend four pounds lengthwise and ninety-one pounds crosswise. Notes are printed four to a sheet. The sheet will suspend one hundred and twenty pounds lengthwise and one hundred and twenty-seven pounds crosswise.

"The remarkable strength of a United States Treasury note may thus be seen at a glance and I venture to say that not one of a million would have guessed the great strength of the paper, which, when properly secured and stamped, becomes good money."—*London Star.*

ONE of the inventions recently made is a "girlless telephone." It has been tested and great success in New Bedford and Fall River. The German government has just purchased the European rights to it, and already change is in operation in Berlin. The secret of the system is the point that attracts the user. The caller makes his own connection and it is absolutely impossible for any one to hear one word of the conversation of the speaker and the one addressed. The Chicago Telephone and Telegraph Company is building an exchange that will accommodate twenty-five thousand instruments, and will be installed in Chicago by the first of

This improvement has but one drawback. While it admits of proper secrecy, it probably contribute to secrecy in promodestic and commercial intrigue and arms of dishonesty.

INTERESTED THE BOYS.—It is stated that the Cuyennes of Oklahoma were induced to farming by strategy. An Indian agent came to give a calf to every boy who for months would help him to milk his cows. And that the braves laughed at the boys and this "squaws" work," but three boys liked it and got their calves. Then nine of the boys volunteered, says the *Youths' Commission*. Then the agent asked them to help him, offering them all the corn they could grow. The boys accepted and raised thousands of bushels of corn, which they sold for thirty-five cents, every boy at agency being anxious to get a herd of his own. The fathers and mothers now became jealous, and as a result the formerly wild youths have become the most industrious and successful. Some farmer may find here a suggestion how to interest his boys in farm life.

RELATIONING TO DOGS.—A French tourist tells that some time ago he set out to cross the Ardennes Pass by himself, and got caught in the fog near the top. He sat on a rock and waited for one of the dogs to come and help him, but in vain, and when the fog cleared away he managed to reach the Hotel. On arrival he observed that he thought the dog rather overrated animal.

"I was," he said, "for at least six weeks I did not come near me."

"Why," exclaimed one of the monks, "you ring us up on the telephone?" The astonished tourist it was explained that the whole of the pass is provided with telegraph short distances from each other, all by telephonic communication with the monks. When the bell rings the monks send a hand loaded with bread and wine and comforts. The dog on duty is told the number has rung and he goes straight to the shelter.

The system saves the hounds their old duty of strutting the pass on the chance of a stray sheep being found, and as the pass is for a great number of months of the year under snow, it is a very hard and often fruitless task. —*Baltimore Sun.*

ALL ABOUT THE ALLIGATOR.—Those who stay in a stock of alligator skins had to go so now, for in a few years there will be no alligators in America. When the French and Louisiana they found the alligator, the most American reptiles, in almost every swampy about like logs in the water and along the banks of rivers, bayous and swamps. While the advance of civilization has reduced the number of the reptiles in Louisiana, they were countless thousands of them up to a few years ago. But some one in Louisiana has gone and tanned an alligator skin and a pair of shoes from it. It took some time for the seamed and knotty leather to be in favor. But when it did become popular, the laughter of the alligator began which would wipe it out of existence. The skin of an animal, so abundant as the alligator was in Louisiana, in so short a time

is almost without a parallel. Moreover the alligator is naturally long lived, its normal age being estimated at from one hundred to one hundred and fifty years. The animal skins have long been in demand for many years for almost all kinds of leather goods, grips, valises, purses, hand-bags, etc. When the skins became very scarce as a result of the wholesale slaughter, dealers resorted to all kinds of imitations, until now it is almost impossible to get an article made of pure alligator skin.

Carried on as it must be at night, for the animal sleeps nearly all day in the mud, the hunt for the alligator is very picturesque. Reptiles are attracted by a torch or other bright light and are easily killed in spite of their rough skins.

ODD WAYS TO EARN A LIVING.—Women workers are invading every line of employment. The census of 1900 makes returns for three hundred and three separate occupations, and in only eight of these do women workers fail to appear, says *Mahin's Magazine*.

None will be surprised that there are no women among the soldiers, sailors and marines of the United States government, yet there are one hundred and fifty-three women employed as "boatmen" and sailors.

Women have not yet invaded the ranks of the city fire department, still not less than eight hundred and seventy-nine women are reported in the same general class of "watchmen," policemen, and detectives."

There are no women street-car drivers, though there are two women "motormen" and thirteen women conductors."

They have not as yet taken up the employment of telegraph and telephone "linemen," yet twenty-two thousand five hundred and fifty-six of them are operators for these companies.

There are no women apprentices and helpers among the roofers and slaters, yet two women are returned as engaged in these employments.

There are one hundred and twenty-six women plumbers, forty-five plasterers, one hundred and sixty-seven bricklayers and stone masons, two hundred and forty-one paper-hangers, one thousand seven hundred and fifty-nine painters and glaziers, and four hundred and fifty-four women carpenters and joiners.

No women are returned as helpers to steam boiler-makers, but eight women work at this industry as full mechanics. There are one hundred and ninety-three women blacksmiths, five hundred and seventy-one machinists, three thousand three hundred and seventy women workers in iron and steel, eight hundred and ninety in brass, and one thousand seven hundred and seventy-five women workers in tin.

Among other unusual employments for women are one hundred workers as "lumbermen and raftsmen," one hundred and thirteen wood-choppers, three hundred and seventy-three saw-mill employees, four hundred and forty bartenders, two thousand and eighty-six saloon-keepers, nine hundred and four "draymen," and teamsters, three hundred and twenty-three undertakers, one hundred and forty-three stone-cutters, sixty-three "quarrymen," sixty-five white-washers, eleven well-borers, and one hundred and seventy-seven stationary engineers and firemen.

Selected for "THE FRIEND."

Henry Stout.

Henry Stout, of Hertford, in the county of Hertford, was born in the year 1631, and was convinced of the blessed truth by the ministry of a woman, in the year 1655, being then about the twenty-fourth year of his age. At which time some of the people called Quakers came into that part of the county, concerning whom he had heard evil reports, and that they denied the Scriptures; which had prejudiced his mind against them. But it so happened that there came a woman called a Quaker, and preached in Waremarket; and afterwards a rude rabble followed her down the street, and he seeing them, followed her also, in pity towards her, and to rescue her from them. But she turned into a house where there was a meeting; and a Friend was speaking there, unto whom he listened, and heard him speak much Scripture, although he named neither chapter nor verse; at which he wondered, because he had heard that they denied the Scriptures.

After he thus lent an ear, the woman stood up and spoke; and such power attended her ministry, that his spirit was much broken, and astonishment seized on him; and he saw others also with paleness of face, and they smote their hands. This brought great fear upon him, lest he should be deceived; yet was he afraid also that he should offend God, and resist the day of his visitation. This brought great sorrow upon him for a time, he not being able to distinguish; but afterwards going to another meeting, he heard another woman by whose preaching his conviction was increased; and he was so confirmed, that he could set to his seal that it was the very truth which had long been veiled in him; but now by the preaching of the gospel, was revealed. He could say Christ was come, and he looked not for another; and it was confirmed by the work that was wrought both within and without. First, within, the eye which had been shut was now opened, and the ear that had been deaf, now heard, and the mouth of the dumb could speak, and the lame walk, and the mysteries of the kingdom of God were known, which before were in parables.

He searched the Holy Scriptures, and found it was the good old way, though new to him and others; and the Scriptures were opened by the Spirit that gave them forth, and witness for God he had in himself, according to John i: 5, 10. "He that believes hath the witness in himself." Then he took up the cross and denied himself, and so became a gazing stock to the world, as the Lord's people were in those days, as well as in former ages. Soon after he was moved of the Lord to go to the public places of worship, to declare against them, and to preach the Truth. Persecution and suffering soon followed; so many and various were the trials and exercises which the Lord's people went through in their day. He was the first called a Quaker who suffered imprisonment in Hertford jail, for the testimony to the Truth; where his sufferings were great, the prison windows being shut, that he might not have the benefit of the air or the light of the day. After he was released of that imprisonment, he was a prisoner five times more in that town of Hertford;

the last of which he was sentenced for banishment, and continued a prisoner nearly eight years, to the great detriment of his health; being often put in the common jail; which trials the Lord carried him through with much patience, contentedness and quietness of mind, he being given up to the will of God.

He was a serviceable man in many respects, and willing to do what offices of love he could for any. He traveled much in the service of Truth in his younger years whilst he had strength of body. . . . The last four months before his death, he went little abroad, but grew weaker and weaker; which his wife perceiving, did much importune him to advise with some doctor; but he answered her, "I would not have thee confide too much in doctors, for they will all prove physicians of no value to me. I thank God I know that power which in former ages raised the dead and healed all diseases and if it is the will of God, he can restore and heal me; his will be done!"

His greatest infirmity was an affection of the stomach and shortness of breath, which often brought faintings, which he bore with great patience. . . . He told some friends he had this testimony, that he had served the Lord with faithfulness, and with an upright heart, to the best of his knowledge. . . .

At another time to a friend he said, "None know the virtue and goodness of Truth so well, as when they draw near their latter end, when all outward comforts fail, and sickness and weakness come upon them."

He further said he had travelled in the service of Truth when he had strength of body, and the Lord had given him many living testimonies to bear for his name; in all of which he was faithful, and the remembrance of it warmed his heart at that time; for he could say that his care was not to speak more than what the Lord gave him to speak, that thereby his name might be honored. Many times and upon several occasions, he fully manifested the true satisfaction and peace he had with the Lord; often desiring to be dissolved, that he might go home to his rest. The Lord's love and gentle dealing appeared very largely towards him, giving him many times ease of body and comfortable seasons of refreshment; and he generally rested well in the night until but about a week before his death; for which favor he would often break forth into praises and thanksgiving for his goodness and mercy to him. . . . When his sleep was taken from him, he continued quiet, patient and sensible to the last moment. When his wife said that he slept little, and took hardly enough to keep him alive, she was full of grief; which he perceiving, said to her, "Thou must give me up, but it will not be long before thou and I shall meet again in that blessed state, where all tears shall be wiped from our eyes."

The day before his death he said to his children, "You, who are likely to enjoy what I have, I would have you to remember the advice of your father, and live in the fear of God, as it becomes the Truth; then you will be as monuments, and it will go well with you, and what I leave will be a blessing to you. Beware of earthly-mindedness, and pride and prodigality which are a dishonor to any family; and bring up your children in plainness, and not in the fashions and super-

fluities of the world, which passeth away. Remember my advice who speaks to you in love, for woe will be to the wicked." I would say more but my strength faileth." The day he died he spoke little, his last words being, "Now I am going to the Lord." Thus he finished his course the sixth of the Tenth Month, 1695, in the sixty-fifth year of his age.

THE DAY SHALL DECLARE IT.—Christians are working in this world to some extent in the dark. We are to obey orders from a Divine Master though we may not understand their bearing, or fully comprehend their results; and never till the great day shall we come to a full knowledge of the fruits of the work which we have done in this world. Then the bread cast on the waters shall be found after many days. Then the saving words which we have spoken shall come echoing back, to fill our hearts with never-ceasing joy. The following instance is related by Canon Twells:

"A friend of mine, a layman, was once in the company of a very eminent preacher, then in the decline of life. My friend happened to remark what a comfort it must be to him to think of all the good he had done by his gift of eloquence. The eyes of the old man filled with tears, and he said, 'You little know! You little know! If I ever turned one heart from the ways of disobedience to the wisdom of the just, God has withheld the assurance from me. I have been admired, and flattered, and run after; but how gladly I would forget all that to be told of a single soul I have been instrumental in saving!' The eminent preacher entered into his rest. There was a great funeral. Many pressed around the grave who had oftentimes hung entranced upon his lips. My friend was there, and by his side a stranger, who was so deeply moved that when all was over my friend said to him, 'You knew him, I suppose?' 'Knew him,' was the reply, 'No; I never spoke to him, but I owe to him my soul!'"

Many a soul has had an experience somewhat similar, and many others doubtless will have such experiences in the great day. Hence we must labor on toiling, watching, hoping and praying till the Lord shall in his own good time give us to see the fruits of our labors in the kingdom of our God.—*Common People.*

GOD made mothers before he made ministers; the progress of Christ's kingdom depends more upon the influence of faithful, wise and pious mothers than upon any other human agency.—*Theodore L. Cuyler.*

It is character that counts in a nation as in a man. It is a good thing to have a clean, fine, intellectual development in a nation, to produce orators, artists, successful business men; but it is an infinitely greater thing to have those solid qualities which we group together under the name of character—sobriety, steadfastness, the sense of obligation towards one's neighbor and one's God, hard common sense, and combined with it the gift of generous enthusiasm toward whatever is right. These are the qualities which go to make up true national greatness.—*Roosevelt.*

FOR "THE F

A BIRD'S FUNERAL.

Drop down, ye heavens, and form in silent Stand with mute majestic mien demure, The folded wing upon the breast is still. Hark! for the silent footfall draweth near. He marks the end; how much more the sea Bending to his behest, response shall sing. And with sublime reach of cleaving wing Rise with lifting heavens to central throne.

H. T. M.

BEAMSVILLE, Ont.

FOR "THE F

"By Their Fruits Ye Shall Know Them"

"A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." This to my mind is one of the most impressive truths uttered by Jesus in the sermon on the Mount, in which we may learn we need to live by to insure us true happiness in this life and peace and rest beyond. It is easily we can see the result of a purely selfish life. It needs no words of mine to show these are as nothing; it is action and words which we know them. Men may preach the most eloquent sermons, full of intellect and scriptural knowledge, but if they stop by the wayside and help their needy brother; if they be not charitable towards all; if they be not patient and kind towards all, we know at once the corrupt. Then, again, we come in contact with others whose beautiful works shine out from their homes and wherever their presence is felt, then we know there is the Christian.

It need not always be those that engage in great charitable works nor those who are gifted with high mental attainments, who bring forth the best fruit, but only those who, faithful in lending the helping hand, give cheering words from a heart filled with love and sympathy to the many wounded hearts that see only darkness and despair in their future before them, to forget self, and realize that we are in a measure our brother's keeper. Christ's whole life was filled with tender sympathy for his fellow-creatures, that not of his own trials, but always found in the suffering of others. When He said to His followers: "By their fruits ye shall know them." He had reference to those who were not content according to His words and example, but that the fruit came always true to the word that bore it, for as He says, "Do men gather grapes from thorns or figs from thistles? While He enjoins his hearers to 'judge not lest they be judged,' yet the caution is 'beware of those who were false prophets, meaning so clearly those that did so much to mislead and yet neglected to do the will of their Heavenly Father. Let us then be watchful over our hearts and actions, that we may be known by our fruits."

I REJOICE that He is come, and hath brought you in the furnace; it was even there that ye and he set trust. That is an old story of Christ's; he keepeth the good fashion of you, that was in Hosea's days: "The Lord beheld, I will bring her into the wilderness, and speak to her heart." There was a longing to her heart while he and she were in fair city, and at ease; but out in the waste wilderness he whispered to her, "art mine."—*Samuel Rutherford.*

Selected for "THE FRIEND."

Alexander Jafray.

oder Jafray, of Kingswell, in the Scotland, born in the city of Aberdeen, was one who early remembered his Creator, as he grew in years he increased in religious concern towards God and those who thought feared Him. He joined with the Presbyterians, though he dated in another form of religion; but after, when those people got into government, they forgot their former persecuted condition, and grew high, and fierce persecutors of others; therefore he disliked them and signified the same of the chiefest among them, when himself one of those commissioned by the nation of Scotland on articles with King Charles the Second in Holland, in the year 1650.

He left the Presbyterian way, for he was among the Independents, thinking them also to be for setting up sects, and persecuting others he could not follow them. After this he resided in private for some years a solitary man, not joining with any profession of religion, nor suffering several of his children to be sprinkled or baptized (as they called it), these could not own their way of constitutional churches; and this was long called a Quaker. In his solitary life he sought the Lord, waiting for those who were spiritually touched with a word from the altar, to kindle true and nascent sacrifices to God.

He first heard that God had raised up a people in England, who directed all to the pure light, Spirit and grace in their own souls, the most sure teacher and leader of all truths, worship and religion, he said to his heart to leap for joy. After examination concerning the people, the Quakers, who preached the Truth to him, he found his heart and soul united to them. This was in the year 1662, a year when it was as bitter a cross even as to those who town them, especially to one of his; and shortly after, several more men came, that nation were convinced of the truth, as John Swinton in the West of Scotland, David Barclay, Alexander Thomas Mercer, and others. This made enemies and others persecute them; but they stood their ground, through the grace of God, and boldly bore their testimony valiantly, until Alexander Jafray, contending for truth in solemn conferences with the bishops of Aberdeen and the chief preachers of the city.

He was faithful in his testimony to the end; and in his sickly old age he journeyed many miles from his own country, for non-payment of tithes. It is remarkable, a little before this imprisonment, he grew near to death, as was judged by his friends, he signified under his hand, that he was altogether unable to speak, by a great swelling of his throat, that his God had yet a work for him to do, in suffering for his preaching; and that he was not to die at that time.

He was taken sick the latter end of the month, 1673; and during the twelve days of his sickness, he uttered many living

testimonies to the blessed Truth, before many witnesses, both Friends and other people, who visited him; and a few of them are as follows. He said "It was his great joy and comfort in that hour, that ever he had been counted worthy to bear a testimony to, and suffer for, that precious testimony of Christ Jesus, his inward appearance in the hearts of the children of men, visiting all by his light, grace and Spirit, that convinceth of sin; and that it was; and would be the great judgment and condemnation of many in this nation particularly of the professors, that they had so slighted and despised, yea hated the said light and witnesses therunto." Sometimes being overcome in spirit, he said, "Now, Lord, let thy servant depart in peace, for mine eyes spiritually have seen, my heart hath felt, and is feeling, and shall ever feel, thy salvation." He also prophesied of a great and near trial shortly to come, wherein some that were not what they seemed to be, should be discovered and fall; but the upright and lowly ones, the lowly shrubs should be preserved, when tall and sturdy oaks should be overthrown, which is since fulfilled on some.

He further said, that the Lord had given him the garments of praise, instead of the spirit of heaviness.

Sometimes when very sick, he would bless the Lord, that now fighting with a natural death, he had not an angry God to deal with, "Oh!" says he, the sting of death is fully gone, being reconciled to me as a sweet passage, through Him that loved me . . . A little before his death he said he had been with his God, and had seen deep things; about which time he was filled with the power of God in a wonderful manner, which much affected those present, and a little time after, he died like a lamb, on the sixth day of the Fifth Month, 1673, aged fifty-nine years.

Items Concerning the Society.

In London Meeting for Sufferings on the 6th instant permission was given for Rufus M. Jones to use the map prepared for the bicentenary edition of George Fox's Journal in an American edition which he is bringing out.

A movement to enlarge the meeting-house at Haverford, at an estimated cost of about \$10,000, to be raised mostly by private contributions, having the consent of Western District Monthly Meeting, is now progressing, the required amount seemingly already well assured.

The meeting for worship appointed by the Yearly Meetings' Committee, held in Arch Street Meeting-house, Philadelphia, at 4.30 p. m. on Sixth-day, the 20th instant, was attended by a large number, under a manifest covering of Divine life and good. A second meeting is announced to be held in Twelfth Street Meeting-house, at 7.45 p. m., on Fourth-day, Fourth Month 8th.

Harriet Green, who came from England nearly a year and a half ago, on a second religious visit to American Yearly Meetings and their membership, has recently deceased, at Salisbury, North Carolina, and was buried at Guilford College on the 17th inst. This solemn event brings to memory Susanna Fales, Stanley Pumphrey, and William Foster, whose lives were sacrificed to arduous labors for American meetings.

Notes from Others.

It has been carefully estimated that the number of missionaries who have laid down their lives of service in Africa is one hundred and ninety.

D. F. P. Noble says that "No follower of scientific progress has ever taken a locomotive into Africa before missionaries had prepared the way."

The *New York Medical Record* says: The Bible itself is one of the very best text-books on hygiene that has ever been written. He who strictly follows its teachings will be a perfect sanitarian.

Rebecca Harding Davis says: "In the churches of America the majority of sermons now are wholesome literary essays and ethical discourses. The effort is seldom made to convert the soul of the man in the pew."

The famous traveller, Isabella Bird Bishop, says she thinks that no one follows the Master's footsteps so closely as the medical missionary, and no work is so entirely satisfying. She has visited such missions in many parts of the world.

Professor Nash, of the Cambridge Protestant Episcopal Divinity School predicts a revival of monasticism and asceticism in the Christian Church in this country within fifty years as a reaction against the worldliness of the Church and the world.

J. H. Jowett recently advised his hearers to come to the reading of the Bible as one stands before a great picture, with the purpose of finding out the Master's mind. Bible reading will cease to be irksome when we read it with earnest purpose to discover the mind of Christ."

The *Pacific*, in an editorial on "The Service of Public Prayer," says: "Our non-liturgical churches will never regain their lost ground until their pastors recover the art (!) of public prayer. The fact is, that the pastoral prayer is to-day the weakest point in public ministerial service. It ought to be the strongest."

It is stated that the English language is becoming general in the land of Japan, which is principally owing to the higher schools and seats of learning, making it imperative for students to become proficient in English literature before graduating. With so many natives acquainted with the language, the typewriter has become common, and all business letters are now dictated to expert stenographers, but the language used is not the native one; the Japanese signs would be too much for the typewriter, and it is necessary to use English. The typewriter is therefore doing more towards Americanizing Japan than anything else.

A PROTESTANT DICTIONARY.—There is being prepared, for controversial use, a Protestant dictionary. Editors of it include a rare list of English scholars, with a few American ones, and the work is to be circulated here—not so much a trade publication, as a missionary one. The claim is made that heads of colleges, clergy and controversialists, when asked to give exact information about the causes of the Protestant Reformation and their bearing upon present day theology, are at sea. There is a Catholic dictionary of no mean merit that provides controversialists on the Catholic side with data in plenty. The Protestant dictionary is intended to do the same for the other side. It is intended also, if possible, to arrest the spread of ritualism in England and the Catholic movement in the United States. Incidentally it is stated that it may "arrest the wave of indefinite religious opinion now spreading over the length and breadth of the land, and among all Protestant churches."

DRINKING AMONG SOCIETY WOMEN.—The drinking of intoxicants is becoming alarmingly prevalent among society women. It has come to have the stamp of fashion, and "whatever has the stamp of fashion goes."

Dr. Sarah Hackett Stevenson, a lady of large

medical practice and observation, has said that, "during the past ten years, drinking among American women has been steadily increasing. The increase has been greater among the wealthy classes and the younger social sets than among the lower strata of society. It is the natural result of great wealth and luxury."

Dr. Nicholas Senn, an eminent authority in medical circles, says: "There is much more drunkenness among women than is dreamed of by most people. There is a tendency to imitate the British women in this vicious habit. Upon the delicate and nervous constitution of the woman, alcohol is more injurious in its effects than upon man, and when the woman becomes a victim of alcoholism, she becomes more depraved than the man victim." Dr. Richard M. Genies says: "Have treated nearly as many cases of alcoholism among society women as I have among society men. At summer hotels and golf clubs is the practice of drinking, especially, prevalent."—*National Advocate*.

DENOMINATIONAL NAMES.—Commenting on the desire of many members of the Protestant Episcopal church to have its name changed, the *Philadelphia Telegraph* says: "As a matter of fact, no denomination is well named. That of necessity ensues from its being only a part of the whole Church, which includes all denominations. The Methodists first received their name in derision; the Baptists have a name which describes only one of their beliefs and practices, and that not the most important; the Presbyterians are called such from their form of government, as are also the Congregationalists; the Lutherans are named from an individual, and he not a Biblical character; the Roman Catholic Church, as it is universally called, since the movement to drop the qualifying adjective has made little headway, even among the writers and preachers of that faith, is limited in its name by the localizing word 'Roman,' which is unsatisfactory to many of its leaders."

"So we see that all bodies of Christians may properly quarrel with their name, if they wish to take time for such a proceeding. The better way is to use as much of their name as has been done—notably the Methodists and Quakers, whose names were originally terms of contempt—accept the common name and make it full of honor and new meaning. Men will inevitably read into the name the church's character, and whatever the name may be, it will be interpreted only in the light of its works and worth."

SUMMARY OF EVENTS.

UNITED STATES.—On the 17th inst. the Panama Canal Treaty was ratified by the Senate by a vote of 73 to 5. It must be ratified by the Colombian Congress before it takes effect. This body will probably convene next month. By its terms the "main works of the canal proper" must be begun within two years after the exchange of the ratifications of the treaty, and the canal must be open for traffic within twelve years after such period of two years; but Colombia consents, in case of unforeseen delays and obstacles, to prolong the time limit twelve years. If the canal is made a sea level canal, the United States is allowed ten years to complete the enterprise.

On the 18th inst. the Senate ratified the Cuban Reciprocity Treaty by a vote of 50 to 16 and adjourned *sine die*. This treaty, for the reason that it is a revenue measure, it is alleged, must receive the concurrence of the House of Representatives.

The Anthracite Commission has made its report to President Roosevelt, which awards 10 per cent. increase in wages of all employees from Eleventh Month 1st, 1902, when the Commission began its labors, to Fourth Month, 1903, and awards an increase of wages and shorter hours to employees generally after Fourth Month 1st, 1903. It provides that awards shall continue in force until Third Month 31st, 1906. It states that a labor or other organization whose purpose can only be accomplished by the use of law and force of society has no right to exist. The right to remain at work where others have ceased to work, or to engage anew in work which others have abandoned, is part of the personal liberty of a citizen, that can never be surrendered, and every infringement thereof merits, and should receive, the stern denunciation of the law. The Commission is of opinion that there should be

a positive utterance on its part relative to discrimination, interference, boycotting and blacklisting, and that this can be put in the form of an award, as follows: It is adjudged and awarded: That no person shall be refused employment, or in any way discriminated against, on account of membership or non-membership in any labor organization; and that there shall be no discrimination against, or interference with, any employee who is not a member of any labor organization by members of such organization. It provides for a Board of Conciliation to adjust differences, consisting of six members."

The suit at law by which the United States Government seeks to enjoin the consolidation of the Great Northern, the Northern Pacific and Burlington Railway systems under one corporation, "The Northern Securities Company," has been argued at St. Louis before a Federal judge. A summary of the railway systems involved shows that the combined mileage is 33,423, and that the outstanding stocks and bonds of the companies amount to the enormous totals of \$3,713,000,000, representing a capitalization of \$111,000,000. This action is taken to carry out the law to prevent railroads from merging and thus stifle competition.

The floods in the Mississippi Valley continue to cause great damage and anxiety, especially near Memphis. Tenn. On the 17th a despatch says: A veritable sea exists in the St. Francis and Mississippi River basins in Arkansas, extending from the one completely to the other, a distance of many miles. On the 20th it was reported that the long lines of levees that guard the river front of Mississippi and protect the vast and fertile delta region of the Gulf States from the sea have stood firm against the great flood, were believed to be in a critical condition at many points, and news of disasters from that country will not be surprising. On the 22nd the river was slowly falling at Memphis, but was rising at Vicksburg.

It is stated that Thomas A. Edison has taken out 791 patents for different inventions.

The Supreme Court of Louisiana has made a decision sustaining the right of the Legislature to pass a law providing for separate accommodations for whites and blacks in the street cars.

An expedition under the auspices of the University of California has been gathering information respecting different Indian tribes of Northern California, especially in relation to their traditions and language. Several Indians have been taken to Berkeley to have their oral traditions transcribed into the languages orally, so that they may finally be transcribed by the Rousselot apparatus for recording sounds.

A bill has passed both branches of the Pennsylvania Legislature to prevent the sale of cigarettes to persons under twenty-one years of age.

Advices from Dalton, Ga., state that five distinct earthquake shocks were felt by the residents of that vicinity on the 15th inst. On the 16th an earthquake shock did some damage at Helena, Mont.

Dr. W. D. Crum, a negro, an educated and upright man, has been appointed by President Roosevelt to be Collector of the Port of Charleston, S. C. This appointment was not acted on by the Senate, and the President has availed himself of his powers to make the appointment during its recess.

Statistics as to injuries to football players show, it is said, 12 killed and 85 injured this year, an increase of 2 killed and 12 injured over the previous year.

The number of Poles in the United States is stated to be 2,600,000, of whom there are in Chicago alone 274,000. Within the last few years 80,000 Poles have left the Roman Catholic Church and surrounded members of a distinct body under Bishop Kolowski of Chicago.

In a recent decision by the Missouri Supreme Court against the "beef trust" five large packing companies were fined \$5,000 each and costs as members of a "pool" to fix and maintain prices.

The authorities in Brooklyn, N. Y., whose attention has been called to advertisements of prize games for women, have warned them that no more professional games must be given.

There were 535 deaths in this city last week, reported to the Board of Health. This is 42 less than the previous week and 101 more than the corresponding week of 1902. Of the foregoing 279 were males and 256 females; 56 died of consumption of the lungs; 35 of influenza; 34 of the lungs and surrounding membranes; 17 of diphtheria; 18 of cancer; 23 of apoplexy; 27 of typhoid fever; 4 of scarlet fever, and 1 of small pox.

FOREIGN.—The Venezuelan Government has paid to the German Minister the first instalment, about \$70,000, of the \$340,000 pledged to Germany in satisfaction of that country's claims.

In a recent debate in the French Chamber of Deputies, the action of the Government in suppressing certain religious congregations was upheld by a vote of 300 to 257.

Premier Combes declared that "instead of love and unity among the people, the teaching congregations brought forth hatreds and alien people from the Republic," and that it was time this propaganda.

A despatch from Paris says: This vote in the Chamber of Deputies gives definite form to the present policy of the Government to terminate the existence of the teaching orders and to substitute a system of secular schools.

The agitation for reforms in Russia it is said, is said, 1st: A great increase and improvement of elementary education under popular control. 2nd: Establishment of Zemstvos, or elective local Assemblies where they do not now exist, and the grant of powers of a representative character to Zemstvos where they exist. 3d: The completion of the law by placing the peasantry on a footing of equality with the rest of the nation. 4th: A change in fiscal policy by relieving the peasantry of the certain forms of taxation. These reforms, together with the limitation of the arbitrary power of the press, the mitigation of the press censorship, constitute reasonable minimum which will satisfy the modern Russian mind.

The recent decree of the Czar, it is said, will relieve the Jews, who enjoy liberty in regard to religious rites, but are subject to many disabilities.

Cable despatches from Salvador say the effort by Consul General Chocano, Peru's representative in Guatemala City, have made possible a peaceful settlement of the differences between Salvador and Guatemala. The matter will be submitted to the American President. The Guatemalan army will be disbanded shortly. The Presidents of Salvador and Guatemala have expressed their gratitude at the mediation of Chocano.

In order to harmonize conflicting interests in Venezuela President Castro has offered his resignation to the Congress of the country.

A despatch from Melbourne says a preliminary of the wheat harvest just reaped illustrates the effect of the drought in Australia. Victoria's yield was 900,000 bushels, averaging 1.25 over the area sown, the yield in twenty-eight years.

A despatch from St. Vincent of the 22nd says volcano Soufriere on that island is belching forth black clouds, which are blown by local winds, which send the spreading plume of smoke which envelops the entire island. Electrical discharges occur at intervals during the night, while at daybreak the playing on the stupendous volcanic clouds, produces exceedingly beautiful effects.

NOTICES.

A MEETING has been appointed to be held in the Arch Street Meeting-house on First-day, the 29th instant, at 3 o'clock, at the request of Cooper, for members and attenders of Friends within reach, particularly the middle aged or ones.

WESTTOWN BOARDING SCHOOL.—For conveyance of persons coming to Westtown School, the stage trains leaving Philadelphia 7:16 and 8:15 A. M., and 4:32 P. M. Other trains are met when West Stage fare, 15 cents; after 7:30 P. M., 25 cents. To reach the school by telegraph, wire West Phone 114-X.

EDWARD G. SIMELEY

WESTTOWN BOARDING SCHOOL.—Applicants for admission of pupils to the school and for instruction in discipline should be addressed to

WM. F. WICKESMAN, Principal.
Payments on account of board and tuition, communications in regard to business should be forwarded to
EDWARD G. SIMELEY, Superintendent.
Address, Westtown P. O., Chester Co., Pa.

DIED. Near Leavenworth, Kansas, Twelfth Mo. 1902, JONAS EDGE, aged seventy-eight years, months.

His decease was a member of the Wesleyan Meeting and a former resident of Downingtown. — Third Month 9th, 1903, LYDIA E. COOPER, of Cropwell Particular and Upper Evesham Meeting of Friends, N. J., in the sixty-sixth year of age. She was much beloved by a large circle. Through her varied afflictions her mind was sustained by an unchanging trust in her Heavenly Father. Her beautiful memory to carry with her life, and the prayer that we may be more "Blessed are the pure in heart, for they shall

Messenger Service.

During the war in Cuba wide-spread attention was attracted to the story of an American merchant, if we rightly remember, handing to a young man in his employ a document with the simple command, "Carry that message to Cuba!" Taking the message without question, he carries it through all difficulties and reaches its destination in Cuba. This loyalty to service was diligently advertised over the land by hundreds of thousands of copies in a business tract, to stimulate in employees a right attitude in duty to their employers. A rejoinder was soon spread abroad on behalf of workmen wearing out their lives in diligent service, asking that such a self-sacrificing loyalty should work in theirs, as well as one way.

Between the faithful and our heavenly Master the golden rule eminently does work reverently. His sacrifice for us wins ours for our Lord. But who is our Garcia to whom our work asks us to carry his message. Who is our strongly entrenched by nature and so hard to reach, to whom we are called upon to deliver messages of the inspeaking Word? In the man of the inmost recesses of our heart our self-will at the secret place of obedience. To our hidden selves we are soon to admit the witness of the Spirit, and our wills to obey Him. There is no greater test of our loyalty to our Master's business. Greater is the inward taking the Divine message home unto obedience, than the travel of carrying it to others. But the first must be in the qualification for the second. He who cannot deliver the Word of Truth faithfully in the place of obedience in himself, is not worthy to be his ambassador elsewhere.

For "THE FRIEND."

Our Preparation for the Annual Assembly.

"The preparation of the heart in man as well as the answer of the tongue is of the Lord;" and so in the ordering of Infinite Wisdom the needs of the Church Universal are provided for in the influences of the Divine Spirit upon the hearts of individual members—moving them in an exercise and travail of soul known only to those thus exercised and to Him who inspired them. Thus it is that the living in Israel are humble before the Great Head of the Church in anticipation of service which may be called for, either in silent travail of spirit or in suffering with and for the suffering seed—that when the tongue is loosed it may be in the "demonstration of the Spirit and in the power of God." Such I believe are the feelings of not a few who are concerned and willing to take their share of suffering and service in our approaching annual assembly—whose hearts are lifted, and whose prayers in secret arise to Him who watches by night as well as by day over his own; and will in his own good time and way bring to pass "whatever is for the glory of his name and overrule the rest."

As those who have been faithful in their day have been removed from the church militant to the church triumphant, leaving our ranks thinned and an added weight of responsibility upon those who remain; may there be a willingness begotten and a preparation experienced to take our share of the burdens thus laid down:—as "good stewards of the manifold grace of God," I would salute in the love and fellowship of the everlasting gospel those whose hearts are thus struggling with a weight of exercise which they feel wholly unable to carry, and which they fain would lay at the Master's feet. To these I would hold forth the comforting, consoling language: They who suffer with their suffering Redeemer shall in his own good time "reign with Him." May our confidence in the strong arm of Israel's God be renewed, and having been made willing patiently to wait and quietly to hope, we "shall yet see of the desire of our soul and be satisfied."

BENJAMIN VAIL.

He that winneth souls is wise.—Prov. ii: 30. The revised version renders this passage, "He that is wise winneth souls." The two statements are equally true. There is but one secret of soul-winning—the Holy Spirit's co-operation with us. As a great soul-winner used to say, "Be sure that you co-operate with the Holy Spirit." Wherein does our co-operation with the Holy Spirit consist? (1.) When we become the subjects of his influence and of his gracious operation. (2.) When we fully share his purpose. (3.) When we actually join him in His work.

For "THE FRIEND."

Worldly Compliance.

It was a noteworthy feature in the teachings of the Saviour of men, when He forewarned his disciples, that the religion which He introduced, should not be popular. For the worldly, the ambitious, the self-pleasing and the voluptuous, it had few attractions. Instead of alluring followers by promises of being flattered and caressed, or holding out to their views the friendships and honors, the riches and pleasures of this world, He plainly told them that they should be hated of all men for his sake, and that in making choice of Him and his religion, they must be prepared to endure the loss of everything else, to be despised and persecuted, and accounted as fools. "If ye were of the world," says He, "the world would love its own; but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you."

Here the cause of the hatred is plainly stated to be *separation from the world*; not being of its spirit, nor following its fashions and customs, which is ever the case with the sincere disciples of Him who declared, "My kingdom is not of this world." The apostles understood it so, and such force had their Master's teaching on their minds, that they wrote in very strong terms to the believers, respecting the subject.

Gentle and meek as was the disciple who leaned on Jesus' breast, yet such was his zeal against the spirit of worldly compliance, that he says: "Love not the world, neither the things that are in the world. If any man love the world, the love of the Father is not in him. For all that is in the world, the lust of the flesh, the lust of the eyes, and the pride of life, is not of the Father." Again, "We know that we are of God, and that the whole world lieth in wickedness." Another apostle says of those who are lost, that the god of this world hath blinded their eyes, lest the light of the glorious gospel of God should shine unto them. The Apostle James makes a great part of pure and undefiled religion to consist in keeping ourselves unspotted from the world; and another enjoins, "Be not conformed to this world."

The antagonism between the world and the Christian, as thus set forth by our Lord and his apostles, is so broad and entire, that the dullest comprehension cannot fail to perceive it; yet there is a studied and systematic effort, even under the guise of religion, to bridge over the chasm which divides them, to reconcile their opposite and hostile views and practices, to smooth down or fritter away palpable differences; and, regardless of the express declaration of our Lord himself, to inculcate the idea that it is possible to serve two masters—God and mammon.

Many listen to these flesh-pleasing sugges-

tions; and not liking to give up religion altogether, and yet, averse to the cross and self-denial, and desirous of shunning them, they readily drink in the plausible and accommodating theories which propose to help them to heaven without renouncing the world, and thus to make them heirs of two kingdoms as widely different as light and darkness, and Christ and Belial. Of the teachers of such errors, the apostle says, "They are of the world; therefore they speak of (or in favor of) the world, and the world heareth them."

The teachers and the hearers are of the same spirit, and to both the doctrine of our Lord is very distasteful, when He says, "Whosoever doth not bear his cross, and come after me, cannot be my disciple." "If any man will come after me, let him deny himself, and take up his cross daily, and follow me. For whosoever will save his life, shall lose it; but whosoever will lose his life for my sake, the same shall save it. For what is a man advantaged, if he gain the whole world, and lose himself, or be cast away."

It is not a little surprising to observe what ingenuity is evinced in endeavoring to appropriate these unmodish but honest tests, and yet to indulge in the customs and fashions, the grandeur and show, the vain conversation, empty compliments and hollow friendships of the world, as though the march of refinement, and the social improvements of our day, had rendered the saying of Christ and his apostles obsolete, and changed their plain meaning.

In our own religious Society the tendency is obvious; and not a few, perhaps, argue the more strenuously in favor of the modern compliances; because they are inwardly sensible their cause is a weak one, and feel that they have need of all the courage and countenance which bold assertion and sophistical reasoning can give them, to allay the uneasiness which secret compunctions of conscience often create. They would gladly be convinced by their own arguments, that the disregard of plainness of speech, behavior and apparel, and indulgence in costly and showy furniture and living, etc., are not incompatible with being good Friends; but after they have exhausted all their resources, there is still in the deep recesses of the heart a consciousness which no argument can wholly efface, that it is not so. We would affectionately counsel such not to reason against the convictions with which they are favored, however weak and faint they may be, lest the visitations of the Spirit of Truth be gradually withdrawn, and they left to the guidance of their fallen reason, which, in religious matters, "leads to bewilder and dazzles to blind;" and thus they realize the saying of the dear Saviour, "If the light that is in thee be darkness, how great is that darkness."

Friends did not take up their testimony against gayety and grandeur, and other worldly compliances, from any affectation of singularity, or desire to mark themselves by a peculiar badge, but from a firm persuasion, wrought in the mind by the operation of the Holy Spirit, that it was the Divine will, they should thus evince their non-conformity with the world and its ways. Many who had a birth-right in the Society, and many others who have been convinced of its principles, and been brought into it, have found, as they kept under

the power of the Spirit of Truth, that their only way to peace, though greatly in the cross, was by being obedient in these things; and it would be presumptuous to suppose that the Lord would call for obedience in matters which were of no importance. Those who have known this work of grace in themselves, will readily admit that nothing so effectually humbled the pride of the heart, and subdued the stout and stubborn will in them, as the humiliating process by which they were brought to submit in these little and despised things, as they are considered by many; yet painful as it was, they found it a blessed work to them, and the day of obedience one of sweet peace and consolation. It is often by weak things and foolish, in the eyes of men, that the Lord chooses to lay low the lofty, and humble the proud; and nothing which He pleases to use as a means of carrying on the work of salvation, can be esteemed, with impunity, of light obligation or importance. The Scriptures moreover show, that prophets and apostles were commissioned by the Most High, to give commands to the believers on the subject of dress, and our Saviour himself did it in respect to language also; and will any one presume to say, that subjects thus noticed by the Almighty, are of trifling moment?

(To be continued.)

Memorizing the Bible.

A short article on the above subject in THE FRIEND, Third Month 14th, has awakened thoughtfulness in the mind of the writer, as containing some sentiments not entirely in accordance with the long established belief of Friends, that the letter of Holy Scripture is ever to be held in subservience to the Spirit which gave them forth; also as regards the proper qualification for religious labor, and for the performance of acts of devotion, or of worship. We should seek familiarity with the Bible for our own instruction, believing as is therein declared that, "All Scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness, that the man of God may be perfect, thoroughly furnished unto all good works."

The daily reading of the Holy Scriptures in our families, and in private, with our minds reverently turned to their Divine Author is highly profitable and necessary for us, that we may be instructed and established in our most holy faith. As we are thus gathered inward unto Him, our true Teacher, and when about our daily calling, how frequently are the many comforting promises contained therein, applied refreshingly to our minds, and obscure passages, made clear, not by an intellectual effort to memorize or comprehend them, but as these saving truths are freshly opened to our understandings by Him who hath the key of David, "He that openeth and no man shutteth; and shutteth and no man openeth." without which the Scriptures remain much as a sealed book to us.*

* I do not wish to be understood as objecting to the committing of portions of Scripture to memory by the children in our schools, as we wish them to become familiar with, and have a due reverence for it, yet I think that the wholesale committing of the Bible to memory [on some of the motives alluded to] might induce an undue dependence upon the letter.

Can we suppose that prayer is any more acceptable to the Divine Being, when couched in "high thoughts and noble language," unless it be from the immediate promptings of the Holy Spirit, than in the most simple form of speech, or, than when it ascends in the breathings of soul unto Him, since He knows our hearts and knows just what we stand in need of before we ask Him? Only that prayer which is of his begetting is accepted of

"Prayer is the soul's sincere desire
Uttered or unexpressed,
The motion of a hidden fire
Which trembles in the breast.

"Prayer is the burden of a sigh,
The falling of a tear,
The upward glancing of an eye
When none but God is near."

In our desires and in our efforts to "help others," may we ever keep in view the true ground of all availing labor. It was the experience of a valuable minister of a former generation that in her public ministrations she could not depend upon "memory," "or recollections of beautiful passages of Scripture" in anything short of the fresh openings of truth from the living source of supply. As I have heard a minister say in a public meeting, "I might think of a hundred passages, but of them might be what the Lord wants to quote."

To seek familiarity with the Bible in order to have it "ready for use," "in helping others," is departing from the true ground of religious labor among Friends.

A few steps further on, and we have the "Bible training school." So may we respond too much upon the letter, remembering that "The letter killeth, but the Spirit giveth life."

Our Saviour said, "Search the Scriptures" (or ye search the Scriptures) for in them ye think ye have eternal life; and they are which testify of me. And ye will not come to me that ye might have life."

As our dependence is upon Him, we are furnished with matter suitable for the occasion, and adapted to the states of others; we are called upon to minister to their souls in public or in private, by the good Remembrancer, and without this fresh anointing the best of words, or what we might think the most appropriate Scripture passages, when in our mouths, little better than as "Sounding brass or a tinkling cymbal."

The writer has no sympathy with those who called "Higher Criticism" which seeks to undermine, and call in question the authenticity of some portions of the Bible, and to deny the reality of some of the miracles there recorded, believing it is the outward revelation of God to man, and was all written by our instruction, by "holy men of old" who were moved by the Holy Ghost."

If we admit doubts as to the truth of the part, we are in danger of finally coming to discard the whole, and to find ourselves involved in the mazes of skepticism.

So, while highly valuing the Sacred Scriptures, let us endeavor to look unto Him, who giveth life to the words, and who reveals their hidden meaning and seals our understandings, so that when we come to know the saving truths of the Bible

ely in the literal knowledge thereof, but realized in our individual experience, and a be prepared through Holy Help to be fruitful unto every good work.

SARAH A. HOBSON.
INONA, Ohio, Third Month 25th, 1903.

There is a service in having the weakness of the extract in question pointed out, chief object in quoting it was to encourage teachers and learners of Scripture to give attention to the committing of verses to memory rather than to so much of the unauthoritative dissecting of them in classes for unfold their spiritual meaning by the natural understanding. Let the mind learn to remem-ber the proportions of what the Scripture says, and to the true Opener who it spiritually is. Of course the motive of getting verses for praying to Him who needs not our aid, could not be entertained by a sound mind. In public vocal prayer, however, the aid, as in preaching, words have to be used, and have been careful beyond others that the language should be Scriptural, and to the fast form of sound words,"—than none are deemed safer or sounder than those of Scripture. That our quotations may be correct, and that we may be able to give every man a reason for truths held by us, the memorizing of actual words of Scripture does useful under right anointing, without impudently to that wholesale extreme which the tract is open to, and against which we have guarded it.—Ed.]

History of the Friends' Registers.

(Continued from page 291.)

REGISTRATION IN AMERICA.

A system of registration of births, deaths, and marriages was established by the Friends who emigrated to America on substantially the same basis as those existing in England. In the earlier Yearly Meetings this system has been maintained with much regularity to the present time. The Friends' registers in the United States are often appealed to in connection with the transmission of property and other civil proceedings. In the United States the civil registration of births, deaths, and marriages is regulated by State legislation, and there is some diversity of practice between the different States. The official registry in New York, Pennsylvania, and other States is very efficient, and nearly all public officers, under the title of vital statistics, similar to those published in Great Britain by the Registrar-General of England, and of Scotland.

The new Uniform Friends' Discipline throws the duty of denominational registration upon the Clerks of the Monthly Meetings, in the following section:—

"The Clerk of a Monthly Meeting shall be appointed by the meeting on the nomination of a committee named for the purpose. He shall forward to the Quarterly Meeting such abstracts as requires its attention, and such abstracts of the minutes of the Monthly Meeting as may be necessary. He shall keep (in a book printed for the purpose and provided by the Quarterly Meeting) a correct record of the membership, including all births, marriages, deaths, transfers, and he shall annually furnish to the Quarterly Meeting such statistical infor-

* These figures are to 30th, 4th mo. 1857, only.

mation as the Yearly Meeting may direct, in-cluding the recording, deaths and transfers of ministers. Where found desirable, a Recorder may be appointed to assist the Clerk in keep-ing these records."

PAST USE OF FRIENDS' REGISTRATION FIGURES.

The figures presented (above) in our paper have never before been published in their entirety.

The idea prevails in some quarters that figures are an almost necessarily unspiritual medium through which to approach religious subjects, but that is hardly the view put before us in Holy Scripture, where the care with which ancient figures and registers have been preserved is observable. The Old Testament was not written at a time when authors were familiar with the scientific treatment of figures, but according to the usages of those early days, the reader cannot but be struck with the numerous entries it contains of dates, births, and genealogies. One volume in the sacred Canon is the "Book of Numbers," and how many chapters in other books, now but little read, are occupied with genealogical details; yet all these form parts of that body of sacred writing which is "profitable for instruction in righteousness." The New Testament opens with a genealogical table, and the early Christians seem to have been wont from the first to count the number of names on their rolls; even Paul's imperfect baptismal statistics, in the 1st Epistle to the Corinthians, possess a suggestive value in unconsciously marking the apostle's slight account

of the place of the outward ceremony, in contrast with the spiritual transaction which it symbolized, and sometimes accompanied. Correct figures are the records of facts, and facts are the most valuable data from which to infer the spiritual condition of a community. The principal object of the Queries which have occupied so large a place in the discipline of the Society was to ascertain facts under a number of specified heads, significant of the spiritual life of congregations. Useful therefore as these registers have been in the past there is reason to think their service is far from being exhausted, and that no apology will be required for questioning their long columns of figures in regard to their more religious and spiritual lessons.

REMARKS.

Whilst the accompanying Table has been prepared with great care, it is not submitted as more than approximately correct.

SUMMARIES OF RETURNS FOR THE FIVE FIFTY-YEAR PERIODS.

BIRTHS.	DEATHS.	MARRIAGES.
1650-1699 . . . 38,460	39,352	9,614
1700-1749 . . . 36,822	49,860	8,209
1750-1799 . . . 31,704	37,624	5,487
1800-1849 . . . 27,988	31,488	4,166
1850-1900 . . . 10,588	18,371	3,207

The foregoing figures will principally appeal to three classes of readers—the historian, the student of vital statistics, and those interested, from religious and moral sympathy, in the welfare of the Society of Friends. We

have already spoken of the uses made of these figures by the historian and the statistician, and do not propose to retrace in any detail ground already occupied.

THE LOW DEATH-RATE.

One interesting feature of the register of deaths is the very light mortality of the past twenty years, during which there has been a substantial increase in the membership, with very little increase in the annual return of deaths.

"What is the spiritual inwardness of this light mortality? Is it the statistical ratification of the Psalmist's promise, "With long life will I satisfy him" who "dwells in the secret place of the Most High," and thus an occasion for thankfulness? Or is it the token of a comfortable life amidst the resources of civilization, untroubled by strenuous labor in the Master's service? How few years did it take in the Commonwealth days to terminate the service of the majority of the forty young men preachers, worn out with work and suffering, through whose tireless labors the Society was chiefly gathered?

But leaving these searching questions unanswered, what are the broad denominational lessons of the figures before us?

An outsider approaching them for the first time would be very likely to say, these are the records of the representatives of a spent or waning force. Certainly they are not calculated to minister to sectarian pride. The low death-rate just referred to, partly rises from the smaller proportion of infantile life amongst Friends than in the general population—and in other directions careful statisticians would caution us against drawing deductions without remembering other facts of which these figures do not take cognizance. For instance, through several generations Friends gave the strongest proofs of the extreme value they attached to their marriage ceremonial, and yet they allowed the marriages in their meeting-houses to dwindle away from generation to generation; and had it not been for the changes introduced in the middle of the nineteenth century a Friends' marriage ceremony would now be a rare event indeed: the force of circumstances had, however, at last induced the Society to adapt its usages to the needs of the time. The weddings by the Friends' ceremonial have nearly doubled in the last forty years. Taking two extreme years—in 1863 there were but forty-nine, in 1898, one hundred and nine. It is still a day of small things as regards these marriages; but the illustration may encourage us to turn to other lessons from these figures, not in the spirit of despair, but of hope.

(To be concluded.)

The record book of every Christian's life has some pages in it which were written at the bidding of that severe teacher, Disappointment. Tears may have blotted and blurred the page at the time. But as we turn over to that page now and read it in the light of experience we can write beneath it: "Thank God for those losses! they were my everlasting gain. Thank God for those bereavements! they have saved my soul from being bereaved of heaven. 'All things work together for good to them that love God; to them who are the called according to his purpose.'"

WEEK-DAY WORSHIP.

[Author unknown.]

Behold us Lord, a little space
From daily tasks set free,
And met within thy sacred place
To wait awhile on Thee.
Around us rolls the restless tide
Of business, toil and care;
And scarcely can we turn aside
For one brief hour of prayer.
Yet these are not the only walls,
Wherein Thou may'st be sought,
On humblest task thy blessing falls,
In truth and patience wrought.
Thine is the loom, the forge, the mart,
The wealth of land and sea,
The worlds of science and of art,
Revealed and ruled by Thee.
Then let us prove our Heavenly birth
In all we do and know,
And claim the kingdoms of the earth,
For Thee and not thy foe.
Work shall be prayer if all be wrought
As Thou wouldst have it done,
And prayest by Thee inspired and taught,
Itself with work to be one.

The Confessors of Peace from the Second Century to the Era of Mahomet.

IV.

In the middle of the succeeding century, during the two years' reign of the Emperor Decius (A. D. 249-251), there raged a persecution which, starting at Rome and quickly extending to the provinces, far surpassed that which had prevailed under Trajan. Decius had wrested the throne from Philip, surnamed "the Arabian," who had shown much favor to the Christians, and so his successor seemed to think that this fact was a justification for an attempt to root out the hated religion. It came upon the church in a state of prosperity, unprepared, so that again many succumbed to the dread ordeal. "In every city, on the receipt of the imperial rescript, a day was appointed for the Christians of the place to present themselves before the magistrates, renounce their religion, and offer sacrifice at the altar. Many stood firm, but very many yielded. Those who refused to sacrifice, after being repeatedly tortured, were thrown into prison, and tormented with hunger and thirst. Such as sought refuge in flight had their goods confiscated, and were forbidden to return under pain of death." Cyprian, being at that time bishop of Carthage, where the persecution was very violent, had much to say in the way of exhortation to the "true and spiritual soldiers of Christ," to the "soldiers and comrades, steadfast in faith, patient in suffering, victors under tortures," while on the other hand he lamented grievously for the many who had lapsed. When the hand of persecution was withdrawn, the position of those who had yielded, and sought to be restored, caused much trouble in the Church. It was through those who had stood faithful, the *confessors*, that many of the weak ones came back into the fold, there being given them "certificates of repentance" by way of recommendation to the compassion of the brethren. These were often too easily granted, and hence was introduced an element of weakness which became felt when, a generation or two later, the State stood in need of soldiers after the carnal order.

It may be worth noting, in connection the soon terminated earthly career of the perial persecutor, that after winning renown in a campaign against the Persians, he was slain in an action with the Goths, who had invaded his dominions. In advancing against them, Decius, with the greater part of his troops, became entangled in a morass, where being surrounded by the enemy, he perished under a shower of darts.

It has been shown that Trajan was a blunderer of the spread of the Christian faith. His successor, Hadrian, on the contrary, was generally according toleration to the Christians, showed exceeding animosity towards the Jews. This episode of his reign is suggestive. Hadrian's purpose, unmistakably, was one of revenge. The same wicked tribute of our fallen nature has instigated more than one war, even between professedly Christian nations of our own times. In his manhood, as a general under Trajan, Hadrian had suppressed a noted and widespread rebellion of the Jewish people in the region extending from Africa to Mesopotamia. In the course of this great outbreak, it was upwards of half a million of their Gentile low subjects had been put to death by the Jews, often with accompaniments of extreme cruelty. In coming to the throne, Hadrian immediately evidenced his vengeful intention by prohibiting circumcision, the observance of the Sabbath and the reading of the law, and he likewise declared the purpose of converting Jerusalem into a Roman colony. The manner of this fulfilment was peculiar.

"The Jews endured this tyranny for a number of years," say Backhouse and Taylor in their valuable compilation, "but the persecution was deeply rooted in the heart of the nation that in its darkest hour the Messiah suddenly appear. They fondly deemed their hopes fulfilled when, in the year 131, a tender named Bar-Cocheba presented himself as their deliverer. This man assumed the name which means the Son of a Star, and the prophecy of Balaam, and his pretensions were supported by the most popular and learned Rabbi of the day. The Jews who had not embraced Christianity flocked to him. The Gallileans and Samaritans joined them. Palestine was filled with violence and bloodshed. But the insurgents could not stand against the Roman legions; the false Messiah was slain in battle, and the Rabbi was slain, whilst the city of Jerusalem itself once more laid in ruins. The emperor came into effect the threat which he had uttered fifteen years before; he settled a colony in the city under the name of Elia Capitolina, erected a temple to Jupiter Capitolinus on the site of the Holy Place, and one to Venus at the spot where Jesus was crucified. They were forbidden under pain of death to enter the new city, and the more effectually to deter them, the figure of a swine in marble was set over the gate leading to Bethlehem. By the estimate of the conquerors, five hundred and eighty thousand Jews fell in the catastrophe."

The Talmud recognizing the deception practiced, changed the name of the leader Bar-Cocheba (son of the lie), and called him by the name of Bar-Kosba, and the coins which he had had struck to celebrate his successes, "rebel money" It is said Bar-Cocheba put to death all Christians who

join his standard. Indeed, in every reign, in speech and action, he was one of those who prophesied should be (Mark xiii: 21, 22), and by his very deeds set forth more prominently the virtues of the Perfect One, the Hope of Israel, the Anointed. (Schaff's "Religious Encyclopedia.") Also Mosheim, quoting Justin Martyr.)

A matter of comparison in connection with the preceding siege and destruction of Jerusalem by Vespasian and Titus (A. D. 70), recorded by Josephus that "the slaughter of them [the Jews] exceeded all the nations that men or God ever brought to the world," the number of those who died during the siege being given at one million one hundred thousand, while the prisoners taken during the course of the war were estimated to number ninety-seven thousand. It may be remembered that the Christians at the time heeding the solemn warning of their Lord had timely found refuge at Pella and neighboring villages on the far side of Jordan, some miles south of the Sea of Galilee.

It is a result of the insurrection of Bar-Cochba is believed to have turned ultimately to the advantage of Christianity, inasmuch as the Jews of Christ kept altogether aloof from the tumult while the lingering adherence, on the part of a section of the church, to the Jewish traditions and usages came to an end. The stormy way by which Constantine held the place of empire and maintained it was there was one by no means conducive to progress in the arts of peace. Going as a man to Britain to assist his father, the emperor Constantine, in the subjugation of the island's northern "barbarians," and Constantine dying at York in the year 306, there began a long warring contest of seven centuries, between Constantine and the five emperors Augusti and Cæsars, before the end of them, his brother-in-law Licinius, was defeated in a battle near Adrianople (A. D. 323), and the heir expectant became the emperor of the Roman world.

Until these wars were those for the succession of the one in Britain excepted, which was a war of conquest. Now, in the year of our Lord 900, the sixty-third year of Victoria, the British Empire and Empress of India, if we think concerning the wars that occurred during the reign of that benevolent sovereign, we find that they were no less in number than fifty, and all of them wars of expansion and conquest and of "benevolent assimilation" of trade and territory. There were wars with China, which had to be made to receive opium, but whose people are owing to our Christian cities with their growing recoil; the wars with Burmah and various presidencies and native states of India; the wars with Afghanistan, Russia, Egypt, Persia, and the Basutos, Kaffirs, Matabeles, and other tribes and kingdoms. The emperors Augusti and Cæsars for the rule of the world, they are still here, as they were sixteen centuries ago when Constantine was ascending for a crown; there is the emperor at Berlin, and his brother on the throne of the one on the Neva and a fourth the ruler of a mere remnant of the empire's greatest empire; the power that has been centred on the Seine, controlling the world, which Constantine was the prefect

during the first six years after his father's death, and, finally, the sovereign of many years' reign, but, alas, of many wars! All of these, notwithstanding the methods and tribunals of amity that are offered, maintaining great armies and ships of war, and in a state of instant preparedness for attack, do they not together present a condition as barbarous and anti-Christian (I speak not of the personal character of the rulers, but of their governments) as that which history presents to us as the state of Europe in the early years of the fourth century when less and less frequently was heard that faithful declaration—"I am a Christian, therefore I cannot fight?"

(To be continued.)

Our New Industrial "Institute for Colored Youth."

The cause of negro education was given a great forward impetus among the city's thinking people on Fourth day evening, the 25th ult., when at a meeting in Witherspoon Hall, held in the interests of the Institute for Colored Youth, the need of enlightening the black man, the means of doing so, and the outlook for the movement's success were discussed by Booker T. Washington, the enlightened counsellor of his race; Charles Emory Smith and Hugh M. Brown. We are indebted to the Philadelphia Press for the best report of the interesting occasion.

For sixty-six years the school has been in active operation in this city. It was founded by the Society of Friends, in 1837, through a fund bequeathed by Richard Humphrey, one of their number. At first it was located in Lombard street, but in 1866 it was moved to Ninth and Bainbridge streets.

Now, the institute, having reached a growth in keeping with the advance of years, is to be moved to Cheyney, in Chester County. A farm of one hundred and sixteen acres has been bought there, upon which are to be erected twelve buildings.

Besides academic branches—above them, rather, trades are to be taught—carpentry, brick-laying, shoe-making, printing, tailoring, type-writing, dress-making, millinery, cooking and so on.

The general idea of the rural location is in accord with the views of Tuskegee's famous founder, Booker T. Washington.

Warmly greeted by the large audience, in which were many of his own race and many Friends, whose society still holds to their trust, B. T. Washington expressed these views. After declaring his belief in the future success of the institute, he said:—

"The race throughout the country, and especially in the South, is in need of teachers, not only teachers who have knowledge of books, but such knowledge of methods as will directly connect the work of the school-room with the actual condition of the people in their homes, their churches, and their places of labor. In the first place, a careful study of the actual home life and the opportunities for support should be made, then as far as possible our methods of education should be bent in the direction of actually meeting these needs."

"I am exceedingly pleased to know that it is the plan of the trustees of this institution to take it out of the immediate environment of

the city and place it in the country in the midst of trees and birds and flowers and vegetables where the students trained in it can come into immediate and direct contact with the soil. All races who have gotten upon their feet have started on the soil in its ownership and intelligent and skilful cultivation. In most cases my race is at its best in the country; in too many cases it is at its worst when in contact with the severe competition and many temptations of large and complex city life.

"I want to see the black boy graduate from the public school, high school or college, and then possess that dogged determination and persistence which will make him willing to begin if necessary in a furrow without shoes, without hat, without coat, and remain there until he has wrung success from the soil.

"I believe thoroughly in the most complete form of academic and literary education, but we must remember that mere literary education increases an individual's wants. Unless while these wants are being increased we are able at the same time to increase the individual's ability to supply these increased wants along lines at which he can find employment we are in danger of not reaping the best results.

"With us as a race at the present time it is not so much a question of getting knowledge into our heads as it is a question of gaining the kind of knowledge that will have an immediate and effective market.

"To deal practically and directly with the affairs of my own race, I believe that both the teachings of history, as well as the results of every-day observation, should convince us that we shall make our most enduring progress by laying the foundations carefully, patiently, in the ownership of the soil, the exercise of habits of economy, the saving of money, the securing of the most complete education of hand and head, and the cultivation of Christian virtues.

"I know no other road. If I know how to find more speedy and prompt relief I should be a coward and a hypocrite if I did not point the way to it.

"As a slave the negro was worked. As a freeman he must learn to work. There is a vast difference between working and being worked. Being worked means degradation; working means civilization. There is still doubt in many quarters as to the ability of the negro unguided, unsupported, to hew his own path and put into visible, tangible, indisputable form products and signs of civilization. This doubt cannot be much affected by mere abstract argument, no matter how delicately and convincingly woven together.

"Patiently, quietly, doggedly, persistently, through Summer and Winter, sunshine and shadow, by self-sacrifice, by foresight, by honesty and industry, we must reinforce argument with results. One farm bought, one house built, one sweetly and intelligently kept, one man who is the largest taxpayer or has the largest bank account, one school or church maintained, one factory running successfully, one truck garden profitably cultivated, one patient cured by a negro doctor, one sermon well preached, one office well filled, one life cleanly lived, these will tell more in our favor than all the abstract eloquence that can be

summoned to plead our cause. Our pathway must be up through the soil, up through swamps, up through forests, up through the streams, the rocks, up through commerce, education and religion.

"The Ten Commandments and the Golden Rule were written centuries ago, but as yet mankind has not come up to the full requirements of these precepts, yet we do not advocate the blotting out of these laws because of our failure to live up to them."

Charles Emory Smith's remarks dealt more with the national importance of the negro problem. He said in part:—

"No other nation faces such a problem. England has a homogeneous population, except in her dependencies, which are only dependencies and are not a part of the body politic of the Kingdom. So has France. So has Germany. Even the dual Empire of Austria-Hungary, with its diverse races, has no such broad radical division, and even there the complex system is held together only by the life and authority of the aged emperor.

"The race problem of the United States is greater and more serious than that of any other land. Some of our people have thought we were taking a great burden upon ourselves in taking the Philippines, with its eight or ten millions of alien people. But we never have proposed to make them an integral part of the State. We have never proposed to introduce them into the body of citizenship, and the question of dealing with them, delicate and difficult as it may be in some aspects, is nothing compared with the question of dealing with the colored people here on our own soil and under our special complications.

"Whatever doubts or difficulties there may be on other points there can be no doubt about the primary duty of doing everything in our power to educate and uplift this race. That work of education lies at the foundation of their progress. If they are to have political advancement they must be fitted for it. If they are to have a fair chance in life they must be prepared for it. That duty comes home to us. The blacks are chiefly located at the South, but that does not make our obligation any less. They were emancipated by our act. They were admitted to citizenship by the amendments which we passed. They are the wards of our nation and their care is our care.

"This institution which provides for their education to the largest extent within its means is a direct fulfilment of that obligation, and the more it is strengthened and the broader its influence the more we are discharging a sacred duty."

H. M. Browne's address was a straightforward, practical talk on the advantages of practical over theoretical knowledge. He is a graduate of Princeton; but, he said, the work he had to do to gain his instruction was of more value to him in the end than the instruction itself. He displayed a chart by which it was easy for the audience to accept his views regarding the superiority of first hand facts over those gained by reading of others' work.

The negro, Hugh Browne said, would have to learn for himself the practical, even primitive facts necessary to his trade or profession.

Isaac Sharpless, president of Haverford Col-

lege, was chairman of the meeting. While no direct appeal was made for funds, the program invited contributions towards the completion of the Cheyney Institute. Gifts of buildings or money, it was announced, might be made to Walter P. Stokes, the treasurer, of 217 Market street.

FOR "THE FRIEND."

Berachah.

The valley of Berachah signifies Blessing. The valley was so called where Israel under King Jehoshaphat assembled to bless and praise the Lord, after He had miraculously delivered his people from Ammon, Moab and Edom (2 Chron. xx: 26).

It is a lively type of those spiritual joys into which the Christian is at times led, through paths of sorrow, suffering and trials. Many are the lessons in Holy Scripture by which the Lord would instruct us to be patient under suffering, that we may in hope look beyond and be made partakers of the joy. This path which to us is the way of the cross, is that which the Captain of our salvation trod on his way back again to eternal glory; a path culminating on Mount Calvary; and He now calls on his disciples to follow Him, as He by his Spirit leads them in the way.

Many poor pilgrims on life's highway are, in the inscrutable wisdom of Him who doeth all things well, at times depressed by an overshadowing gloom; to them it is a sore time of need, when they find themselves to be poor in spirit, compassed by their own infirmities, the secret besetments and buffetings of the enemy ever recurring like the waves of the sea on the sandy shore; their fellow pilgrims seemingly all unconscious of these trials of spirit through which they are passing, and they themselves bereft, like Job, of the conscious support of the Divine arm on which they would lean. Yet "the Lord will not cast off forever; though He cause grief, yet will He have compassion according to the multitude of his mercies. For He doth not afflict willingly nor grieve the children of men" (Lam. iii: 31-33.)

The Lord is with these in the way, though they may not see Him. "In all their affliction, he is afflicted, and the angel of his presence saves them."

Thus was it with Jacob who long mourned for Joseph as lost, but his sun set in a cloudless sky, and through faith he perceived the glory beyond. The children of Israel, too, suffered affliction in Egypt, their sighs and groans reached the ears of the Lord of Sabaoth, still their troubles increased, until helpless, they cried to God for deliverance from the army of Pharaoh, and the Lord stretched forth his arm, and made to them a path through the Red Sea. Leaving all their fears and troubles behind them, the rising sun beheld them filled with exultation and joy.

Jesus was "a man of sorrows and acquainted with grief." At Lazarus' tomb Jesus wept tears of sorrow and sympathy. He by his Spirit in the prophet king affirms, "It is better to go to the house of mourning than to go to the house of feasting." . . . "Sorrow is better than laughter; for by the sadness of the countenance the heart is made better" (Ecc. vii: 23). And to prove that the house of mourning is very nigh to that of inward joy

and blessing; the Lord Jesus said, "But are they that mourn; for they shall be comforted."

The Apostle James plucks this fruit of sympathetic sorrow with others in their afflictions, as one of the choicest fruits of religion, and as a sample of them all. "It is more blessed to give than to receive." "It is more blessed to give than to receive." "It is more blessed to give than to receive."

Wouldst thou then a blessing seek for thyself? Why then stand so long idle in the market place? Is it because no man has hired thee? To the attentive ear the word of Him who knocketh at the door of our heart are neither few nor seldom. He did once enjoin that we should pray that laborers might be sent into the harvest, is he now to send the workers, willing to do his word, willing to do his will. All are his, are homes where the glory of the light has not streamed in as it had done.

Bereavements, misfortunes or follies brought sorrow there. Even though sorrow was the direct effect of sin, our Lord Jesus Christ in mercy forgave, and sweetly said "Go and sin no more."

Why not then be Christ-like, as the Christian means? Nor should we let worldly notions of rank, culture, riches, estate deter us from thus exercising towards all when the Lord puts it in our power to do so. "Blessed are the merciful for they shall obtain mercy."

Ever watching the pointings of the Master, our hands shall soon be fully engaged, and our own sorrows lightened, if not altogether taken away, in thus laboring with the Lord. May we not then hope to be comforted through mercy, with these to whom he said: "Inasmuch as ye have done it unto the least of these my brethren, ye have done it unto me." W. W.

"As becometh saints." Beautiful expression! It gives in one touch the deportment, behaviour, rule of Christian life as a thing suited to the character of saints, applies to everything we do in our honest conversation.

The need of seed-time and harvest has been recognized in the case of the Christian; he cannot be forever giving out; he must be taking in. A most important part of his experience was that gained in his previous to his great life work, and he was Mt. Sinai. The great prophets that followed him were often alone with God. John the Baptist had his season of preparation away from the haunts of men, and he had his forty days in the wilderness. The silent hours on the tops of the mountains. John, the Evangelist, had his Patmos; Paul, his Warburg; and one of the greatest of the early church, monasticism, was out of the abuse of what is otherwise a useful and healthful practice; temporal separation from the visible world in order to draw nearer to that kingdom which is within.—Lutheran.

great rival to God in the human heart love of this world. The very gifts of bounty which were meant as a remedy of love we, by our selfishness, have turned to a source of temptation and degradation. The world was given to us as a servant; it was to become a master; and the service which was ordained to help us up to God was allowed to become a tyrant to drive us from Him.

A Scottish nobleman once, seeing an older brother of his establishment with a somewhat threadbare coat, made some passing remark on its condition. "It's a verra guid coat," said the honest old man. "I can not say with you there," said the nobleman. "It's a very good coat," persisted the older man. "It covers a contented spirit and a body that has no man anything, and that's more than any man can say of his coat."

He ever and always excommunicate from his society is under the ban of his disfavor, and he, forfeiting his rights of sonship, becomes the son of wrath. This is contrary to God's part. It lies in the nature of things. As holiness has in it the power and principle of growth, so sin has in it the elements of disintegration and destruction. The sinner exiles himself. As a sinner could only be in torment perpetually because of holiness; and away from holiness is impossible.

Items Concerning the Society.

LAST DAY DEVELOPMENTS.—Speaking of the last Brooklyn Meeting-house, we quote (avoiding personalities), a New York correspondent of *Our Friend*, who says: "Friends of fifty years ago, having at heart the cultivation of utility and simplicity in their unadorned architectural effects; the Brooklyn Meeting-house might have passed for a factory, or a mild form of a penal institution. But the taste of the age is æsthetic, and the homely plainness in process of transformation. The high main auditorium has been completely striking or garish introduced, including ironing coloring in woodwork, carpets, and plaster, softened light coming through glass windows, the straightness and simplicity of the former benches giving place to rounded in a semi-circle, with broad aisles of oak."

The opening of the newly-arranged room was a pleasant event. On Seventh-day evening, 7th inst., a large number of friends gathered in the lower room, and listened to an address on the Present-day Responsibilities of Friends, a setting forth of the truth that ours is a religion of negotiations, but of positive, living relations to be expressed in word and deed, in the power of the Holy Spirit, of the truth as it is in Jesus. A social half-hour followed.

On Sabbath morning, though an easterly rain prevailed, the main auditorium was well filled. A number of New York Friends being in the city, some of the young people of Brooklyn gave some fine well-trained voices, and in their parts of the hymns form a sweet and acceptable part of the worship, and it was so on this morning. An organ, nestled unobtrusively in a corner of the room, was used as accompaniment. After prayer, in which another led, and a prayer suited to the hour, another stated that his friends did and did not stand for the eighth chapter of Nehemiah is a model. After then spoke on Paul's declaration, and was not ashamed of the Gospel of Christ, for

it is the power of God unto salvation.' His exposition of this passage was clear, logical, lightened and brightened by apt illustrations after his usual happy fashion. There were more sweet hymns, prayer and a benediction, and the good, old-fashioned hand-shaking and greeting, as the company dispersed. On Sabbath evening the chief address was given by —, of —.

There are, says the correspondent, "diversities of operations," on the two sides of the river, New York the more conservative, Brooklyn verging more to what may be termed, not invidiously, the Western type of Quakerism." And of that type, what is its verging? A Richmond, Indiana, paper contains a call by the "Friends Church" for observing the Lenten season, and gives directions for daily services and observances. Among the objects for prayer, one is, "For a return to absolute faith in the Bible as the inspired authoritative word of God, and as furnishing the churches their only credentials and message."

Notes from Others.

The noon prayer meeting, established by the late D. L. Moody, in Chicago, has not omitted its daily service for over forty years.

There are contracts for 120,000 copies of Hindi and Urdu Scripture portions being made with Christian presses in Allahabad, Benares and Lucknow.

The superintendent of Methodist missions in the Philippine Islands, speaks of his work with much enthusiasm. He says the work is encouraging beyond his expectations.

C. H. Spurgeon has been dead for eleven years, but the issue of his sermons has continued every week. The total number of sermons published is over three thousand.

Theodore L. Cuyler says: "There is much talk about saving the masses, but people are not saved in the mass; they must be reached and persuaded Christward one by one."

Henry W. Hulburt, of Bangor Theological Seminary, says: "The theological Seminary has remained nearly stationary, and has been tempted to give short cuts to the ministry."

It is stated that out of 200,000,000 people in Africa only 2,000,000 have ever heard the gospel through human instruments. In the Sudan region alone there are 90,000,000 who are thus without religious instruction.

Cloverbrook, Cincinnati, the home of Alice and Phoebe Cary has been purchased by William A. Procter, a wealthy citizen and presented by him for a home for the blind under the management of the Trader Sisters of Avondale.

A writer proposes as a reason for the increasing neglect of the privileges of public schools: "May it be because parents are coming to realize that information minus inspiration and aspiration is a barren, sterile thing?"

The widow of the late William E. Dodge, Sr., who recently died at the advanced age of ninety-four years, had been a member of the Brick Presbyterian Church, New York, for eighty-two years, and was its oldest member.

The city school superintendents of New York have decided to include the Roman Catholic translation of the Scriptures known as the Douay Bible in the list of school supplies, and to permit any teacher who wishes to call for such for use in the schools.

The *Universalist Leader* has the following: "Religion must be set to no less a task than to moralize and spiritualize the industry of the world, for failing this she will be driven into a corner by the wild beasts of greed who seek whom they may devour."

An exchange says: Protestantism is weakening on its sectarian side, is placing less emphasis on doctrine and more on life, and is more disposed than formerly to recognize worth in systems of belief and sense in points of view which formerly it denounced or ridiculed.

"After evil, not, I think, out of it, God educes good," writes Helen B. Harris in reporting a remarkable religious movement among the Armenians. We may add that Helen B. Harris, the wife of J. Rendell Harris, has been reinstated into membership in Hertford and Hitchen Monthly Meetings, England, from which she thought it right some years ago to resign.

JEWISH SITUATION IN AMERICA.—Jewish leaders in this country had their hopes high upon the promulgation of the Czar of Russia's edict, only to have them dashed to the ground by later reports, to the effect that the edict does not change the hard condition of the Jew in Russia. The Jewish situation in America is most serious, but it is nothing when compared with the terrible condition of the Jew abroad. During the last ten years fully 250,000 Jews, all poor, have come hither from Russia, and have settled on the lower East Side of New York city. What to do with them and for them, is giving to Jews who feel keenly their responsibility no end of anxiety. The Baron de Hirsch funds are being used to their utmost in works of relief, and rich American Jews are being appealed to for financial assistance. If the tide hither could be shut off, some reasons for leaving Russia being removed, there was a little bit of hope that those already here might be taken care of. Jewish leaders have a little hope left that some relief may come, but the outlook is dark and difficult.

Speaking of the recent decree of the Czar, a correspondent of the *Boston Transcript* says: "Emperor Nicholas is a man of broader views and of more progressive mind than his father. He had enjoyed the advantages of more extensive foreign travel than had ever fallen to the lot of his predecessor on the throne, and being an omnivorous reader has been able to keep himself abreast of and in touch with foreign ideas and with the spirit of the age. While fully appreciating the integrity and the devotion of Pobiedonostoff, he entertained but little of Alexander III's sympathy and affection for the man, and after repeatedly remonstrating with him, he has at length asked for and received his resignation. And in order that there shall be no mistake either at home or abroad about his complete disapproval of the late procurator general's policy, he has issued this decree, in which, after having called attention to the 'principles of religious tolerance laid down by the fundamental laws of the Russian empire,' that is to say, the laws established by Peter the Great and by Catherine the Great, he demands 'unwavering observance' thereof, and the assurance 'to all our subjects of other religions [than the Orthodox Church] and to all foreign persuasions, freedom of creed and of worship in accordance with their respective rights.' This means that the 12,000,000 Roman Catholics, the 7,000,000 Protestants, the 4,000,000 Jews and the 12,000,000 or more dissenters of one kind and another in European Russia will be free to practice their religion without let or hindrance, and will be no longer persecuted and treated as disloyal and as rebels merely because they refuse to join the Orthodox Church, and to regard the Czar not alone as their temporal ruler, but as their spiritual Pontifex Maximus (chief priest)."

SUMMARY OF EVENTS.

UNITED STATES.—A dispatch of the 27th ult. from Greenville, Miss., says: "The storm in Mississippi has torn a three mile gap in the levee south of Greenville and the flood is roaring over the Great Yazoo Delta. Under the torrent as it sweeps its way southward lies the most fertile land in the State of Mississippi. This is the first crevasse reported on the east side of the river during the present high water. A second one occurred at five o'clock this afternoon on the west side in Lower Jackson county. Reports from there to-night state that the gate is several hundred feet wide, but as the water is running through with very little force it can probably be closed." A break on the west side of the river near Hymella, La., 150 to 200 feet wide has occurred by which a large area of land in one of the richest sugar producing districts of Louisiana has been submerged. In Greenville, Miss., the crevasses are making their way through the levees. At other points along both banks of the river large areas have been inundated. It is estimated that in the Yazoo Delta 1500 square miles of territory are covered with water.

A statement that one-fourth of the inmates of the State prison at Danemore, New York, are afflicted with tuberculosis has drawn attention to the danger of infection from this cause. Dr. L. F. Flick has stated that "many persons sent to prison come out with tuberculosis because the cells often contain the germs of the disease," and says that all cells in all prisons should be regularly disinfected.

The award of the Aethraic Commission appears to be generally accepted by both miners and operators. The Roman Catholic population in the United States is set down as 11,289,710, that in the Philippines 6,565,998, in Porto Rico 953,243, and Hawaii, Guam and Samoa 745,000, making a total of 19,553,951 out of the whole population of 84,233,069.

A despatch from Washington of the 23d ult., says: Urgent appeals have been made for the relief of the impecunious and other inhabitants of Northern Alaska who are said to be in an extremely destitute condition as a consequence of a strict enforcement of the laws prohibiting the taking or killing of fur-bearing animals in that territory. Instructions have been sent to the Department Commander to investigate the situation and, in his discretion, to distribute rations in cases of emergency. Dr. Leachle, of the Board of Health, at the University of Maryland, New York, that "Tuberculosis remains the greatest single cause of deaths in this city, and one which, in my opinion, demands more attention from the authorities in the interest of public health. The number of persons suffering from tuberculosis is variously estimated at from 30,000 to 40,000, and many of these are undoubtedly affecting their associates and thus adding to the extent of the disease. I believe that the time has come when the City of New York should extend its facilities for the treatment of tuberculosis." He recommends the erection of a sanitarium on the tent plan. The deaths from pulmonary tuberculosis in New York last year numbered 7571.

It is reported from Washington that manufacturers' materials have formed one of the leading items of export from the United States in the Second Month. This is the first time in the history of our importations that this has been the case. There has been a steady increase for some months in the proportion of articles of this class, which includes chemicals, copper, cotton, flares, furs, hides and skins, Indian rubber, silk, tin, tobacco, wool and the bulk of the iron and steel imported which comes in a particular manufacturing form.

There were 545 deaths in this city last week, reported to the Board of Health. This is 10 more than the previous week and 45 more than the corresponding week of 1902. Of the foregoing 289 were males and 256 females; 64 died of consumption of the lungs; 85 of inflammation of the lungs and surrounding membranes; 12 of diphtheria; 17 of scarlet fever; 10 of typhoid fever; 1 of typhus fever; 5 of marlar fever, and 2 of small pox.

FOREIGN.—A bill has been introduced by the Finnish Government into Parliament, intended to assist tenants in Ireland to purchase the lands they occupy at moderate prices and on long terms of payment, and appropriating \$60,000,000 for the purposes of the bill. Tenants are to pay 34 per cent. interest on money so advanced. The bill also provides that untenanted farms and grazing lands shall be sold to neighboring tenants, and that three Commissioners, to be known as Estate Commissioners, shall supervise the sales. In introducing and explaining the bill Secretary Wyndham said he "was sure the landlords and tenants would continue to act in the reasonable spirit which actuated the Government in the purchase of the estates before the country. They could prolong for an-

other 150 years the present tragedy in Ireland, or they could now initiate and henceforth prosecute a business transaction, based on the self-esteem, probity and mutual good-will of all concerned." An English newspaper, discussing the proposal, said that the removal of the land question from the field of Irish politics would be of inestimable value to both Ireland and England, for there might be some hope of a contented Ireland; whereas, while the land question is unsettled there is no hope. It is said that to-day out of 15,000,000 acres of arable land in Ireland, less than 2,500,000 acres is under the plow. The best land is given to cattle. The people are in many regions huddled together in bogs. The mass of them live in huts of one or two rooms, often without windows. One in seven of the population is "on the rates."

—supported by the parish. President Castro has withdrawn his resignation at the request of the Venezuelan Congress.

A despatch from Paris, says: A parliamentary group has been formed in the Chamber of Deputies, whose aim is the advancement of the cause of international arbitration. The initiative was taken by Baron d'Estournelles de Constant, the French delegate to The Hague arbitration conference, who was elected President of the group. More than 100 deputies, irrespective of party, have given their adhesion to the group.

A despatch of the 30th ult. from London, says: The Times to-day publishes two Marconigram messages of over 100 words each from its New York correspondent, giving them to the American news. To-day the transmission of news between the New and Old World will be undertaken upon a contract basis, such as the Times starts this morning. It marks an epoch in the development of telegraphy. Messages can be sent between England and America by the new system at a rate slightly in excess of that between England and France by the old plan.

A despatch from Toronto, says: Canada is to have another transcontinental railway. Its terminal will be at Quebec in the East, and Port Simpson, B. C., in the West. The road will run parallel with the Canadian Pacific, but will be from 200 to 400 miles farther north, traversing the very heart of Canada through the wheat and pulpwood belt. The road will be called the Transcanada Pacific. The American news of the 29th ult. says: It promotes a charter, and prominent capitalists of Great Britain and Canada are interested in the project. Canada now has one transcontinental line, a second rapidly nearing completion, and two, the Grand Trunk-Pacific and the Transcanada, under promotion.

Two distinct earth shocks were felt in various parts of Dorchester, England, on the 24th ult., and caused great alarm. In the town of Dorchester, the roofs of houses and fireplaces were dislodged and the walls of houses wavered.

Mail steamers running between Kiel and Korsor, Denmark, are in continuous connection with the mainland by the Slaby wireless telegraph system. The Government is accepting messages at twenty-five cents a word.

Information lately received from a British exploring expedition in Antarctic regions indicates that a vast continent exists there. It is stated that Captain Scott, the commander of the ship *Discovery*, has penetrated more than 100 miles further south than any previous explorer, and discovered an extensive mountainous region, hitherto absolutely unknown, extending to 82 degrees 17 minutes south. He thinks this indicates that the land stretches to the Pole. In the series of expeditions which have been considered to be far the most important geographical result ever achieved in Antarctic exploration. The *Discovery* wintered 400 miles further south than any vessel had previously wintered.

The Cuban reciprocity treaty has been ratified by the Cuban Congress without amendment.

An up-to-date engineer has said, he is said, has recently been achieved in Australia. The Kalgoorlie water scheme is to Australia what the famous Assuan dam is to Egypt. The remarkable feat of pumping 6,000,000 gallons of water a day for a distance of 350 miles, from the Helena River to Kalgoorlie, has been accomplished by English engineers, by means of a great dam, called the Mundaring weir, ninety feet high, constructed across the Helena River twenty miles from Perth. There are a number of auxiliary reservoirs and pumping stations along the 30-inch steel water main which runs along the railroad line to the gold fields, near Kalgoorlie.

In reference to the famine in Finland Dr. Reuter, of the Finnish National Relief Committee, says "that there would have been untold suffering but for the assistance of the Finnish Committee, which was organized to raise funds. The Committee has branches in every village and parish, and every case of suffering is attended to. The Committee supplies bread, peas and salt fish and ex-

pects labor for its help, so as to avoid pauperism. As to the series of deaths from fam Reuter adds, 'no such happenings have been anywhere.'"

NOTICES.

WESTTOWN BOARDING SCHOOL.—For convenient persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.13 A. M., and 4.32 P. M. Other trains are met with re Stage fare, 15 cents; after 7.30 P. M., 25 cents. To reach the school by telegraph, write Westtown, Pa. EDWARD G. SMEDLEY, Superintendent.

WESTTOWN BOARDING SCHOOL.—Application addressed of pupils to the school, and letters to the instruction and discipline should be addressed to WM. F. WICKESHAAM, Principal.

Payments on account of board and tuition, communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent, Address, Westtown P. O., Chester.

The portion of the Yearly Meeting's Committee for service within the limits of Philadelphia, propose holding a meeting for Divine worship, meeting-house on Twelfth Street, below Market on Fourth-day evening, Fourth Month 3d, at 7.4 The members and attenders of the meetings of Philadelphia and vicinity are invited to be present.

Mahlon Johnson has been appointed Agent for FRIEND, in place of William Harvey, who has Address Monrovia, Morgan County, Ind.

A woman Friend desires position as superintendent or managing housekeeper, either public or as companion to lady.

Address "E. B."

Office of The Friend.

Wanted.—At the School for Indian Children, Passaic, New York, a suitably qualified Friend as one of the girls, and one as assistant matron. Any may be made to H. M. CARTER, Superintendent, 201 E. Central Ave., Moorestown, N. J.

or CAROLINE C. SCATTERGOOD, 626 Spruce St., Phila.

The annual meeting of Friends' Western District Society, etc., will be held at Twelfth Meeting House on Fourth Month 3d, 1903, after the following day.

ALICE C. LETCHWORTH, Secretary.

DIED, at the home of her son-in-law, Isaac P. M. in Jewell County, Kansas, on the tenth of Twelfth Month 1902, DENICE HILL, aged sixty-five years, ten months and twenty-five days. She was a bright member of the Society of Friends, and a firm believer in the doctrines and testimonies held by them. She was an example and a meek and quiet spirit, who in the sight of the Lord is of great price. She was a health for quite a while and her already enfeebled body received a severe shock in the death of her beloved son. At one time she said to her sister, "I feel in my heart a great deal of condemnation, but it is an unmerited mercy that it is thus with me." She was ready and willing to go, and a short time before her death, said, "A few more fleeting days, and all will be over. Her relatives and friends trust that she received the same language, "Well done, good and faithful servant, enter thou into the joy of thy Lord."

On the seventh of Third Month, 1903, died at her home in Danville, Henricks County, Indiana, MARY CARTER, wife of Newton Carter, in the seventy-fourth year of her age; a member of Plainfield Month Meeting of Friends, Indiana. On account of poor health she often deprived of meeting with her friends in worship, but maintained a firm belief in the doctrines and practices of Friends, until death. Her last illness was short and severe, was marked by a spirit of peace and tranquility. Her expressions evinced a sense of the presence of the promised Comforter, a friend that sticketh closer than a brother, and a mother, who was a devoted servant of Christ, and a self-sacrifice of life is "o'er" and "Death is a victory."

—, Third Month 16th 1903, MARY ELLEN, widow of Thomas Branson, in the eighty-ninth year of age. She was a beloved mother and elder of 1st Yearly Meeting of Friends, Western District. Her presence is fullness of joy."

THE FRIEND.

Dymond's Essays on Morality in Spanish.

ESAYOS sobre los PRINCIPIOS DE MORAL Y derechos y Obligaciones del Género Humano tanto en la Vida Privada, como en la Pública. Por JONATÁS DYMOND. Version española . . . hecha y publicada de orden y a expensas de . . . JOSEPH PEASE (Edición ampliada), Filadelfia: Friends' Book Store, 207 Calle de Arch, 1903 (\$1.25).

Quakerism has brought forth one masterpiece in Christian doctrine at the hands of Jonathan Barclay and another in the field of Christian Morals by Jonathan Dymond, and in the same domain a spiritual classic by John Woolman. An excellent translation of Dymond's Essays, produced under the care of Joseph Pease (in recognition of which the monarch of Spain endeavored to award him a nobility), has been known for years past to the printer in England; while also an edition in Spanish has still more lately been brought out by the Philadelphia Yearly Meeting's Book Committee, containing all parts that are of permanent and universal value, but omitting the now obsolete or relating chiefly to English laws and institutions. The Spanish edition before us contains the same matter (about 400 pages), which is retained in the Philadelphia edition in English, and omits the superfluous which that omits. To say that its pages were printed in the printing-house of the Yearly Meeting, in Gloucester, England, is to say the most excellent feature of the work beyond its subject-matter, as a specimen of the printer's art.

Dymond's Essays constitute a book which, in its subject-matter, remains unsurpassed as a moral treatise of a high order. Its principles are simple and upon a rock. While other present-day treatises of the Moral Law evade the meeting of spiritual and Scriptural truth in plain language and squareness, and seem to climb up

some other way into the domain of ethics, Dymond treads on the firm ground of Divine Revelation as his main authority from start to finish. He is not ashamed of the Spirit of Truth, nor of its Book, as undeniable evidences of the Will of God, nor to own that which will be the simple and eternal Rule of Right and Wrong. Its teaching makes for simple and pure Christianity,—for unadulterated Divine righteousness,—much too directly and unswervingly, to be acceptable to popular standards of conduct. Because Dymond's work, being Christian without compromise, a standing rebuke among moralists, they prefer to ignore him; and because it stands steadfast for Truth, it is kept standing in life. And here it comes forth in Spanish tongue to preach the Word; and well calculated is its teaching to fill a void among the people of that tongue with important discoveries in righteousness.

A sense of a service incumbent on Friends to open out to Spanish-speaking peoples our views of Truth, has also of late brought forth translations of some of our TRACTS into their language. These have received considerable circulation in Spanish-American States. A letter from Cuba comes on the very day of our writing this, urging the need of much more of the leaven of the kingdom being presented there from Friends' standpoint and through their hands.

HOLY WEEK.—For the first time, as some of the papers are saving, "Congregationalists, Methodists, Baptists, Quakers[?], Disciples of Christ, Presbyterians and all other non-liturgical bodies unite this year with the liturgical ones in observing Holy Week, which began on the 5th inst. That is, they will do so if they heed the recommendations officially made by the foreign mission boards of their respective bodies."

But we can hardly expect those papers to know the difference between Quakers and pseudo-Quakers. Some will ask, "What are we doing to let them know?" It is not for us to tell what to do,—only to each one this: Be true to the Holy Spirit. Then the mission of our Society to the churches will be unmistakable.

We believe that the Spirit of Christ knows no Holy Week for us in any sense that the other weeks are less so. "Always bearing about in the body the dying of the Lord Jesus,

that the life also of Jesus might be manifest in our body." "Ye observe," said the same apostle, "days and months and times and years. I am afraid of you, lest I have bestowed upon you labor in vain." "Behold" said our Lord, "I am with you *all the days*, even unto the end of the world." In season, out of season, Christ is our perpetual calendar, and our times are in his hands. To those who are attentive to His Spirit, due notice will be given of His NOW as the acceptable time for a right service to Him, and no church council can prejudice or tabulate His future times for special states of the heart. It becomes Friends, in view of their profession of each week as holy, so to evince it as to find each week a higher step than the last. If not higher, the prospect is it will be lower.

La Verdad (The Truth) is a weekly periodical published in Manila in English, Spanish and Tagalese, or the principal Filipino language. Two copies of sixteen pages each have come to us, exhibiting, in the English articles at least, marked force and ability. *La Verdad* is the official of the Filipino Independent Catholic Church, which has severed connection with the Roman authority. The archbishop Gregorio Aglipay is the official head of this new movement and organization, which has been forced into being, as the Puritan churches were, by the tyranny and rapacity of the priesthood under which its members had been suffering. The Archbishop Aglipay in his manifesto has put himself and his followers on record as accepting in its entirety the sovereignty of the United States, and their intention to pursue their religious and political aspirations peaceably and on constitutional lines. They are undertaking the great reform of clarifying the religious and political atmosphere, and of bringing about a settlement of the vexed friar question, which Rome is unable to accomplish. We have been impressed thus far with the wholesomeness of the moral and religious instruction which *La Verdad* gives.

A GOODLY old couple were in trouble and sorrow. Said the husband to the wife: "Mary, I am faint and glad I can say, 'What time I am afraid I will trust in the Lord.'" "Eh, John," said the wife, "I can beat thee at that, for I can say with all my whole heart, 'I will trust and not be afraid.'"

History of the Friends' Registers.

(Concluded from page 300.)

THE BIRTH REGISTER.

The gravest feature in these registration figures is their evidence of the diminishing stream of young life entering the Society. When Philadelphia was building, it may safely be said, having regard to the incompleteness of the records, that more than one thousand children annually came into association with the Society in Great Britain through birth and registration. This number has continuously lessened through 220 years, till now it stands at less than 20 per cent. of the figure just given; and in recent years the diminution has proceeded at an increasing ratio.

In recent years Friends have given generous proofs of their religious concern on behalf of their young people by contributing more than £100,000 for the improvement of their schools; but the number of Friends' children in these schools has been steadily diminishing, and these institutions would now be thinly peopled, were it not for the large admission of children unconnected with the Society. The regulations affecting the relationship of children to the Society have naturally been closely connected with its marriage rules; when these were revised, the rules affecting the membership of children were left unaltered.

POOR RELIEF.

In this connection the action of the Friends' system of poor relief, framed with the best of motives, has unintentionally worked restrictively. It is a singularly beautiful idea to have no beggars in the spiritual Israel, but one hard to translate into the practice of a thrifty people, without engendering very restrictive influences. It was the exigencies of poor relief which dictated the membership minute of 1737, which has operated through successive generations in the creation of the great dividing line between members and attenders. After the provision of a boarding school education for all children of members by the foundation of Ackworth and other schools, pecuniary considerations naturally made Monthly Meetings shy of admitting families of children who might entail a large expenditure for education on the Society; whilst at the same time the sentiment of independence made many parents of such families reluctant to apply for membership. The abrupt stopping of the registration of non-member children in 1837 now looks as if it had been a mistake; it is rather curiously out of harmony with the concern, which, about the same period, was founding schools at Rawdon, Penketh, Sibford, and Ayton.

It cannot be denied that the civil objects of the Friends' registry, which largely prompted its establishment and secured its continuance for two centuries, have been very much removed by the excellent State registry founded in 1837; and hence it follows that the main objects of the denominational registry now are religious. The chief direction in which it seems possible for registration to exercise a distinctively religious influence is in its bearing upon the training and education of children; and here we are at once confronted by large problems as to the mutual relationship

which should subsist between a religious society and its children.

There is little or no difficulty in discovering the causes of the recent diminution in the entries in the birth registry; it is not necessary to dwell on social causes, excess of prudence, and the like, which have lessened the birth-rate in the population at large in the last twenty years, and the influence of which tells upon Friends, in common with the whole population; but the main reason for the diminished number of births registered in the last twenty years, is the increased number of families in which only one parent is in membership, and where consequently, by the existing regulation, the children are not in membership. An examination of the Tabular Statements for the last quinquennium of the series shows that the number of homes founded, in which the children would be in membership with Friends, was 196, whilst the number of homes founded in which the children would not be in membership, was 586.

In the epistles to the early Churches, it is observable how much stress is laid on the duty of edification, the building up of Christian people in their corporate life. The extreme individuality of the Friends' conception of Christianity has not been favorable to their success in edification. This thought seems to have been present to the mind of London Yearly Meeting of 1734 when they affirmed their "weighty concern for the offspring of Friends that the rising generation may be trained up in the principles and practice of the Christian religion," and in association with "a people, who, by their lives and conversations, should be patterns of that simplicity, holiness, and charity, which our great Lord Himself in the most perfect manner exhibited, leaving us an example, that we should follow his steps."

Is It I?

In reading "The Irresponsibilities" of Second Month 7th, the selection seemed loudly to echo the many who, in our Society at this time are desiring Peace, Temperance, Bible-study, &c., every day of their lives wishing to do some good; "For the harvest of the earth is ripe." Candidly speaking, much labor is offered by the Master, that would multiply many-fold, if faithfulness to the requiring, however small, was abode in. It may be the duty shown is, faithfully to uphold our testimonies that make us so conspicuous, especially while mingling in a business capacity. Are these not reasoned away and so refused, in a preferring to do nothing? Finally the talent is wrapped in a napkin, or otherwise the zealous one chooses his or her labor, some "philanthropic work" perhaps, thus making their own idols. If each member of our Society were to feel the great responsibility resting upon us as burden-bearers, filling up our measure though ever so small, we should be as a city set on a hill with our light shining forth to the world, being in the world, yet so filled with His light and power as to enable us to resist the many temptations; not conforming to the customs either in dress or address which is so marked at this time. We must be weaned from the world to be made partakers of a life hid with Christ in God.

R.

FOR "THE FRIENDS"

The Preparation of the Sanctuary.

The presence of God is the crown and glory of his people. Nor will He dwell amongs unclean or the unholy. A holy God, he ex holiness in all those who approach his stool to render homage and worship. So priests of old were commanded to wash in laver every time they entered the sanctuary or ascended the altar to offer sacrifice. could the priests minister unless they were legally clean. "Be ye clean that bear vessels of the Lord" was and is a perpetual ordinance.

Nor is less required of us in this, Chr higher and more glorious dispensation. in temples made with hands does God manifest his visible glory, but this he do the sanctuary of the heart of his saint whom He dwells, as Jesus said, "I will not defile myself to him" (John xiv: 21). He fles his promises by his prophet, "I will rify the house of my glory," (Isa. lx again, "I will make the place of my feet rious" (v. 13.) So Christ Jesus, our said in his prayer to his Father, "The which thou gavest me, I have given to (John xvii: 22.)

God was in Christ, as He came in the and God is even now in Christ as He com Spirit and in power, and Christ is in his ple; thus through Him does God resto man that heavenly communion which the sin man lost. Nor has any man a valid to be called a Christian unless he have the Spirit of Christ. All so anointed are by made priests unto God, that they may be tute of the one atoning sacrifice of their Priest Christ Jesus, now offer to God their spiritual sacrifices, acceptable to God the Him."

Before then convening for so sacred a pose as to worship Almighty God may we expect that He who has declared that the preparations of the heart in man, and the swer of the tongue, is from the Lord" (Eccl. xvi: 1) will thus prepare his people to his promised holy presence? Many, in are the witnesses who have declared that the hand of the Lord has been time and again laid upon them."

A watchful, prayerful people will pe this, and being attentive and obedient as to, the heart, emptied of all worldly th the Lord will find more room to fill with his blessings.

Let me quote an extract from the journal of William Savery, a Philadelphia Friend, thus wrote in the year 1797, (see page 10th line) "Retired to my chamber, seems to me improper, before these public meetings to continue in comparison conversation until they come on—my least, appears to be to retire and endeavor have my mind gathered to the Divine tain, where strength and qualification them to the honor of the Truth, can be found; and, after all, I think I always entered them with fear and trembling, the blessed cause should by any means suffer."

To be a true minister of the gospel is a minister of the Spirit and the power of the Word only; and to do this requires vouchsafed from on high, as it did to miracles. The apostles were early

their Lord and Master, "Without me, ye do nothing." They needed like Jacob to lie in prayer and with fasting to God, as then the Lord is pleased to uphold, to guide and to guide us in our ministry by his spirit, we need not expect any true conversion of sinners to God. How essential then, to all who are truly concerned for the welfare of Zion, and those who are called to be shepherds in Israel more particularly, that they first diligently take heed unto themselves, that they may be qualified to fulfil the purposes of their calling, viz: to feed the flock of God. Let these oft-times sink down into prayer, who is the root and the offspring of David, that they may be partakers of the life in the word, that the sap of the vine may circulate through all the members. Then shall all the trees of the Lord's own planting, trees of righteousness, planted by the waters of the living fountain, bear fruit to the praise of the heavenly husbandman.

My we always bear in mind, there is no acceptable frame of mind, to the greater number of hearts, wherein to come before God in worship than that of a humble and contrite spirit. And when hearts rightly prepared come under a baptizing ministry, exercise in the demonstration of the Spirit and power, doctrine drops as the gentle rain, and the dew on the tender herb, and hearts are softened and melted by the love of Christ, according to his promise is present there. The Lord is with his servants, going before them and working with them, as He was in the beginning with those who were scattered abroad and sent everywhere preaching the word.

The Lord is with his church as He ever has been, therefore though the waters of the sea roar, threatening to engulf the gospel, we need not fear as we steadfastly do as we are commanded, "Look unto Jesus, the author and the finisher of our faith." It is He who ruleth the raging of the sea; when heaves thereof arise thou stillest them" (Is. xlix: 9). W. W. B.

Courtesy is closely akin to religion: indeed, courtesy is an inseparable element of true religion. True politeness, inherent urbanity, or of the fruits of indwelling religion, is the golden rule is the highest law of etiquette.—R. S. MacArthur.

THE INSTINCT OF ANIMALS.—An English naturalist says: The instinct whereby wild creatures detect those of the human species who are likely to be hostile to them and those who may be regarded as harmless is of so subtle a quality that it almost appears to partake of the nature of metaphysics. In the still season plovers will actually buffet the glew who is fishing too close to their broods; at the date of the shooting season they will not allow him to get within two fields of them. The wood pigeon seems to know the range of the modern fowling piece, and will flash boldly past at an interval of one hundred yards and upward, but is careful not to put a tree between himself and a sportsman if disturbed at any range within gunshot. The fox knows that he is sacred from guns and will audaciously seize a pheasant and decamp with it within the paces of a retriever; as he is quite aware that the latter is no foxhound.

The Confessors of Peace from the Second Century to the Era of Mahomet.

V.

Here it may be well to make record of the following interesting and significant result of the investigations made by LeBrant concerning early Christian inscriptions, to wit, that out of four thousand seven hundred and thirty-four, but twenty-seven—or one in one hundred and seventy-five—were memorials of military men, whereas, of ten thousand and fifty Pagan inscriptions, five hundred and forty-five—or about one in eighteen—were over the bodies of soldiers.

The epoch was a momentous one, and it will be worth while to seek to know how it happened that the Christian rule of non-resistance which obtained during two and a half centuries, came to be so generally forsaken. The modification of the oath has been referred to, together with the unfaithfulness arising from worldly conformity manifest in so many lapses when the times of persecution appeared. Perhaps to no one thing was the moral weakening more due than to the influence of the circus and the amphitheatre.

"While the shamelessness of the theatre," says Farrar in his *Early Days of Christianity*, "corrupted the purity of all classes from the earliest age, the hearts of the multitude were made hard as the nether millstone with brutal insensibility by the fury of the circus, the atrocities of the amphitheatre and the cruel orgies of the games. Augustus in the document annexed to his will mentioned that he had exhibited eight thousand gladiators and three thousand and ten wild beasts."

An immense oblong-circular building nearly two thousand two hundred feet in length lying between the Palatine and Aventine hills was the oldest and most celebrated of the many circus buildings in Rome intended for exhibiting shows and games. It is said that it would accommodate as many as two hundred thousand spectators. Cæsar subsequently supplied it with porticoes and also with a surrounding canal to furnish water for naval exhibitions. The amphitheatres used for gladiatorial combats, fights of wild beasts, etc., were to be found in the provincial cities of Italy as well as in various provinces of the empire from Britain and Gaul to Thrace and Syria. The largest of these was the Coliseum or Flavian Amphitheatre, erected by Vespasian, who employed in the work twelve thousand Jews who had been made slaves at the taking of Jerusalem. To these of the favored nation who remembered the splendid Temple for the worship of Jehovah in the walled city whence they had come, what a humiliation and cause for wailing that they should now be doomed to build a temple to the gods of cruelty and sport!

"Wandering bands of gladiators," says Erace in his *Gesta Christi*, quoting sundry authorities, "traversed Italy, hiring themselves for the provincial amphitheatres. The influence of the games gradually pervaded the whole texture of Roman life. They became the commonplace of conversation. The children imitated them in their play. The philosophers drew from them their metaphors and illustrations. The artists portrayed them in every variety of ornament. The vestal vir-

gins had a seat of honor in the arena. The Coliseum, which is said to have been capable of containing more than eighty thousand spectators, eclipsed every other monument of Imperial splendor, and is even now the most imposing and the most characteristic relic of Pagan Rome."

Augustus had limited the number of men who might take part in gladiatorial fights, to not more than one hundred and twenty on any one occasion; but this imperial regulation appears not to have been greatly regarded, for Josephus mentions that in the amphitheatre at Berytus, in Phœnicia (the modern Beirut), Agrippa caused fourteen hundred to do battle. The adjacent plain, it may be said in passing, is renowned as the place where the so-styled "St. George, the patron saint of England," slew the dragon.

Under Nero and Domitian, female gladiators were not uncommon, and Juvenal, in his *Satires*, describes the enthusiasm with which Roman ladies practised with gladiatorial weapons. Was it with the hope of a Pagan renaissance after this order that the practice of fencing was recently said to have been growing into favor with "society ladies" in certain localities? Also, that one of our great universities should be projecting a "real Grecian amphitheatre" for the young men's sports?

As to the contests with wild beasts, it need not be necessary to go into particulars further than to refer to a series of games provided by Trajan, which continued one hundred and twenty-three successive days, when lions, tigers, elephants, rhinoceroses, hippopotami, giraffes, bulls, stags, even crocodiles and serpents were employed to give novelty and zest to the spectacle of slaughter. Variety in the exhibit of ferocity was shown in innumerable ways, as instance the chaining together of a bull and a bear. We will now give some consideration to the relation of the Christians to these very popular and seductive entertainments.

It has just been said that the philosophers drew from the gladiatorial contests some of their metaphors and illustrations. So also the Apostle Paul, who we know to have been a man of considerable learning and of acute observation, makes happy illustration of the accompaniments of worldly games in inciting Christ's followers to press obediently and very earnestly on in the way of their Divine Leader. Thus, in his first epistle addressed to "the

*It seems like a singular revival of what is said above by Brace—that "the influence of the games gradually pervaded the whole texture of Roman life; the children imitated them in their play"—to refer to the suggestion contained in an article which happened to-day to come under my notice, on "The Use of Myth in the Primary." It occurs in a serial which has supplied a great deal of excellent matter for American mothers. It tells of play instruction for little children concerning the myths of Apollo, Neptune, Minerva, etc., and gives especially a lesson about Diana, introducing some infantile dramatization. "Now the children were ready to read about Diana so part of the story was written on the blackboard, and we chose our palace of the moon, a corner of the room, and our Diana. Of course she had to have black hair, as the goddess had. We pinned a large yellow star and crescent on her hair, and in our fancy, decked her in a robe of richest blue. For the star maidens we chose little girls with golden hair, and for the trees, black dolls." We can scarcely suppose that the Christian mothers of the early days were considering, would have deemed this diversion to the "great goddess Diana" of the Ephesians, a judicious line of instruction for their little ones. Not less of care is surely called for to-day.

church of God which is at Corinth"—that city being but seventy miles distant from Olympia on the Alpheus, where the celebrated games were stately held—he employs the following appropriate parallel in illustrating the careful preparation and unflinching zeal of those who press on for the heavenly prize:

"Know ye not that they which run in a race run all, but one receiveth the prize? So run that ye may obtain. And every man that striveth for the mastery is temperate in all things. Now they do it to obtain a corruptible crown, but we an incorruptible. I therefore so run, not as uncertainly; so fight I, not as one that beateth the air; but I keep under my body, and bring it into subjection lest that by any means, when I have preached to others, I myself should be a cast away."

A little later in the same epistle to his brethren at Corinth, explaining the resurrection from the dead, and how the faithful "in Christ shall all be made alive," he ardently exclaims: "I protest by your rejoicing which I have in Christ Jesus our Lord, I die daily. If after the manner of men I have fought with beasts at Ephesus, what advantageth it me, if the dead rise not? let us eat and drink, for tomorrow we die."

Then again, writing from his confinement at Rome to the Ephesians from whom he had so sorrowfully parted (as detailed in the twentieth chapter of Acts) about four years before, he enjoins them to "put on the whole armor of God." Full well those distant brethren in Asia would apprehend his beautiful simile of the Christian warrior's panoply, seeing that right there in their own city was that wonder of the world, the great Temple of Diana, as also the immense theatre in the shadow of Mount Coressus, where the uproar raised against Paul had been finally appeased by the town clerk, and where the populace were wont to throng to view the gladiatorial combats. So the fitting concluding exhortation of Paul to Christ's followers and confessors of peace in the midst of the idolatries, popular entertainments and many other temptations of their attractive city, ran thus:

"Wherefore take unto you the whole armor of God, that ye may be able to withstand in the evil day, and having done all, to stand. Stand therefore, having your loins girt about with truth, and having on the breast-plate of righteousness and your feet shod with the preparation of the gospel of peace; above all, taking the shield of faith, wherewith ye shall be able to quench all the fiery darts of the wicked. And take the helmet of salvation, and the sword of the Spirit, which is the word of God; praying always with all prayer and supplication in the Spirit, and watching thereunto with all perseverance and supplication for all saints."

Again, writing to "the church of the Thessalonians which is in God the Father and in the Lord Jesus Christ," he bids them as children of the light and of the day, to watch and be sober, reiterating, "But let us, who are of the day, be sober, putting on the breast-plate of faith and love; and for an helmet, the hope of salvation." . . . "For what is our hope, or joy, or crown of rejoicing? Are not even ye in the presence of our Lord Jesus Christ at his coming? For ye are our glory and joy." He furthermore declares the rapture of those

"which are alive and remain," who, with "the dead in Christ . . . shall be caught up with them in the clouds, to meet the Lord in the air; and so shall we ever be with the Lord." But, alas, it was at this same Thessalonica, upwards of three hundred years later (A. D. 390), that there occurred in the great circus building of the city, the most awful scene of slaughter of its kind that the world has probably ever witnessed! It happened in the reign of Theodosius, called also Flavius, and surnamed the "Great," that a certain favorite charioteer of the circus, having been put in prison for an offence, the populace, inflamed by this punishment of their idol, and recalling some former matters of dispute, murdered their governor and several of his officers, and dragged their mangled bodies through the mire. Theodosius, concealing his resentment, caused an invitation to be given in his name to the people of Thessalonica, to witness an exhibition at the circus. When a great concourse had assembled, they were mercilessly massacred by a body of barbaric soldiery, the number of the victims according to lowest computation being seven thousand. While it is very probable that many of these were known as Christians—for even at that time, Chrysostom, with other teachers of the faith, was forced to complain that the theatre was more frequented than the house of worship—yet we may also conclude that of those who on that fatal day went thronging to the circus with the multitude, there was probably none who wore the protecting breast-plate and the helmet of the children of the light and of the day.

We will now return to the historical relation. It is told by Neander concerning Apollonius, of Tyana, that noted disciple of Pythagoras and magician or seer, of the first century, that "he spoke against the cruel gladiatorial shows; for when the Athenians, who were celebrating such games, invited him to their public assembly, he replied, that he could not tread on a spot stained by the shedding of so much human blood, and wondered the gods did not forsake their Acropolis." A similar bold testimony, likewise cited by Neander, is that of Demonax, of the isle of Cyprus, who at the beginning of the second century resided in Athens, where he lived to nearly the age of a hundred years, universally respected for his simple life, full of kindness and charity to all despite his profession as a Cynic philosopher. "When a show of gladiators was about to be exhibited in Athens, he presented himself before the assembled people, and told them they should pass no such decree until they had first removed away the altar of pity."

During the reign of the Emperor Marcus Aurelius (contemporary with Demonax, the benevolent pagan philosopher), his legions were kept in constant conflict with the Germanic tribes bordering on the empire, and at one time the danger appeared so threatening that even the gladiators were enrolled in the army. This both alarmed and irritated the Roman people as an interference with their favorite pastimes, and operated as one cause of the severe persecution against the Christians which stains the record of the reign of the wise and virtuous emperor. Recent plagues had desolated the empire—there had been

earthquakes and epidemics—an inundation the Tiber had done great damage in Rome and hence was good occasion given for saying of Tertullian: "Let the Tiber overflow its banks, let the Nile fail to inundate the country, let the heavens be of brass, let the sun be darkened, let famine or pestilence visit the land, and at once the cry is raised—'Christians to the lions!'"

(To be continued.)

FOR "THE FRIEND."

Around Porto Rico.

BY WILLIAM C. ALLEN.

This winter feeling the need of a change from our rigorous climate, and my mind having been turned toward Porto Rico, I started for that island. The interest it has excited in our own country since the acquisition of the United States, may be some apology for this brief narrative.

The steamship *Ponce* is a very good vessel. She is a freight steamer with fine passenger accommodation on deck. Everything as clean as possible, and the table is good. The service is excellent. My stateroom was amid-ships, had two good windows in it, also a slat door opening out on deck. All this secured that most desirable condition on ship-board—splendid ventilation.

After a voyage of a little more than ten days we sailed into San Juan harbor under the light of the moon, which was nearly at the zenith. The waters of the harbor danced in the silvery light beneath the frowning cliffs of El Morro, the great Spanish fortress erected many years ago. The electric lights of the city were brilliant along the waterfront, while from the dimly seen wharves far distant, there arose a babel of voices in a foreign tongue.

From that time on I realized being in a tropical climate. Indeed, although I had been in New York on a piercingly cold day, the seventy-four hours it had been necessary to shed my heavy overcoat. Two days after reaching San Juan the people on the ship were glad enough to get into the lightest summer clothing.

San Juan was founded many years before Philadelphia. Part of the castle was completed as long ago as 1584. Columbus discovered the island in 1493. The city is surrounded by ancient walls, some of them over fifty to one hundred feet in height, constructed of the most solid masonry; and so arranged to mount batteries to command the approaches to the city in every direction. But the care and vast expense of a preceding age could not prevent the city being easily captured by the United States, in the recent war with Spain.

I stayed with the ship during the trip, whilst she made a circuit of the island, calling at various ports to load, principally with molasses, sugar, coffee and oranges.

I went ashore during the day-time and enabled to be physically comfortable, at the same time observe interesting phases of Porto Rican life, in some of the smaller towns and villages.

San Juan has about twenty-five thousand people. As on other parts of the island, there are a great mixture. There are a few Spaniards, and a few Spaniards, besides the

The latter are of all shades of color from light brunette to almost black. They are of slight build and frequently have good, attractive features with black hair and eyes. Doubtless are of altogether Spanish descent, while others are a mixture of Spanish and Indian blood. There are also many negroes.

Porto Ricans are a light-hearted race. I am inclined to make them indolent, as our own countrymen become, after a short sojourn of residence on the island. They are very friendly by kindness. Going down on the morning, a lady who had resided there, remarked, that in Porto Rico "a smile goes a long way," and that, "if you but smile on people, they cannot do too much for you." My personal experience confirmed her assertion. On the morning after arrival, restless and in my attire, armed with an umbrella to protect me from the winter's sun, and with a folding pocket-knife in my pocket, I sallied forth to do the duties of the day. The kodak was soon brought into requisition, for novel sights greeted me in every direction. In about half an hour, I ran across many acquaintances, who were starting out on some hunting expedition, out in the suburbs, and they invited me to join them. Thus I was engaged in investigating real estate and learning about rentals in Porto Rico. Rentals are very high, at least for Americans. One would-be-renter asked fifty dollars a month for a veritable shell of a house, which he said rented for fifteen dollars a month before the American occupation. Most of the houses are of medium style and size in the center of one story, built high up from the ground on posts. They have one central room which opens smaller living and bedroom with wretched apologies for the conveniences, as we understand them. The ovens are of massive masonry with square apertures, and charcoal is burned. Every thing is of the cheapest.

When I went to San Juan and its neighborhood for several days after reaching Porto Rico, and also about the same time previous to sailing for the place. San Juan and Ponce are the two principal cities. I was in the latter also about a week. These and the smaller towns have some general characteristics. Everything is distinctly foreign. The architecture is European, or like the pictures one has seen of Spain or Moorish towns. There are the deep windows, the balconies overhanging the women lean, as they watch the street below; and the big door-ways in the middle of one walls up and down the streets. The streets are narrow, and in San Juan are particularly so. The large shops are European in appearance and look like those in any of the European towns. The little shops are more adapted to visitors. All sorts of odds and ends are to be found in them; often in front is a large sugar cane, cut into lengths about six feet long. This sells at a cent a stalk, and the natives pare down the outside, and drink the sweet juices from the interior of the stalk, and it is good.

Ornamental fruits are offered everywhere. Big oranges can be purchased at three for one cent from any street corner of old men or negroes squatting on the pavement. Funny little stands are loaded with mysterious things which would not tempt the users of

Whitman's or Lowney's candies. The narrow sidewalks are thronged. In the middle of the streets, and far out into the country, pours an unceasing stream of men, women and children with burdens on their heads, crying their wares. All are dressed in thin stuff of gayest pattern and color. Great ox-teams sometimes block the way. The jargon is terrific, for the Porto Ricans seem to be great talkers, and can laugh and argue with one another, over anything, by the hour.

San Juan is on an island between the harbor and the sea. Out on the point, commanding the entrance to the harbor, is El Morro. Its walls are enormously thick. United States troops now occupy it. Nearby are the barracks. In the center of the city is the Plaza or public Square—surrounded by shops and government buildings. In this space are trees and seats for the way-farer. Twice a week the military band plays music in the Plaza, whilst the light-hearted people promenade under the electric lights.

San Tuce is a very pretty suburb of San Juan. Here are really charming villas, painted or calcimined in the brightest colors.

Over them, perhaps, wave broad palms, whilst around them are other beautiful specimens of tropical verdure. The brilliant flowers, and deep green of the shrubbery, all tastefully laid out amidst winding walks, and enclosed behind high walls, or pretty railings, oftentimes combine to form lovely views.

One of the most attractive places near San Juan is the La Parque, or the Park. A fifteen minutes' trolley ride takes you there. A great grove of cocoanut trees extends down to the beach. Thither one First-day morning I repaired with my little Testament, and, sitting in the shade of the waving palms, close by the booming breakers, as they rolled in from the broad blue Atlantic, I seemed very close to God. Possibly I had as much satisfaction during that quiet hour, as some of our ship's company who attended Episcopal church at the same time. I apprehend they thought it strange that I, a professing Christian, did not go with them to listen to the bishop. And later in the day it seemed additionally strange that I did not accompany them to a masked ball in the theatre,—where the fiercest revelry abounded. Truly the consistent Quaker is little understood by those who, professing Christ, love the world.

The trip around the Island included some beautiful views of sea, surf, headland and mountains. The waters of the Caribbean Sea are, when shallow, simply indescribable as regards their colors. Alternate shades of indigo, emerald, or sapphire surround the ship, or are tossed into lighter tints in the foam in her wake.

Our first stop on the south side of the Island was made at Ponce, where we anchored in the roadstead, about half a mile from shore. Ponce is an interesting city of about twenty-five thousand inhabitants. One of our first experiences was in the market place where, as in similar places in Porto Rico, were offered for sale a great medley of things,—fruits, meats, clothing, and what might be called local bric-a-brac. All around squatted on the pavement were women surrounded by vegetables, fruits or articles for personal use. People of all degrees of color threaded their

way amongst these vendors of merchandise, whilst loud and fluent Spanish voices filled the air. Our party wandered through the crowd looking for subjects for snap-shots in the grotesque scene. Several of us had small packages, and as in this country it is assumed that no lady or gentleman will carry bundles we soon became ourselves objects of curiosity to the natives. Possibly the summit of our popularity was reached when one of our number, finding a small boy prepared to do the job, essayed to have his shoes polished. Perched on a chair he was soon surrounded by an amused yet respectful throng.

One of the novel sights of Ponce was to see how milk-men guarantee the freshness and purity of their wares. Men drive bunches of three or four cows around from house to house. The purchaser will carry a large mouthed bottle out to the milk-man, and he proceeds to fill it directly from the animal under her personal observation, thus precluding any sinful association with the pump.

Leaving the town, one finds many of the conditions of country life exceedingly primitive. All the towns have their suburbs of "shacks" and many smaller villages seem to consist entirely of them. A "shack" is only a hut, maybe not more than ten by twelve feet in size, with a wretched floor if any, its roof and sides being covered with cane or palm leaves. In these dreary abodes exist the poor, who probably constitute fully one-half the population of the Island. In one of these huts almost without furniture, and amid sickening odors, will live possibly a large family.

(To be continued.)

Remarkable Conversion of an Infidel.

The following narrative has lately been received by a Friend in this city from the writer now residing in England:

I was brought up in the Established Church of England and remained within its ranks until my twenty-first year. Its lifeless formalism and meaningless ritual never impressed me with conviction, but rather paved the way for me to receive the prevailing scepticism of the age. I began the study of what is called the higher criticism. I read Strauss, Renan, Fichte, Schlegel, Hegel, and other metaphysicians and soon blossomed into a philosophical Deist. After tasting these highly spiced dishes of heterodoxy, my craving for stronger food led me to Rousseau, Voltaire, Paine, etc. The tenets of Christianity were insidiously uprooted from my mind.

I became what is termed a Free thinker (why a rejecter of Christianity should have the monopoly of this title I have never been able to understand.) The transition from this phase was greatly facilitated by a course of studies in the realms of science. There I was introduced to the works of Darwin, Tyndall, Huxley, Leuchner, etc., who completed the work, and left me a materialistic atheist.

In this state of mind I met Charles Bradlaugh, whose rejection by the House of Commons (because of his atheism) had gained my sympathy. I became a strong supporter of his ideas and attended twice as a delegate to Trafalgar Square demonstrations in favor of his right to enter the House of Commons. Under Bradlaugh's teaching I soon developed into an active anti-Christian propagandist, and in

1881 I became secretary of a branch in Manchester of his society National Secular Society, and carried on an active propaganda against Christianity in many of the large towns in Lancashire. In this vein of thought and activity I continued for twenty years, varying my ideals as the humor took me. Now it was Classicism, now Hedonism, now Epicureanism, then Stoicism, Egoism, Anarchism, Spiritualism, Socialism, etc. All these were tried during these years, and yet my life seemed meaningless, I wondered what I was here for, there seemed no answer, life appeared to be only a farce, and we compulsory players.

Why should we build up an edifice of intellectuality which would crumble away without a moment's warning? What was all our boasted Science, Philosophy and Literature? really, it was vanity and nothing more. Yet I could not abandon it. Whilst in this condition I unexpectedly received instructions to undertake a journey through the United States by the firm that I was employed by. During this journey I saw many wonderful sights and experiences, through the Rocky Mountains, Deserts, Grand Canons, Mississippi River, Niagara Falls, etc., all these influences gradually had a remarkable effect upon my mind. I felt I was in the presence of a power greater than myself, my materialism began to give way, the solemnity of the panorama through which I was passing was teaching me more than any other influence had ever the power to do before. I could not reject the idea of a God now, the facts were so palpable, insensibly I had to admit that the evidences were overwhelming. The Holy Spirit was working through me and drawing me to the Eternal Father and I was resistless, there was no conflict, the edifice of materialism that I had been building up for the last twenty years, crumbled to pieces in as many days.

I capitulated without an effort, the Lord had revealed himself by his *Holy Spirit*, without the means of the written or spoken word.

Then came light, glorious, wondrous light, the scales fell from my blind eyes and I saw the glory of the Lord in all creation. O what a revelation, what a revolution of ideas. Was I dreaming or ill with the fever; nay, neither, I never felt in better health, and when I returned to England the desire to know the things of God increased every hour. I was convicted of my sins by the Holy Spirit, repented, accepted God's gracious gift of salvation through his dear Son Jesus, and became a new creature. This will naturally be interesting to you to learn, considering that no preacher, book, nor even the Bible had anything to do with my remarkable conversion, but to the Grace of God by his Holy Spirit is due this great work, and that is why I honor Him, and give all praise to Him.

I am conscious that this light that has been given to me has been in answer to my prayers that the Holy Spirit would guide me into all the Truth as it is in Jesus, and that it is through my honoring the Holy Spirit as I have always done since my conversion two years ago that I have been brought into the knowledge of his marvellous light. I sincerely thank Almighty God for his wondrous love and mercy towards me and ask that I may be guided to the highest of Christian Truth wheresoever it may lead me.

THE TAPESTRY WEAVERS.

Let us take to our hearts a lesson—
No lesson can braver be—
From the ways of the tapestry weavers
On the other side of the sea.
Above their heads the pattern hangs,
They study it with care,
The while their fingers deftly work,
Their eyes are fastened there.
They tell this curious thing besides,
Of the patient and plodding weaver,
His work on the wrong side evermore,
But works for the right side ever.
It is only when the weaving stops,
And the web is loosened and turned,
That he sees his handiwork—
That his marvellous skill is learned.

Oh, the sight of its delicate beauty,
How it pays him for all his cost,
No rarer, daintier work than his
Was ever done by the frost;
Then the Master bringeth him golden hire,
And giveth him praise as well,
And how happy the heart of the weaver is,
No tongue but his own can tell.

The years of men are the looms of God,
Let down from the place of the sun,
Wherein we are weaving always,
Till the mystic web is done.
Weaving blindly, but weaving surely,
Each for himself his fate,
We may not see how the right side looks,
We can only weave and wait.

But, looking above for the pattern,
No weaver need have fear,
Only let him look clear into heaven,
The perfect pattern is there,
If he keeps the face of our Saviour
Forever and always in sight,
His toil shall be sweeter than honey,
His weaving is sure to be right.

And when his task is ended,
And the web is turned and shown,
He shall hear the voice of the Master,
It shall say to him "Well done!"
And the white-winged angels of heaven
To bear him thence shall come down,
And God for his wages shall give him,
Not coin, but a golden crown.

Science and Industry.

THE most hazardous part of the work on the Manila telegraph cable is that completed between San Francisco and Honolulu, in which the sea bed is precipitous, with valleys thirty-one thousand six hundred feet deep. The next two sections will lead across plains of mud at a depth of eighteen thousand feet, while the last section will be laid over a series of mountains.

LONGEVITY OF SHIPS.—Ships, even built of the best materials, rarely last longer than one hundred and twenty years. There are, however, some exceptions. Thus, the whaler *Truelove*, a three-master, that had been constructed at Philadelphia in 1748, after sailing several years under the American flag, was purchased by an English captain, to be used for whaling in the Arctic Sea. At the age of ninety-seven it passed into other hands, and continued to sail in the Baltic Sea for another forty-four years, and not until after one hundred and thirty-nine years of active service it was sold to be demolished. The other day twenty-four English vessels over one hundred years old, and thirteen vessels that kept at

sea more than sixty-five years, were got afloat. It has been estimated the average duration of a vessel is twenty years. All steamers built in 1815 and have disappeared. The oldest ship in the world is said to be the *Victory*, Nelson's ship at Trafalgar. This vessel was launched in 1765, and is therefore one hundred and fifty years old. Moored for several years at the docks of Plymouth, this historic vessel could be preserved only at the price of considerable sacrifices on the part of the British admiralty.

HINTS CONCERNING INK.—Some inks turn black in a few hours look pale when used. Most inks, too, run and flow if gets on to the writing. The *American Gist* advises a correspondent, who writes ink which is black at the very beginning is waterproof, to try this formula: 17 grains, two hundred grains; potassium bichromate, thirty grains; gelatin, thirty grains and water enough to make sixteen fluid ounces. Dissolve the gelatin in one-half of the water and the nigrosine and the bichromate the other half. Then, having poured the solution into a dark, amber colored bottle, stop the second solution.

The ink should, if possible, be kept in a tin of such shape or color that the contents shall not be exposed to bright daylight. It can be used in a fountain pen by diluting with water until the writing appears pale or black. If this is done the gelatin will clog the orifice of the pen.

Another useful bit of advice refers to the restoration of the color of faded writing in ink, as in old letters. The desired effect can be secured with aniline inks, whose distinctive character is well known, and which are not to be trusted for anything requiring permanency. When the ink with which a letter of writing was done was made, as most of the inks are, from compounds of iron sulphate, nut galls or tannin, the task is easier. The tint may be deepened by washing the writing over lightly with a solution of ammonium chloride.

THE TRAINED NURSE HABIT.—The "trained nurse habit" is deplored by a writer of the *Saturday Review* who contends that while mothers have too much given up a precise service in surrendering the sick room to the care of loved sufferers, even in trivial cases to the professional attendant. He says:

"We have to face the fact that while there is great gain in trained and paid nursing, there is also a loss of something else, and that to be settled is whether this loss is beneficial to all parties concerned. Personally I am not so settled. So far, indeed, as the slighter ailments are concerned, I believe—and I know that doctors will bear me out—that the habit of sending at once whenever possible to a skilled shoulders on which to lay the burden of responsibility cannot fail to weaken a man's mother-hood or loosen the ties of wife-hood. This is strong language, I know, but the subject deserves it. The nurse who is something that no woman is fit to leave out of her life altogether, out detriment to her own character. call in skilled aid by all means should

the technical part of the work, but it does not exonerate her from other work so important. For without being a Christianist, I assert that no reasonable person who has studied the marvelous influence of the mental atmosphere in which we happen to be does affect the

DOES AS WEED DESTROYERS.—Recent investigations made by the Biological Survey, of the United States Department of Agriculture, of the habits of the dove, prove this bird to be of considerable value. The examination of the crops of two hundred and thirty-seven doves of the dove shows over ninety-nine per cent. of its food consists wholly of vegetable matter in the shape of seeds; less than one per cent. being animal food. Wheat, corn, rye, corn, barley and buckwheat are the principal crops. One hundred and fifty of the stomachs of the doves constituted thirty-two per cent. of the total food. However, three-fourths of the amount was waste grain picked up in the field after the harvesting was over. Of the crops of grains eaten, wheat is the favorite, and is almost the only one taken when it is in the field, and most of this was eaten in the months of July and August. Corn, the second amount, was all old damaged grain coming from the fields after the harvest, or from the stacks in summer. The third and almost constant diet, however, consisted of weeds. These are eaten at all seasons of the year. They constitute sixty per cent. of the annual food supply, and show very little variation during any month. If the seeds eaten were so minute it seems that none but the smallest species of birds would eat them, and then only when there was no other food. Some of the enormous numbers of seeds of individual birds consumed will be of interest. In one stomach were found seven hundred and fifty seeds of the yellow bird (Orealis Stricta), in another six hundred and forty seeds of barn grass or (Chactocloa) and a third had eaten a considerable combination.

WEATHER PROPHETS DEFENDED.—Willis L. Felt, chief of the United States Weather Bureau at Washington, was lately in Philadelphia and is reported to have spoken in a conversation as follows: "I am sure that the weather reports coming from this city are not inaccurate. On the contrary, they are so accurate that if there were false predictions our immediate attention is drawn to them. It is human nature to enlarge on one's faults, and fall to the ground on points. This is the case here. I have been out of every hundred predictions correct, and there has been no such number of calculations here. "One thing is generally overlooked. No one can predict with mathematical precision climatic conditions of any one place at a given time. We rely on the judgment of men in handling the instruments and judging the clouds. We take a map and see a storm moving in a certain direction at a certain speed. Then we calculate when it will reach a point, and predict rain for that time and place. Now that is the only calculation

we can make. But suppose that storm suddenly moves either faster or slower, or changes its direction. Then our prediction is spoiled.

"When there occurred in Philadelphia several false prognostications in succession I investigated. I found that the local bureau was justified in its reports. The storm was on the maps all right, but it moved so slowly east that it caused the predictions to go wrong. Sometimes a forecaster will make several mistakes in succession without any apparent excuse. Then I just relieve him for a week or so, and tell him to go away and rest up. It is a case of brain fog. Like the trained athlete who is constantly under a nervous strain, the forecaster will sometimes go stale and make all kinds of queer reports. Such, however, was not the case here and I have nothing but praise for the local bureau.

"Just to show you what we can do, I will cite the present floods along the Mississippi River. Two weeks ago our reports all through the flooded districts warned the residents and predicted almost to the inch how the rise would be. The waters are now at those figures, but by our warning I calculate that the Weather Bureau saved the South fifteen billion dollars, and that is a low estimate."

W. L. Moore was reminded that to-day was the vernal equinox, the supposed death knell of winter. It has long been a popular belief that on this day a storm will occur and this was pointed out to the weather chief. "Well," he smiled, "if you were anywhere else around the country but Philadelphia I could undeceive you.

"True, it is raining here to-day, but nineteen-twentieth of the country is enjoying fair weather which disproves your old theory. But I am going to get even," he laughed. "There is likely to be a stretch of cold weather yet."

Selected for "THE FRIEND."

George Fox.

George Fox was born in the Fifth Month, 1624, at Drayton, in Leicestershire. At eleven years of age he knew purity and holiness. In the nineteenth year of his age, in the year 1643, he left all, and travelled up and down the nation, visiting many people who were seeking the Lord, until the year 1646, at which time he entered into his more public ministry; for he was sent of God, as the apostles were in the primitive times, to turn people from darkness to light, directing all to mind the light of Christ Jesus in their own hearts. In the year 1648, several meetings of Friends were gathered to God's teaching through his ministry; in which ministry he faithfully labored forty-four years, through much suffering and many perils of various sorts, as by the journal of his life does largely appear.

God gave him length of days, so that he saw his children in the faith, unto the third and fourth generation, to a great increase. Great was his care for the preservation of those who had received the Truth, that they might walk in the same; and to that end he gave forth many faithful epistles, and good exhortation and advice, for good order and discipline in the Church of Christ, as appears in the collection of his epistles to Friends. He preached the gospel effectually but two days before he died, viz: on the eleventh of the Eleventh Month,

1690, at Grace-church street meeting house in London. After meeting, he said, "I am glad I was here; now I am clear, I am fully clear;" and then was the same day taken ill of some indispotion of body, and continued weak in body for two days, at the house of Henry Goldney, at Whitechapel court, in Grace-church street, and lay in much contentedness and peace to the end, being very sensible. In this time he mentioned divers Friends, and sent for some in particular to whom he expressed his mind for spreading Truth and Friends' books in the world; signifying also to some Friends, saying, "All is well, and the seed of God reigns over all, and over death itself; and though I am weak in body, yet the power of the Lord is over all, and over all disorderly spirit;" which were his wanted sensible expressions, being in the living faith and sense thereof, which he kept to the end.

On the thirteenth of the Eleventh Month in the year 1690 he quietly departed this life in peace, and so ended his days in a faithful testimony, in perfect love and unity with his brethren, being about the sixty-sixth year of his age.

HE will not send thee into a wood to fell an oak with a penknife. When He calls thee to work thou never didst, He will give thee strength thou never hadst.—John Mason.

SUMMARY OF EVENTS.

UNITED STATES.—President Roosevelt left Washington on the 1st inst. He ended his last year on Sixth Month 5th, in the course of which he has planned to visit many of the cities in the Western States, the Yellowstone Park, the Grand Canon of the Colorado, and various points on the Pacific Coast, travelling altogether about 14,000 miles. During his absence, it is expected, he will be in constant communication with officials in Washington by telegraph. On the 1st inst. he was in Milwaukee, Wis., and in the course of a speech expressed the following sentiments: "We should be false to the historic principles of our Government if we discriminated, either by legislation or administration, either for or against a man because of either his wealth or his poverty. The vigorous administration of the Anti-Redeem law, and it will be enforced, will afford a remedy for certain trusts. We are no more against organizations of capital than against organizations of labor." In an address at Minneapolis, he said: "Weeping and violent changes in the tariff would be disastrous in any event, and would be fatal to our present well-being if approached on the theory that the principle of the protective tariff was to be abandoned."

The award of the Anthracite Commission has been interpreted differently by the operators and their employes. Particularly in reference to wages, and in some places the employes are divided as to the meaning intended.

On the 2nd inst., at Scranton, thirty-five independent operators, representing the whole anthracite region, met to consider the award of the Commission. A committee was appointed to confer with a committee of the superintendents of other companies with a view to securing a concerted understanding about putting in operation the various recommendations of the Commissioners.

A despatch of the 5th inst., says: The sentiment in favor of the weekly half holiday is a growing one, and if the coal companies insist upon the full nine-hour day on the seventh day of the week there will certainly be trouble. It is not improbable that this question will be the first question for the board of arbitration provided for in the award of the Strike Commission.

The flood in the Mississippi River continues, and serious crevasses are reported in various parts of its course in Mississippi and Louisiana.

A Vermont jury has rendered a verdict against a labor union for \$2500 in favor of a manufacturing company, which claimed damages for the intimidation of non-union men and for preventing them from filling the positions vacated by strikers.

The first regular daily newspaper in the world depending entirely on wireless telegraphy for its general news service at Avalon, Catalina Island, twenty-five miles out in the Pacific Ocean, has been published. The new paper is called *The Wireless* and is published under the auspices

of the Los Angeles, Cal., *Times*, from the office of which an epitome of the news is telegraphed each morning.

The President has selected Wayne MacVeach, of Pennsylvania, who was a member of the Cabinet of President Garfield, to represent the United States at the Hague, when the arbitration tribunal considers the question of preferential treatment in every branch of trade.

Organized labor in all parts of the United States is said to be quietly preparing for what may prove to be a gigantic struggle between capital and trades unionism. Labor leaders are confronted by many serious and perplexing problems, which, if not settled, will involve thousands of workmen in every branch of trade.

Arrangements have been made whereby the rural free delivery mail carriers, near Utica, N. Y., will carry flags which will be weather signals, a certain flag to denote changes in temperature, storms, etc.

Many applications have been received in New Orleans from members of the religious orders in France, who are desirous of establishing themselves in Louisiana, upon their expulsion from France.

A dispatch of the 3rd from Kalispell, Montana, says: The residents of Helena, Plats, near here, were terrified last night by an earthquake. At a point on White Fish River, where the disturbance occurred, more than five acres of bluff land was carried a distance of six hundred feet and deposited in the channel of the river. The dam is three hundred feet long. No trace of the former channel can be seen. The water is backing up and flooding bottom lands.

A despatch from Monardville, Texas, says: A rich gold discovery has been made here by J. K. Stone, an experienced miner. The vein is found in an ancient abandoned mine, which Stone located by means of old Spanish records.

It is said the demand for snails in this country has steadily increased during the last fifteen years. At the height of the season twenty thousand snails are consumed in New York in a week, and nearly as many in New Orleans. Practically all of them come from Burgundy and the Bordeaux district, France. They feed on the grape leaf, and so profitable does their culture sometimes become that while vineyards are given up to them.

By an executive order of the 14th ult., Pelican Island, in the coast of Florida, a resting-place for native birds, has been made a reservation and been placed under the charge of the U. S. Department of Agriculture. By this action the continued existence of the useful pelican, at least on the east coast of Florida, has probably been assured.

There were 535 deaths in this city last week, reported to the board of Health. This is 10 less than the previous week and 29 more than the corresponding week of 1902. Of the foregoing 284 were males and 251 females; 74 died of consumption of the lungs; 87 of inflammation of the lungs and surrounding membranes; 12 of diphtheria; 15 of cancer; 19 of apoplexy; 21 of typhoid fever; 8 of scarlet fever, and 2 of small pox.

FOREIGN.—In the course of a discussion of the Irish development grant in the House of Commons, Secretary Wyndham, in moving that \$925,000 be granted annually for development purposes in Ireland, said a genuine industrial revival was taking place in that country. The proposal was adopted.

Minister Bowen, representing Venezuela, has refused to accept an amendment to the protocol giving the allies upon the blockade of Venezuela preference in payment of claims over the nations having such claims.

Hostilities have commenced between the Bulgarians and Turks and a battle in Albania has recently taken place.

King Edward VII left London on the 30th ult. for Lisbon, with the prospect of visiting there before his return. Queen Alexandra left England for Denmark on the same day. The King of Portugal met King Edward on the 2nd instant. It is stated that King Edward will visit Rome during the month.

The German Emperor has been to Denmark, and the 3d instant was in Copenhagen, returning towards Germany on the 5th.

The prefect of police of Paris and the prefects of all the departments of France are distributing official notices from Premier Combes to the monastic congregations of the action of the Chamber of Deputies requiring them to disband. This affects twenty-five teaching orders, having 1580 branches with 15,964 members, and 28 preaching orders, having 3040 members. The prefects are directed to allow the preaching orders fifteen days from the date of the order to disperse. The teaching orders are allowed one to four months' delay. In case the orders fail to disperse within the time stated they are to be notified that they will be prosecuted by the police in the local courts. Action in the case of orders conducting hospitals is postponed.

Acknowledgment of the aid rendered by the American people to the famine sufferers of Sweden last year has been made through United States Minister Thomas at Stockholm, by Karl J. Bergstrom, Governor of the province of Norrbottn, where the failure of the crops was marked. After assuring the Minister of the good accomplished by the American contribution, the Governor added: "It has been a great comfort to feel the interest which has been shown this remote part of the world by the people of America and its industrial newspapers, two of which have been so kind as to send respondents to investigate the situation. The esteem which the Swedish people have always cherished and evinced for the American people will, through the sympathy now shown, be still more confirmed and united with grateful feelings."

A dispatch from St. Petersburg says the statement is published in the Russian capital, that in the South of Russia, especially in Kerk and Odessa, the forgery of antiquities is carried on as a regular business. Several factories, chiefly in the hands of Greeks and Jews, are engaged in the work, employing men of great archaeological learning, which are able to produce coins, urns and ornaments so correct as to deceive the experts.

The St. Petersburg correspondent of the *Daily Telegraph* says the measures for the relief of the peasants being carried out. Arrears of taxes amounting to about \$57,000,000 have been canceled, and overdue taxation exceeding \$15,000,000 which the peasants owe to the district authorities have been assumed by the central Government. Other measures alleviating the burdens on the peasantry are expected to be adopted shortly.

A despatch of the 30th ult. from Jerusalem says: An act of violence of unprecedented violence was experienced here to-day. The entire population was panic-stricken, but the damage done was slight.

Professor Hellsprig has called attention to the fact that Mont Pelée has not yet ceased in activity, although eleven months have passed since it began its terrific life. He said that in one day the mountain throws up 200 times the quantity of sediment that the Mississippi throws off in a year. In 330 days it has thrown off enough to cover the island of Martinique, which has an area of 384 square miles, to a depth of 330 feet.

Advices from France state that a process has been discovered by which alcohol can be produced by synthesis without the use of vegetable matter. By a direct combination of carbon and hydrogen in the electric arc, acetylene is obtained. Sufficient hydrogen then is added to produce ethylene, and by combining water with ethylene, alcohol is obtained. While the cost of alcohol by the new process has not yet been reduced much below its cost as produced from vegetable matter, it is predicted with confidence by eminent French chemists that in the near future it may be produced by the new process at a cost of about half that which Germany pays to obtain it from potatoes.

NOTICES.

WESTWTON BOARDING SCHOOL.—For convenience of persons coming to Westwton School, the stage will meet trains leaving Philadelphia 7.16 and 8.18 A. M., and 2.50 and 4.32 P. M. Other trains are met when requested. Stage fare, 15 cents; after 7.30 P. M., 25 cents each way. To reach the school by telegraph, write West Chester, Phone 1144.

EDWARD G. SMEDLEY, Supt.

WESTWTON BOARDING SCHOOL.—Application for the admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to

WM. F. WICKERSHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

Address, Westwton P. O., Chester Co., Pa.

Wanted.—At the School for Indian Children, Tusasassa, New York, a suitably qualified Friend as caretaker of the girls, and one as assistant matron. Application may be made to HANNAH F. CARTER,

201 E. Central Ave., Moorestown, N. J.

OR CAROLINE C. SCATTERGOOD,

626 Spruce St., Phila.

Friends' Freedmen's Association is preparing to send the spring shipment to their Christiansburg Industrial Institute. Contributions will be gladly received at Friends' Institute, No. 20 S. Twelfth Street, Philadelphia, on or before Fourth Month 14th. They should be plainly marked "For Christiansburg." Clothing, or material, or shoes which need mending, will all be made good use of. The

rooms in the new Dormitories, as well as the class will welcome many things which Friends are willing to find a good place for.

Friends' Library, 142 N. 16th Street.

—Open on week-days from 11.30 A. M. to 2 P. M. and 3 P. M. to 6 P. M. The new additions include the following: BURROUGHS, John.—Literary Values.

ELY, H. R.—A Woman's Hardy Garden.

HULFBECHT, H. V.—Explorations in Bible Land

the 19th Century.

MILLER, M. R.—Brook Book.

OTLEY, R. L.—Short History of the Hebrews.

REXPORD, E. E.—Home Floriculture.

VAN VORST, Bessie and Van Vorst, Marie.—The who Tolls.

WORDS WORTH, Dorothy.—Journals (2 vols.)

WOODS, R. A. (ed.)—Americans in Process, a

ment Study.

LAWRENCE, William.—Phillips Brooks.

DIED, at her residence in Media, Pa., on the fifteenth of Second Month, 1903, MARY E. M. in the eightieth year of her age; a beloved member and elder of Chester Monthly Meeting. Her Meekness and gentleness of spirit with the sympathy which characterized her life, endeared her to many, and these precious qualities, joined with a clearness of judgment, prepared her to fill wisely and acceptably responsible station in the church, and to "adorn the doctrine of our Saviour" in her daily life. The patient resignation with which she bore the reduction of her physical strength, gave evidence that her mind was stayed upon Him who had supported her under the stress of a lengthened illness, who had realized her great gracious promise, "Even to your old age, I am He, and even to hairs will I carry you." "Even I will call and I will deliver you."

—, on the twenty-eighth of Second Month, 1903, at her home in Monrovia, Indiana, ANN STANTON, a well beloved member and sister of West Union Family Meeting, and a long and faithful worker in the church. She was a living example of devoted service to her Master. She bore with patience and calmness her protracted suffering, covering a period of ten years. While her natural strength gradually declined, her mental faculties were unimpaired, her spiritual vision clear, so that she was able to encourage and exhort others to the service of the Lord. She had been a member of the Great Union of the Church, and to the bringing of all the tithes, that they might inherit the blessing of the Lord. Her life in public closed nearly four years ago. She was faithful still in ministering in her home to those who came about her, "dropping in and out," as she expressed it, and seldom tardy, as she was finished—the time had come for rest, and she had nothing to say or do, but to sleep, and awake to inherit the mansion which she had a vision in the prime of life, to ensure it would be hers if faithful to the end. The language of Scripture is peculiarly applicable to her: "Blessed are they which die in the Lord, that they may rest from their labors and their works do follow them."

—, in Philadelphia, Pa., on Second Month 1903, RACHEL B. DECOU, in the sixty-fifth year of her age. She was a member of Mansfield Friends' Meeting, and Upper Springfield Monthly Meeting, N. J.

—, on the thirtieth of Third Month, 1903, SARAH L. PASSMORE, in the seventieth year of her age. She was a member and elder of West Chester Friends' Meeting, and New Garden Monthly Meeting, N. J. Although she had been in declining health for some time, the summons came, and she was able to look upon the friends who were gathered around her, and to say, "I am I Lord."

—, on Third Month 14th, 1903, at the residence of her son, Joseph H. Branson, Philadelphia, JULIAN H. BRANSON, widow of Jacob A. Branson, in the eighty-eighth year of her age; a member of the Monthly Meeting of Friends of Philadelphia, formerly of Flushing Monthly Meeting, O.

The Redemption of the Body.

Pictures are but words, spelled as words; and as such, they are to be delineated, and may express good or evil, truth or fiction, according to the mind of him who speaks by their means. The facts expressed by them were not corrupt. Friends have unhesitatingly had recourse to pictures for illustration and teaching, but have not approved of their display where the prevailing motive or effect was that of a sensational show,—as for the gayety of a popular indulgence of pride.

In presuming to depict the crucifixion of our Lord any human hand must degrade its sacredness by falling short of it, and produce the work of fiction. Yet whether we approve of the attempt or not, it now stands as a fact, that an object looked upon as an impressive teaching of the doctrine of Atonement or Redemption by way of the cross on Calvary, is displayed to the people of Boston in a symbolic picture which Sargent has painted on a wall of their Public Library. In a clerical book of words, so pictorial language might have place in a library if anywhere. The painter should be a prophet to be inspired to preach in that mode of utterance. Though our feelings have always revolted from an attempt to delineate that sacred scene, we leave the question of this artist's calling between him and his Master. We are told, indeed, that nothing has happened in Boston for a long time which has so demonstrated the moral and religious earnestness of our American people as has the uncovering of Sargent's painting. "Day after day, and all day long, the hall is thronged with men, women and children gazing at the picture. They speak to one another in the loud voices, and come and go in silence. They carry an air of awe, as in the presence

of a solemn mystery. The majority of visitors care very little for 'art for art's sake,' but are intensely interested in a picture with a meaning. And here is a picture with a meaning which appeals to the universal sentiment, and it is for this reason the crowds of people are attracted to it. With absorbed attention they strive to decipher the various details of the symbolism. It is as if, like Paul, they were 'determined not to know anything save Jesus Christ and Him crucified.'"

In case such a mode of teaching was divinely calculated for the latitude of Boston, we could not wonder at that or, indeed, any language chosen of the Spirit to speak to men in their own tongue wherein they were born. And if not ruled, yet may it be overruled there, for many solemn convictions of the redemption which is by Christ Jesus.

That which has impressed the writer, who has not seen the picture, is the inscription upon it, as thus translated: "The Maker of man was made man and the Redeemer of his work; as man (incarnate) I redeem the body, as God I redeem the soul."* And our special attention is drawn to the language "I redeem the body;"—which is apparently based on that of the apostle, "Ourselves who have the first fruits of the Spirit . . . waiting for the adoption, to wit, the redemption of our body" (Rom. viii: 23).

In saying "as man I redeem the body," the translation is as imperfect as the doctrine. If we are reminded that George Fox said, "He died as he was man, and not as he was God," yet we do not ascribe the whole work of redemption to his physical death, but believe also that "by his Spirit that dwelleth in us" he quickens and redeems not only "his body which is the Church," but the bodies of individual Christians. Whatever is redeeming a soul in the body, is improving the body with it.

Let "the redemption of our body" mean what it will concerning any far off resurrection,—are we not also impressed with a sense of solemn responsibility to join with the Spirit of the risen Christ, in the present redemption of our bodies as instruments of our most precious treasure, the soul?—even these temples of the living God, which "if any man defile, him shall God destroy."

*Factus Homo Factor Hominis Factique Redemptor;
Rodimo Corporeus Corpora Corda Deus.

We are called upon now, in these present bodies of ours, to live unto Him who for our sakes rose again,—called to live by his resurrection life. "He that raised up Christ from the dead shall also quicken your mortal bodies by his Spirit that dwelleth in you." "If ye then be risen with Christ (a present state for such) seek the higher things." The intimate relation and effect upon each other of body and spirit is indicated in every miracle of healing by Jesus, through spiritual power quickening mortal bodies. Shall we not cooperate with his Spirit in keeping our bodies wholesome inwardly and outwardly, having in view that "that which goeth out of a man,—that is, from his heart—defileth the man;" and "so also is the tongue among our members, that it defileth the whole body."

We are not prepared to adopt a recent medical statement that "at least forty poisons in the blood can be traced to evil thoughts," but the statement contains a principle, that the corruption of the body is hastened by the sin of the soul, and that a sound mind is needed in a sound body if it is to remain sound. Laws of health, we believe will yet be increasingly opened out in "the law of the Spirit of life in Christ Jesus," neither can we doubt that under the great Physician a suffering body has a ministry in the cure of the soul; but rather may the sufferings become superfluous by the soul being cured.

There has been indeed a blameworthy "show of wisdom in will worship, and humility, and neglecting of the body;" but the body is a talent for whose good and efficient condition we shall be held responsible, so far as we have a part in its redemption,—so far as we can keep it and foster it as an instrument of grace,—so far as we can present it as "a living sacrifice, holy and acceptable to God, which is our reasonable service."

At times it comes to us as a marvel, how careless of Divine grace professors of grace can be in the faithful keeping and carriage of their bodies,—in the language which their postures exhibit, in their heedlessness of offensive or uncouth manners. If we are "always bearing about in our body the dying of the Lord Jesus, that the life also of Jesus might be manifest in our mortal bodies," we shall be as much redeemed from vain show or pompous bearing on the one hand, as from

unrefined or slouchy awkwardness on the other, and our manner tend to be more like that which William Penn describes of George Fox, "courteous beyond all forms of breeding." Indeed, the distinctive marks of the Lord Jesus Christ which we bear in our body, may well bear such due savor of their process of redemption as we love so often to quote from John Woolman: "Some glances of real beauty may be seen in their faces who dwell in true meekness. There is a harmony in the sound of that voice to which Divine Love gives utterance, and some appearance of right order in their temper and conduct whose passions are regulated; yet these do not fully show forth that inward life to those who have not felt it; this white stone and new name is known rightly by such as receive it."

The Horse Race and the Human Race.

We fear that by this time a bill will have passed the Pennsylvania Senate for so recognizing and adopting the racing interests of the State as to erect a horse-racing bureau under the charge of a trust or monopoly of three individuals. [The *Ledger* also prints our concern.]

To the politically-minded this may appear as one sort of danger, while to the spiritually minded it is evident as a much deeper danger. This setting the seal of the State's sanction on a demoralizing interest which experience at Gloucester, Saratoga and elsewhere shows will not make for righteousness among its people, is bad teaching, and if adopted puts the State in the light of a sponsor of immorality. Legislators cannot shut their eyes to the fact that there will be gambling at race-courses, and the usual drunkenness and debauchery, with the insane excitement of multitudes, and the impoverishment of men already poor, and of not a few rich.

For what purpose is all this harvest of corruption? Its plea is the encouragement of improved breeds of horses. But does it raise a higher order of men? Is the intoxication of the horse-race of greater value than the virtue of the human race? What well-wisher to his children would locate his home and family in the vicinity or moral atmosphere of the race-course? To improve horses and men, there are better conditions than the excitement of excessive nerve-strain in both, and the gathering of throngs of men and women, adult and youth, to spots blighting to the righteousness that should enact a nation.

National decline has ever been hastened by fostering the appetite for spectacular shows. While Friends have in their official capacity done what they could to remonstrate, yet much must always depend on the influence of individual members everywhere in discouraging the

multiplying of such centres of demoralization, and especially the endorsement and partnership of the State in such a business.

The remedy and preventive of all lawlessness without, is Christ within. So much remains to be done in applying the gospel to the spring of men's motives and practice, that it seems by comparison as if the work for which our religious fellowship and testimony was first called into being, had scarcely begun. Through us or through others—at any rate by the direct witness of the Spirit, may there come upon the people an awakening to bring their deeds to the light of Christ in their hearts, that their deeds may be made manifest whether they are wrought in God.

FROM "THE LONDON FRIEND."

Peter Verigin on Tour.

THE LEADER AMONG HIS PEOPLE.

Last month Peter Verigin, Doukhobor leader, exiled among his people after so many years' back in Siberia, made a tour of the villages in Manitoba where the Doukhobors are located, strengthening, encouraging, and counselling the people. The special correspondent of the *Manitoba Free Press* accompanied Verigin on the tour, and gives a graphic account of the earlier part of the journey and its results, which will be followed with much interest by Friends. He writes:—

Petrovka Village, Yorkton Colony, January 19th.—Peter Verigin, the Doukhobor leader, has started his tour of the villages, accompanied by a select company. His reception in his own village a little more than a week ago was solemn and emotional. He had started from Yorkton early in the morning, and by changing horses twice, the forty odd miles to Proterpeosky village was covered by nightfall. It was bitterly cold, but the people turned out and massed themselves in the village street to meet the returned leader. It was weary waiting, but at length the sleigh came up the street, and Peter Verigin was at home again.

The whole party began to chant their special song of welcome, and a lengthy prayer was recited. Verigin then replied to their greeting. His remarks were few, and soon he asked for his mother's house, and the aged dame had the joy of that meeting to which she had so eagerly looked forward. That evening and the days following were busy indeed. Delegation followed delegation, "pilgrims" and "moderates" alike hurrying to interview the head of their sect. In conversation Verigin does not encourage the assumption that he has any special power over his people. He probably knows that to avow influence is to risk or lose it, but one is not long left in doubt as to the feelings of his people towards him. They trust his judgment implicitly, perfectly sure that his advice is valuable, and that it comes from a man far cleverer than they, and who has their interest at heart. In his exile in Siberia he has come in contact with other exiles, educated Russians, often of good family, exiled for political heresies, and this has increased his knowledge, and familiarized him with progressive ideas. In nature he is eminently practical (some might say even too practical), and for a flow of speech he is

not excelled by any Russian of my acquaintance.

Already, before we started from Proterpeosky, his influence on the "pilgrim" movement could be seen. They grew noticeably meeker; ineffectual beards were shaved, cut, certain stalwarts were currently regarded as riding on sleighs, and it was even hoped that some had again taken to mill butter.

The night before our departure Verigin held a village meeting at his house. The good-sized room was crowded with people, filled every available corner. The leader, of his exile, his journey from Siberia to Canada, his dangerous voyage down the Obi across the Atlantic; and at last he came to practical questions. He first treated the question raised so often by the pilgrims—of the suitability of Canada for their settlement. He declared that they were heeding God's will, and that there was no need to go anywhere else. As far as he could see, it was a country where they could live and prosper. The climate was cold, but very healthy, and all necessary vegetables grew splendidly. To become prosperous he said, there must be harmony. And the best guarantee of harmony was a community life. They professed peace and love; the expression of this was life of brotherhood. But, of course, any wished to take separate farms were free to have it so. Freedom was their motto.

The other essential to success was the session of animals, especially horses, as far as possible. Each family should have at least a pair of horses and one or two cows. Some among them considered it wrong to have animals. The speaker paused interrogatively. "Here all the work is done by horses; man gets the benefit of enslaving them," he spoke up a pilgrim. Verigin discussed the point courteously and dispassionately, arguing that the relation was not, or should not be, that of a slave and master, but of fellow-workers. The horse helped to raise not only wheat for his master, but oats for him. Hay was cut and stacked, and stables built for their benefit. If horses served man, man served horses; the work and benefit were mutual. "Let us consider the matter in this way," the speaker concluded, "horses are workers with us, they should also be considered members of our community."

Regarding cows, the same pilgrim raised the question of the disposal of the excess of males. "If we have many cows, soon we will have too many bullocks. What is to be done? We must sell them to the butcher, and that is wrong." The reply for its appeal to the generous instincts of the people, was highly effective. On the ship that Verigin crossed from England were seven hundred immigrants. They were poor people, and most of them expecting to settle on the land. "If we had too many animals, we can give to them."

Then he returned to the question of settlement. Everything depended on their being settled. In his opinion they should be up and land without delay. They should be diligent and grateful to the government. For four years they had behaved as if they were on a ship, and the government had not deprived them of land as it might have done, but had treated them with every kindness. He saw no dispo-

ing as the government asked. Canada a free country, not to be compared with Russia, crushed into the dust by bad government. But even were it not so, it was not them to expect evil and danger. Regarding the registration of vital statistics Verigin is not less clear. The law was for their benefit as much as others.

Then came a few words on the late pilgrimage. Many had lately come to the conclusion that they should only walk and preach, someone had even declared that they would again in the spring. Of course they were wrong and must do what they saw to be right. They should think, and think again, before any deciding. He asked them, were they not content enough in their own lives to be able to reach to others? Before preaching to others, one must live a good life oneself. "Are you good? I don't know how it is with you," he said smiling "but I know that I am not. I repeat that if you feel it is your true action, that no other life is possible, and may you are good enough—then go. But remember this, you have full right to dispose of yourselves, but no right at all to make women and children endure fatigue and pain. If any of you should start out again you should leave yourselves with your brothers and sisters in the village. They will, I am sure, gladly discharge of them." Referring to the account of the government in forcibly stopping the pilgrimage, Verigin said, "I see in this the hand of God. It is true that I do not like use of force; but what was to be done? I was not wrong to use force to save men from it, and that is what the government

every village visited the same is said, up to the time of writing all indications were favorable. Our party makes an imposing parade of three and sometimes four sleighs. Verigin's has been fitted with seats down the middle and is drawn by four beautiful horses. A dozen people travel in it. The joy of the village's welcome is infectious. The cry of welcome is the same in each village. When we enter we find most of the inhabitants in a mass outside one of the best houses chanting the song of welcome—all the men ahead independently of temperature. They follow prayer, often recited by a woman and a low bow. Verigin greets them, and gives them messages from friends in Russia and England. If the day is cold, all are invited into the house fully to discuss matters. The tables are ready laid, and soon tea is brought, together with fancy bread and preserves. A feast follows.

Constantly one comes on evidences of the pilgrimage movement. One village had twenty horses and thirty-two cows. All were well, and one man, whose chronic gout was at bay by plenty of milk, is again a part to the complaint. In another village Verigin finds a man whose leg was run over and mangled by the loaded wagon he was, with others, dragging from Yorkton. A few weeks before his family went on pilgrimage, and took along on a stretcher. The jolting dislocated the break, and he will perhaps always be crippled. In another village a woman was insane by the pilgrimage. Verigin admires the Canadian scenery, the climate, and says such things about

the government that the Doukhobors must be feeling quite vexed that they have not appreciated it better themselves. In short, he finds that in Canada they have come to just the place for them. The settlement of the Doukhobors now seriously begins. Torn by dissension, puzzled by extreme doctrines, they welcome gladly the clear, common-sense advice of their leader (given, too, with great policy), and it is as if they had received a new access of life. The second night of his arrival I met a party of people—men, and women—returning from an interview with him. They were singing joyously. Passing them one caught exclamations, "Thank God for all." "What a load has lifted from our hearts." The significance of the incident was at once apparent, when I learned that they had been pilgrims. It really forms the keynote of what is now happening in every village.

H. P. A.

FOR "THE FRIEND."

Around Porto Rico.

(Continued from page 309.)

Porto Rico is one of the most thickly populated parts of the globe. The poorer people, comprising the vast majority, are indolent, and their often helpless air indicates that they are the victims of past injustice, as well as the unfortunate inheritors from their ancestors of disease and sin. In spite of all this, they frequently have ambition to live better lives. They possess many amiable traits, and are seldom seen intoxicated.

The higher-class people are sometimes highly educated, are very polite, and live and dress well. Some of them send their children abroad or to the United States to complete their schooling. As I have elsewhere intimated, they often possess pleasant homes surrounded by charming tropical conditions.

One of the cleverest boys I ever met with was a little fellow at Ponce. Peter is twelve years old, has aquiline features and is light-complexioned. He was dressed in a white duck suit and was a perfect little gentleman. He proved to be an encyclopedia of local information, spoke English fluently, and was a fine interpreter. If that boy only had one-half the opportunities of young Americans, he would speedily outclass many of the latter. I regret to say, however, he admitted that, whilst he was earning money from "Americans," he was neglecting school.

After leaving Ponce we called at several ports loading for the return voyage. This process was full of interesting and exciting incidents. There are no docks at these ports, so lighters come out to the steamer; and the bags of sugar or hogsheads of molasses are hoisted aboard as quickly as possible. Sometimes it is very slow work, as the lighters are either poled out by sinewy negroes, or pulled out by means of great ropes attached to a buoy, half way between the shore and the ship. Sometimes the lighters have sails. When the sea is rough and the lighters fall up and down with the wave motion by the steamer's side, it requires much skill to get the merchandise safely into the ship's hold. Once in awhile an accident occurs, and the jabbering crowd of laborers, will pause a few moments to burl at one another divers unhandsome epi-

thets, each man seeking to make out that some one else has made an error.

These laborers are very strong. I have seen one of them lift a bag, weighing say one hundred and eighty to two hundred pounds, on his head and walk off with the load as unconsciously as if wearing a straw hat. They talk incessantly whilst working. They are very rough and sometimes indulge in good-natured horse play. Occasionally they will draw their knives and playfully go through the motions of stabbing one another. They live largely on a diet of beans and rice, and are urged on to their labor like the beasts of the field. Their lot seems a hard one, yet apparently a happier lot of humans never lived.

Although Porto Rico is so densely populated the land is only partially tilled. The ground is very rich, and the low lands show broad acres of sugar cane, young orange groves and banana fields. Up in the mountains coffee is grown. This is of a superior flavor, but is little known in our own markets. The sugar industry has almost completely gone into the control of the Sugar Trust. I could not learn that Americans, who have entered into other agricultural developments in the island, have been paid for their enterprise, but rather the reverse. The undeveloped conditions of interior transportation and climatic indolence, affecting natives and Americans alike, have helped to contribute to failure in business openings, which, on the face, apparently should have proved successful.

Speaking of mountains, reminds me that across those in the Island from the north to the south coast, winds the famous Military Road. It is a splendid highway, smooth as a floor, and hard as rock, which, by gradual ascents or declines, leads through some of the most beautiful scenery. This roadway is a wonderful piece of engineering and was constructed by the Spaniards many years ago. This great highway will, before long, have competition, in the form of an American trolley system. The new line will carry freight and passengers. In view of the traffic now carried on with ox-teams, it would seem as if the modern method of transportation will certainly pay. And those ox-teams! How long trains of them meander for miles out in the country! How the negroes love to travel with them! I have seen one of these ox-carts slowly creaking by, loaded with goods, and over it a flimsy cover to keep off the sun, whilst sprawled out on the goods in the shade, were two or three sleeping darkies. Is this the genesis of the Pullman sleeping car?

I received several deeply appreciated courtesies from resident American officials, or from natives, during my twelve days sojourn at Porto Rico. They seem glad to converse with one interested in the social, commercial and religious conditions of the place. I cannot here take the time to elaborate the reasons for my conclusions regarding the value of this "acquisition" to the United States. But it can briefly be summed up by stating that the natives claim business has declined since the American occupation, also that it costs more to live than under Spanish rule. Some Americans on the island, who believe in holding colonies for the benefit of America practically admit these assertions. This condition is largely brought about by the fact

that the United States laws applying to Porto Rico have cut off the importation of goods from Europe under the free-trade which they previously enjoyed; now they are forced to buy in the United States where the range of prices is much higher than in Europe. Consequently they cannot live as well for equivalent money, and local business languishes. The natives also say that foreign commerce has declined because, as a result of the United States laws, the carrying business is forced into American hands. Consequently American Steamship companies have a monopoly of freights to the detriment of the Islanders.

(To be concluded.)

True Philanthropy.

Friends' Western District Dorcas Society is a practical illustration of one of the best methods of reaching the poor with that which they most need—the means of self-help, which to the women who are struggling for decent living, apart from the so-called "charity" in which the pauperizing loss of self-respect is a factor, is unfortunately too often ignored. To add to the scant earnings of mothers with large families of children to support and educate (when the husband is incapacitated for work, or making insufficient wages to supply the necessities of life), without requiring long absences from their homes and little ones, is charity in an important sense of the word. Dangers both to body and soul, which surround the poor in the congested districts, are such as to require constant vigilance on the part of these mothers if they would protect the young. The piece of sewing at hand whenever or wherever it can be done in the home, has a deeper significance than the mere money or comfort it brings. Herein, too, lies a keynote to the problem of sweat-shop work for women and children, at least in so far as it is able to reach and resist it through this one phase of philanthropy. If we would really help the poor, we must do it through their home life! The FRIEND is deserving of commendation for permitting the attention of its readers to be drawn to this worthy work, which deserves to be strengthened and enlarged.

MARY H. GRUBB.

THERE are persons whom some professing Christians cannot tolerate. When one comes into the community who is broad enough to be the friend of their friends and of their enemies also they cannot understand him. Unless he will discard those whom they discard they will discard him. This Pharasaic spirit has broken down Christian fellowship in scores of so-called Christian churches. There are persons in every community and in every church who are not congenial. There is something irritating in their manner of life. This antipathy will manifest itself even when we try to hide it. It is the purpose of the Holy Spirit to burn up all such antipathies and prejudices and melt all sorts of people into one brotherhood. The Spirit did this on the day of Pentecost, and He will do it wherever He may have his way. It is an easy thing to love those who love us and to live on good terms with those who are kind to us; but to love our enemies and to enter into fellowship with those who irritate our feelings requires grace.

Jeremy Taylor says: "It is no great matter to live lovingly with good-natured, with humble and meek persons; but he that can do so with the froward, with the wilful and the ignorant, with the peevish and perverse, he only hath true charity. Lord evermore give us this charity."—*Selected.*

The Confessors of Peace from the Second Century to the Era of Mahomet.

VI.*

Athenagoras, the converted Athenian philosopher, in his "Plea for the Christians," addressed to the Emperor Marcus Aurelius and his son Commodus (177 A. D.), says—"The pastime which you fondly dote upon is the combat of gladiators and wild beasts. But we, deeming that to gaze on manslaughter is much the same as slaying a man, have renounced such spectacles."

The treatise *De Spectaculis* of Tertullian, a generation later, was written by way of caution to certain of the Christians who were in the habit of attending the theatre and circus, and the gladiatorial exhibitions at the amphitheatre. Having referred to the heathen defenders of these sports and disposed of their apologies, he continues in language which shows that the pleaders for more "liberty" were ready with the same specious excuses that they are to-day:

"Fortified by this knowledge against heathen views, let us rather turn to the unworthy reasonings of our own people. For the faith of some, either too simple or too scrupulous, demands direct authority from Scripture for giving up the shows, and holds out that the matter is a doubtful one, because such abstinence is not clearly and in words imposed upon God's servants. Well, we never find it expressed with the same precision, 'thou shalt not enter circus or theatre, thou shalt not look on combat or show,' as it is plainly laid down, 'thou shalt not kill; thou shalt not worship an idol; thou shalt not commit adultery or fraud.' But we find that the first word of David bears on this very sort of thing: 'Blessed,' he says, 'is the man who has not gone into the assembly of the impious, nor stood in the way of sinners, nor sat in the seat of scorners. . . . God certainly forbids us to hate, even with a reason for our hating; for he commands us to love our enemies. God forbids us to curse, though there be some ground for doing so, in commanding that those who curse us we are to bless. But what is more merciless than the circus, when people do not spare even their rulers and fellow-citizens? . . . If the literature of the stage delight you, we have literature in abundance of our own—plenty of verses, sentences, songs, proverbs; and these not fabulous, but true; nor tricks of art, but plain realities. Would you have fightings and wrestlings? Well, of these there is no lacking, and they are not of slight account. Behold unchastity overcome by chastity, peridy slain by faithfulness, cruelty stricken by compassion, impudence thrown into the shade by modesty; these are the con-

tests we have among us, and in these we win our crowns. *But would you have something blood too? You have Christ's.*"

Perhaps it will serve to elucidate a long consideration of the times now before us under notice, if we take a glance at the various position held by the Montanists, and Tertullian, their foremost apologist,—he who was the son of a high officer of the Roman garrison at Carthage, had been given a liberal education, especially in the line of jurisprudence, and now, having become a Christian, commended the brethren to a simple, non-resistant life. Montanus, of Phrygia, according to Neander "claimed to be considered a prophet sent of God in behalf of the new Church, as an inspired reformer of the church life." His opponents, it is charged that he made claim to be the Paraclete, the Comforter, the Holy Spirit, and we must not forget that so recently as the seventeenth century, the utterances of the Friends were similarly misconstrued by their enemies. "Tertullian," the above author then explains, "sets over against the church consisting of the number of bishops, the Church of the Spirit, which manifests itself through man enlightened by the Holy Spirit." The man's gift and qualification for the ministry equally with man's, was acknowledged. Neander unsympathetically observes, that "all the followers of Montanus, the most distinguished was Tertullian, a man of genius, austere and gloomy by nature, who defended the cause of his preceptor by many energetic and severe publications." This reflects the popular view of the time, of those who pleaded more "liberty of the flesh and of the spirit." But, Schaaf and Herzog in their *Religions-encyclopedia*, with a juster discrimination, sum up the matter: "With such principles Tertullian could not help coming into conflict with the Catholic church [the general church which acknowledged the decrees of the councils]. To him the very substance of the church was the Holy Spirit, and by no means the episcopacy, whose right to wield the power of the keys he even [ever?] rejected. . . . the conflict assumed such a form, that the Montanists were compelled to separate from the Catholic church. But Montanism was, nevertheless, not a new form of Christianity, but were the Montanists a new sect. On the contrary, Montanism was simply a reaction against the primitive church, against the obnoxious tendency of the church of the day—to strike a bargain with the world, and arrange healthily and comfortably in it."

We are considering the influence of the theatre, and the shows generally, of the period antecedent to Constantine, in weakening the moral tone of the professed followers of Christ, and particularly in breaking up their testimony against war. The faithfulness and endurance under persecution of many confessors of Christ and of the testimony of peace, was the occasion of drawing many into the fold, and of strengthening the faith of others. We remember the oft-quoted saying of Tertullian—"The blood of the Christians is the seed of the Church." On the other hand, the effect of the witness of these spectacles by the multitude at large in the quest for sport, was to harden and brutalize. Thus the faithful moral counselor of Carthage

*In the present number our essayist conforms to a request which he has received, to extend his references concerning Tertullian and the Montanists to their testimony against other vices than War. So the popular shows and other signs of decadence are given a space here.—Ed.

ing both upon the immorality of the
and the barbarity of the gladiatorial
proceeds:

we not in like manner enjoined to put
immodesty? But the theatre is the
of indecency, where nothing is in
but what is elsewhere disreputable
Let the Senate, let all ranks, blush for
name . . . These things are that very
of the devil which we Christians have
The rejection of these amusements
chief sign that a man has adopted the
of a faith . . . How monstrous it is to
God's church to the devil's, from the
the saying is, to the sty; to raise the
to God, and then to weary them in the
of an actor; with the lips which have
been Amen over the holy things, to scream
in gladiator's favor."

And, in his *Mœurs Romaines*, quoted
Fressé, says, that "The theatre, and all
less closely connected with it, had be-
the grand school of corruption and of
it was the fruitful centre of every sort
in Pantomimes of the amours of Jupi-
of Venus, very literally rendered, not-
withstanding the mere symbolical significance
for them, were, with wanton dances,
favorite dramatic attractions."

Another writer of this time of Rome's Decline
describes the fascinating and deadly attrac-
of the ever-popular spectacles. Thus, in
his picture to us the decadent Ro-
man: "As they sat upon the steps of the
theatrical theatre beneath a burning sun,
this a moral atmosphere of feverish ex-
citement, watching in security the vicissit-
udes of real battle, gloating over the suf-
ferings of the wretched whose blood crimsoned
the arena, delighting in their death, as Tacitus
describes them witnessing the all too vivid rep-
resentation of some scene of adultery, shel-
tering under the name of an Olympian god,
conformed to the rhythm of melodious
music, while the Numidian lion was roaring in
impatience to devour his prey waiting
in the condemned cell; as thus they sported
with death, the people became themselves the
spectators of wild beasts, and never did Africa
resound with a more terrible roar
than in which many a delicate Roman
perished, as it rose in the circus: 'The
arena to the lions!'"

Now, the prisoner of the State, who
looks of himself as "the prisoner of
Christ," "dwelt two whole years in his
prison house" in the imperial pagan city,
as he presents us a vivid portrayal of the unre-
deemed Roman of the days of Nero—inglori-
ous, very vile, "without natural affec-
tionable, unmerciful," whose low state
was not improved under the further
degradation of Domitian, Elegabalus and Caracalla.
He tells of the only escape "through
the dust our Lord," in answering the ex-
ecutor's query—"O wretched man that I
am, shall deliver me from the body of
death?"

And then, the Church excluded from
the catechumens (neophytes or proba-
tioners), who were in any way, directly,
indirectly, connected with theatrical, cir-
cuses, gladiatorial performances. Tertullian
expresses the general sense of the early
Church on this matter of frequenting the

ungodly shows, speaks of one unhappy woman, who, yielding to the temptation to go to the circus, was so overcome with horror at the spectacle to which she had allowed herself to be drawn, that she returned from it de-
ranged, believing herself to have become the prey of demons.

The gladiatorial contests were continued in Rome during the greater part of a century after Christianity became the State religion, but they were not introduced at the capitol of the Eastern empire, Constantinople. A decree of Constantine, contained in the Theodosian Code (A. D. 438), says: "Let those who are condemned, whether to gladiatorial games or to the mines, not be branded on the fore-
heads, that the majesty of the face formed in the image of celestial beauty be not dishonored." It is curious, however, that the same law justified the infliction of torture in examination of persons accused of treason; and so, under the degenerated church, as under Roman law, the innocent were liable to the infliction of barbarous punishments in the search for evidence. It may be remarked here, that in the Jewish code, as in that of the Hindoos, this savage method of inquisitorial procedure was unknown.

The last gladiatorial show in Rome was in the year 402, being given in honor of Stilicho, the Vandal commander of the Emperor Honorius. Upon this notable occasion, a monk, Telemachus, rushing into the amphitheatre to part the combatants, was stoned to death by the enraged and disappointed populace; but his death brought about the final abolition of the games. The contests of men with wild beasts, however, lingered in the East for more than two centuries, when the degrading "sport" was formally and finally condemned by the Council of Trullo, (A. D.) 692. This Council, it will be of interest to explain, in passing, was also known as the "Quinisext," the name representing a sort of supplement of the fifth and sixth general councils, its decrees being of a disciplinary character. It assembled in a hall of the imperial palace at Constantinople called the Trullus.

(To be continued.)

The Value of Memorials.

[A series of brief memoirs of members who had deep spiritual experience and have suffered steadfastly for the Truth, has been appearing, and will be continued in our columns. The following observations are appropriate to such selection.—ED.]

Memorials of the circumspect lives and dying expressions of such as finish their course well, show the efficacy of the Divine principle—the holy spirit of the Lord Jesus which we profess,—and that obedience to its dictates yields the peaceable fruit of righteousness.

To promote an attention to this principle in the youth, the accounts of many in their day are recommended to their perusal, that, excited by their example, they also may fill up their duty as they go along, and partake of the same peace those had to rejoice in, when no human help could afford them comfort. The experience of those who are gone before is a mark to those who follow after; and their example calls loudly, "Follow us as we have followed Christ." Those

who in early youth are happily brought under the teachings of this Divine principle, and are faithful to its precepts are prepared to encounter the world, and all its allurements. If prosperity be their lot, they can receive it as the bounty of an Almighty Father, and keep in that state of humility which becomes dependent beings, applying it to the honor of Him who hath entrusted them therewith. If afflictions attend, and it is sometimes the lot of good men to experience adverse winds and tempestuous seasons, they can look with an humble confidence to him for protection in their conflict, and bow to the hand which has permitted them. It was not the offering of any temporal things, according to the Psalmist; but says he, "Offer to God thanksgiving; pay by vows to the Most High; then call on me in the day of trouble, and I will deliver thee, and thou shalt glorify me." Psalm L.

This hath been the experience of those who have had their trust in God's power, in every age; and as they have gone along in this vale of tears, for such it hath been to many, they have from time to time, had their faith renewed, and their hope confirmed, so as to set up their Ebenezer, "Hitherto hath the Lord helped us."

"We have," as saith the apostle, "no continuing city here;" neither have we any state of security beyond [that which asks], "Give us this day our daily bread." Whatever may be our growth and experience in religion, it will never go beyond that state of dependence. Our only safety is a truly humble state, where in the mind is exercised in a daily watch, care, and travail, for the risings of the Divine life; under a sense of which such have a hope that He who hath been their morning light, and hitherto conducted in safety, will in the conclusion, be their evening song; and in effect add to the language of the prophet, "I will greatly rejoice in the Lord; my soul shall be joyful in my God; for he hath clothed me with the garments of salvation."

T. W.—1795.

FOR "THE FRIEND."

Ambrose Rigge.

Ambrose Rigge, of Ryegate, in Surrey, was convinced of the truth about the year 1652. Being called of God to preach the gospel of peace and salvation, he was drawn to visit London, and the south and west parts of England about the year 1655, enduring great hardship, being often imprisoned in divers jails, not for evil doing, but preaching the truth. For refusing to swear, in obedience to Christ, who commanded, "Swear not at all," he was preminured and made prisoner at Horsham, in Sussex, above ten years at one time. He was also whipped, and often evilly treated and abused, which he bore with much patience, and continued faithful unto death. In the time of his sickness, whereof he died, he had great assurance of the mercy and favor of God and said, "I am going where the weary are at rest." He bore his sickness with much patience; and a little before his departure, he declared, saying, "If Friends keep to the root of life in themselves, they would be the happiest people in the world!"

He departed this life the 30th of the Eleventh Month, 1704, aged above seventy, and a minister about forty-nine years.

For "THE FRIEND."

Christ's Resurrection Morn.

"She supposing him to be the gardener :"

Yes, he who stood before Mary weeping at the tomb, her heart overflowing with grief too deep for utterance, He was the gardener. But not of such an earthly garden, containing such a tomb, wherein Jesus, crucified, was tenderly laid by weeping friends; friends, brethren, children, as He loved to call them, for whom He himself had once wept and prayed, and, like stray lambs, had borne them home to His love. But no tomb, hewn out of the solid rock by the hand of man, could possibly retain its hold of the Lord of glory, He who in His own power, did cleave the fountain and the flood and from the flinty rock made crystal streams of water flow to quench the thirst of this flock of Christ, as safely through that wilderness, great and terrible, he led them. Neither could huge rock rolled to the door, which a company, with shouts of triumph, placed there to bar the egress of Him whose words they derisively repeated, saying, "This deceiver said, 'I will rise again.'"

The soldiers, the chief priests' guard, faithfully kept their watch, but near the break of day one angel came, his countenance struck terror into the hearts of the bravest, and they all did tremble as an aspen leaf, and became as dead men; nor could they move a limb, nor lift an arm to stay the work of that one angel, whose Master's tabernacle lay sleeping within; for had he not taught this dissolution of the earthly tabernacle of man; this seeming death is not the death they have to fear who trust in Him, for such, said he, "shall never die." Gloriously he rose from the dead; all nature smiled as it had mourned, when hanging on the cross it beheld this deed of man, God's creature, first created in God's image, blessed above all others. The light broke in the East, and the sun in glory rose as it had done from the beginning by his beams chasing away the darkness of the night. Had then God forgiven all these mournful things? Yes! Jesus' prayer, as He hung upon the cross, to God, His Father, had been answered, "Father, forgive them; they know not what they do." And afterwards this charge He gave to his disciples, when with glad tidings of salvation, through Him their crucified and risen Lord, this special charge He gave, "beginning at Jerusalem."

In Mary's soul, his mother, the sword had pierced too deep, and so wounded her that she could not rise and go tenderly to care for his body lying, as even she supposed, in the grave where they had laid Him. But other willing hearts were found who, with eager steps, did haste, bearing myrrh and frankincense, his body to embalm. They reach the tomb early; it was break of day; but yet they were too late. Over all brooded a holy silence, like as that which came over the vast multitude, when expectantly the worshipping Jews awaited the reappearance, in his glorious apparel, of their High Priest, after that He had entered, with the blood of atonement, into God's presence, and had come forth with power from Him to reconcile his people to their God; for did not the Lord now sit upon his throne of grace and mercy willing to forgive

and cleanse the repentant sinner? All was quiet; the garden, a prosencha or place of prayer, was emptied of those who, in its quiet shades, sought to hold communion with God. The guards, where were they? Already gone to tell the strange things to the priests, and how their (to them dead) prisoner had escaped. The huge stone was rolled away. The sepulchre's door was open, and peeping in, for love is strong and conquers fear, they saw indeed the place where they had laid Him. But where was He? The tears of these gentle women did now more profusely flow, tears for the time refrained in this ministry of love to Jesus, for had not He, when once alive, wept at the tomb of Mary's brother, and by almighty power raised him from the dead? Fit messenger was she to send to men, who, though full of faith and power and strong in themselves, yet had proved weak in temptation's darkest hour, and had left their Master all alone in his hour of peril. But Mary could not forego her mission of love, and, turning round weeping, she dimly sees through her tears, as she supposed, the gardener, and her petition was, "Where have ye laid Him? that we may go." Her sense of sight, bedimmed by tears, had failed to recognize her Lord, but when in tones, his voice so often heard as sweetest music in her home, now called, "Mary;" it was enough; Mary believed and replied in humble reverence, "Rabboni," highest title given by Jew to those who taught the law of God.

O woman! richly with love endowed of God, when sanctified by grace, what can withstand thy power? It is true that woman first through weakness fell, but to Mary, first the virgin, did God's message come, and she reverently bowed, all other interests failing to outweigh the complete submission of her will to that of her Lord. To Gentile Samaritans, too, the Lord first by man preached his power to save, and with what power she preached, brought by her means to Jesus, they themselves declared. Women lingered longest at the cross, cherishing the hope that He would take that power to himself which they knew was his, and defy the taunts of those who mocked and exulted in his death. First at the tomb, the last sad rites to do; now first their love unquenched, Christ sends them to bear glad tidings to the chosen few, who mourned for Him as they would for their first born. Could woman then be by Him forgotten, when from his throne of power He sends, like a rushing, mighty wind, his spirit on Pentecost's day, and fills with its power the disciples who, like a little flock, had gathered there? Far from it. He who did create, knew well the mother's love, and had tasted of her love to Him, when like as *man*, to others He had seemed to be; nor do we ever read of one woman's tongue that ever spoke one unkind word to Jesus, who, though man, was yet Lord of all. Henceforth in Christ, sex was to be unknown. It is to the inner-man, Christ born again, in all the hope of glory, as raised by his power from the grave, in which death our sin has placed us, who hearing His voice, shall with Him rise, and living praise his holy name. Henceforth woman is and is to be equal recipient with man of Christ's spirit of love and power, and shall receive like holy gifts and graces as

men, that she may be a helpmeet to him as Eve when first in innocence in Paradise they together, walked with God.

And now it is the garden of their hearts which they are together to labor, and the Lord's direction, root up every part of his planting, and tend and keep and each precious seed of grace, that He, the unutterable condescension called him the Son of man (whilst yet He was in the Son of God), may sow, that it may sprout and flourish and bear fruit to the glory of Great Husbandman.

This same Christ Jesus, once dead, now alive again, no more to die, once given the resurrection and the life; who believeth in me shall never die." And servant John declared to us, "Blessed is he that hath part in the first resurrection; on such the second death has no power; but they shall be priests of God and of Christ, and shall reign with Him a thousand years." Rev. xix: 4.

W. J.

For "THE FRIEND."

Doukhobor Notes.

Confirmatory reports continue to come from Canada to the effect that the Doukhobors are progressing in the right direction. "The Commissioner of Immigration was the last inst. viz: At the present time the colonies are at rest, and, under the influence of Peter Verigin, are settling down to a cultural life and are now making entry into homesteads."

From the *Manitoba Free Press* the following has been summarized: "The Doukhobors the Yorkton District have changed their views in regard to taking out homesteads. They have abandoned their ideas of community and ownership and are now disposed to obey the laws and customs of Canada; but since the Yorkton Land Agency would not work and assistance was sent to them at another point. In the Swan River and other Colonies they are settling down to the work of making permanent homesteads to the land of their adoption. The exiles had purchased fifty horses and intended to buy one hundred more. Their brethren in the Saskatchewan Colony had sent them several hundred dollars worth of cash which had been appropriated for that purpose. The credit of the Doukhobors as the merchants of the towns with which they have business dealings was very good and hence having shown that they will pay their obligations promptly and in full; and believing that in a short time the Doukhobors in each of the Colonies would be clothed with the necessary modern appliances to enable them to carry on farm operations in the most approved manner. They have regarded the Russian and adopted the Russian calendar and further, they have rechristianized the names of all their children. They may be born in their colonies. Charles, the Colonial agent, is reported to have said that sixteen hundred and fifty homesteads will soon have been completed in the Yorkton."

To the above compilation of accounts it may be added, that those who came over on the last ship from Russia mostly settled in

hewan District, which is a choice tract. They had rather more money in and it was evident from the quality of their goods, such as rugs, etc., which brought with them, that they had more riches in their native land; some of their relations were sold, however, at exceedingly low prices to afford the means of subsistence to the first year after their arrival, but on the whole this colony seemed at least one advance of their Yorkton and Swan River brethren.

They have lately been received from Russia and returns for the property which they were obliged to abandon at the time of their capture, which together with their gift has enabled them to make their gift of eight thousand dollars and rises to their brethren less favored, and has suffered from being deluded into their working to start out on their pilgrimage worths ago.

J. S. E.

Notable Books on War.

The following notice of two books recently published is clipped from *The Journal of Education* for two reasons: First, the intrinsic merit of the notices, and secondly, especially, for the encouragement it affords to friends of peace to find one of the best educational journals of the country giving place to such sentiments.

J. H. BARTLETT.

BOOKS ON WAR. Charles Sumner. With introduction by Edwin D. Mead. Boston: Houghton Co. Cloth. 319 pp.

THE FUTURE OF WAR. By I. S. Black. With introduction by Edwin D. Mead, and conclusion by W. T. Stead. Boston: Ginn & Co. Illustrated with diagrams and charts. 380 pp.

These are three greatest orations were written, and there have been no greater arguments for Peace than these of Charles Sumner. The only remarkable thing about them is that they are now printed in one volume for the first time.

Edwin D. Mead certainly has a mission in this age, the message and conviction of peace on this subject, and he finds his philanthropic to aid him in Edwin D. Mead makes possible the publication of these, and one on "The Future of War" by I. S. Black, who was the most profound thinker of the problem of peace that has ever

up to the mischief of one campaign:" or this of Charles Sumner: "Put together all the ills and calamities from the visitation of God, whether in convulsions of Nature, or in pestilence and famine, and they will not equal the ills and calamities inflicted by man upon his brother-man through the visitations of war," and then say whether it is not worth a half-hour a day for one month or two to awaken a sentiment against war. One generation of school children well taught would go far toward leading the United States to do its part toward the settlement of national differences as do individuals, cities and states.

I. S. Black's great book with its adequate body of facts, charts, maps and diagrams furnishes the best possible arsenal from which to draw material for arguments for peace. Once each year some pupil in every upper grammar grade, high school, normal school and college, should prepare an essay or address on some phase of the peace problem, drawing his material from this book. Rightly used these two books can be made to do more for civilization than any other two books that have been issued in recent years.

Notes from Others.

Dr. Hall's lectures have been issued already, in an octavo volume, printed on good paper, and sold in India for eight cents.

The legislature of Cuba has refused to make "Good Friday" a legal holiday, greatly to the dissatisfaction of the Cuban Roman Catholics.

Ellen M. Stone, at the end of her lecture engagements, beginning last Tenth Month, will have made the circuit of the continent and filed 149 appointments.

Manorama, the daughter of Pundita Ramabai, has aroused much interest among the people in Queensland in missions in India, especially in the great work for widows.

Helen Gould maintains an office in her New York house for charity work, presided over by two secretaries and a typewriter. Representatives in her name make the rounds of the hospitals, relieving worthy cases of distress.

John K. Nutting, head of the Utah Gospel Mission, believes that if the increase among Mormons continues to go on at the rate it has been gaining during the last twelve years, they will control the west of the United States from Canada to Mexico.

Joseph Clark, missionary at Ikoko, Africa, gives a very interesting account of "Fetichism on the Congo." He says a fetich is not an idol, nor is it the likeness or symbol of a god, but it is supposed to be either the abode or receptacle of an impersonal power.

What is said to be the culminating part of the Chataqua exercises for the coming summer will be a series of conferences on "The Essentials of the Christian Life," in which men of differing points of view will discuss the elements of faith and purpose which they hold in common.

The annual meeting of the American Tract Society has just been held in Washington. The distinct publications of the society now number nearly nine thousand, of which about two thousand are volumes. The whole number of tracts and periodicals reaches nearly eight hundred millions.

Two years ago Porto Rico did not have a single school-house, says Superintendent Brumhagh. Spain in 400 years built not one. To-day more than fifty first-class brick, stone and concrete buildings are in use. Agriculture is taught in connection with twenty-two schools. The poor people are very anxious to educate their children. A compulsory law is not necessary. The average of admittance is higher than in any State except Massachusetts. —*Iloilo Times (in Philippines).*

RELIGIOUS STRUGGLE IN SOUTH AMERICA.—Reports coming here through the Methodist mission boards and the American Bible Society representatives are to the effect that a desperate struggle is going on in Ecuador, Peru and Bolivia upon religious lines. Government officials seem to be earnestly in favor of absolute religious liberty, while ecclesiastics are defying the law and inciting to riot. Full religious liberty has been guaranteed recently in Ecuador. The marriage law putting Protestants and Catholics upon the same legal footing has just passed both houses of Congress. In Peru an effort is making to secure religious liberty by constitutional provision, and in Bolivia a bill freeing ecclesiastics from Catholic control is pending. Another bill is likewise pending in Bolivia, taking away the privilege of priests, monks and nuns repairing to ecclesiastical courts for trial in case of misdemeanors, and placing them upon precisely the same footing as other citizens. Scenes of outlavery in great numbers are being enacted, and bon-fires have been not a few, especially in Peru. It is a curious fact, observes one of the missionaries, that there, as always, it is the civil authorities and not the religious authorities who are leading in reforms.

SLAVONIANS IN CHICAGO.—The Bohemians, Russians, Slovaks, Croations, Hungarians and Poles are all akin in character and languages, yet all show great diversity in their unity and require different literature for each. To prepare this needful religious literature for immigrants has been a work of great difficulty, financial cost and sacrifice on the part of friends and supporters of the American Tract Society, and to put it into circulation from house to house calls for even more strenuous efforts. There is much good, moral and religious literature in circulation in the language of John Huss, which colportage has introduced, and which is producing good results wherever it has been distributed. The Russians have a larger per cent. of illiteracy than any other Slavonic people. The Slovaks are all nominally Roman Catholics and have few religious books except those published by the American Tract Society. They are particularly careless about all religion, and yet there are some noble exceptions. Many ask for the Bible.

The Russians and Slovaks are given to intoxication greatly. Temperance literature is very useful. The Croations are also woefully given to drunkenness and gambling, and yet there are many exceptions, and many buy a New Testament in their own language and will accept tracts and get someone to read them to them if they cannot read. Their children are growing up under better conditions and learning to read English in the public schools, and gradually literature is making its mark on them as well as others. Through the colporteur largely most the supply of religious truth come, for no one would seek it except it was carried to them.

The Hungarians (Magyars), the people of the patriotic Kossuth, whose struggles for freedom at one time secured the sympathy of the civilized world, are largely represented in Chicago. They are an enlightened people and stand in many ways high in literary and social qualities. The volumes and tracts in that language provided for them by the American Tract Society, together with a critical version of the Holy Scriptures, are well received.

Unconceivable that one can read these great addresses, "The True Grandeur of Peace," "The War System" and "The Duel between France and Germany," and not enlist in the cause for peace. Every graduate of school in the land should read these utterances as a part of his school curriculum. These should be read aloud in the school the whole school, if there is an assembly, otherwise in each class-room. It requires not more than a half-hour a month to do this, and this would be an investment that could be made of so little each year.

Designate this as a "fad?" Read the notice of Voltaire: "Put together all the best of all ages, and they will not come

The Polish people are more religiously needy than any other nationality. If the census of 1900 is to be believed there are more than 100,000 of them within the corporation of Chicago. The partition of Poland, the military tyranny of Russia, and the bloody rebellions which were put down in the most remorseless ways have not dampened the love of liberty in the hearts of the Poles. The countrymen of Kosciuszko have a grand future before them, and the key to it is said to lie in an open Bible and evangelical ministry, and the education of the children in our public schools. The large and most excellent religious literature provided for them in the publications of the American Tract Society is said to be steadily winning its way. The old Catholic movement continues to flourish and develop in spite of every effort to destroy it. The Polish press is largely against all religion. Among these Slavonian people the common sin is drunkenness. The saloon and beer-hall and the half-informed agitator are said to have done them much harm mentally and morally.—*Michael Jaeger, colporteur.*

SUMMARY OF EVENTS.

UNITED STATES—A decision has been rendered by the United States Circuit Court in St. Louis, which enjoins the Northern Securities Company from voting the stock of the Northern Pacific or Great Northern Railway Company, but allows the return of such stock as had been delivered to that holding company. The opinion was unanimous, all the four Judges concurring. The judgment of the Court in the Northern Securities case is one of far-reaching consequences, and reaffirms the right of the people to be free from monopoly. The results of this decision, if it is upheld by the Supreme Court, to which it is said an appeal will be taken if it is believed, will be so momentous that wholesale consolidation of competing railroads will be checked or sensibly modified. This decision, it is explained, holds in substance, that whoever has control of competing railroad carriers is secured, either by a combination of natural persons or by a corporation which they create, and the motive for competition has thus been destroyed by the consequent unity of interest, the Anti-trust law is violated.

A law recently passed in Iowa permits the confinement of confirmed drunkards in lunatic asylums. Within eight months after its passage three hundred such patients were under restraint and treatment. Many of them are discharged, and the statement is made that 75 per cent. of the cases have thus been restored.

A dispatch from Indianapolis, says: The Executive Board of Union Carpenters and Joiners, meeting there on the 13th inst., will have 350 strikes in various places to investigate and sanction. There must also be appropriations to carry on the strikes now in progress, and any others that may arise soon. There are now 3500 carpenters out in New York.

President Roosevelt has lately entered the Yellowstone National Park with the purpose of remaining two weeks within its recesses for relaxation and rest. In late public addresses he remarked in reference to the interests of the laboring men: "The worst being of our time is the man who will do anything to get ahead of his fellows. Very much of our effort should be to try to secure a constantly better understanding between employer and employee. The report of the Anthracite Strike Commission is a masterpiece of sound common sense and of sound doctrine on the very questions with which our people should most deeply concern themselves."

Dr. Howard S. Ames, president of the Pennsylvania Society for the Prevention of Tuberculosis, has urged the necessity of a popular educational movement for the spread of practical knowledge of the character and nature of tuberculosis and its prevention and cure. Dr. Anders said: "Popular education is still necessary to combat beliefs that tuberculosis is hereditary and incurable, or that such a disease can be cured by the use of a popular fallacy for which the advent of proprietary 'consumption cure' nostrums and fakers are most largely responsible. Legislation against these heartless triflers with credulous and hopeful consumptives is greatly needed. For economic as well as humanitarian reasons there should be Government institutional care of incipient and curable cases, including the tent and shack plan, and farm colonies to try the soil and shade of the woodland; municipal hospitals for advanced destitute and desolate cases, and city dispensaries for walking cases that cannot or will not be sent away. Change of climate is not so essential as change of environment."

At a "conciliation conference" at Pottsville the Read-

ing Railroad Company's miners were promised reinstatement of men discharged, adjustment of working time and a more convenient train schedule.

The steamship *Bulgaria* lately arrived at New York with 2594 immigrants, the largest number of aliens ever brought on one ship. Thirty-eight thousand and seventy-six immigrants were landed in New York between Fourth Month and Fourth Month 10th.

The Supreme Court of Kansas has decided that the Topeka Board of Education can maintain separate schools for white and negro children.

A dispatch of the 6th from Harrisburg, says: It is a misdemeanor punishable by a fine of from \$100 to \$300 for any person to sell cigarettes or cigarette paper to a person under twenty-one years of age. The Governor signed this bill to-day, and it goes into effect immediately.

The New Jersey Legislature has made an appropriation of \$300,000 for a sanatorium for poor consumptives, an appropriation to purchase a site having been made last year.

New York State has a College of Agriculture for Women. It is situated on the Hudson, near Ossining. The girl students are taught to plow, harrow, milk cows, drive and groom horses, dig ditches, to irrigate land scientifically and to fertilize it. They also acquire the principles of floriculture, vegetable raising, grape and nut culture, the training being so arranged that they become not only practical farmers, but landscape beautifiers. This new departure in the education of women, it is said, has been very successful thus far.

A dispatch from Kansas City, says: Plans are under way for the establishment of an Angora goat packing-house in Kansas City. The plant will be equipped with a tanning outfit, and the skins of the animals will be made into robes. A very large percentage of the fur garments in use to-day are made from the Angora fleece. The company will establish a branch of its business in Texas, where Angora milk will be condensed and sold for medicinal purposes.

Recent elections in Kansas disclose the fact that the vote in favor of enforcing the Prohibition law is the most overwhelming in the history of the State.

The Wabash Humane Society has elected President Roosevelt an honorary member in consideration of his efforts to Cuba to secure recognition of the kind of kindness toward the cavalry and artillery horses of the army. The Attorney-General of California is reported to have rendered an official opinion declaring the use of the Bible in the public schools as unconstitutional. Not only may teachers not use the Scriptures as a textbook, but even reading from them, as is the custom frequently at the opening exercises of the schools.

An immense tract of coal lands, it is announced, has been discovered near Wilkesbarre, Pa., including eight veins new to that region.

As much as 1,000,000 tons of coal are estimated to lie in the Blue Mountain dam, and as much in Felix's dam, near Reading, Pa., whither it has been deposited by rushing waters.

There were 500 deaths in this city last week, reported to the Board of Health. This is 35 less than the previous week and 6 more than the corresponding week of 1902. Of the foregoing 269 were males and 231 females; 62 died of consumption of the lungs; 70 of inflammation of the lungs and surrounding membranes; 11 of diphtheria; 14 of cancer; 18 of apoplexy; 17 of typhoid fever; and 1 of cholera. The instructions from Washington to the representatives of the U. S. Government in China in reference to the payment of the indemnity money, it is announced, will stipulate simply for the payments of the instalments of the indemnity on the basis of exchange at the date the agreement was signed in 1900. Whether the United States will exact the payments in gold or silver concerns no other nation, and the other national parties to the agreement are permitted to likewise exercise their discretion as to the basis upon which they will settle.

It is stated that the American Government's proposed silver bond for the Chinese indemnity was disapproved by the Powers, who require that payments shall be made on a gold basis.

The London Times correspondent at Peking cables that riots reported in the district around Hanking were provoked by official exaction of increased taxation. The riots are described as anti-taxation and not anti-foreign. The officials now levying taxes invariably declare that they are required to satisfy the needs of rapacious foreigners, therefore anti-taxation easily becomes anti-foreign. The Times correspondent at Peking states that Count Cassini, the Russian Ambassador at Washington, has suggested the co-operation of the Powers to prevent the importation of arms to China. The prohibition clause in the protocol expires on Eighth Month 25th, but is renewed

while if the Powers think it desirable. The effect prohibition has been to give great impulse to the manufacture of arms in China.

It is stated that there are now in the Chinese 11,000,000 post-offices, which are placed in every except Kausu, and in 730 other important cities. In the province of Chihli, in which Peking is the service point of all the provinces, the latter province have been considerable losses, which, however, minishing yearly.

The Russians partially evacuated the second port of Manchuria on the 8th instant. A despatch from St. Petersburg says: The Russians removed their flag from their customs and retired from the civil government of the city of Nanking, but retained the rail minus at the Russian concession, which is to be a march from the city, whence they can effectually locate the treaty port and the Liau River.

President Loubet of France is expected to go to geria, Morocco and Tunis, returning to France on the 29th inst. Much political significance is attached to the journey, as it is the first time that any president of France has visited his African empire, and it will be the first meeting on African soil of a French ruler and a North African Sultan and the Tuols.

Notifications have been received at The Hague, the Governments of Salvador, Uruguay, Guatemala and Korea of their adherence to The Hague Convention.

The recent action of the French Government pressing the religious orders in France is expected to result in the complete extinction of monasticism in that country. There are fifty-five religious orders by this action who have more than 13,000 establishments, such as retreats, schools, colleges, industrial monasteries; all of which have been estimated at 200,000 monks and nuns, and will be owing to the strict enforcement of the reconsecration these religious orders.

A strike has been proclaimed throughout Holland labor engaged in transportation, both by land and by water. The strike is due primarily, it is said, to the action of Government bills in Parliament intended to restrict the labor of the railway employees, to perform their duties. A long term of imprisonment imposed by the pending measures upon public who act "collectively" in refusing to work. Persecute a strike of public servants are also subjected to severe punishment.

Estimated that the railroad strikers number 25,000.

There are many sugar refining companies in most of them situated in the southern part of the total capital invested in this industry here is \$5,000,000. Except in Formosa—which, although a part of the Japanese Empire, has separate oil laws—the industry receives no direct aid from Government.

Recent experiments in England have shown that marine boats can be communicated with by telegraphy, when submerged to the depths at which they can reach them.

A vast deposit of iron ore has lately been discovered in the State of Guerrero, Mexico, 6000 acres in extent including a mountain of ore hundreds of feet high.

NOTICES.

A woman Friend desires position as superintendence or managing housekeeper, either public or as companion to lady.

Address "E" Office of THE FRIEND.

WESTTOWN BOARDING SCHOOL.—For care persons coming to Westtown School, the stage trains leaving Philadelphia 7:16 and 8:15 A. M., and 4:32 and P. M. Other trains are met at West Stage fare, 15 cents; after 7:30 P. M., 25 cents. To reach the school by telegraph, wire West Phone 1145.

EDWARD G. SMEDLEY, Superintendent.

WESTTOWN BOARDING SCHOOL.—Application admission of pupils to the school, and letters to instruction and discipline should be addressed to

WM. F. WICKERSHAM, President.

Payments on account of board and tuition, communications in regard to business should be sent to

WHAT will it profit us that Jesus died for us, if we do not die to sin?

WHEN one is under call for a Christian service the best way of saying, "I pray thee have me excused," is instead of looking back and going forward. Then when a willing mind is moved, will be the Master's time, should He choose, to take the will for the deed.

A little of the proceedings of this week's sessions of Philadelphia Yearly Meeting could be expressed in the present number to make it more profitable to the reader, or compensation for the interference with the right service of the sittings in the mind of the writer.

The fear expressed in our last number of the passage of the Racing Bill in the Pennsylvania Senate, we may now in gratitude have proved groundless, in that the bill failed to become a law.

The Christian dispensation does not need revival, but the Twentieth Century does need salvation. Can we save the age, but the age cannot save salvation, in any other sense than being saved;—coming under its power from generation to generation and so glorifying the Gospel in being glorified by it.

Christendom may, indeed, give way to the enemy; but Christianity cannot, and live. Suppose the Christian dispensation could begin and end to make the world its master, that beginning would be its end. Thanks be to Christ that the beginning was fought off by Him, when Satan offered Christ the world for the price of one act of submission to him. "Oh, but," say our time-servers, "the Christian dispensation must adapt itself to the

age!" To the wants of the age, but not to its wishes, Christ does, indeed, adapt his dispensation. The same yesterday, to-day and forever, He speaks to the condition of every age as Lord of its needs, but not the accommodator of its whims. "Indulge me," says the world to Christianity, "or I will not patronize you,—you will not get adherents;" And so the times, the age, the world "will love its own." Its logic to the church is, "Throw away Christianity if you wish to get adherents to it;"—just as to us its word keeps up the cry, "Throw away your Quakerism if you wish to get members"—and then they will be members of what, an organization or a principle?

Not conformation to an age, but transformation by the renewing of its mind, is what salvation requires and bestows. Let the age adapt itself to the Christian dispensation, rather than the dispensation to the age,—and great shall be the peace of its people, and the happiness of its civilization. Salvation forbids that we should glory "save in the cross of our Lord, by whom the world is crucified unto us and we unto the world," using it as not abusing it. What an abuse of this world it is to make it our master. What a mastery and overcoming of the world our faith makes!

The author of the book on "The Future of War," noticed in our last number, should be given as I. S. BLOCH.

John Carlile.

John Carlile, of the city of Carlisle, in the county of Cumberland, was, through the gracious visitation of God, convinced of the blessed truth about the year 1763, by the ministry of John Graves. . . . He grew and increased in faithfulness, according to his measure; and was drawn forth sometimes in a public testimony, and preached the gospel, not in the eloquence of speech, but very powerful and reaching, in simplicity, and sincerity.

Although illiterate as to outward learning, yet in his doctrine and testimony, he considerably opened the Scriptures of truth, by the assistance of that Holy Spirit that gave them forth, to the edification of the hearers, and confirmation of those gospel truths by him preached. He labored in the work of the ministry in divers counties in England, and also in Scotland. Several were convinced by his labors of love in the gospel of Christ in many places, who remain as seals of his ministry.

He was open-hearted, and zealous for the

testimony of truth, and in much love received the friends of it into his house, who were travelling in the same work. As he delighted to draw near to the well-spring of life, for Divine succor and consolation, he was not unmindful often to wait upon the Lord in his family, to whom the Lord was pleased to reach, in order to their conviction, by his blessed truth. He was sometimes opened to speak a few words to them, and to supplicate the Lord; at other times in silence, to wait upon the Lord in his family, to feel an increase and growth in the virtue of truth among them. Many are witnesses of the benefit and comfort they received in those his family meetings. Although at his first conviction in the city, and when he came to bear testimony to the truth, he was as a speckled bird among the birds of the wood, there being none who bore the same profession in the said city, and was warred against by the bitter magistrates, and severe informers, and cruel persecutors; yet such was the Lord's goodness to him, that he was preserved faithful in his testimony for the Lord through all. Some of his persecutors fell into great distress and died miserably; and others of them fell into great poverty; so that a prison became their dwelling, and therein they died. He was always ready to help forward and encourage every good work on truth's account, was much given to hospitality, and was open-hearted to the poor of any society. He was of a blameless conversation, just in his dealings, and of a good report among all people, and valiant for truth and its testimony to the end.

In his sickness he often exhorted Friends to be faithful to the Lord and His truth according to their measure, saying, then the Lord would stand by them, and bring them through all the exercises they might meet with for the same, and they should have the reward of well done; with more expressions of the like nature.

Having some sight of the glory and joys of heaven, that those who are faithful and upright-hearted shall enjoy, and that evidence in himself, of his soul's everlasting peace, he signified his desire of a change, and that his wife and children might give him freely up, saying it would be well. Being sensible the time of his departure drew near, he said to his friends and neighbors present, that a little time would finish and make all things easy.

He died the 25th of the Twelfth Month, 1766, in the faith of Jesus, and in full unity with Friends, aged about seventy-four years.

—Selected.

WHEN the Lord breathes into the human heart a thought, it behooves the hearer to weigh well its import; they who heed the celestial visitant, see not with the limitations that pertain to mortality, but walk in the light and unity with Jehovah.

FOR "THE FRIEND."

Around Porto Rico.

(Concluded from page 316.)

So it comes about that, whilst trade between our country and Porto Rico has increased by leaps and bounds as the annual official statistics reveal, this has been accomplished to the part dissatisfaction of the Colony. Do people or newspapers of our country forget the other side of the story when telling of the benefits and profits of imperialism?

Another cause of dissatisfaction in Porto Rico is the fact that, under Spanish rule the people had representation in the Cortes of Spain, but they have not been conceded any such representation in Congress. Their government is simply a local one, the executive branch of it being under appointment from Washington, and being endowed with large powers wherewith to steer or control legislation. The people feel that their position is only that of a colony like one which any imperial power might hold, and that, having had their citizenship taken from them, no substitution has been granted. All this does not seem fair. Yet in some extension it may be said that the Colonial government seems to be made up of sincere and efficient men. Also, a great many of the natives would not—as in our own country—seem to be sufficiently educated to be custodians of the franchise.

The United States is doing a grand work in the matter of education in Porto Rico. In 1897, just previous to the war, there were about twenty-two thousand pupils enrolled in the Spanish schools, many of which were not entirely free. The schools lacked system and equipment, and in many cases, the teaching was hardly worthy of the name. The United States sent Dr. Brumbaugh to Porto Rico as superintendent of education, and he instituted a most efficient administration in connection with the public school system. Dr. Lindsay, the present superintendent, is ably forwarding the good work. I had a very interesting conversation with him. There are now about three hundred thousand children of school age on the Island. The latest reports show that about sixty-one thousand of these are in the public schools—patterned after those of the United States. There are nine hundred and twenty-one schools in operation, including normal, night and special schools. Four hundred thousand dollars in the past four years has been devoted to new buildings. Fourteen hundred teachers are natives, about one hundred of them being Americans. The average monthly salary of teachers is about forty dollars. It will be seen that a very economical and substantial progress is being made in diffusion of education. In addition to the regular public there are now three industrial schools. Twelve agricultural schools have been established, and three nurses' training schools are in contemplation. English is taught in every school on the Island, and it is hoped ere many years American text books will be generally used.

One day when wandering around San Juan, I came across a good-sized building with some young people about the door-way. Thinking it might be a school, I inquired of a gentleman with the children. He proved to be the principal of the establishment, which was an industrial school. He called the teacher of

English, who acted as interpreter. I had an interesting talk with them, and was courteously shown through the building. Both sexes are taught in this school. The course includes not only English and Spanish grammar, history, reading and geography, but also book accounts and methods of conducting business. Instruction is given in free-hand and mechanical drawing, also in Sloyd and construction of models and articles of household use, such as brackets and light furniture. Some of the work done in designs with different colored chalk on the black-boards was beautiful. The girls are particularly taught cooking, sewing, dress-making, needle work, drawn work, darning and embroidery. They are very skilful. Taking the boys and girls together, it would be difficult to find a more alert and keen-eyed lot of young people.

Another day I went over a common public school. Here, as in the other one, was a regular American equipment of furniture, etc., for school work. The children, about two hundred and fifty in number, generally ranged in age from six to fifteen years. The discipline and quickness of the pupils seemed admirable in all the class-rooms I visited. After a broad hint to the teacher of English, she willingly had some of them step outside for a few moments, while I photographed them. From what little I have seen and heard the Porto Rican children are very ambitious, and take great pride in their work, as well as in presenting as good a personal appearance as they can during school hours. Many of them are very poor, and as they cannot afford to wear shoes and stockings all the time, will go to and from school barefooted, carrying these useful articles of apparel and only wearing them during school hours.

When our ship lay in the bay at Ponce eight United States war vessels were anchored a mile or two away. At night time the play of the innumerable electric lights as they practised signalling was beautiful to witness. One evening the admiral's yacht passed by conveying him and many officers to a ball in Ponce. The deck was crowded with a gay throng dressed in the trappings of war, whilst music floated on the breeze. Who, according to nature, would not be an admiral with almost unlimited power over his fleet, and courted by "fair women and brave men."

But here the enticement ends. The two days of my sojourn on shore in Ponce I saw a good deal of the sailor boys. Some behaved well enough; but many were all around the town miserably drunk. Occasionally there would be a fight and vile language filled the air; I took a snap shot of a drunken marine fighting, and nearly got another picture of an intoxicated sailor attacking a well-dressed and apparently educated native. My object was to show the seamy side of naval glory. Americans laugh or some of the escapades of the "jacksies" as they affectionately call them. But it seems to me that if a stronger people than ourselves held our country, and our would be "defenders" roamed in maudlin condition through the streets of our cities and villages insulting men and women, we possibly would not enjoy the situation any more than do the Porto Ricans.

One lovely First-day morning whilst we lay in San Juan harbor, there was a fight between

two sailors on the forecas'le of a nearby United States ship of war. An officer and a sailor with a gun, stood over the scrap to see fair play. When it was over the deck was wiped up and things looked normal once more. Here is the moral. It may seem very strange to a good Christian people to think of such a violation of the day. But if they hire and employ men to slay their fellows, they cannot expect to secure those of the finer sensibility to engage in the Christ-forbidden business. If associations are inherently bad. Sin and its consequences unmentionable, will continue to follow the wake of the navy just so long as the people fearing people continue to countenance a crime or complacently allow their tax-money to be applied therefor without any word of protest.

Porto Rico may need a strong constabulary, and has it. But what a pity that the splendid educational work of the United States should be offset by the evils connected with the frequent presence of the navy!

One morning a cultured and prominent American to Rican called on me, evidently with the intent of conversing on religious subjects. He pleaded me with many interjections regarding the Society of Friends. The conversation was through an interpreter and with the aid of my little parallel-column Spanish and English Testament. As he asked me searching questions regarding the work of the Holy Spirit, the atonement, ritual, worship and what would reply by referring to the Testament—verse after verse, endeavoring to explain the connection with each other, and the reasons for our faith and practice. At the culminating point in an argument with me, he reached he with alternate solemnity or passion expressed his assent. At the end of the interview, he asked why a people holding such ideas regarding religion did not send out of their ministers to Porto Rico to teach as biblically founded truths?

Truly the fields are white unto harvest and the laborers are all too few. And why?

The return voyage was delayed by headwinds which frequently broke in veritable catenae over the bow of the good ship *Ponce*. A little less than six days we exchanged the tropical heat and waving palms of Porto Rico for the frosty air and snow-clad hills surrounding New York city.

Richard Pike.

Richard Pike, of Cork, in Ireland, was born at Newbury, in England, about the year 1627, and came from Ireland belonging to the "horse in the army," which were sent on to England, for the reduction of that country upon the rebellion of the natives. When he was in the army he had the character of a very sober, conscientious man, but of no courage, for which he was much esteemed by his superior officers. In those days he was religiously inclined, and one who sought the Lord, and the Lord was pleased to befriend him, and revealed his truth to him. In the year 1653, the Lord sent some of his faithful ministers called Quakers to that country to preach the everlasting gospel, by which he was convinced of the way of life and salvation to which he became truly obedient, and denied the use of carnal weapons for the

tion of mankind, and in other things taking up the cross of Christ, despising the shame, and, for truth's sake, became a great sufferer, by patiently enduring reproaches, stripes, and imprisonments, as well as loss of goods and substance. As he was a faithful follower of the Lord Jesus, so he was greatly beloved by all faithful Friends who knew him; his deportment and conversation were such as adorn the blessed truth, he being very meek and just, as well as a very inoffensive man; inasmuch that his greatest persecutors have been heard to say, "If there were any good and honest men among the Quakers, he would be one." The year 1668 he was with several Friends more cast into prison by one Rye, the mayor of Cork, for meeting together to praise God; in which place he got a violent cold which ended in a flux, that brought him to the low, the prison being thronged and without convenience at that time for the sick. The jailer indulged him for a little time to be at home in his own house.

After his coming home, the distemper increasing upon him, brought him exceedingly low; and though in much pain, yet very patient under it, and much retired to the Lord in a sweet frame of spirit. The Lord, when he died, came that worthy night in Israel, Susannah Mitchell, to visit him, who, sitting in silent waiting upon the Lord by his bedside, was moved to pray, which she did with great fervency of spirit. At which time also the power of the Lord fell upon him in a wonderful manner, greatly adorning and tendering his spirit, causing him to bring forth several sweet and heavenly expressions; and though he was exceedingly weak in body, and neither able nor fit to rise out of bed before, yet the presence and power of the Lord so strengthened him that he immediately rose out of bed as one that ailed nothing, and put on his clothes in order to go to the prison to see and meet his dear companions and fellow sufferers. His wife and children present, seeing the great and sudden change, were in great hopes the Lord would restore him to his health again.

He went abroad to prison as one that was weak, and had a good meeting with Friends there; the jailer gave him leave in the evening to return home again, which he did with the appearance of illness; but soon after his return as one that was only raised from the dead, he gave his last visit to his beloved Friends, his distemper returned again, and he grew exceedingly ill that night, and continued growing worse till about the third day, in the evening, at which time he said that it was concluded he was dying. In this weak condition the power of the Lord came upon him again, in an extraordinary manner, so that he was revived, and as one that had new life and strength given him, he spoke of the wonderful love of God to his soul, and of the preciousness of truth, with seasonable exhortation to all that were about him. Thus continued with the Lord's power upon him till the fifth day, having a spirit of discernment given him from the Lord, by which he saw and spoke directly to the inward states and conditions of most or all that came to him, giving counsel and advice accordingly, and in particular to some who had been faithful. He spoke so home to their states

that they were almost amazed, warning them to prize their time, and be more faithful for the time to come.

He also called those of his children who had come to some years of understanding, and gave them heavenly advice and counsel as follows: Fear the Lord, and be faithful to Him, and be obedient to your mother, and then the Lord will be a father to you, and provide for and bless you every day, and let the blessing of your dying father rest upon you.

He quietly departed this life in the Fourth Month, 1668, being about forty-one years of age.—Selected.

For "THE FRIEND"

ISAAC.

Gen. xxiv: 63.

Give me the quiet voice of priestly mien,
Responsive soul who gives vibrating touch,
And clasps in chains of prayer the heavens and earth,
Adding completeness to departing day.

Unfolding thoughts go out to farthest reach,
And lifted hands reveal a bosom bare,
When lo! a! drove of camels heaves in sight,
And Sarah's tent bids welcome to the bride.

H. T. MILLER.

BEAMSVILLE, OHIO.

The Slaughter of our friends for Hat-Homage.

The Audubon Society of Louisiana has issued a circular for general distribution which contains the following:

"Of late years the ravages of the cotton-worm, tobacco-worm and the cane-borer have been appalling, and why? Because the birds that feed on these insects and their larvae have been wantonly slaughtered to satisfy the greed of a civilized but perverted people. Millions of our most beneficial birds are annually killed to be served on the tables under fancy names; while many other millions are stripped of their feathers, which are then used as fantastic decorations for the heads of women.

"Why are the cray-fish giving so much trouble to the rice-planters, boring through their leaves, cutting the standing rice and doing thousands of dollars damage every year? Because the Herons, which feed on these cray-fish, have been slaughtered to satisfy the vanity of women, who demand their plumes for their hats. Why do the fishermen have so much trouble locating the schools of fish and shrimp? Because the great flocks of Gulls and Terns that followed these schools, thus showing the toilers of the sea just where to cast their nets, have disappeared. Where have they gone? Read the answer on the hats of our women.

"A most urgent appeal will be made to the next Legislature for bird protection. We intend to raise such a powerful sentiment for the redress of present frightful wrongs that our demands for efficient legislative enactment will be granted, not because this Society asks for it, but because it is in the vital interests of the people of every part of the state."

The last judgment is a phrase which we have almost robbed of its effect, because we have used it chiefly for a remote and pictorial future. We have dwelt on the final date of judgment, and lost sense of a state of judgment.

Science and Industry.

SYSTEMATIC inquiries into the present condition of bird life in Missouri bring to light the surprising fact that within the last fifteen years insectivorous birds have decreased sixty-two per cent. and game birds eighty per cent.

The deadly "sleeping sickness" of West Africa has been discovered to be a form of meningitis. It is almost always fatal. Communicated by some means unknown, it begins with a slight listlessness and gradually produces coma and death. Its duration is from one to six months. Its ravages have depopulated large districts, although as far as known it has affected only the negroes.

OHIO, says the Scientific American, holds an interesting place among the stone-producing territories of the world in that here are said to be located the largest sandstone quarries extant and from these quarries comes the bulk of all the whetstones and grindstones of the country. The value of her grindstones and whetstones product last year was \$577,543. It is this class of Ohio's stone product too that is more in demand than her rough stone.

TODAY we hear a great deal about women usurping men in the field of labor. That it is not so new an idea is proved by one woman in Indiana, who admits she is thirty-six years old and has for twenty-one of them been a cobbler. She understands the trade as well as any man who handled an awl or wielded a hammer. She learned her trade at a factory when she was fifteen years old and continued there till the factory closed down, some eight years after.

HOW BIRDS DRINK AT SEA.—The means by which sea birds quench their thirst when far out at sea is described by an old skipper, who tells how he has seen birds at sea, far from any land that could furnish them water, hovering around and under a storm cloud, clattering like ducks on a hot day at a pond, and drinking in the drops of rain as they fell. They will smell a rain one hundred miles distant, or even further off, and scud for it with almost inconceivable swiftness.

THE resourcefulness of modern engineering appears in a plan nowadays employed in tunneling through water-bearing strata. The soil is first frozen and is then removed in blocks. In a mine at Iron Mountain, Michigan, a long perpendicular tunnel, extending one hundred feet below the water level, was thus excavated. To freeze the soil, pipes are sunk in a circle around the site of the proposed shaft, and brine that has been cooled in an ice machine to zero temperature is circulated through the pipes.

"WHEN we consider what an important adjunct the telegraph has become to the railroads," says *The Electrical World and Engineer*, "it is hard to get oneself back to the time of the Baltimore and Ohio experiments of 1844, and to take seriously Professor Morse's suggestion that if a break were found in the telegraph wires the train should stop long enough to repair it. But this is what

he said: "Very little interruption would take place if the train that discovered a break would stop not more than five minutes, and, being furnished with pieces of wire already prepared for the purpose, any one could simply unwrap and scrape the broken ends and unite them by twisting the ends of the pieces of wire to them."

TO FIND THE NORTH MAGNETIC POLE.—Captain Ronald Amundsen, a Norwegian, this coming spring, is to conduct an expedition to discover the magnetic North Pole and there to carry out observations during a series of years. The magnetic North Pole differs from the earth's mathematical North Pole in two essential respects: the magnetic North Pole is easy to reach, while the mathematical pole has proved sufficiently difficult to approach; investigation of the magnetic pole is of much scientific interest, whereas the mathematical one is of little real importance for purposes of study, the gain in reaching it being of the kind experienced in attaining to the summit of some difficult mountain peak. Captain Amundsen will make a magnetic survey of the whole ground and thus establish whether the pole is a mere point, a more widely spread area, or even several points. His equipment is very complete and entirely modern; he has had much experience in voyaging through the polar regions, and is said to have every qualification necessary to carry to a successful end an expedition of this kind. His task will doubtless take him several years.

WONDERS OF RADIUM.—Dr. George F. Barker, emeritus professor of physics in the University of Pennsylvania, in a lecture delivered Third Month 19th, at Columbia University, held up in his hand a diminutive glass bulb which contained a small quantity of a white substance. Then he ordered the lights turned off, took a position where all could see his hand poised aloft, and the white substance in the little bulb began to gleam, as a distant star will shine on a dark night or through a cloud.

Professor Barker explained that this was "radium," the wonderful element which was discovered recently. Before he made his demonstration he had lectured at length and shown tests on the power of cathode rays and Roentgen rays, with which he has had long experience. In introducing radium he said the rays sent out by that element would make all other rays look like tallow dips.

"Here," he said, "we have an element which holds within itself apparently the power to give out rays. It overthrows all the old ideas through its conservation of energy, for its inherent power seems never to diminish. If you have respect for the discoveries of Crooke and Roentgen you should have exceeding reverence for the wonderful power contained in radium."

"The Cathode rays in the highly exhausted atmosphere of a Crooke's tube can travel with one-tenth the speed of light, or about seventy million miles a second. The speed of the radium ray is one hundred and twenty million miles in a second. Yet, with all that tremendous energy within it, it is so harmless that I can hold it in my hand or put it in my pocket."

After dwelling for some time on the won-

derful things that might have been accomplished by means of radium, Professor Barker said that, unfortunately, its prospective usefulness was totally discounted by the fact that it would be almost impossible to produce any quantity of it that would have practical value. Professor Barker said it was obtained from pitchblende, a mineral that is being mined only in Bohemia and Poland, and that it would take about two hundred thousand tons to produce a pound of radium.

"This little piece of the ore," said Dr. Barker, holding a piece of pitchblende up in his hand, "contains less than one-tenth millionth of one per cent. of radium. The largest quantity of radium I have seen was in Paris. It weighed three centigrams, was the size of a buckshot and was valued at \$20,000."

The new element was discovered in 1898 by a Polish woman, the wife of a professor in the Ecole Industrielle of Paris, who had been making a series of experiments with uranium.

Bird-Study in the Schools.

BY WILSON TOUT.

The solution of the bird protection problem can never be reached by courts, laws, or officers. The small boy is one of the chief offenders, and those in authority seldom attempt to cover or even reach his thoughtless acts of destruction. If all boys could be shown the harmful results of killing birds or destroying their nests, what an army for bird protection there would be within a few years. If the girls were taught the folly of pandering to the demands of fashion when it calls for the sacrifice of countless innocent victims, the game warden now needed to protect our birds would have to seek some other vocation if they would still prosper. The school is the foundation of reform movements in other lines—why not in this?

The first objection offered to a proposal for having bird-study in the schools is that the course is already crowded and no room remains for a new study. The objection would be rational if it were proposed to introduce a new study. Birds cannot be studied from books and very few schools have access to mounted specimens. Excursions, observations on the road to and from school, and in country schools, even at recess and during school hours, will furnish subjects for conversation lessons and also much needed material for language and composition work. One school I know of organized itself into a club for the study of birds. The children met at four o'clock twice a week and compared notes for about twenty minutes. This did not detract from school work, but on the other hand increased the interest in the regular studies.

Bird-study should be begun as soon as the child begins to attend school. The seeming interest of the little tots in their reading and number lessons pales before the glow of wonder and enthusiasm as they tell of finding a bird's nest while on the way to school or hear the story of the birds from their teacher. Let a teacher mention finding a sparrow's nest and the school turns into an experience meeting; each little one having a story of his own to tell. In the country school this is especially true, as the pupils have a better chance to observe birds than the children of the cities.

I have had to work out my own plan of bird study in the schools, as I have never chance to get another's plan. I have had some successes and some that were not successes, but from these experiences I have formed a plan that I believe overcomes most of the difficulties.

In primary grades social talks with the pupils is the best method. Let the pupils talk as much as possible. Take a single bird as a lesson and show a picture. By a judicious use of questions and statements bring out distinguishing features of the bird you are studying. I have no patience with the teacher who asks such questions as: How many legs has a bird? What is its body covered with? How many eyes has a bird? What is a bird's nest for? etc. The dull pupil does not learn anything and the bright boy is disgusted. The pupils will tell about the habits, food, nest places, eggs, call, etc., of the common bird.

If you are studying a woodpecker, call attention to the peculiarities that distinguish it from other birds; consider its stout, sharp bill, its peculiar feet, its short, stiff tail feathers, its habit of drumming, and its undulating flight. Tell the story of how one species of woodpecker got its red head and black and white dress, and have the pupils learn a verse or two from the many that are to be found in the readers and in teachers' journals. Before the interest lags close the period, always leaving something for the next lesson. At the next lesson, if during the right season, you will have several facts from pupils who have seen and observed a woodpecker during the interim. Never fail to treat of the good points of a bird and by a vote have it declared a "good bird" worthy of protection or a "bad bird" deserving extermination. The teacher can mold the opinion of the school in accordance with established facts.

In the grammar and high school grades a different plan works better. Here each pupil should have a note-book in which should be recorded his own observations. These should include the time of arrival, numbers, nest places, food, departure, acts of depredation, value, etc. Every note should be dated to its value. In the course of a year the pupils will find several dead birds; these should be brought to school for specimens. *Shooting bird specimens should not be tolerated.* Last year we had twenty-two birds brought to school. Among those brought alive were a barn owl, a coot, a horned grebe, a meadow lark, a barn owl, and a flicker. Several different kinds of ducks were brought and a number of dead birds, among them a black-headed grosbeak, a golden-crowned warbler, a Bohemian waxwing, a downy woodpecker, and a bittern. I mention these to show the actual possibilities of this line.

At the end of the year a list is made of the notes of all of the pupils, but each pupil has his own. One pupil will see the note and shriek and mark it "seen," while another will only mark it "reported." No bird is put on the list without the approval of the teacher. Last year we had seventy-three birds on the list, and I can answer for every one of them.

Now I believe this to be true bird-study in its utility and common sense are its end. Only fifteen minutes twice a week was needed to keep the notes, and the time was not

interest was aroused and the diversion regular school work was pleasing. Pupils reported an added pleasure in writing their notes and observations during summer vacation, and all voted for a continuation of the study during the present year.

Never taught a school where I did not read study, and I have never heard an announcement. It is not a good plan to announce the day of school that you intend to introduce bird-study. Such a course will arouse opposition. Start it very gradually, so you have the school well under control, so no one will suspect an innovation. Unhappily the pupils converted and the parentalize the value in the added interest of children in their school work. And remember bird protection should be the keynote. Enact laws protecting game and song birds could be discussed and better ones proposed. Spring shooting of migrants should be discouraged. Superstitions about birds should be exposed. Errors in popular ideas should be corrected. Prejudices should be removed, but truth must prevail. A love of birds must not blind one to the fact that birds are destructive to the agricultural and natural interests of the state. A healthy limit in the school-room in favor of the bird will down the boy who shoots meadow-larks just for fun," and he will be an out-and-out reformer.

Every member of the Audubon society should think upon this matter and do something to encourage the study of birds in the schools. This is one of the objects for which societies are founded, and yet I fear little has been done for the children of our public schools. Every year hundreds of boys and girls finish their studies and leave school, yet know nothing of the value of birds. In our savings to become real men and women, we imitate the vices as well as the virtues of our elders and join the ranks of bird-destroyers for the men for sport and pleasure, the ruin of our decoration. As students of bird protection, we are champions of bird protection our duty. The school is the field and we are to be on the harvest. What shall it be?

Helping People.

Every year ago a discouraged young doctor came of our large cities was visited by an old friend, who came up from a rural district to look after his boy.

"My son," he said, "how are you getting on?" "Not getting along at all," was the discouraging answer. "I'm not doing a thing," replied the man's countenance fell, but he encouraged and patience and perseverance. Later in the day he went with his son to the Free Dispensary, where the young doctor held an unsalaried position, and where he spent hour or more every day.

Another sat by, a silent, but intensely faithful spectator, while twenty-five poor patients received help. The doctor for his sitor, while he bent his skilled energies to his task; but hardly had the door closed on the last patient when the old man said:

"I thought you told me you were not doing anything. Why, if I had helped twenty-five

people in a month as much as you have in one morning, I would thank God that my life counted for something."

"There isn't any money in it, though," explained the son, somewhat abashed.

"Money!" the old man shouted, still scornfully. "Money! What is money in comparison with being of use to your fellow men? Never mind about your money; go right along at this work every day. I'll go back to the farm and gladly earn money enough to support you as long as I live—yes, and sleep sound every night with the thought that I have helped you to help your fellow men."—*Unknown.*

PERSONAL RELIGION AND EXTERNAL ACTIVITIES.—Has not the world within the last thirty years learned from the church that man's personal piety is a matter of small consequence alongside of his external benevolent activities? Has not the church come to teach, consciously or unconsciously, that external activities, outward benevolence, are not merely the fruit—for that they are—of Christian life, but the Christian life itself?—that doing these things is the all-sufficient living before God? Is not the judgment of the world expressed in the words of indifferent contempt for a man who is trying to save his own soul?

The remedy for present conditions is the restoration of personal religion, the direct relation of the individual soul to God, to that primary place in the Christian economy which it has momentarily lost, and to relegate to their subordinate consideration all those external works which have usurped its place.

Personal religion is but the co-operation of man's will with the power of Jesus Christ that man's soul, man's whole being, may be saved, not for his own profit chiefly, but that he may lay it, thus redeemed, thus exalted, at the feet of Him who loved him and gave himself for him.

As believers in Christ we can see no security for the civilization which has grown up around the faith in Him and has prospered nowhere else and under no other conditions, if that faith ceases to spread.

CAPT. A. T. MAHAN.

"And, behold the veil of the temple was rent in twain, from the top to the bottom; and the earth did quake, and the rocks rent." Matt. xxvii: 51.

In Fleming's "Christology," it is stated that an unbeliever visiting the sacred places of Palestine was shown the clefts of Mount Calvary. Examining them narrowly and critically, he turned in amazement to his fellow travellers, and said, "I have long been a student of nature; and I am sure that the rents and clefts in this rock were never done by nature, or an ordinary earthquake. By such a concussion, the rock must have split according to its veins, and where it was weakest in the adhesion of parts; for this," he said, "I have observed to have been done in other rocks when separated or broken after an earthquake; and reason tells me it must always be so. But it is quite otherwise here; for the rocks are split athwart and across the veins in a strange and preternatural manner; and therefore," said he, "I thank God that I came hither to see the standing monument of miraculous power by which God gives evidence to this day of the Divinity of Christ."—*Faith and Works.*

AT THE FOUNTAIN.

I rest me at the fountain near the hill,
I trace the pathway rising higher still,
What kindly hand was this that turned the stream
Of lonely life, that had not yet a gleam
Of hope, or gladness, love or joy or fear?
I could not say as yet, "the Lord is here."
But now I hide me in the rocky dell,
And dip communion cup in holy well.

My passion now is for the Lord most dear,
That He would bless me with his secret cheer;
Come near, come nearer, nearer still!
I am so well when Thou my heart dost fill.
On Thee I rest, with Thee I journey on,
With Thee I labor, till the work is done,
My strength and stay, the savor of Thy name,
Shall bring vast increase to thy deathless fame.
H. T. MILLER.

BEAMSVILLE, Ont.

The Confessors of Peace from the Second Century to the Era of Mahomet.

VII.

Here it will be worth while to pause and to put forth a few interrogatories, seeing that the value of any investigation of the sort now undertaken, is by no means so much in its historic interest, as in its practical, present-day application. How is it, for instance, throughout Christendom, to-day—do its great cities possess the theatre, amphitheatre, circus, which, in their attractiveness, may be spoken of like those of pagan Rome, as ever-popular, fascinating, deadly?

Taking the first of these, the theatre, does not every one know that the scenes and personations of vice presented upon the boards of almost every modern play-house, are of a sort so utterly debasing that it has been well said by attenders themselves, that it is not safe to take a refined lady to witness a stage performance, unless her intending male companion has first seen it and is assured that it is passably decent? But alas, if not so for the woman, is it any better for the man? In the Scripture code of moral obligation, whether male or whether female, there is no difference.

Do we not know that a very large proportion of the spectators in these demoralizing places claim to be church members, "communicants"? Is it not likewise a fact, that of the thousands of newspapers, issued daily throughout the land (speaking only of our own country) and coming freely into its homes, scarcely one in one hundred will be found that does not print the advertisements of—the invitations to—these perilous resorts? Is it not evident to every observer that our art and our literature are tainted, often noisomely polluted, by things written and pictured that emanate from the theatre? Applying the words of Friedlander—"It is the fruitful centre of every sort of sin."

Again, as to the circus,—we do not have, it is true, the chariot races, but we have the race-course, and we have the pool-rooms for betting upon the races in every city, to which thousands flock, gamble away their money, wreck their fortunes and ruin their families.

Then, as to the amphitheatres,—the law says we may not have the bull-fights, as they have them in some other lands, and we may not have the gladiators with swords or other deadly weapons, but there is the coarse, brutal (now and then fatal) fist-fighting between man and man, and the foot-ball contests carried on with

every accompaniment of fierce rivalry, whereat scores of the contestants are killed or seriously wounded every year.* We have no imposing Coliseum, as at Rome, where upwards of four-score thousands of spectators can at one time view the combat in the arena, but we have, nevertheless, our "up-to-date" dailies, which give the particulars of the combat down to the slightest detail, the pictures of the bruised, pitted against each other, and all the slang and scandal in connection therewith, and all this appearing (practically) before an audience, in a single day, that shall be a hundred times as great in numbers as could have possibly crowded into the Coliseum. And then, further, when we consider that such baneful matter as this is served up, with special zest, on the day commonly set apart throughout Christendom, for needed rest from business employment and for religious observance, it is apparent that there still lingers with us altogether too much of the spirit of heathen Rome, and (modified according to the times) we, to our shame, "do as the Romans do." Hence, it is worth while, at any rate, seriously to ask, whether this education of which so large a proportion of our population partake, is Christian or whether it is Roman? whether it will graduate the confessor of peace, who, because he is a Christian, feels that he is forbidden to fight, or whether it will not continue the class of those who must have "an eye for an eye and a tooth for a tooth," and who utterly fail to apprehend the non-resistant teachings of Christ's Sermon on the Mount?

The Council held at Arles, in Gaul, under Constantine (A. D. 314) condemned soldiers, who, through religious motives, forsook their colors. In this judgment, Augustine, who flourished in the latter part of the same century, united. The emblazoned cross upon a banner had now become, in lieu of the eagle, the conquering standard of Constantine, adopted, it was claimed, in obedience to a vision from heaven. When about to commence a campaign against Persia, he prepared, it is stated, a tent of embroidered linen, formed on the model of a church building and to be borne before him, as he had read that the children of Israel did in their marches in the desert. A band of priests and deacons were to accompany the tent, and officiate according to the rules of the Church. So also, thereafter, each legion had its own church tent, with its attendant servants. It is evident that the Old Testament conquests of arms were easily adopted by the Roman head of the State and the Church as his model of the holy warfare. And here it will be apposite to quote a remark of Pressensé under high assumptions of this character:

"Prof. Edwin G. Dexter, of the University of Illinois, in the course of an exhaustive study on college football accidents, contributed to the *Educational Review*, found as the result of inquiries sent out to a large number of colleges, that in the year 1902 there had been one hundred and forty-three cases of serious injuries—being nearly double those of the previous year. This indicates an increase in the brutality with which the game has been played. The killed and the injured outnumbered the killed and seriously injured in prize fighting. Facts such as these have led many educators and concerned observers seriously to consider whether (1st) football ought not to be given up, and (2nd) whether the intense rivalries engendered by intercollegiate games are such as ought to be fostered. Surely, 'the tree is known by its fruit.'"

"A State religion," he observes, "however orthodox, will be always a partial resurrection of the pagan idea. Ancient religions were maintained only by coercion, and by the support of wealth—both forces foreign to Christianity, which conquers by none but spiritual weapons. It might well blush to grasp the sword which slays the body, since it has in its hand the sword which can pierce the soul. Its kingdom is not of this world, therefore it can assert its dominion over the whole world. Protection places it in a servile position; it is strong in its own independence. The State is not at variance with the Church—as the flesh with the spirit, the old man with the new. The State, no less than the Church is of Divine institution. *The Church is called to act upon it, but only by way of influence, and the more the two spheres are kept distinct, the greater and more penetrating is that influence.*"

Before his semi-acceptance of Christianity, Constantine had sanctioned the sending of criminals to the amphitheatre. He had caused a great multitude of persons to be exposed to wild beasts, so that the people were fairly satiated with the sight of blood. Now the humanizing effect of Christianity on legislation became evident in a law of Constantine (A. D. 325) which declares—"Bloody spectacles, in our present state of civil tranquility and peace, do not please us; wherefore, we order that all gladiators be prohibited from carrying on their profession." It was hence no more the custom, as it had theretofore been, for the emperors or their principal generals to give gladiatorial shows before going to war.

It had been the habit of the early Christians, taught by the Apostles (Matt. xvii, 15-17; I Cor. vi, 4-7) to decide their disputes by arbiters chosen among themselves. This principle was engrafted into the new legislation, when the emperor conferred upon the archbishops the legal right to protect the weak and become arbiters in civil cases,—a practice, says C. L. Brace, which was the beginning of the system of arbitration, the Austrage, which in the Middle Ages became so important an influence in rescuing society in Germany from private war and anarchy.*

On the other hand, it will be seen, that this concession whereby litigants were permitted to carry their suits before the ecclesiastical powers rather than the civil courts—the former having authority to have their decisions enforced by all governors and military—was a combination of State and Church likely to lead to disastrous consequences. Other mischievous tokens of the Emperor's newly-directed zeal, were the endowment of churches with revenues derived from the confiscation of heathen temples, and from the common funds of the cities, together with a system of tithes and exemptions for the benefit of church and clergy.

*The comparatively slow progress made by this beneficent principle for the reconciliation of conflicting interests, is seen in the case of the recent coal miners' strike in Pennsylvania (1902), when, after five months of anarchy affecting several counties, and involving the sacrifice of a number of lives, the wounding of many persons, and the loss of many millions of dollars in wages and traffic earnings, the dispute was finally referred to a commission to arbitrate the claims of the contending parties.

Early was Constantine plunged into cor upon questions of ecclesiastical variance heresies, which appear to have kept him busily and aggressively engaged as he wars with the various competitors for crown. During the Decian persecution preceding century, there had arisen the of Novatians (so called after their form which had extended itself throughout thepire. Likewise were they named Catharists. Although classed as schisms among these are we to look, through se centuries, for the confessors of the testi of peace, rather than among those who bound more nearly to the religion of the S

Allied to these in the demand for a r to the simplicity of the earlier Christiani tice, were the Donatists, whose rise occ during the Diocletian persecution. A ing for a hearing of their grievances to stantine, their case was referred succes to the councils at Rome and Arles (313- but, not being decided in their favor, an Emperor being irritated at what he was pl to consider their obstinacy, decrees we thORIZED depriving the "schismatics" of church properties and exiling their bis. The authority of the Emperor being defe armed force was sent to reduce them to mission, the "Catholic" or State party only too ready to assist in this crusade.

Says the *Early Church History* of Back and Tylor: "A sanguinary contest ensued now for the first time the world beheld followers of the Prince of Peace engag the slaughtering of one another. The perial attempt at coercion stirred to its of the fanaticism of this hot-blooded pro [Numidia, with its chief city of Carth Bands of furious desperadoes, known e the name of Circumcelliones, who held own lives cheap, and deemed no death to for those who differed from them, swept the country, carrying fire, torture and ster wherever they came.* Their warcr *Deo laudes* (Praises to God), and because had forbidden the use of the sword to they took for their weapon a huge and m club, which they named *The Israelite*. Catholics, according to their own adm were not far behind them in violence; the pealed to the Old Testament to justify, l examples of Moses, Phineas and Elia; Christian duty of slaying by thousand renegades or unbelievers." "It must be knowledge," is the just comment abo narrators, "that the first fruits alliance between the Church and the State bitter enough."

(To be continued.)

REALITY.—The decay of the sense of r is caused by the loss in our moral sense of note of judgment. Our convictions d start from a sense that we are convicted want to be convinced by evidence wh should be convicted by the Spirit. Thi element that has dropped out from vi the cross, and therefore out of much Ch life.—Forsythe.

*Farther along in our narrative, if it be suffici tely, we will find that the Camiars, of S France, some of whom were non-resistants, we carried away by this fanatical spirit in their of persecution.

FOR "THE FRIEND."

SILENCE.

questioned him with many words, but he answered nothing" (Luke xxiii. 9).

And thought claims kindred with the light, /
 And that shapes no words has touched the /
 Light unseen hands reach out to turn, /
 The cold current of a vain request.

And eyes serene, the quiet mien, /
 The radiant radiance of his conscious sway, /
 The rude wish of vulgar pomp and pride, /
 The blush of impotence in power.

HAMILTON, Ont.

Self-Control.

"Oh, Tommy, don't do that," said a mother, "you know it makes my head ache."
 "Oh, it makes your head ache, mother?"
 "No, child seriously, and with a pitying /
 In his voice, came creeping up to his /
 Side, and looking at her as if in /
 Doubt whether he would be repulsed or not.
 "Does it, does it, my son," replied his /
 Mother, "and it is always unpleasant.
 "You try to play without making so much /
 Noise."

"Mother, I'll try," answered the little /
 Boy cheerfully, "but I forget sometime."
 "Did I earnestly at his mother, as if some- /
 One was in his thoughts.

"Oh, dear, what else?" she said encour- /
 Agingly.
 "I forget you'll tell me, won't you?"

"Oh, no, I'll stop. But don't scold me, /
 For then I can't stop."
 "Then his heart was touched. She caught /
 Him and bent her head down, to conceal /
 Her passion, until it rested on the silken /
 Hair of her child. "Be a good boy, Tommy, /
 Your mother will never scold you any more," /
 She murmured gently in his ears.

"He stole upwards, and as they were /
 Pressed closely about her neck, he pressed his /
 Forehead against her cheek, thus sealing his /
 Love with the contract with a kiss.

"We meet to a mother's taste were these /
 Fruits of a self-control! In the effort to /
 Control herself, what a power had she acquir- /
 ed! On first fruits were these. In all her /
 Days did that mother strive with herself /
 To enter into a contest with the in- /
 stincts of her children. And just so far /
 As she was able to overcome evil in herself, /
 To overcome evil in them. Often, very /
 Often, she fell back into the old state, and /
 Very often, was self-resistance only a /
 Slight, but the feeble influence for good /
 Gained from her words or actions when /
 As she warned her of error and prompted /
 Her voracious self-control. Need it be said /
 She had an abundant reward? Words /
 Of a banger are sure to bring regret.— /
 On, hope.

 & ynn, Mass.; Lester and Ida H. Cham- /
 & om, Iowa; Jacob Maule, Charles and Rachel /
 & Martha N. French, from Ohio.

WOMEN AND THE AMERICAN HOUSE OF REPRESENTATIVES.

To the Editor of the [London] Friend:—I noticed a note in this week's Friend about Esther Fowler and her concern for service in the House of Representatives at Washington, and as a woman has previously spoken in the Capitol, I thought it might be interesting to thy readers if I sent thee the extract from her Life which tells of her mission to the then President.

Dorothy Ripley, though not a member of our Society, attended meetings, and frequently applied for membership; but the Whitty Friends of those days would have none of her. She was a remarkable woman, as her six missionary journeys to the United States testify. Amongst other works she wrote the "Bank of Faith," from which I have copied the enclosed extracts. Should any of thy readers have copies of her books published in Philadelphia, I should very much like to have particulars of the same. Thine sincerely,

JOSEPH T. SEWELL.

Chubb Hill Road, Whitty, Third Mo. 20th, 1903.
 Dorothy Ripley spoke in the Capitol, Washington, on the twelfth of First Month, 1806 (fo. 241). She says: "We return thanks to God for the tranquillity of soul expressed when standing in the presence of the President (Thomas Jefferson), Vice-President, Senators, Representatives, and a crowded audience. . . . When I sat down in the Speaker's noble chair thought Wisdom adorned me; but with awful reverence I felt God was in the midst, when supplicating his throne of mercy for assisting power, that He might be honored by those rulers of the land, who had the direction and government of all the United States of America, at this period, when they were convened together for the purpose [fo. 246]. . . . After the meeting was finished I arose and rendered that respect due to the assembly, whom I revered as the higher powers ordained of God to govern the affairs of men" (fo. 247). She had evidently been testifying against slavery, and in Charleston, a few months later, we read of her speaking to the captain of a slave ship, who was exposing "his Ethiopians" for sale at the quay side, and saying to him, "Believe the Scriptures [Isa. xxiv.] thou that seest it fulfilled, and remember, those brought hither will at length possess this land which will be experienced to the sorrow of many" (fo. 251).

Notes from Others.

The popular haste to leave the place of worship to be in time for dinner is disgusting and sacrilegious. We must teach the people better things, and not ourselves drift along with them.—*Episcopal Recorder*.

A lady said to me, some days ago, "I believe a clergyman should be well groomed." Most ladies think so. I agree with them. A clergyman should be well groomed. His life and character should be well groomed—spotless; his heart—pure; and his clothes—clean.—*W. K. Collins*.

The \$2,500,000 trust established by George Peabody, the American banker living in London, for the purpose of securing sanitary lodgings for the London working classes has increased to nearly \$7,000,000. The trust provides 5378 separate dwellings with 11,918 rooms for a population of 19,033.

Committees charged with the selection of books for municipal libraries, cannot be too careful in their choice. Literary style and vigor are dearly bought if they be obtained at the expense of decency in the community, and this class of translations needs to be especially watched, as some of these books—and the fact is greatly to be regretted—are issued by reputable publishing houses.

One hundred and seventy-five young men who

were among the Boer prisoners at St. Helena and other places have returned to South Africa to become missionaries. They are mostly under twenty-five years of age and have been placed where they can continue their education and receive the necessary training. The various Dutch churches of South Africa have undertaken their support.

If Congregationalists, United Brethren, Methodist Protestants, and the small body known as the Christian Connection come together into organic union, the effect will be, so it is held in all directions, very telling in favor of union or other religious bodies. Delegates representing the denominations named are to meet in Pittsburg on Fourth Month 22nd, to see what can be done toward such union.

Bishop Scherchewsky of Pekin has finished his translation of the entire Bible into Chinese. The work has been done under the greatest difficulties, as the bishop had the partial use of one hand only with which to operate the typewriter and spell out the Romanized Chinese sounds.

A well-informed magazine in an editorial on "Church Decadence," declares that there is no such thing, but that "the Church in this country and throughout the world was never so strong and never so active and useful as it is to-day."

Resolution passed by the Wagon-Drivers' Union, Fourth Month 9th, 1903: "Whereas, the delivery of milk on Sunday compels hundreds of men to work on that day, and as a result deprive them of their weekly rest day and their privilege to attend upon Christian worship, and as we believe the people of our cities are interested in all men having these privileges.

"Therefore, be it resolved, that we, the Milk Wagon Drivers' Union earnestly request that all who are interested in the welfare of the milk-wagon drivers of the city of Philadelphia arrange and take milk on Saturday evening as far as possible, and if by any reason this cannot be done, they arrange to have it delivered early on Sunday morning."

George B. Chapman from London brings a doleful tale of religious conditions in England. He is a Church of England priest of wide intelligence and experience, who has had ten years' service among the poor of London's East End. England, he thinks, is at the moment in as low spiritual condition as it has known of late times. The causes are two, in his judgment. One is an influx of pleasure from France, and the other is an influx of money from America. (Why does he not discern the effect of the late war in abjuring Christianity and deadening spiritual life?) Both are, he says, good tools in the devil's hands. Indulgences of all sorts, some never before heard of, obtain. The churches are making concessions, and also making mistakes in that they are. He thinks the spiritual character of the Church of England unimpaired, and believes the same to be true of the free churches. Until the present era of worldly prosperity ceases, or is checked, he is afraid to hope for better things.

The total bill of the nation for stimulants in 1902 reached the enormous total of \$1,369,098,276, an expenditure per capita of \$17.33, or 4.7 cents a day. One-fourth of the total population are estimated to be users of alcoholic beverages, and on this basis the average per capita is \$69.32, or 19 cents a day. This expenditure has been on the increase for more than twenty years. Since 1880, it has increased 92 per cent., or from 10.09 gallons per capita to 19.48 gallons. The figures are not to be accounted for by the growth of the population alone, rapid as it is, but rather by the fact that the use of intoxicants is steadily increasing. The increase is simply enormous when compared

with that of coffee, which still retains first place as the most popular non-alcoholic beverage among us. Coffee has increased a little over 52 per cent., while tea has decreased nearly 48 per cent. These figures are not encouraging. They do not show any advance in the direction of betterment, either social or physical. We sincerely deplore this fact.

LATIN.—Regarding the extent to which the Latin language still is in practical use, the *New York Tribune* says:

Until 1848 Latin was in Hungary the language of the constitution, the laws and the diets. To-day it is still the official language of the Catholic Church and of some universities. In Germany, in England, etc., most of the programmes, announcements and diplomas of the universities are composed in Virgil's tongue. In the domain of natural sciences the need of a universally understood vocabulary has led to the use of the Latin. There are great works on botany in Latin such as "Index Bryologicus," "Lichenes extra-Europæi," etc. In anatomical treatises the same language is being used, and if "musculus sternocleidomastoideus" is not altogether euphonic, it is to my taste easier understood than its German equivalent "Brustschlüsselzwerchmuskul." In many foreign universities Latin orations are delivered on public occasions; in Amsterdam there is annually a distribution of prizes to the author of the best Latin poem. In Germany the various associations of students bear Latin names, and some of their most favorite songs ("Gaudemus igitur, etc.") are in the language of Horace. Nay, some time ago, the proprietor of a beer garden in Berlin had distributed in the streets his prospectus in Latin.

We add that there exists also Latin press; among the periodicals published the most noteworthy are: "The Phenix Nuntius," of Oxford; "The Vox Urbis" of Rome, and "The Præco Latimus," of Philadelphia.

SUMMARY OF EVENTS.

UNITED STATES.—A commission of British workmen, who have recently been studying the conditions of labor here, have made a report in which they say that the American workman has a far better education, "is infinitely better paid, housed, fed and clothed, and, moreover, much more sober," and add, "If we are to hold our own in the commerce of the world, the old methods must be dropped and the old machinery abandoned." One of the commissioner's reports concludes with a severe criticism of the social and moral life in America, where "gambling and pleasure seeking appear to be characteristics. The disregard for human life, the corruption in politics and other immoralities tend to the moral and physical deterioration of the people, and must be arrested if disaster is to be avoided." Summing up the reports of the delegates, the conclusion seems to be that while keen competition in American competition, it does not mean a hopeless position for Great Britain; for the report says: "The workmen who have built up American industries are largely Britishers. Most of the inventions in American workshops come from men hailing from the old country. Let us adopt modern methods and England will hold her own in the commercial rivalry of the world."

The number of negroes appointed by President McKinley to office was fifty-two. The entire number appointed by President Roosevelt is fifteen, and of these several are reappointments. The latter has made no changes in the Consular service among the negro incumbents, and all of these officers appointed by McKinley continue in office.

Act to provide coined money for the Philippine Islands was passed by the late Congress; 2,500,000 pesos, a silver coin equal in value to the silver dollar, have lately been coined in the Philadelphia Mint, in the short space of twenty-five working days, together with a large number of bronze and nickel pieces.

The steamship *Minnesota*, the largest vessel ever built in this country and the greatest cargo carrier in the world, was launched on the 16th inst. at the yards of the Eastern Shipbuilding Company at Groton, Conn. The *Minnesota* will carry 172 first cabin passengers, 110 second cabin, 68 third cabin and 2424 steerage passengers, in addition to a crew of 250. Its speed is 14 knots. In completeness of electric service, of cold storage and 're-

frigerator plant, of laundry service, ventilation plant and life saving appliances, the *Minnesota* and *Dakota* are the most modern and up-to-date vessels that have been designed. It is intended for use in the Pacific Ocean by the Great Northern Steamship Company.

A banquet given by the Academy of Political and Social Sciences has lately been held in this city, in which the general subject under discussion at all the sessions was the relations and common interests of the United States of America and Latio-America. Among the beneficial results of this series of conferences, it is claimed, are the sentiment of mutual respect and consideration prompted by them among the nations interested, the impulse given to material improvements, the encouragement of closer commercial intercourse and the furtherance of international arbitration.

Preparations are now being made by the United States Fish Commission at Bryant Point, on the Potomac, to supply various neighborhoods with young shad, and it is stated that between now and the middle of the Fifth month, when the season closes, many thousands of young shad will be hatched at the station and will be shipped all over the country to stock streams where the conditions are favorable for the growth of the fish.

Considerable damage has been done in parts of the Eastern and Middle States by violent rain storms on the 13th and 14th insts., accompanied by high winds. The flooding in several rivers has caused considerable damage. The waters of the Mississippi have lately considerably subsided, and the breaks in the levees along its course in many places are being closed.

The lynching of a negro murderer at Joplin, Mo., on the 15th inst., was accomplished notwithstanding the efforts of the authorities to prevent it, after which another mob of several hundred enraged white citizens went on through the same section, burning houses, stopping negroes and firing many shots. All attempts to stop the mob's fury were futile.

The number of cases of rabies in Chicago has reached such dangerous proportions that the education of policemen in regard to it is urged as necessary. It is proposed that lectures on the disease be given, that every patrolman be furnished with a gun and that he destroy rabid dogs as soon as the first symptoms of madness be shown.

Imports into the United States during the year just ended aggregated \$1,001,000,000 in value, and exports to foreign countries were \$1,414,000,000.

It is estimated that there are more than 2000 automobiles in New Jersey alone, where a license cost \$1 each is required by law.

The number of deaths in this city last week, reported to the Board of Health, is 39 more than the previous week and 67 more than the corresponding week of 1902. Of the foregoing 284 were males and 246 females; 67 died of consumption of the lungs; 76 of inflammation of the lungs and surrounding membranes; 8 of diphtheria; 17 of cancer; 15 of apoplexy; 26 of typhoid fever; 14 of scarlet fever, and 7 of small pox.

FOREIGN.—A National Irish Convention has lately been held in Dublin to consider the offers made by the British Government in the land bill lately introduced by Secretary Wyndham—John Redmond, one of the Irish leaders has stated that "The convention was the most important Nationalist assembly held in Ireland during the last hundred years. If the recommendations be substantiated, carried out by the Government, the land question will be settled, and the whole future of Ireland will be full of hope. The convention's recommendation will be supported by the members of the land conference, and will be presented to the Government as the demands of both landlords and tenants. I have the strongest possible hope that the Government will have the wisdom to accept them. If all goes well, the result will be the abolition of the land war in Ireland, the union of all classes and creeds in this country, with the inevitable result of the concession, almost immediately, certainly within the lifetime of the present generation, of a system of national self-government."

An attempt to re-organize the "Boxer" movement in a district in China about 100 miles west of Peking has lately been suppressed by the native authorities with great severity.

Statistics of the movement among Roman Catholics in Austria entitled the *Away from Rome* movement show that in 1902 there were at least 184 places in Bohemia and Styria where religious instruction was regularly given by ministers or others connected with this movement, and that one of its objects the throwing off of the yoke of Rome.

A Congress of Latin peoples met in Rome on the 15th instant. The delegates are said to represent the peoples of France, Italy, Spain and Portugal, the various Balkan States and the whole of Central and South America, aggregating 165,000,000 souls.

Nasi, Minister of Public Instruction, delivered a speech designed to show that the congress was not into a threat to other races, and that its object was to "defend the Latin world against the advance peoples wishing to conquer the globe."

President Loeferer, of France, has been welcomed by the people of Paris, and his visit appears to have strengthened feelings of friendship between Algeria and France.

The International Anti-Alcohol Congress has held its biennial meetings in Bremen, attended delegates from fifteen different nations. Their strong and general endorsement of the position of the nations against the sale of alcoholic liquors to school children is done in this country.

Explorations in Peru by Dr. Uhle of the University of California it is said have led to the belief that a race existed in that country many hundred years previously to the Incas, whose reign was ended by conquest of that country by the Spaniards. The city of this early race appears to have exceeded the Incas.

Several hundred-weights of cotton grown in the district of German East-Africa have just been reported to have resulted in showing that it is nearly as good in staple, color, etc., as the valued Egyptian product, from seeds of which grown in this country.

A despatch from Berlin of the 16th inst. says: A wintry weather prevails in Northern and Central Germany, particularly in the Harz Mountains. The station in the Upper Harz reported yesterday a snowstorm and a temperature of twenty-five Fahr. The mails have been carried on sleighs, carriers, gendarmes and wood cutters are only seen on snow shoes. The snow in some places is three to four feet deep. The storm continues, increasing violence.

In discussing a new German industry, Consul Richard Guenther, writing from Frankfurt, a manufacture of quartz glass is rapidly developing country. He adds: "Quartz glass consists of melted quartz, which is made into tubes and other articles in perfectly transparent. The manufactured quartz glass is yet in its infancy. Everybody who knows the properties of quartz glass admits that it replaces ordinary glass for many uses."

NOTICES.

WESTWON BOARDING SCHOOL.—For persons coming to Westwton School, the stage trains leaving Philadelphia 7.16 and 8.18 A.M. and 4.32 P.M. Other trains are met when Stage fares, 15 cents; after 7.30 P.M., 25 cents. To reach the school by telegraph, wire Westwton 114x.

EDWARD G. SMELLEY.

WESTWON BOARDING SCHOOL.—Application admission of pupils to the school, and letters to instruction and discipline should be addressed to

WM. F. WICKERSHAM, P.

Payments on account of board and tuition, communications in regard to business should be forwarded to

EDWARD G. SMELLEY, Superintendent.

Address Westwton P. O., Chester.

DIED, at his home in North Dartmouth, Mass., twenty-seventh of Eleventh Month, 1902, JESSE H. BROWN, aged eighty-five years and seven months, dearly beloved member and elder of Dartmouth Meeting of Friends, and the influence of his beneficent life will long be felt both in the community in which he lived. From his home he was a notable example of faithful and Friendliness, but his light ever shone before such humility, that others, seeing his good and glorify not him, but his Father in heaven. scrupulously honest in all his dealings with men, steadfast in adhering to his convictions, tender and compassionate friend to those in assistance, and constant in his endeavors to the affairs of our Society and to promote the cause in the land. Gifted with a remarkably good memory, he was able to make use of the discriminating knowledge of conditions and the time of his sudden death, so that he will be missed. But we endeavor to rejoice that after a life of labor his cheerful, gentle spirit is at rest, are the pure in heart, for they shall see God, are the poor in spirit, for theirs is the heaven."

The Friends.

W precede our account of the recent session of Philadelphia Yearly Meeting with the literary editorial given in the *Public Ledger*: "The Yearly Meeting has brought to Philadelphia a large assemblage of Friends, whose presence must always be welcome in the city," said by William Penn. To this day Philadelphia bears the impress of its Quaker founders: its architecture, its plan, its laws and its family names. It has been said with justification that the city been governed from its cradle with the sense of stewardship and responsibility which characterized Penn's government; there would be no public ills here to get to deplore and to remove. There have been no departures from the pure standards of the Quaker regime, but there are rules of life and official conduct recognized and acted by the Friends which cannot become obsolete without irreparable injury to society.

The followers of no other sect adhere to such beliefs more faithfully than do the Friends in the relations of life. No body of Christians are more tolerant of the religious beliefs and practices of others. Religious persecution was one of the glories of Penn's life. In this respect Pennsylvania differed widely from the colony of Massachusetts. In tracing the history of the Baptists, Professor Vedder says that Roger Williams fled to Boston in 1631 only to find that the Puritans had established a theocracy, "and he was more disposed than Laud himself, to his arch enemy and persecutor, to allow any man to depart from the religion established by law."

The Quaker community organized by Penn in the New World was in its purposes the first approach to an ideal commonwealth of which there is record. For more than a century Philadelphia was the leading city in the country. Its rapid growth, prosperity and attractiveness were due to Penn's presence in the selection of the site of his settlement; to his tolerant spirit of the Friends, and to the equity, justice and wisdom of their government.

The Friends have stood for prudence, purity

of life and righteousness through all the years of their existence as a religious body. They are a conservative and protesting element in an age too prone to depart from the wholesome restraints under which the finest types of manhood and womanhood have been developed. Charles Lamb beautifully says of the Friends in one of his essays:

"I have seen faces in their assemblies on which the Dove sat visibly brooding."

The moral influence of the Friends in the world bears no relation to their numerical strength.

The testimonies of the Friends have always been against war, and the establishment of The Hague tribunal for the arbitration of international controversies marks a substantial advance in the acceptance of Quaker principles on this subject in quarters which seemed to be hopelessly committed to warfare.

Philadelphia Yearly Meeting.

The 222d session of Philadelphia Yearly Meeting began on Second-day, Fourth Month 20th, and closed on Sixth-day afternoon of the same week. All the men representatives and all but five of the women representatives were present at the opening session. After a season of waiting, in which a solemn engagement in prayer was vouchsafed, not without vocal expression, the Men's Meeting proceeded to the consideration of the proceedings of the Meeting for Sufferings for the past year, and the Women's Meeting to that of the Queries and Answers.

This was preceded, however, by the Clerk announcing his reception, through Samuel Morris and Jonathan E. Rhoads, of a message of greeting from the General Meeting of Australia, which was set up since our last meeting. These two Friends having explained to the meeting the situation and sincerity of Australian Friends, among whom they had a few years since paid a religious visit, the Meeting approved of the reading of their salutation. It spoke appreciatively of the two messengers from Philadelphia who had acceptably visited them, and commended us to the same grace in which they desired the members of their own General Meeting to be built up. The Clerk was desired kindly to acknowledge for the Yearly Meeting our receipt and reading of the fraternal message.

The Meeting for Sufferings had appropriated from the Charleston Trustees' Fund \$50 to Laura Monthly Meeting, Ohio; \$250 for the meeting-house at Chatham, N. C., and \$100 for the meeting-house at Cottonwood and Emporia, Kansas. It is understood that such appropriations are made for the repair or building of such meeting-houses only as are confined to the mode of public Divine worship approved by the Society from its beginning.

Much concern had been felt on account of the unsettlement in the religious world produced by the promulgation of views calling in question the Divine authority and inspiration of the Holy Scriptures. The following expression of this exercise was approved, and was clearly endorsed by the Yearly Meeting:

ON THE HOLY SCRIPTURES.

"While not rejecting the discoveries which throw additional historical light on the inspired volume, it was felt that in the flood of criticism and questioning, and the endeavor to bring all their contents to the test of human reason, there was great danger that the faith of some might be so shaken, as to lead to a rejection, in a greater or less degree, of the supernatural element in both the Old and New Testament, and thus the way be opened for a disbelief in the record concerning the life, miracles and offices of the Lord Jesus Christ.

"The same Almighty Power that created the universe, and stamped upon it the wondrous laws by which it is governed, can doubtless suspend or reverse those laws, thus furnishing a most impressive evidence of his Omnipotence.

"The miracles recorded in the New Testament as performed by our Saviour, furnish the outward and visible proofs of his Divinity and mission in the world, for the redemption of man.

"With our finite comprehension, we may not know just how or why all the miracles were performed, for, as was declared by the Most High, through the Prophet Isaiah (chapter iv, verse 8th): 'As the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts.'

"If we reverently and diligently familiarize ourselves with the Holy Scriptures, depending on the Holy Spirit to enlighten our understanding, and to apply their truths to our individual needs, we believe that the assurance of the Divine authority of these truths will be sealed upon our spirits, and that the help and strength and comfort which the inspired writings have given to the righteous of other generations, will be ours also, and we shall not be unsettled by the spirit of criticism or human reasoning.

"Here, also, a holy settlement will be reached as regards those views of Christian faith and practice, which distinguished our religious Society from fellow Christians of other persuasions, and strength not our own, will be given to uphold them faithfully before the world."

A new edition of the "Address on Theatrical Amusements and Horse-Racing," first issued in 1874, with additions from the pamphlet on "Horse-Racing," published in 1891, was authorized.

The great value of the record of our membership being carefully kept was commended to the attention of the Yearly Meeting, which subsequently instructed subordinate meetings

to observe increased care in having the form of record adopted in 1885 fully kept up.

A remonstrance against a bill before the Pennsylvania Legislature, which would legalize horse-racing and betting, had been carried to the Governor and distributed among the members of the Senate and House by two of a committee of this meeting, who also, during the course of two visits made to Harrisburg on that account, had interviews with the Governor and several members of both houses, including a senate committee. The bill eventually failed to become a law.

The Book Committee reported that 1,534 volumes and 1,326 pamphlets had gone into circulation from the Book-store in the past year. The copies of books printed in the year were 3,064. The Spanish edition of Dymond's Essays, lately commended in these columns, had been reprinted from a translation made by the late Joseph Pease of England, and first published in that country in 1870. The present reprint conforms to the abridgment of the work issued by the Book Committee in 1896. The cost of stereotype plates on hand is \$15,-889.64. All the publications on hand are valued at \$8,731.10. This year's expenses in publishing have been \$1,386.68. A Friend in Australia writes to the committee, "As a people we have largely abandoned the practice of making ourselves acquainted with the early days of our history, and this accounts in no small measure for the uncertain attitude which so many of us present towards those truths on which our Society was originally founded."

The Willits Fund Trustees have continued to publish the *African's Friend*, and have distributed about 2,900 copies monthly in the Southern States, and about 2,400 in Liberia. Tracts were also sent to Liberia during the year.

The committee to aid the Doukhoborts reported as follows:

REPORT ON THE DOUKHOBORS FOR 1902-'03.

"Our intercourse with the Colonists has been maintained by correspondence and the visits of Friends. Their means of support have increased, so that their physical needs are supplied by their own resources, and their condition in respect to health and comfort, so far as we can learn, has much improved.

"Their unwillingness to comply with the Canadian laws continued to be a source of solicitude to the committee, and our friend Joseph S. Elkinton again spent much time among them in the spring of last year on this account. The government of Canada has shown much forbearance in dealing with them, deferring from time to time the enforcement of its laws requiring the registration of titles to land, whereby the Doukhobors have not been disturbed in the possession of their homes. Gradually more and more of them have secured their homesteads, and it is lately reported that through the influence of one of their leading men, Peter Verigen, who recently was released from exile in Siberia, they are generally adopting this course.

"While there is some unwillingness to accept aid from Friends in establishing and conducting schools, the committee has not felt prepared to enter actively into this work, although they would now encourage any Friends who rightly feel drawn to engage in it.

"Considerable unsettlement has been caused by the propagation of chimerical notions of religion, which were happily allayed, and order was restored by the intervention of the Canadian officials."

The labors of the Meeting for Sufferings received hearty approval. Their declaration concerning our attitude towards the Holy Scriptures was very acceptable. An earnest plea was made by a member who had visited the Doukhobors in the past summer, for our decided interest now to be manifest in their education, especially in the matter of a school property now partly provided for, where such a boarding school is hoped for as will serve as an object lesson for education among all that people.

Third-day, the 21st.—William Evans and Charles S. Carter having been reappointed as clerks of the Meeting, the consideration of the state exhibited by the answers to the Queries was then taken up. The larger meetings appeared to have been regularly held and attended as usual, but an uncommon number of lapses in the holding of some small or declining meetings, chiefly in one of them, gave a discouraging aspect to the general answer. Much increased life and interest throughout the membership was nevertheless testified to by speakers, and in greater proportion in the smaller country meetings, than in the larger meetings. The inquiry concerning love and unity was favorably answered throughout, but that on our testimony through speech, behavior and apparel, was followed by an unusual amount of counsel and expostulation, some of which was of a truly instructive nature. The Holy Scriptures were believed to be generally and frequently read in Friends' families.

Fourth-day, the 22nd.—Continuing with the Fifth Query, which, as regards provision for the poor, and for education of children, was satisfactorily answered, Friends soon, on reaching the Sixth, were earnestly engaged in considering the acknowledgment of a paid or stated ministry by such as had attended at its places of delivery, and searching analysis was given of the radical difference between that ministry which could be engaged and ordered in the will and time of man, and that which waited for the fresh renewals of Divine life and authority for the putting forth of public utterances in the name of the Head of the Church, who alone can thus anoint and qualify them. The reason any do not find satisfaction in a waiting worship or a waiting ministry, is that they do not come to them in a right spirit.

The relation of the limitations of Truth to business enterprises and practices was dwelt on, with a caution as to what the headship of large financial institutions by a member might mean to the Society, should unsound operations through unwatchfulness find an entrance. Spiritual life, as it is the greatest attraction of a Friend, so it is the surest safeguard against the scattering of confidence in his dealings. "I would," said one, "that the Spirit of Christ might be in every action in the shop, in the office, in the factory, and in our leisure."

Of the observance of the principles of all the queries, the necessity of maintaining a high standard, since they serve as "the barometer of the Society," was impressively set

forth. A famous judge has said of the law embraced in these queries: "If they were by all people there would be very little of our courts."

The record of the death of these ministers and elders,—Sarah W. Roberts, John R. tum, William P. Townsend, Debbie Cope, Hannah Evans, Charles Rhoads and Josiah Cloud,—was occasion of a deep solemn which fell over the meeting, baptizing company under a felt covering of the Presence.

Fifth-day, the 23d.—Meetings for Discipleship were held in the forenoon, in the meeting-houses usually thus occupied. In the afternoon a concern for the opening of Friends' boarding-house or home, for the sheltering of younger members who come to the City from other parts of the land to obtain employment, was laid before the Meeting. A general sympathy with this concern was expressed and an association of Friends interested in so beneficent an accommodation was heartily encouraged to proceed in preparing for such a place. It was not, however, regarded as a proper work for the Yearly Meeting in its official capacity to carry on.

The annual inquiry as to how children of our membership are placed as regards schooling showed the whole number of children between five and twenty years of age to be 1,200 of whom 486 have been taught under care of Friends and 134 at schools of others.

The number of members who have at any time partaken of intoxicating drink does not seem to have varied noticeably from the last year. Some Monthly Meetings quite abstain.

The Committee appointed one year ago to visit the subordinate meetings made an interesting report, and testimony to the value of their labors was made by many members. It was a disappointment to many to learn that the Committee requested to be released, as it became the prevailing judgment of the Meeting to forego their services for the present, and to await the Divine Power to arise some future time when there might appear a call to further similar service."

Sixth-day, 24th.—The Committee appointed a year ago to consider the marriage rules of Discipline, reported that way did not open up to accede to the request sent up by a Monthly Meeting, allowing marriages of members and non-members to be solemnized in our meeting-houses according to our rules of Discipline. But they had simplified language, re-arranged, and brought together the provisions concerning marriage, without changing their principle or mode of operation. These were all read and proved satisfactory to the Meeting. A new edition of the Discipline will have to be printed to embody changes in the form of the Marriage Rules.

The account of the year's care of Wesley School commanded the usual eager attention. The faithfulness of the Committee was acknowledged. One member's suggestion that the modern advance in educational methods could be secured with more helpful purpose among the workers, under sympathy of a Committee less representative of past conditions in education. Others thought that, for all the instructors there might have had none too many fathers; and that were especially needed for the safeguarding

his institution in right religion as the most concern, far in advance of the literature, and nowhere to stand aside in the use for modern methods. Much regret was felt at the pressure from families generally to which the Committee had at length no alternative but to yield, so as to save the time of winter vacation to that of the holidays now kept open by most near the end of the year. The general claim of parents that they must have their children at home during that season had brought much difficulty to the caretakers, in the unprofitable settlement resulting to the school. A rate in the price of board and tuition, from one hundred and eighty dollars to two hundred dollars was approved. The whole receipts of the institution for the year was about two thousand three hundred and seventy dollars, and the expenses forty-five hundred and seven hundred and seventy-nine dollars.

The Committee on Education had carefully reviewed a work which proved to be of growing importance and excellence year by year, and the visiting superintendence of a well-educated woman Friend. Thus schools are maintained in Friends' neighborhoods, where without the assistance of the Yearly Meeting children would be left to public schools. The appropriation of two thousand dollars to this work was again cheerfully made. The report of Friends' care over the Tunesias Indians showed wise and diligent labor on the Committee's part. Their efforts to remove opportunities for the obtaining of strong drink by Indians were gratifying, and the results of instruction given at the Boarding schools truly satisfactory. Two thousand five hundred dollars were appropriated for the use of the Committee's use for the coming year.

[See Wm. Savery's account of the origin of the Innessassa concern, given in next column.] The Treasury was reported to contain a balance of ten thousand two hundred and sixty-eight dollars, and six thousand five hundred dollars was appropriated for the use of the Yearly Meeting in all its concerns for the coming year.

An instructive memorial concerning our old Friend William P. Townsend, who died on the Eighth Month last, in his ninety-fourth year, was read near the conclusion of the Yearly Meeting. It was the occasion of several lively emotions and incidents expressed concerning his valuable service and religious character. A minute embodying some of the concerns and exercises which had been delivered during the consideration of the state of the Society, showed evidence of the same anointing in which the exhortations had been uttered, and was accompanied by a covering of good. When the Yearly Meeting for this year, in an afternoon session, came to its concluding moments, there was a sense of a Divine solemnity, under which the Yearly Meeting long lingered in silence, loth to separate.

Religion is not a little fenced off enclosure which all is sacred, and outside of which all is secular and profane. There is no such distinction to be drawn. Religion is life, character, conduct; it reaches up to God and down into the smallest details of daily duty; it covers everything.—*Anon.*

Let us forget the things that are faded and tried us,
The worrying things that caused our souls to fret;
The hopes that, cherished long, were still denied us,
Let us forget.

But blessings manifold, past all deserving,
Kind words and helpful deeds, a countless throng,
The fault o'ercome, the rectitude unswerving,
Let us remember long.

The sacrifice of love, the generous giving,
When friends were few, the hand-clasp warm and strong,
The fragrance of each life of holy living,
Let us remember long.

Whatever things were good and true and gracious,
Whatever of right has triumphed over wrong,
What love of God or man has rendered precious,
Let us remember long.

A Letter by William Savery.

An interesting letter by William Savery to Abraham Lapham, long preserved in a family of Abraham Lapham's descendants in Philadelphia, has lately been offered to the notice of Friends, who have obtained a copy, as follows:

For Abraham Lapham, Canadarqua, in the Genesee Country. By favor of Captain Israel Chapin.

PHILADELPHIA, Third Month 2nd, 1796.
Respected Friend Abraham Lapham:—I cheerfully embrace the present opportunity by the return of Israel Chapin to revive in thy Remembrance one who frequently thinks of thee and thy family & our other fellow Professors in your Neighbourhood, with desire that the great and good Shepherd of Israel may be with you to preserve & keep you to encourage one another in maintaining your faith and hope in our Lord Jesus Christ who hath mercifully called divers of you (& some of those too who are young in years) to the Inheritance of that Peace and Joy in Him, which all the enjoyments and advantages of this world are not adequate to. Tell my young friends in the Neighborhood and thy children in particular, my Love is to them all with affectionate Desires that they may in the Days of their youth seek after knowledge of their great Creator and holy Redeemer, in preference to all things in this uncertain world, love, honour and obey him with all their hearts. So will he delight to bless them both with those things that are necessary and convenient for them in the present life, be their Stay and Staff in the hour of affliction, and finally when it shall please Him to call them from this state of probation, he will receive them into those Peaceful mansions which our Blessed Redeemer has gone to prepare for all those that Love & Obey Him.

I frequently Bear in remembrance the Desire thou had to be of Benefit to the poor Indians & may Inform thee that our last yearly meeting taking into Consideration their situation, recommended a liberal subscription in all our meetings for promoting among them the knowledge of husbandry & useful trades as well as School Learning and other necessary Instruction. In Consequence of which a large Sum has been raised and put into the hands of a Committee to expend for that purpose and several friends have the prospect of visiting some or all of the Six Nations in the Spring, who I expect will take with them some

friends—Tradsman & farmers to stay with the Indians for the purpose of promoting their civilization. I apprehend thee will be glad to hear this—but to inform thee more fully of the Prospect the yearly meeting had of the subject, I herewith send thee a little Pamphlet which was circulated among our members for their Information.

Our Fr^d David Bacon is in England with Nicholas Wain. David went as a Companion for him in his Gospel Labours & travels. John Parrish is well. We often talk of our friends at Canadagua, and James Emelen has gone to the Southward as a companion for our Fr^d Peter Yarnall. How long I shall be here is uncertain but having for some years had a Prospect of visiting some parts of Europe, particularly some places in Germany & perhaps France where friends are settled, my friends have granted me a Certificate for the purpose, and my friend Sam^l Emelen of the same meeting also—our present intention is if no hindrance appears to endeavor to embark in the next month. This Journey & Voyage appears awful & trying to me, but my heart's desire is that I may lay down my head in peace and therefore though it is not pleasant to the flesh to leave my Dear Wife & Connexions & quiet home, yet Believing it to be my Religious Duty I Labour for Resignation to the Divine Will—a Dear fr. from this City John Pemberton Laid Down his life at Pyrmont in Germany the Beginning of Last Year after having seen some pleasant fruits of his Labour in that Country.

Now my Dear fr^d having wrote (though in much haste) more than I at first expected, I must bid thee & thy Dear Wife farewell and Desire my best Love to you Children, to Susan that lived with thee, to my Ancient friend Nathan Cumstall and his Children, and my fr^{ds} that remember me, with the desire in my heart that the God of all Grace, mercy & power, may bless you all with faithful and Believing minds and make you a Joy & Comfort to each other, though outwardly separated & distant from the body of your fellow Professors of the Faith, and I remain thy fr^d and Brother—

WILLIAM SAVERY

I expect you must have heard of the Decease of Dear Robert Nesbit.

Savery Meeting.

Copy of a Record dated Tenth Month 9th, 1833.

About 50 frds taken out of y^e meeting 13 whereof were brought before 2 Justices by y^e Con^{ble} etc. (by means of y^e Inform^r Hilton) who put y^e oath of Alleg. to Jn^o Vaughton, and referred him to speak to a certain priest, who was to Inform him upon his queries concerning the oath & y^e Lawfulness thereof etc. all to appear at sessions y^e day following.

Being gone, all were Convicted for a Convicticle and fined in their Absence. And Jn^o Vaughton with y^e rest appearing at y^e sessions at Hicks hall y^e day following, found a great deal of moderacon toward them and were greatly Comended.

Sr. Wm. Smith being Chairman who called frds early before y^e bench (y^e Lord Craven being on y^e one hand & another Lord on y^e other hand etc.) and having spoke to friends concerning y^e lawfulness and usefulness of an oath, & Equity thereof as to defend y^e King, who takes an oath to defend us his subjects said at last, I must confess though you have

not sworn Alleg, yet you have practis^d Alleg, by your honest Life and quiet Conversation among your Neighbors etc. speaking pretty much to that purpose: saying further. And therefore this honorable Bench in hopes you will Continue your Alleg, and obedience to y^e King, & his government and have no hand in any plot or designs as we do not hear of any of you or yours have, do not intend to put that upon you which they know you cannot perform, which is to swear: and so discharged them.—From *Mss. Book called "London Friends' Meetings,"* etc.

Science and Industry.

STRAW hats of excellent quality can be bought in Cuba at exceedingly low prices. The hats are made by hand, mostly by the women, while the men work in the fields or lounge about in the shade. Every Cuban residence in certain of the farming districts of the poor is a hat factory. Here girls in their teens toil throughout the day interweaving the straw into the form of tiles. Remarkable skill is possessed by some of these feminine hat-makers, but a remuneration of 30 cents a day is considered good returns for their labors. Cooking, eating and sleeping are often done in the same room where the hats are made.

AN IDEAL IN WORK.—What is needed in life, if we would secure a moderate degree of happiness, is an ideal. Fortunately for us, an ideal is possible in any kind of employment. When the cockney visits the country he often commiserates the toiler on the soil for what appears the dullness and monotony of his life. No doubt it is dull enough, measured by city standards. There are no music halls, no lighted streets in which diversion may be found, no excitement and nimbleness of thought, communicated by the mere contiguity of numbers. But if you come to examine the life of the plowman, you will find that he also has things to live for. He wants to plow a straight furrow, so that at next year's agricultural contest he may take a prize. He is proud of his horses, of his crops and of what he can do with his small bit of garden or his allotment. His home is dear to him and he is as proud of his few sticks of furniture as a prince is of his marble palaces. So with the humblest craftsman. There are difficulties in making a good table quite as real as the difficulties in making a great picture and there is the same kind of joy in overcoming them. It has often been pointed out that the craftsman of the Middle Ages produced superior work because he had a real faculty for art. Let us rather say because he had a deep interest in his work.—*N. W. Christian Advocate.*

MAP OF PITTSBURG AND VICINITY.—The United States Geological Survey has begun the construction of a series of topographic maps of a section in western Pennsylvania, having Pittsburg as its centre. Six atlas sheets of the topographic atlas of Pennsylvania will be required to cover this area.

The larger part of the area is being mapped on a scale of about one mile to the inch. All roads, railroads, and streams, as well as streets in the towns and houses in the country, will be shown. The relief of the country will be determined by lines of spirit level run over

all the important roads and wherever else may be found necessary. Permanent bench marks, bearing bronze tablets having the elevation of the place above sea level stamped upon them, will be located at all important points.

The area covered by these maps includes within its limits a greater number of industrial enterprises having a larger aggregate capital than any equal area in the United States.

A circular area having Homestead as its centre and a diameter of about 20 miles will be mapped on a larger scale, approximately one mile to two and three-fourth inches. This will include Pittsburg and its suburbs and many important manufacturing towns. On this map it will be possible to show such features as the ground plan of the larger buildings and mills, the location of oil and water tanks, railroad tracks used in operating works, and other similar details.

From this larger scale map the Pittsburg Chamber of Commerce intends to have constructed a model of Pittsburg and its vicinity for exhibition in the Louisiana Purchase Exposition at St. Louis. This model will show the parks, streets, and buildings of Pittsburg and the surrounding towns, the rolling mills, foundries, and factories, and the rivers with their shipping, in addition to all the natural features—in short, the model will be a complete plastic representation of that great hive of human industry, Pittsburg.

THE WEATHER.—The unusually mild weather last month, the forwardness of vegetation, and the absence of the high, cold winds, so characteristic of the Third Month, led me to look over some records of my father's and a relative of his, covering the period from 1789 to 1870; these, with those kept by the writer since that date, making in all over one hundred years, I find but one Third Month during that time with a temperature equal to the month just past; in fact, a little in excess of it, and that was Third Month, 1842, when the average temperature, taken early in the morning, was 47 degrees, while last month it was 45 degrees.

The record states: "The weather the past month has been unusually warm, the average temperature at early morning being 47 degrees. Several days at 3 P. M. the thermometer has been above 70 degrees, vegetation being as forward as it is generally in the Fourth Month, and peach and apricot trees being in blossom on the 20th of the month. There were several thunder storms, April weather prevailing."

The past month the average temperature at early morning, as stated, was 45 degrees. On three days at 3 P. M. it was above 70 degrees. Also thunder and lightning several times, and peach, apricot and cherry trees in blossom, and the apple and pear nearly out by the end of the month. While the Third Month, 1842, was the warmest on record, that of 1843 was the coldest.

The record states: "The average temperature the past month at early morning was 30 degrees. For fourteen days the thermometer ranged from 13 to 20 degrees above zero, and only on three mornings was it above the freezing point. On the 15th of the month snow

fell to the depth of fifteen inches, with a hard wind piling the snow in drifts from four to five feet high.

"The New York papers reported snow to the depth of two feet, with drifts six to eight feet high, the country roads impassable, no mails arriving for three days."

JACOB R. ELFRETE

The Power Behind the Man.

When Lord Beaconsfield went to the Berlin Conference to represent the British Empire he was asked, "What concessions are you willing to make?" His reply was, "Gentlemen, I did not come here to make concessions." That reply thrilled all Europe. Men with the British army and navy behind him could take that stand in the face of the world, what kind of a stand should a Christian take with the resources of Jesus Christ behind him and the power within him strong as the right arm of God that raised his Son from the dead?

Fellow Christians, we need to let this come down into our hearts, and become the motive of all our thinking. It will put iron in the blood; it will give you back-bone like a shaft of steel; it will enable you to stand before an ungodly world with something of the Divine dignity of the Son of Man, and something of the spirit of a born conqueror.

There are a thousand ways of showing whether or not we resemble the Lord Jesus—there are merely talking about Him. I am told that a rather worthless man, a member of the British Parliament, standing one day in the parliamentary house lobby, told a very interesting story to another member, not knowing the man to whom he was speaking was a Christian. He replied, "I will give you one hundred pounds in gold if you will go in and tell that story to Mr. Gladstone. Will you do it?" He shook his head, and said, "No, I couldn't. Of course he couldn't; it would have changed him. Why? Gladstone would probably have done nothing but look at him, but he wouldn't stand that look. There was something about the man who had walked through the streets of England's great statesman had, that would sink and shrivel in his presence because of his privilege and mine to have a totality that very thing.

The Holy Spirit also dwells in the believer to make him an effective witness for Christ among men. Have you ever noticed how much more the same testimony means in the mouth of one person than in the mouth of another? Did you ever think why? The difference is in the man or the woman behind the testimony, the difference between the light weight, cheap, vain character, and the character to which Christ has added something of his own Divine weight. A gentleman once said to me one day to see some new guns tested. He was waiting for them to be loaded one of the engineers said to him, "We always make the gun a hundred times heavier than the shot it is intended to throw. A three-pound gun must have a three hundred pound gun; a ten-pound shot a thousand pound gun, a pound shot a hundred pound gun." He fell to musing. "Suppose I were to take one of those balls and a charge of powder, and put it into an empty barrel, and stick it off—what? The powder would lie still, the powder would kick the ball

of the bamboo stick, and the only person would get hurt would be myself. Suppose to put that same ball and that charge of powder into a steel cannon one or two times heavier than the ball—what a time the cannon will be still and—well, if you should be in its pathway—would better move! The difference is in sight behind it." Jesus Christ cannot be evensiveness to your witness save by advantage—Divine weight—to your charac-

go in and out of homes I meet at every influence of A. J. Gordon. I wonder who was another pastor so beloved in his life. I ask myself sometimes, "What would he say that his influence should reach the circumference of Christendom," and it always comes to me, "It was not what he did or said as the man best doing and the saying that made his way for Christ forth like a river of water to the ends of the earth." It is the influence of the Holy Spirit not alone to be like Christ, but to make our words the destruction of evil, for the comfort of sinners, upbuilding of saints, and the progress of that kingdom of Truth and which is destined yet to fill the world. A good wife comes down in the morning to the fire. She puts into the stove a pair, lights it; there is a tremendous fire, she says the kettle will soon be boiling. A moment more, and there is nothing but a little black ashes. She tries it with a larger paper, and again;—no good. What is needed in that stove is not more fire, but some solid fuel of which she can take hold, and produce a strong, lasting heat. Exactly so! And I have seen people pray very fervently to be filled with the Holy Spirit and rise from their knees with shining faces, saying, "Surely, the Lord is in his place." And in an hour, the effluence as any one could tell, had entirely faded away. Why? There was no fuel of love in the mind, of which the Holy Spirit could take hold, to make a strong, lasting fire of love to God and to man. Make acquaintance with the Word of Truth. Let the Holy Spirit who gives the Spirit of Truth, the Spirit of God, the Word of God, the Word of the man of God, will give you the effluence of power for service.—*A Francis.*

Obedience Honorable.

of the mistakes into which certain people sometimes fall is that of devaluing the value of obedience. They regard it as some degree as a symbol of slavery, and they openly despise it and count it the enemy of liberty, or at least slight it as a thing which has had its day, and is no longer applicable to our advanced notions of independence. This is a not unnatural reaction of the mind of the modern aristocracy, when the community is divided by rigid lines into classes, and when some possess unlimited authority, and others are rendered unqualified submission, in respect of cessation or change. It is not strange that sympathetic people are repelled at the tyranny of despots and the abuse of power, and painfully conscious of the passive and willing subjection

of the down-trodden, should be led to decry the very quality of obedience itself and give it small place among the virtues. Yet such an estimate is as untrue as it is injurious. It overlooks a large part of human nature and a most necessary element in human society.

Take the most obvious example, that of children. There are few persons so ultra in their views as to deny the importance of obedience in their case. Their very safety and well-being depend upon it. Only by its means can the ignorance of the child be supplemented by the knowledge of the parent, so as to preserve him from all sorts of physical and moral evils. Without it all training and teaching would be impossible, whether at home or at school, and to the lack of its cultivation may frequently be traced the presence of many subsequent evils to the child and sorrows to the parents. Of course, the authority that enforces it is of many kinds. It may be used selfishly or unselfishly, wisely or unwisely, tyrannically or gently. The obedience may be wrung from fear or rendered gladly and lovingly; but the abuse of any power is no argument against the power itself.

The necessity for obedience by no means ceases with the passing away of childhood. The value and success of every one who works for another person depend largely upon his ability and willingness to obey. The laborer on the farm, the workman in the factory, the mechanic at his trade, the clerk in the office, the secretary at the desk, are each employed for certain work, under more or less defined conditions, and for a specified remuneration. It is a simple contract, entered into by two parties, for a given time, and can be ended whenever either one desires; but so long as it exists it is for the one who bears the responsibility and takes the risks to give directions, and for the other to obey them. Otherwise the contract is worthless, and the work, in all probability, a failure. This does not in any way depend upon which of the contracting parties knows the better how the work should be done. It may be that their relative positions might be reversed with advantage; but, as long as they remain what they are, so long do the terms of the contract require obedience from the one who is employed, however much he may doubt the wisdom of his orders.

This is seen very clearly in the army. The battle would in all probability be lost, without the prompt and unquestioning obedience of the soldiers. Sir Arthur Helps quotes from Napier's "War in the Peninsula," as follows:

"The Duke of Wellington issues orders that certain divisions of the Peninsular army are to move in a certain direction, by a road not the shortest and not apparently the best. Before dawn he is on the road. The troops do not come. The Duke, rightly conjecturing what had happened, gallops off to the other route, and surprises these divisions by his presence at a point where it was impossible to pass, but at which, knowing how likely men are to disobey orders, he expects and fears to find them."

In this instance the evils of insubordination were emphasized by the superior knowledge of the general. The result shows their fault in a stronger light, and inclines us to blame them more severely. But this does not alter the quality of their action. Had the Duke

been mistaken, and their information been accurate, they would have been equally culpable. For in every case it is with him who bears the responsibility that the decisions must rest, and from him must the orders come, while those who have agreed to receive these orders and carry out these decisions are not accountable for the results, and should render implicit obedience.

Nor is the latter of these positions at all less honorable than the former. It is merely the most effective and convenient way of dividing the business on hand and producing the best results, without in the least degree lessening true independence. Each accepts his share of the work and trenches not on the province of the other, thus preventing confusion, and, by orderly arrangements, facilitating results. It is by no means necessary that this relation be a permanent one. Only at the desire of both need it continue. The private in the ranks may become a general; the workman may become a master; the clerk may become a principal. Meantime, let all who aspire to such changes remember that the art of obedience is essential to the art of command. One who has never learned the former is not prepared to assume the latter.—*Selection.*

FOR "THE FRIEND."

A Plea for More Faithfulness.

Seeing, as is generally admitted, that the moral and religious standard of the world has been elevated, by the influence upon it of our beloved religious Society, it seems allowable, and perhaps commendable, that we should endeavor to see in what way in particular that influence has been most exerted, to produce so desirable a result, that we may as a people be thereby incited to a greater degree of faithfulness in the furtherance of the same in the future, if consistent with the Divine will.

It no doubt is apparent to many, that this has not been so much through the medium of holding and advocating, in common with other professions of the Christian name, the fundamental truths of the Christian religion, as in those peculiarities of our profession, that have ever distinguished us from them, and marked us as a peculiar people in the eyes of the world.

Doubtless our distinguishing doctrines, practices, and testimonies, are the legitimate outgrowth of our fuller recognition of the spirituality of the Christian dispensation, in its application to mankind as the practical guide of life;—the only guide that availingly leads its votaries into the straight and narrow path, and on to eternal life; now if this is their origin (of which I have no doubt), and it has been through the faithful maintenance of them in the past that we have been made as a people so practical an object lesson to the world, will it not be by a faithful continuance in the same that the good work will most surely go forward in the future, to the ultimate universal triumph over error, when, according to ancient prophecy, "the knowledge of the glory of the Lord shall cover the earth, as the waters cover the sea." Hab. ii: 14. So if the foregoing is true, every deviation from our well defined pathway will be as a spot upon our standard, eclipsing the radiance of our outshining example, and thus

curtail our usefulness in proportion to its magnitude.

If proof is needed that the characteristics of our profession have their foundation in the Truth as it is in Jesus, there need be none given more convincing than that exhibited through the constancy and faithfulness of our early members in enduring persecution therefor even unto death, when called upon so to do, as our history reveals was the case in hundreds of instances. Thus have we been made (with other faithful martyrs) "as the salt of the earth" and "as a city set upon a hill that can not be hid." That these things have been abundantly suffered for is true, sufficiently, it would seem, to establish them permanently in the heart of every honest Friend as essentials of our profession that cannot safely be ignored or compromised. We have a vivid and practical demonstration of this in the experience of our Society, particularly in the last seventy-five or eighty years; how the departures, little at first, from our original doctrines, practices, and testimonies where given way, to have led to the almost total abandonment, in many places, of nearly every characteristic of our ancient profession; in others a middle ground, halfway into the world, seems to be occupied, woefully verifying the truth of the admonition, "He that contemneth the day of small things, shall fall by little and little." So we may see that, we as a people, have been much scattered by the malice of Satan, the world, and worldliness, instead of gathering the world unto the standard of Truth, as doubtless was the gracious design of our High and Holy Head in calling us out of the same, and the lifeless professions of religion to be a separate people to his praise on earth.

Then in view of our perpetuity, where is the hope of prosperity attending us but in the direction of rebuilding on the original foundation? The walls of our Jerusalem have indeed "been broken down, and the gates, as it were, burned with fire;" but are there not Nehemiahs, here and there, especially in those organizations that are, more or less, feebly striving to maintain our integrity to the Truth, who see it so, who are prepared, and are being prepared for the great work, as the Lord their light shall lead in the way, and who will not be dismayed or disheartened at the mocking and derision of the Sanballats and Tobiahs who may oppose the good work going forward, as they did in the rebuilding of the walls of Jerusalem in the days of the captive Jews; but if these with their confederates are faithful as was Nehemiah and those who joined with him, the good work will go forward and prosper, no doubt, as it did then to the discomfiture of the enemies of Truth and the rejoicing of the upright in heart.

So then, is there not still encouragement, notwithstanding our scattered and peeled condition, still to trust in that Almighty arm of power that first gathered us to be a people to his praise, that He will still be with the remnants of His heritage, and enable us to rebuild on the Ancient Foundation? But should we seek (as it is to be feared there is too much of a tendency prevailing to do) to occupy a lower plane, one more in conformity to the world than the one we were and are designed to occupy. I fear there will be no place in

the religious world found for us, but a further scattering and confusion will be our portion, and the faithful ones here and there will be rescued only as "on broken pieces of the ship;" for in any event, doubtless there will be true witnesses left, to whom, in the Lord's time, there will be a gathering to the true standard as in the beginning, and the prophecy of Francis Howgill concerning this people will still be verified, in part as follows, viz: "The sun shall leave its shining brightness and cease to give light unto the world; the moon shall be altogether darkness, and give no light to the night; the stars shall cease to know their office or place; my covenant with day, night, times and seasons shall sooner come to end than the covenant that I have made with this people, into which they have entered with me, shall come to an end or be broken." For the declaration in full of what this valiant and truly dedicated servant of the Lord then saw and wrote, see Sewel's History, Volume Second, Page 14. D. H. COAL CREEK, Iowa, Third Month 18, 1903.

Health or Whiskey—Which?

A recent president of a state medical society said, "The health of the people demands the suppression of the saloon." And he was right. If any disease like small-pox or cholera caused one-half as many deaths in our country during a year as has intoxicated liquors sold over licensed bars, the United States congress would appropriate a hundred thousand dollars to stamp out the disease, and then appoint special officers to see that the health orders were enforced. This would be right, and the people would give such a measure their hearty approval.

The health of the people is a precious heritage. And no legislative power has any right to legalize any business that destroys or endangers the health of the people. We speak the more positively on this question because the United States supreme court has so decided.

You will permit me to speak briefly from my own experience, especially if I substantiate what I say with high authority. Having been a busy physician for more than twenty-five years and in that time having never lost a week by ill health myself, and having my office located with a saloon on one side and another saloon in front, and my residence with a saloon keeper living each side as neighbors, you see I have had a fair opportunity for practical observation and study as to the effects of alcoholic preparations on health.

A drunken man is a sick man. And it is cruel to send him to jail, where he is disgraced and often cruelly treated, when he should be sent to a hospital and there kindly treated and restored to health. A drunkard may be a sinner; we leave that to a merciful God; but one thing we do know, and that is that he is a diseased man, and made so according to law.

A noted physician, a few years ago, when he observed that most men who died of cholera were drinking men, declared that every drug shop ought to be labeled, "Cholera sold here." And I declare unto you, every saloon in America and the world over, ought to be labeled, "Disease sold here." We know it is a severe charge to say that saloons sell disease, but it has the merit of being true. And we have

the facts to prove it, a few of which I give here.

Dr. Willard Parker, who for many stood at the head of the medical profession in New York City, said: "One-third of the deaths in New York City are caused, directly and indirectly, by alcoholic drinks." Dr. Hammond, of Washington, D. C., who enjoys success in his specialty of treating nervous diseases as to make \$100,000 a year, twenty diseases of the nervous system by alcohol. He said in a letter to S. Blair: "I am free to admit, weighing all for and against, mankind would be better mentally, morally and physically, if alcohol were altogether abolished."

The Massachusetts legislature appointed a committee to investigate the cause of the deaths of Dr. Howe, its chairman, reported that 300 idiots investigated he found that 250 of them had drunken parents, and he estimated that three-fourths of the idiots of the State had intemperate parents.

Insanity is the worst form of mental disease. One of the students, who has been the physician in charge of the largest hospital for the insane in the state for fifteen years, recently reported that sixty-five per cent. of all their patients came to the hospital, directly or indirectly, by the influence of alcohol. Were it not for these facts could be multiplied almost indefinitely. When the statesman Gladstone declared that "Strong drink destroys more human families than war, pestilence, or famine," he could have meant nothing more true. The mighty destruction caused by alcohol through disease which it produces.

Fathers spend their money at the saloon and their children go half dead, take on die of pneumonia or other diseases of the lungs. The mother and children of the poor go half starved, and become an easy prey to the germs of disease.

If moderate drinking fathers, and mothers, and medicine taking mothers realized how narcotics weaken their offspring, making them an easy prey to the germs of disease, they would cease the use of intoxicants for their children.

Many, many are the good reasons why the saloon should be wiped off the face of the earth, but one of the greatest of these is the destructive powers over the health of the people.—Dr. Homer J. Hall.

Beauty in Excellence.

The hard dividing line so often drawn between us and beauty is a purely artificial one, there being nothing analogous to it in the world of fact. All through nature the lines are inextricably commingled. We are impressed with the wonderful beauty of the stars resplendent in the heavens, of the living forests with their varied tints, of the majestic in its broad expanse, or dazzling on the shore, of the graceful of the meadow and mountain, of the color of the plumage of birds, the brilliant sunset, the tender bloom and verdant spring, and the blazing glory of the fall. But the meaning of it all lies deep in science. Science will readily explain these very qualities that so abundantly minister to our delight are the results of forces that tend to the order and perfection of the development and improvement,

with and the general excellence of the we so much admire. The use, the perfection of each in its sphere, the primary aims; the beauty was the outcome, the crown of excellence. It speaks of this in his Essay on Beauty: "and their sensuous delight the forms of Nature have a new charm for us perception that not one ornament was for ornament, but each is a sign of some health, or more excellent action. * * * rule of largest application, true in a loaf of bread, that in the construction of any fabric or organism any real fitness to its end is an increase of * * * Beauty rests on necessity the line of beauty is the result of economy. There is a compelling reason in the shape of the plant, for every novelty of form; and our art saves material by a judicious arrangement, and reaches beauty by taking every superfluous ounce that can be done away, and keeping all its strength in the beauty of its columns."

There is not sadly in need of these lessons in the ordering of our own lives? As of resting upon the truth that beauty ever springs from fitness, we treat the two notions, and seriously consider which is sacrificed to the existence of the other. Of course, this notion lies at the root of the false ideas of beauty which are so universally widespread among us. The well-known subject of dress and fashion affords the familiar illustration of this. We smile in contempt at the rude effort of the savage for himself with paint and beads, while we set at naught clothing as a means of protection and adornment; yet we follow him at no great distance when we submit to inconvenience, discomfort, pain and loss of health, time and money for the sake of altering the shape of our bodies, or the size of the waist, or of adopting some whim of fashion which will pass away before we have had time to become accustomed to it. We sometimes hear the criticism that we are sacrificing use to beauty, but the fact is that we are only sacrificing it to a desire for which beauty has no share.

The finishing of our homes affords a similar example. We cannot make them truly comfortable without studying their uses and their needs. A small house, crowded with expensive furniture and filled to overflowing with ornaments, is not beautiful. Nor is a room comfortable, or two costly objects seem to enhance the inferiority of all the rest; nor a room comfortable if the parlor is decorated at the expense of the comfort of the living rooms, or a room comfortable if the roof or defective plumbing is allowed to continue, that showy banquets may be given where, in any way, use and adaptation are sacrificed for ulterior objects. The question, whether large or small, comfortable, will proclaim the comfort, the health, the hospitality of the family; it will show the needs of the children, the needs of the elders, the happiness and comfort of its inmates, the pleasure of its

in the manner the beauty of life in all its details cannot be separated from its excellence. The fleetness of the greyhound, the spirit of the horse, the gentleness of the dove, that make them beautiful in

our eyes. The human countenance will ultimately betray the soul that dwells within, and the constant presence of love or of hate will transform it into beauty or ugliness long after the roses of youth have lost their bloom. And what is beauty of character? Certainly nothing that can be added as an ornament after character has been established. It is the simple and natural expression of goodness, which can be no more imitated than the rainbow in the sky. When right-doing ceases to be a painful duty, and comes to be a delight preferable to all others, then does the beauty of character flower forth in rich and fragrant profusion.

If this true idea of beauty could be generally appreciated and realized it would at once simplify and elevate our lives. We all love it and long for it in many forms. But we are seeking it as a thing by itself and it escapes us. We think of it as something apart from usefulness and value, reality and truth, virtue and honor—something that can be added at will, like an exterior decoration. Thus we vainly strive to obtain it by appearances, display, simulation; whereas it is really imbedded in the very heart of all true efficiency, excellence, sincerity and integrity.—*Ledger.*

DESPISE NOT PROPHECYING.—Even as there is no surer way of putting out a fire than pouring cold water upon it, so there is no surer way of quenching the Spirit than by rejecting and despising his revelations. Yet it is a fact, strange indeed, yet constantly noticeable, that whilst the only religion which the world believes in at all is a life of complete consecration to God, and whilst the world makes no allowance for the defects of those who belong to Christ, yet the advocacy of such a life often moves the scorn of the church.—*M. S. Pearce.*

WE cannot be a blessing to those who need the ministry of comfort until we, too, have suffered and learned the lesson of comfort for ourselves at God's feet. Hence, if we would be truly and deeply helpful, we must be willing to pay the price of the costly tuition. We must learn long before we can teach. We must listen long before we can be ready to speak to others.—*Er.*

Items Concerning the Society.

HEARD AND OVERHEARD ABOUT THE YEARLY MEETING.—"It was a Yearly Meeting marked by as much life as any of late years, preserved in as great peace, notwithstanding unusual risks of breaking the peace, but held under an evidence of silently working power surpassing that of recent years." Says another, recently received into membership, "I don't know what to make of such a spectacle. What! No president, no moderator, no votes cast—but only a recorder of the sense of the meeting—and that gathered sometimes without hearing words enough to tell it by? I tell you, I sat dazed at it. I tried to tell my folks about it, but they couldn't conceive of such things happening so orderly, and decisions come to that way, in any assembly of people, and such unbroken dignity! What do you say? 'Christ the head over all things to his Church,' and no other presiding officer needed? Ah, that explains it. Now I see it all!" Another, of eminence among men in England, when asked if he could sum up his impression of Philadelphia Yearly Meeting in one word, replied, "I could not in one word, but I might convey it in two. And they are these: RESERVED POWER."

Notes from Others.

Canada has stopped all First-day excursions, Switzerland has done the same and Norway closes all its business upon the First-day by law.

The importance of giving the Bible to the Filipinos in their native dialects is emphasized by the fact that ninety-five per cent. of the population cannot read Spanish.

Every settlement in Greenland is now said to be Christian. The Christianized Indians throughout the Hudson Bay region sing hymns in eleven different languages.

Conference, a paper published in India, states that opponents of missions to Jews calculate that it costs from four to six thousand dollars to convert a single Jew.

Canon Henson says of Dean Farrar: "It is an agreed point that he succeeded in gaining the attention of the middle-class public of England beyond any other Anglican divine."

At Point Barrow, Alaska, which is in the "very teeth" of the arctic circle, the Presbyterians maintain a mission. Ships with mail and provisions only once a year touch there.

In his travels through Northern Luzon Bishop Brent found at Ilocos a community of two thousand Christians, who for over two years have had no priest even for occasional ministrations.

Ichino Shibota, a Buddhist priest, is taking a post graduate course at Yale. He is a native of Japan, and has been decorated by the mikado for special services. He is studying philosophy at Yale.

It is said that the ancient Syrian manuscript of the gospels found by Lewis in the monastery on Mt. Sinai agrees in almost every respect with the changes made by the New Testament revisers.

William E. Griffis says: "In the pure text of the Bible one may search through its sixty-six books without finding wings ascribed to the angels, though fleetness and celerity of motion are ever theirs."

A magazine whose orthodoxy is sometimes questioned, has an editorial in which it states the belief "that sacrifice is the central truth of the Christian philosophy, as it is the supremest experience in the Christian life."

Henry Ware has been appointed dean of Westminster to succeed the late Dean Farrar. Some years since H. Ware had controverted with Professor Huxley, which has been preserved to literature in "Christianity and Agnosticism."

"It is still the itinerant rather than the fixed preacher," says the *Congregationalist*, "who must be depended upon to carry the gospel message to the multitudes of new peoples who are constantly coming to our shores."

Timothy Richards, an English Baptist, has been summoned by imperial decree to the consultations of the great counselors of state in China to consider questions relating to the peaceful conduct of missionary work in the empire.

"The Methodist Book Concern" has grown from a borrowed capital of six hundred dollars to an investment of over three million dollars in one hundred years and more of its existence. It has never lost its credit; never failed; never made an assignment; never passed through bankruptcy.

The new venture of the Y. M. C. A. along the

lines of industrial work is said to be one of apparently limitless possibilities, not only in the religious world, but also in the domains of physical improvement, of mental attainment and of social regeneration.

Gregorio Aglipay, archbishop of the Philippine Independent Catholic church, who surrounds himself with advisers, both Protestant and liberal Catholic, recommends the study of the Bible and urges his people to support the public schools and uphold the present Government by obeying all its laws.

E. E. Hale has an article in the *Christian Register* this week on "The Singing Birds," in which he asks if "we cannot arouse the public opinion of the very people who butcher the birds to-day, so that these people shall be their most cordial friends and protectors." The Catholic archbishop of New England is also interested in this matter.

Henry R. Talbot, of the Philippine mission, who is now in New York says, "The Filipinos are largely disaffected toward the Roman church as a foreign institution, but quite satisfied with the system of thought and practice which Rome represents. They want priests from their own people. Roman priests from the United States would not satisfy them."

A similar concern to that entertained by some Philadelphia Friends for the sheltering of young members animates C. Silvester Horne, who in speaking of his new work at Tottenham Court road says: "It is one of my hopes for Whitefield that we shall make it a veritable city of refuge for the young people of London who are hard pressed in the realm of thought and harder pressed in the realm of morals."

The American Tract Society has received a request for the employment of a colporteur in Mayaguez, Porto Rico. "I know from long experience," says the maker of the request, "that the books and tracts are doing great work in these Spanish countries. They preach the gospel in many places in the privacy of the home, on the public highways, in stores and shops, in the city and in the country, and many of them will be read and reread over and over again."

SUMMARY OF EVENTS.

UNITED STATES.—President Roosevelt, during his late visit to Yellowstone Park, is said, spent most of the time in studying the habits of the various species of game which abound there. He would lie for hours near a herd of elk or mountain goats, and frequently would walk eight or ten miles to observe them. He also studied bird life with John Burroughs, the poet naturalist, who was able to show him one bird which he was not acquainted, namely, the solitaire. In some very appreciative remarks in reference to the interesting objects and the scenery of this Park, he said: "I have been literally astounded at the enormous quantities of elk and at the number of deer, antelope and mountain sheep which I have seen on their wintering ground, and the deer and sheep in particular are quite as tame as range stock. A few buffaloes are being preserved."

The original decree of the United States Court of Appeals, enjoining the Northern Securities merger, has been modified only to the extent of allowing the payments of certain dividends. An appeal has been made to the Supreme Court of the United States against the decision of the United States Circuit Court in this case.

The trustees of the American Normal and Industrial Institute, of which Booker T. Washington is the head, have received \$600,000 toward the endowment fund from Andrew Carnegie. In a letter, Andrew Carnegie, says: "I give this without reservation, except that I require that suitable provision be made from the gift for the wants of Booker T. Washington and his family during his own or his wife's life. I wish that great and good men be entirely free from pecuniary cares, that they may be free to devote himself to his great mission." Last year this Institute had 112 instructors and 1384 students under instruction in such manual training as will enable them to become self-supporting and self-respecting men

and women. The value of this establishment is stated to be \$1,000,000.

The amount of anthracite coal produced during 1902 in Pennsylvania is stated to be twenty-three million tons less, and of bituminous coal about eighteen million tons more than in 1901.

The manufacturers of cotton in the Southern States are looking at a more rapid rate than in New England. It is said that "not proximity to the cotton fields, not climate, but cheap labor, long hours, together with utter absence of excitement, of extreme moderation of taxation, explain the growth of the South."

The Northern manufacturers demand factory laws which shall restrict the time during which children may work in the South.

Dr. Beaudette-Bonnet, of New York, lately held a clinic in the Polyclinic Hospital to demonstrate the use of electricity in curing deafness. Three patients, one totally deaf, were treated, and in every case they acknowledged having heard distinctly numerous sounds made by physicians in the room. The instrument used in the demonstration is the invention of Miller Reese Hutchinson, chief engineer of the American Finance Company. It consists of a small storage battery of 6 voltage and small enough to fit in the vest pocket. Two wires connect it with a circular rubber box, which is used instead of an ear trumpet. When applied to the ear, and the battery turned on, the patient is made to hear the faintest sound made within a radius of about fifteen feet, providing there is no paraffin in the eardrum. In the experiments made on the three patients were successful. One of them, who had been deaf since childhood, answered correctly several questions put to him by one of the attending physicians.

A slight earthquake shock was felt at Haverhill, Mass., and also at Georgetown, N. H., on the 24th ult.

A despatch from West Point, N. Y., of the 20th, says: The presentation of teachers' Bibles by the American Tract Society to the members of the graduating class of the Military Academy was made this afternoon. Bibles were provided for 104 graduates, and in a few instances to those who already had Bibles other books were given.

A despatch from Riverton, N. J., says: State Entomologist John B. Smith is asking the co-operation of local friends of the State to carry out the experiments made for the destruction of which the State has placed an appropriation in his hands. He suggests connecting all mosquito infected places by ditches with tide-water, so that a small fish, known as "killies," would have free access. These fish live on the larvae of insects and, he believes, would be effective in destroying the mosquito. He suggests this plan in preference to treating the pools and ditches with oil.

There were 526 deaths in this city last week, reported to the Board of Health. This is 4 less than the previous week and 53 more than the corresponding week of 1902. Of the foregoing 294 were males and 232 females; 73 died of consumption of the lungs; 70 of inflammation of the lungs and surrounding membranes; 21 of cancer; 18 of apoplexy; 18 of typhoid fever; 4 of scarlet fever, and 1 of small pox.

FOREIGN.—A despatch of the 20th ult. from Hong Kong states that the famine in Kwang Si province is killing tens of thousands of persons. The American Consul at Canton has inaugurated a relief fund.

A despatch from Peking of the 23d says: Russia has demanded that the Powers sign a declaration pledging to her the sovereignty of Manchuria and excluding other nations from that country. The Russian Charge d'Affaires, Plancow, has informed Prince Ching, President of the Foreign Office, that no further steps in the evacuation of Manchuria will be taken until this agreement is signed. These demands of Russia abrogate the understanding which was prevailing among the Powers in regard to the "open door" policy toward Manchuria.

Secretary Hay has directed Ambassador McCormack, at St. Petersburg, to present a strong protest against Russia's demands as to Manchuria, and he also has instructed Minister Conger, at Peking, to advise the Chinese Government to resist the demands.

A despatch of the 24th ult. from Berlin says: "The Government of Prussia and of the Grand Duchy of Mecklenburg have decided to expel the Mormon missionaries, of whom there are 145 in Germany and 90 in Prussia, on the ground that they are propagating a form of religious belief incompatible with the laws of the State and public morals, and because polygamy is not excluded from their doctrines. The missionaries, who are all Americans, and do not come to the United States with the intent to settle upon their personal affairs. The Government of Prussia defies the expulsion as being simply a police measure, to which no legislation need be made."

A despatch of the 20th ult. from Berlin says: The great storm of wind and snow which raged for thirty-six

hours ceased at daylight this morning, and Central was under a white pall, varying in depth from two to three feet in the Harz highlands and on the plains.

The steamship *Kaiser Wilhelm II.*, which is to prove the fastest in the world arrived at New York on her first voyage. Her length is 425 feet and she is capable of making 775 first class, second class and 770 third class passengers, and consists of 6000 V.I.E. It is equipped for wireless telegraphy.

King Edward VII. of England left Malta on the 19th for Italy, and preparations have been made for him to the Pope. His arrival at Naples was met with great enthusiasm.

A despatch from Washington of the 22d ult. United States Minister Leslie Combes was the preventing a war between Guatemala and Salva- letter from President Manuel Estrada, of Guatemala, says: "There is no doubt whatever that offices exercised by you had a great influence in storing peace between us, and I have the satisfaction to tell you the name of Guatemala, heartfelt thanks for your work."

In a discussion in the German Reichstag pre- passage of the bill forbidding the use of white phosphorus in match making after First Month was stated that phosphorus not only caused near times three or four years after a workman has been killed by it, but it was hereditarily transmitted to whole families were afflicted, and again to necrosis to their descendants. So subtle were the vapors that bones were fractured without son being aware of the fracture at first.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For conv persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.18 A.M. and 4.32 P.M. Other trains are met when Stage fares, 15 cents; after 7.30 P.M., 25 cents. To reach the school by telegraph, wire West- Town 1142. EDWARD G. SNEED, Superintendent.

WESTTOWN BOARDING SCHOOL.—Application of pupils to the school, and letters to instruction and discipline should be addressed to the Superintendent, Westtown, Pa.

Payments on account of board and tuition communications in regard to business should be forwarded to EDWARD G. SNEED, Superintendent, Address Westtown P. O., Ches.

Notice.—The Fourth Annual Meeting of the Educational Association will be held at Haverlee on the afternoon and evening of Seventh Month 9th, 1903.

Afternoon session 3.30 P.M.—Regular Reports of Standing Committees; Reports of the Colleges Represented in the Association; Wall- board will report on the curriculum for Philadelphia; and a paper on "The Place of Athletics as Intellectual Force in the Curriculum."

This subject will be discussed by Franklin J. the Haverford Grammar School, and opportunity be given for general discussion.

Evening session, 7.30 P.M.—Dr. Martin G. of the University of Pennsylvania, President of the Association, will address the association on the general subject of "The Work of Schools and Colleges from the Religious and Intellectual Standpoint."

Supper will be served (on the college laws permits), at six o'clock. Those attending the will be guests of Haverford College, and the Sharpless of Haverford College will please notify the Haverford College, Pa., not later than Fifth Month 7th. A general invitation is extended to all persons interested.

Disbursing Charity Funds.

Certain persons who have been investigating a subject of the cost of disbursing the funds provided for various charitable purposes, in Philadelphia, claim that from thirty to sixty-four per cent. of the money contributed to such organization there, is spent upon salaries and expenses. Of examples given in support of this allegation, one is that of a well-known institution which receives three hundred thousand dollars a year, expending one hundred and sixteen thousand dollars of that sum in salaries; another receiving one hundred and thirty thousand dollars, is said to pay out twenty thousand dollars for salaries and administration expenses; a third, receiving fifty thousand dollars, uses seventeen thousand dollars of it in a similar manner. Connected with these is the United States Marine Charities, receiving one hundred and twenty thousand dollars, which spent only one thousand two hundred and forty-one dollars for salaries and expenses. The balance of many secret lodges and fraternal organizations have frequently revealed a very large sum charged to expenses account, as for banquets, junketing trips, etc. A person known to the writer, who has frequently given money for philanthropic objects, has recently once expressed his satisfaction that he should handle the funds, believing that he could be administered with scrupulousness, so that practically all the contributions could reach the beneficiaries. The *Herald of Truth* remarking upon the above Chicago inquiry, observes:

"We have little comment to make on this, and the language of the disciples (Matt. xxvi: 18) would lead to say, 'To what purpose is this?' The people who give do not count the giving their donations to be expended in salaries and expenses. Of course there are some expenditures in all plans and pro-

jects for the relief of the poor and other benevolent purposes, but, as shown in the last instance [The Hebrew Charities], these expenses need not require more than a very small percentage. When people have only the glory of God and the welfare of humanity at heart, they will maintain the working machinery, and the managing expenses in all benevolent and charitable institutions on just as simple and economical a basis as possible, and will be willing to devote some time and labor as a donation to the cause. L.

An Unfriendlylike Monument.

A monument to Lawrence and Cassandra Southwick as persecuted Quakers under the Puritan regime has been offered to be set up in Salem, Massachusetts, by Fred S. Ayer, of New York City. "They were my ancestors," he writes to the mayor of Salem, "and they were public martyrs in the cause of religious liberty and freedom of thought, as they were among the first to become Quakers in this country and to perish for their independence." He thus continues:—

They settled in Salem about 1630. The town donated to Lawrence land to enable him to establish glass factories, and tradition reports him to have been one of the first to manufacture glass in this country. For absence from the established worship to embrace Quakerism he and his wife, Cassandra, and their children were repeatedly imprisoned, mulcted, whipped, starved and almost despoiled; two of their children were ordered to be sold into slavery, a sentence not executed because no shipmaster could be found to take them, while Lawrence and Cassandra were finally banished from the colony under penalty of death, took refuge in midwinter at Shelter Island in extreme age and perished there in the spring of 1660 of privation and exposure. There were others who also suffered."

We are informed that besides Lawrence and Cassandra Southwick, there were Daniel and Provided Southwick. These were ordered sold into slavery for their faith. Josiah Southwick was banished in 1659, but returned in 1661 and was seized, tied to the tail of a cart and dragged through the streets. He remained in Salem, however.

The model of the proposed monument of bronze or marble represents a mortal struggle of a man and woman with a fierce and rampant tiger. This beast stands in the artist's mind for the spirit of Persecution, and the munificent contributor of the gift to Salem, doubtless with noble intent, contemplates a

righteous protest in celebration of religious liberty and its martyrs. But in effect the tiger would naturally stand in the people's mind as a vindictive libel on ancient Puritanism. It would find secret sympathy amongst anti-Christians and anti-protestants; but none, we believe, in the true-hearted Quaker or Friend.

The lamb that tired out and discomfited that beast for all America through faithful non-resistance save by the sword of the Spirit, would be among the first to wish the tiger kept buried out of sight, and all trace of rancorous memory hid which might flaunt the mistaken zeal of fathers in the face of unforgiving children, who are to-day just as sorry for it all as are the Quakers of to-day. Professing the immediate Spirit of Christ as their foundation, the Friends must in the same spirit continue to say, "Father, forgive them, for they know not what they do;" and rejoice in no exasperating reminders to mar in Salem the grace of peace.

How surely are generations succeeding stonors of the prophets moved to garnish their sepulchres. How often the first stone hurled at a faithful one's life, is made the first of his monument! But Quakerism covets no monuments or stones of memorial but of the spiritual order, and no adornments but "the ornament of a meek and quiet spirit which in the sight of God is of great price," even that of the sacrificial life and offering of his dear Son. For principles, Quakerism will observe memorials and testimonies to be displayed because of the Truth, but not in any honor for the pleasing of the flesh. If this proposed for Salem had been a monument for a principle, and not in effect a stigma on mistaken men, the Friends, though inquiring "for what purpose this waste?" of fifty thousand dollars, could leave the well-meaning sign-builders to their signs. But we aspire to no structures for personal fame. Likewise, if Friends in truth, we look upward with no pride on that highest of human statues yet erected on this planet, though it figures one of our historical characters foremost in true honor, William Penn, towering, as it were, above time and earth in this city of his founding. "How can ye believe," were that statue its original, it would preach,—"who receive honor one from another, and not the honor which cometh from God only?" Not even would he, as architect

of a state, have the vanity to say words put upon the architect of a great Cathedral, "If thou wouldst see my monument, look about thee." No boasting forecast breathed in the spirit of his mind; but this, in brotherly love, was the yearning of his soul over his city:—

"Oh that thou mayest be kept from the evil that would overwhelm thee; that faithful to the God of thy mercies in the life of righteousness, thou mayest be preserved to the end. My soul prays to God that thou mayest stand in the day of trial, that thy children may be blessed of the Lord, and thy people saved by his power."

Imagine the same William Penn coming to Boston some twenty years earlier than when he came to Pennsylvania. What was there in human probability to have prevented his sharing that martyrdom along with William Robinson, Marmaduke Stevenson, Mary Dyer, or William Leddra? And yet, so far as we know, William Penn was not better than they, and they all in pure righteousness as good as he. But their death largely made it possible for Penn, or any others, to find in North America twenty years later a land of toleration of conscience, which he came hither to confirm. Religious liberty covering America is the monument, more imperishable than bronze, of Cassandra and Lawrence Southwick, with the noble army of Robinsons, Dyers, Brends, Holders, Copelands, Nortons, Christions—who received upon their own persons, and stunned to silence the shock of state-persecution for religious opinion. Less traceable to the labors of that pioneer army of faith, but more elusive, as being spiritual, is the substantial monument which has now found a foothold of recognition among so many churches,—that of the immediate and perceptible witness of the Holy Spirit on the hearts of men. But marble monuments are too carnal for us to covet for that vanguard of Truth, and we repudiate all tiger monuments for their enemies.

Simply forgetting the things that are behind save as sacred incitements, let us come unto the living Rock of Divine revelation in Christ for our future, other foundation than which no man can lay, ourselves also "as living stones being built up a spiritual house, an holy priesthood, to offer up spiritual sacrifices acceptable to God through Jesus Christ."

When Hannah More was dying she said three words: "Light, light, light." Then she went up on the wings of light to the city of light. A neighbor of Hannah More's died near the same time, and made all hideous about him with his cry: "It's so black, so black!" How do you explain the difference? Hannah More was scared to death at a little mouse. Her neighbor was the boasted bully and infidel of the country, bragging that there was no God, man, or devil that he was afraid of. The only rational explanation to a reasonable mind is, Christ was with Hannah More.

A Bank Teller.

"The average signature of the young business man is becoming more and more difficult of identification," said the paying teller of a leading local bank to a Washington *Star* reporter. "This is so because of the teaching in the schools during the past few years of the new vertical handwriting. Although this writing is more legible than the style of the past it has a tendency to destroy individuality in the signature and put to the severest test the faculties of the teller in distinguishing genuine from forged signatures. These facts apply particularly to young men who have graduated within the past dozen years, for up to that time there was only the Spencerian style taught in the schools and every pupil unconsciously acquired his own particular style as his hand became adapted to the use of the pen."

The business of the bank had been concluded for the day, the cash had balanced and the teller grew loquacious as he sat before a luncheon in a neighboring cafe and repaired the waste in his system that had gone through a siege of ten hours amidst piles of money and the varying moods of those with whom he had come in contact.

"You see," he went on, "signatures can be duplicated almost as easily as a suit of clothes. There are men in every city of the world who have the power to counterfeit almost any signature given them if they are permitted a little practice, and it is the dishonest among these whom we have to avoid. Therefore, the new handwriting is a constant menace to the tellers, for if the signature is really forged it lacks the individuality of the genuine, and it is this trait in all signatures that the teller first has to learn. I have thrown down hundreds of forgeries that would have passed for the genuine in the hands of any but an expert, and all because of the lack of individuality. It is a hard thing to get used to, but once acquired is impossible to overlook, any more than one could fail to recognize a friend if he happened to change his clothes. It cannot be taught, but must be acquired by the teller, and it is this that has made me a firm believer that tellers are, like poets, born, not made. I think I have a familiar acquaintance with five thousand signatures, and the rating behind them, and when any one of these come before me with a demand for recognition on a cash basis I instantly size up the man presenting it and draw my conclusions from the tout ensemble. Not only must the signature be all right; but so must the person who presents the check, and if he is unknown to me he must prove his identity and right to the money called for."

"When you present a check of your own at your own bank you will observe that the teller glances at the face, then turns it over to see that it is indorsed, and then pays it at once. But you do not know all that he saw in that quick glance. He saw the signature first, then the amount, instantly recalling if it was in excess of the sum on deposit, then the date to see that it was not predated, and then he glanced at you to see if you were the indorser. All that took but the fraction of a minute, but in those few seconds the teller had sized you up and rated you all along the line, for we

have no authority to overpay a check one single dollar, and are personally responsible for errors that may occur if we do. We are at the time, and customers in line do not like to be put to the embarrassment of being kept waiting when they present a check. Every depositor feels that he has a sort of interest in the bank, and when his check is questioned he gets warm around the collar, no matter how gentle he may be at other times. He feels that his honor is questioned, and makes him want to fight. These are a few of the things we have to avoid in order to make the bank popular, yet at the same time must be alert to the bank's interests."

"To give you an idea what it is to be perfectly familiar with several thousand signatures, tell me how many you know so well that you would be willing to take the responsibility of paying other people's money on the strength of your surety?"

The *Star* man, after several minutes spent in recalling signatures, confessed that he knew half a dozen, for the first time actually realizing what it meant to know thousands, his respect for the capabilities of the teller growing in the interval. The expert continued.

"Some men of business will recognize a hundred signatures, but even these cannot be so sure of them that they would be willing to go a large amount on their judgment. Signatures are a part of the world of the teller. He becomes as used to them as the broker does to the fluctuations of the stock bulletin board. He lives one-third of his life around them, and when a forger comes to him it is the face of the presenter of the check that he first notices, nine times in ten, reads the guilt, for a forger is a difficult thing to detect. Do you own signature, for example. Do you know that, after a year, you could positively swear that you wrote it? No, and you would hardly care to take the risk of a man's word on your judgment. In every criminal case where handwriting comes into play, you almost invariably read that the witness testified that he thought that the signature was genuine or forged, but seldom or never sure of it, even when they say they are sure of it, it is only a handwriting expert who says so, and he bases his conclusions on his set of eyes and not on rapid judgment, as we have to. You will seldom find a teller on the stand who will positively assert that he knows a signature to be good or bad. He always qualifies his testimony. But take that same teller behind his window, and place before him a man who presented the check and he will tell you positively if the check is good or bad. That is what makes him valuable. His ability to read signatures and human nature at the same time."

"We, like all men who deal directly with the homogeneous public, have our troublers. Banks nowadays are always ready to correct errors, and if such a claim was made by one at the window he would be given courteous attention and told that if at the close of the day's business the balance showed a deficit it would be remedied. Frequently checks are overpaid, but it generally happens that the time can be calculated, and very rarely are there losses to the bank from this cause. Tellers are only human, and are liable to errors."

their percentage of error is so slight that he is not on foot any plan at present to supplant them with machinery.

Every hour in the day there are people at the window who object to being told that they are unknown to the teller and will have to be identified. It hurts their sensibilities. They seem to feel that we offer them a gratuitous bribe by doubting them, and at these times, particularly when the person is a woman, we have to exercise all our diplomacy to make her feel that we are doing them a favor as well as the bank by protecting them from dishonest persons by insisting that all who come or money be personally known to some one in the bank. A story is told of Joseph Jefferson's attempt to cash a check on a Chicago bank several years ago. The teller did not know him, never having seen him save on the stage in 'Rip Van Winkle,' and when the factor came face to face with one of his nearest admirers the latter refused to believe the evidence of his own eyes, and demanded that Jefferson get some one to identify him. The teller was somewhat nonplussed that his name was unknown to even the teller of a bank, and before turning from the window to get the necessary identification, said, in those inimitable and world renowned accents 'If my dog should see here he would know me, dot's.' The teller laughed with delight, and paid the check without further question. Nobody but J. S. Jefferson could have said it that way."

from the Yearly Meeting of Women Friends, held at Philadelphia, the Ninth Month, 1776.

The Friends who were a Committee appointed to consider of the most convenient method of conveying the advice of this meeting to the Yearly Quarterly and Monthly Meetings began thereto, have, after deliberate and careful consideration, produced the following plan, which, being approved, is recommended to be read in each of the said meetings: "The having been revived in the minds of our Friends a weighty and growing concern for the advancement and preservation of purity in the way of purity and plainness, and united exercise appearing in the meeting of that account, we feel a fervent desire at those who are in the station of parents and heads of families, may deeply attend to the proofs of instruction in their own minds the way of life and peace, that peace which the sure and lasting reward for the discharge of every religious duty; may, therefore, arise in that strength Divinely communicated, and lay our hands upon every one of our houses and families that's inconsistent with the high and holy profession we are making; thus would the causes of contention be greatly removed and we should experience a being enriched with that blessing which is annexed no sorrow, and become as children of the world, as a 'city set on a hill' cannot be hid." Signed on behalf of the meeting by MARY PEMBERTON, Clerk.

There are those who honor a far-off Saviour, and are now living, and such have built their graves over places where Jesus once was, and are buried; but the Friends have preached a religion not once only in the world, but continually.—T. E. Harvey.

William Gibson.

William Gibson was born in Caton, near Lancaster, about the year 1629.

Being a soldier in the garrison in Carlisle, Cumberland, he, with three others, understanding that a preacher called a Quaker, who was a stranger, had appointed a meeting in that city, agreed to go together to the meeting, with an intent to abuse the said Friend, whose name was Thomas Holmes. William Coming, first to the meeting, and hearing the Friend powerfully declaring the truth, was so affected and reached by his testimony, that he stepped up into the meeting, near the place where Thomas Holmes stood, and, knowing the design of his fellows, waited to defend the Friend against any that durst offer to abuse him. From this time he became a constant frequenter of Friends' meetings, and quitted his place in the garrison, and employed himself in the trade of shoemaking, and waited upon God in silence, under the exercise of his power, for the space of three years. Afterwards he received a dispensation of the gospel to preach, and became very serviceable in divers places in the county of Lancaster. . . . He afterwards travelled southwards in the work of the gospel, and was imprisoned at Maidstone, in Kent, for his testimony, which imprisonment was long; from whence being discharged, he went to London, and removed his wife and family thither, where his service was well known to Friends in that city, and many other parts of the nation, and many are the seals of his ministry. . . . He was a tender father to the mourners in Zion, and divided the word aright, speaking a word in season to the tempted, afflicted and travelling soul, a cherisher of such as loved and feared the Lord.

He was a lover of unity amongst brethren, but as a sword against that spirit, which, under pretence of love to the light of Christ Jesus in their consciences, would plead for a liberty that was out of the truth, and sought to draw others from the footsteps of the flock of Christ. . . . He was a man devoted to the service of God, and an example to believers in word, in conversation, in charity, in spirit, in faith and in purity, given to hospitality, apt to teach, and was an approved minister of God. He had suffered hard imprisonments, and the spoiling of his goods, for his testimony's sake, against hiring priests, who feed themselves and not the flock, and against their maintenance by tithes. In the Third Month, 1684, he travelled into his native county, Lancashire, though he had been out of health; and in his return home he was taken sick, and continued ill for three months. . . . He had two sons and one daughter, to whom he gave good advice in the time of his sickness, directing them to that blessed and lively light of Christ, by which he had received the knowledge of God, and, by walking in it, salvation to his soul, desiring that they might know the same and walk in it. "It will show you," said he, "what is good and what is evil. Take heed to God's word in your hearts, so you will know your ways cleansed by it." He charged them to avoid all vain and idle company, and to be diligent in frequenting the assemblies of the Lord's people, and to keep society with such, and to flee youthful lusts,

which war against the soul. . . . He also charged them to read the Scriptures and other good books.

He died the Twentieth of the Ninth Month, 1684, aged fifty-five years, and a minister twenty-six years.—Selected.

NOTE.—In this series the selection on page 321 gave the year of John Carlisle's conviction as 1763, which should be 1673.

A Declaration by William Savery.

William Savery, an eminent servant of the Lord, when near the close of life: "I thought," said he, "I was once strong for the work, but now I am a child brought back to my horn-book, and have nothing to trust to but the mercy of God through Christ my Saviour." Without attempting to give the preacher's words, it may be stated that the purport of his discourse was to show the importance of faithfulness in little things, and the necessity of bearing the Cross. He said that if we were in earnest in our pursuit of essential good every day, and several times in the course of the day, we should have to do and to suffer things extremely mortifying to us. The Cross, the Cross; this was the banner we must always bear; he found it so, at least; and nothing but prayer, prayer for preservation, morning by morning, evening by evening, would be the means of enabling us to travel safely. At the close of the day we should impartially review our conduct, bring it to the test, and, whenever we have fallen short of the standard, we should endeavor to feel after a qualification to seek for, and obtain our Heavenly Father's forgiveness. This, with all its exercises, is a truly happy life. The want of faithfulness in little things is the cause of their being so many dwarfs in Israel. Those who are faithful in a little, and those only, would be made rulers over more.

Soon after rising upon his feet in the afternoon he mentioned the great fear that had ever attended him through life on occasions like the present, lest he should not be skilful in discerning between what was given to him for his own improvement and that which was designed for the people, adding that at the present time he still found that care as needful as ever. However it might be with others, thus it was with him.

Dick and the Sparrow.

The lady of the house was standing in the vestibule, casting an anxious eye down the street.

"Are there no boys in sight?" asked a voice from within.

"Yes, plenty of boys on the street, but you know how particular I am about Pet. I should like to be sure that the boy who rides her will not be rough with her."

Just then a sturdy young fellow of ten came whizzing by on a bicycle. It was not his own, but one that its owner was generous enough to lend to the boys who had none, and he was taking his turn while the other boys lay on the grass and played jackstones, wishing as he rode along, "My! if I only had a wheel for my trip to the farm!"

Just then he suddenly straightened himself up. "Ting-a-ling-ling!" rang out the bell of the bicycle sharply, and as he slowed up the

other boys half rose and looked wonderingly. They could see nothing to ring for.

"What was it, Dick?" they inquired. "Oh, nothing but a sparrow. I was afraid I would run over it; the little thing stood so still right in front of the wheel."

"Ho, ho! Rings his bell for a sparrow!" sneered the other boys as Dick dismounted. "Mamma's itty wity baby."

"I don't care how much you make fun of me," he replied, good naturedly, yet not without a red flush on his brow. "I guess I wouldn't run over a sparrow, even when I could help it by ringing or stopping."

"Come here, please, Dick," called a voice from the doorstep of one of the handsomest houses on the avenue. "You are the very boy I want to drive a pony to the country, and back. It is out the Darlington boulevard. Would you like to go?"

"Why, yes, ma'am," quickly answered Dick. I have an errand out there, and was just dreading the walk."

"Then I am glad you may ride. I was wondering whether I could trust one of those boys to be kind to Pet when I overheard about the sparrow. This made me willing to trust you."—*Junior C. E. World.*

THE CHURCH AND THE WORLD.

A TIMELY ALLEGORY.

The church and the world walked far apart
On the changing shore of time;
The World was singing a giddy song,
And the Church a hymn sublime.
"Come, give me your hand," said the merry World,
"And walk with me this way,"
But the good Church hid her snowy hand,
And solemnly answered—"Nay."

"I will not give thee my hand at all,
And I will not walk with you;
Your way is the way of eternal death,
And your words are all untrue,"
"Nay, walk with me a little space,"
Said the World with a kindly air,
"The road I walk is a pleasant road,
And the sun shines always there;

"Your way is narrow and thorny and rough,
While mine is flowery and smooth;
Your lot is sad with reproach and toil,
But in rounds of joy I move.
My way, you can see, is a broad, fair one,
And my gate is high and wide;
There is room enough for you and me,
And we'll travel side by side."

Half shyly the Church approached the World,
And gave him her hand of snow;
And the false World grasped it, and walked along,
And whispered in accents low,
"Your dress is too simple to please my taste;
I have gold and pearls to wear;
Rich velvets and silks for your graceful form,
And diamonds to deck your hair."

The Church looked down at her plain white robes,
And then at the dazzling World,
And blushed as she saw his handsome lip,
With a smile contemptuous curled.
"I will change my dress for a costlier one,"
Said the Church with a smile of grace;
Then her pure white garments drifted away,
And the world gave in their place

Beautiful satins, and shining silks,
And roses and gems and pearls;

And over her forehead her bright hair fell
Waving in thousand curls,
"Your house is too plain," said the proud, bold
World,
"Let me build you one like mine,
With kitchen for feasting and parlor for play,
And furniture never so fine."

So he built her a costly and beautiful house—
Splendid it was to behold;
Her sons and her daughters met frequently there,
Shining in purple and gold.
And fair and festival—frolics untold,
Were held in the place of prayer;
And maidens bewitching as sirens of old—
With world-winning graces rare;

Bedecked with fair jewels and hair all curled,
Untrammelled by Gospel or Laws,
To beguile and amuse and win from the World
Some help for the righteous cause.
The Angel of Mercy rebuked the Church,
And whispered, "I know thy sin,"
Then the Church looked sad, and anxiously longed
To gather the children in.

But some were away at the midnight ball,
And others were at the play;
And some were drinking in gay saloons,
And the Angel went away,
Then said the World in soothing tones,
"Your loved ones mean no harm—
Merely indulging in innocent sports,"
So she leaned on his proffered arm.

She smiled, and chatted and gathered flowers
And walked along with the World;
While countless millions of precious souls
To the horrible pit were hurled!
"Your preachers are all too old and plain,"
Said the gay World with a sneer;
They frighten my children with dreadful tales,
Which I do not like them to hear.

"The Father is merciful, great and good,
Loving and tender and kind;
Do you think he'd take one child to heaven,
And leave another behind?"
So she called for pleasing and gay divines—
Deemed gifted, and great, and learned;
And the plain old men that preached the Cross
Were out of her pulpits turned.

"You give too much to the poor," said the World,
"Far more than you ought to do;
Though the poor need shelter, food and clothes,
Why thus need it trouble you?"
So the poor were turned from the door in scorn,
She heard not the orphans' cry;
And she drew her beautiful robes aside
As the widows went weeping by.

And they of the Church, and they of the World,
Walked closely, hand and heart,
And none but the Master, who knoweth all,
Could discern the two apart.
Then the Church sat down at her ease and said,
"I'm rich, and in goods increased;
I have need of nothing, and naught to do,
But to laugh and dance and feast."

The sly World heard her and laughed within,
And mockingly said aside,
"The Church has fallen—the beautiful Church—
Her shame is her boast and pride."
Then the Angel drew near the mercy-seat,
And whispered in sighs her name,
And the saints their anthems of rapture hushed,
And covered their heads with shame.

And this for comfort thou must know
Times that are ill won't still be so;
Clonds will not ever pour down rain;
A sudden day will clear again.

—*Herrick.*

The Confessors of Peace from the Second Century to the Era of Mahomet.

VIII.

The bloody settlement of the Donatist schism had not long been concluded, when the greater one growing out of the teaching of Arius arose, separating the whole Christian world, as it were, into two antagonistic camps.

In the two centuries preceding there arisen similar widespread doctrinal controversies, first with Gnosticism, and then with Manichæism. The gnostic cult was a speculative theosophy that concerned itself very particularly with the origins of things—I and human—unknowable mysteries, to exclusion of the simple life of faith in Christ. The followers of Mani, a Persian, essayed engraving a dualistic realm of light and darkness derived from the religion of Buddha, upon stock of Christianity. The so-called "heretics" among these were purists, abstaining from flesh (being opposed to the killing of animals) and wine, and even from marriage. Their teaching, in which was not a little truth mingled with error, re-appeared variously in succeeding centuries.

The doctrine of the Arians, claimed to be heretical, was thus defined: "The apostles assert that God was not always Father; that there was a period when He was Son; that the Word of God was not eternal, but was made out of nothing." So, that the Word incarnate, was of substance with the Father, and not of the same substance.

As the controversy proceeded, "in the city," writes one historian, "bishops who posed to bishop, and the people contended with one another, like a swarm of bees fighting in the air." "Those," writes another, "were indeed melancholy times, deserving of our tears. It was not the former ages, when the Church was attacked by strangers and enemies; now, those who were natives of the same country, who sat under one roof, and sat down at one table, fought together with tongues as if with spears."

Chiefly to settle this very serious controversy Constantine called together, in 325, at Nice in Bithynia, a few miles east of his imperial capital of Constantinople, a notable council, which was composed of three hundred and thirty bishops, besides other hundreds of presbyters, deacons, and interested lay persons.

The fact of the coming together of the churchward peace, at least—of this great assembly from all parts of the Roman empire, is one of the startling contrasts of history; for only twenty-two years previous to this event had occurred at Nicomedia the burning of the beautiful palace of Diocletian—an act, which was attributed to the Christians, had again renewed fury the fires of persecution. At last it came to be triumphantly said: name of the Christians who were seen to overturn the State has been blotted out. Everywhere the Christian superstition destroyed, and the worship of the gods was fully restored."

Constantine did not idly hold his title was sovereign head of the State and army, and so he intended that he should

Church. The great Council being called at Nicaea, he appeared there as the presiding and central figure of the assembly. His speech counselled peace, and deprecating the devil's tares of dissension, and, mercifully enough, he admonished his "beneficent ministers of God" "to remove the cause of dissension, to cut off the heads of this hydra of heresy and establish peace." The proceedings, nevertheless, were marred by a great and unseemly contention. The creed, the basis of the historic Nicene Creed, was drawn up, followed by anathemas condemnatory of heresies of Arius.

The breaking up of the Council, which lasted two months, the Emperor issued an edict ordering that the writings of Arius should be burnt, while anyone secreting them stood in peril of death. Another edict, against the Novatians, Marcionites and other schismatics, enjoining them to forsake their "pestiferous errors" and return to the fold, and, to make the cure of the prefectural, requiring that the meeting be peaceful "all heretics shall be, without delay or contradiction, pulled down and confiscated from the Catholic Church." Thus early began the professing church the evil course of persecution for conscience' sake. It may be well to add that a few years later, in the treasury with Athanasius, bishop of Alexandria, Constantine sided with the formerly threatened Arius, whom he fully restored to his seat.

The time of the Decian persecution, which was so violently in Northern Africa in the third century, witnessed the beginning of the religious movement of Monachism. The persecution itself, the corrupt society, the falling away of many Christians from their faithfulness, the prevailing wars, together with the spread of a false merit of celibacy, influenced first of all to a time to withdraw as hermits from the world into the solitudes of the Egyptian desert. The knowledge of Christ which seemed to be overspreading all the world, the abundance of multitudes from engagement in carnal warfare, had not the Fathers—Justin Martyr, Clement, Tertullian, Origen and others—told them were a fulfillment of the prophecies of Isaiah and Micah and the seers of old, that the swords and arrows in the latter days all be done up in sheath, and violence and wasting no more known in the land? Evidently the outstretched hand of ruthless power and the inmates of torture did not presage those "days" of the Lord's own rule which were foretold, and so in the despondency of souls at the world's condition, and the thought of nourishing the better in themselves, did some of these proceed to withdraw themselves far away from the world.

Young men, Paul, and Anthony—of whom wonderful things have been related—were of those who first withdrew (A. D. 250) to the desert of the Thebais, and, in twenty years, the solitary parties on the shores of Libya, and up into Palestine and Syria, became the abiding places of the hermits. The climate favoring this outdoor method of life. The founder of the associations of hermits, or monks, was one Pachomius, also

a native of Egypt, who had been forced into the military service, but obtained a release from the undesired employ. During twelve years he remained as companion to an aged anchorite, and then, actuated as he believed by a call from heaven, founded on an island in the Nile, not far from Thebes, a community of monks. This was in the time of Constantine. In little more than half a century, many monasteries had been established thereabouts, with as many as fifty thousand brothers subject to the order's rules. These were not idlers, but diligent workers in the making of mats, ropes and boats, and in the pursuit of agriculture. Community of goods was observed, the surplus products were sent down the Nile to the Alexandria markets, and what was left over was bestowed in charity. A sister of Pachomius, emulating her brother's zeal, became abbess of the first convent, which was built by brethren from the parent monastery of the island in the Nile. The picture of this early institution of the colonies of monks and nuns offers many pleasing features, yet the system was an unnatural one, and, closely examined, need not fail to discover harsh and unattractive accompaniments. The following instance of this period is cited:

"The hideous degree to which some succeeded in drying up the spring of human affection is shown in the accounts of Pior and Mucius. The former, one of Anthony's disciples, vowed on leaving his father's house, that he would never again look upon any of his relations. After he had spent fifty years in the desert, his sister discovered that he was still alive; she was too infirm to seek him out, but her earnest entreaties set in motion the authority of his superiors, and Pior was ordered to visit her. Arriving in front of her dwelling, he sent her notice of his presence. As the door opened he closed his eyes, and held them obstinately shut throughout the interview; and having allowed his sister to see him in this fashion he refused to enter her house and hurried back to the desert."

Here we see a singularly literal adaptation of the Lord's injunction, that "if any man come to me, and hate not his father and mother . . . and sister, yea, and his own life also, he cannot be my disciple." Read thus narrowly, one might even commit self-murder, and claim that he honored a Divine requirement in not regarding his own life. Nevertheless, the spirit of the obligation remains subject to the paramount command—"Honor thy father and thy mother." It is likewise said—"The kingdom of heaven suffereth violence, and the violent take it by force," a passage which has undoubtedly been interpreted in a way to justify the forcible taking of lands, that their possessors might the better be brought within the beneficent pale of Christendom.

The canons of the Egyptian Church as to military service did not fully uphold the position of Tertullian. Sympathizing with, and, indeed, being the foremost exponent of the principles of the Montanists (who, previous to the Novatians and Donatists stood for puritanism in the Church), this forceful writer declared consistently against all carnal warfare. In the Egyptian Church, military service was sanctioned only under compulsion. "The catechumen, or believer," quotes Bun-

sen in his *Analecta Antenicana*, "who chooses to be a soldier shall be cut off. But one who has been enlisted without his own free will does not fall under the same condemnation; he is only enjoined to respect human life as far as possible. Let the soldier who is under command never voluntarily kill a man; and if he is ordered to do so, let him not obey with haste. If he takes life without being compelled to do it, let him be excommunicated." But Pressensé shows (as quoted by J. B. Braithwaite) that under the Empire in the third century, military service was not, as formerly, obligatory, and hence "by choosing the calling of a soldier a Christian exposed himself to all the temptations of camp life, and showed a disposition altogether opposed to the spirit of his religion." It is gratifying to have this so discriminatingly shown, and assented to, by the eminent evangelical writer of France, and author of "The Early Years of Christianity."

(To be continued.)

Christ in Humanity.

The meaning of the incarnation is full of instruction when applied to the practical life of the Christian. In the familiar phrase, Christ has come into humanity to stay. His life is to manifest itself in all the affairs of men. Constant attempts are being made to crowd Him out. His experience in infancy, that Mary, bearing Him, found no room at the inn, has been repeated in all ages. Notwithstanding all the blessings He has bestowed upon the world, attempts never cease to crowd Him out of the political thought, the current literature, the amusements and the business affairs of the world. Many statesmen go upon the theory that Christ has no place in their political calculations, and that religion belongs to the interior of the Church. Authors and editors, on the other hand, write as though Christ had no place in the literature of this age. All subjects, science, art and kindred themes, are discussed independent of their relation to Christ and his Church. And yet the fact is that art and literature owe almost everything to Christ. The thought of Him is the deepest inspiration of human intellect. In the world's amusements there seems to be no thought of the morality of the Christian religion. There is no place for Him in many palaces of enjoyment. He is banished from the social pleasures of life, and our amusements are in many cases of such a nature that Christ is looked upon as an intruder in places of merriment and mirth. Christ is also excluded largely from the business of the world. Business, it is said, is one thing and religion another. The great principles of Christianity are considered obstructions to business. The great law, "Do unto others as you would have them do unto you," is too troublesome to be admitted as a maxim of business. Yet, while Christ is crowded out of many hearts, let us thank God that there are also many millions of lives where He is welcome to dwell.

Thus, while the doctrine of the incarnation contains a profound philosophical truth, and has a deep theological significance, there is also an eminently practical side to it, which we do well not to overlook.—*Reformed Church Messenger*.

Science and Industry.

THE BABYLONIAN TABLE.—In a recent article telling of his excavations in the city of Nippur, Dr. Herman V. Hilprecht is quoted as saying: "The Babylonians, in their arithmetical tables, the multiplication table, for instance, went far beyond us. Our multiplication table stops at 12. 12 x 12 is the highest. The Babylonian table went up to 60. Their children might have sung 60 x 60 in reciting the multiplication table. Indeed, for astronomical purposes, they carried the table out to 1300; that is, the results of multiplication up to 1300 x 1300 were tabulated. They wanted to know at once the result of large calculations. They did not want to be retarded in their work by arithmetical problems, that is why they extend the tables so far."

ONE HORSE POWER TO EVERY SEVEN PEOPLE.—It would be difficult, says the *Boston Herald*, to obtain better proof of the great industrial advancement of the United States than is furnished by the fact that there is employed in the United States, one horsepower in manufacturing establishments for each seven of the population, and that ten years ago the figure was one to ten, and twenty years ago one to fourteen. It is estimated that the horsepower now available in this country for manufacturing purposes foots up to the enormous total of 11,300,000. This is almost double the figures ten years previous, which were less than 6,000,000, while twenty years ago the total was less than 3,500,000.

Not only has the power that can be utilized in our manufactures increased with our population, but it has actually advanced in greater ratio than have the number of workers. These figures, be it understood, include only power used for manufacturing, and they make no account of the locomotives on railway or the power in electric light plants or other similar establishments. Of this total engine power, three-fourths is obtained from steam. Water power provides for perhaps 15 per cent, and the rest is divided among miscellaneous sources of mechanical power. While electricity is now credited with only a small per cent., the growth in the use of this power is remarkable, and it bids fair, at no distant time, to rank second only to steam. According to the figures of the last census, there were employed in manufacturing and mechanical pursuits in the United States about 7,113,000 persons, and on this showing there would be over one and one-half horsepower available for the use of every person employed in the manufacturing industries of our country.

SWEDISH TELEPHONES.—Probably the first thing which a visitor to Stockholm remarks after his arrival is the appalling number of telephones scattered about the hotel in the corridors and rooms, says the Stockholm correspondent of the *London Express*.

In his bedroom he will perhaps find one and just outside the door another. He cannot move twenty steps without discovering a new one. While when he goes out into the streets

he will see little shelters, each of which holds an instrument.

If his washerwoman does not send the linen back punctually, he rings her up to ask the reason. If he wants company at dinner or lunch, he invites a friend through the telephone. It is here, there and everywhere.

In Stockholm there are more subscribers to the telephone than there are in New York and Chicago together. It is used very advantageously in the rapid discharge of work by the State authorities.

There are arrangements made by which telegrams, instead of being sent to the house, are communicated per telephone to the receiver direct from the postoffice.

But the system is not confined to Stockholm. The whole of Sweden is covered with a network of cable and wires. At short notice it is possible to converse with Haparands in the north, sixty miles beyond the railway terminus, or with Malmo, in the extreme south.

At the present time larger wires are being laid in the north. When this task is completed and the trunk lines are in full working order again, it will be possible to carry on a conversation with the utmost ease between Victoria Hafen, on the Arctic Ocean, and Moscow, Berlin or Paris.

In short, the telephone system of communication has been carried to the highest pitch of perfection in the Scandinavian Peninsula.

But even now it cannot be said that the system has attained its greatest dimensions if one is to judge from last year's figures, from which it appears that no fewer than 12,000 fresh installations were made in Sweden, the majority in and around the capital.

Almost every village is connected by telephone with its nearest neighbors, even in such distant parts as Lapland.

WHERE ICEBERGS AROUND.—Admiral Markham relates how, on one occasion, some men were attempting to secure a ship to an iceberg, which split into two with a loud report immediately a blow of the drill was delivered, says the *London Standard*. A cubic foot of ice at 32 degrees Fahrenheit weighs about fifty-seven pounds, and a cubic foot of sea water weighs sixty-four pounds, so that icebergs float with about one-eighth of their total mass exposed above the sea surface. It must not be hurriedly assumed however, that the total height of an iceberg from base to summit is 12,000 feet because the portion above water is 1500 feet high. As a matter of fact, the submerged portion of an iceberg may be altogether different in shape from the portion which is visible. Icebergs, drifting lazily southward on the broad bosom of the Labrador current that hugs the east coast of North America, often bring with them large fragments of rock and a considerable quantity of earthy matter; they occasionally ground on the shallower parts of the banks of Newfoundland, and doubtless help decrease the depth of water there by depositing the detritus gathered while forming parts of glaciers. Similarly, the icebergs of the Southern Ocean have been observed with earth adhering, and one, which was close to the Long Ranchon in Second Month 1893, had a large brown rock firmly imbedded in its side. Captain Ross, the renowned Polar explorer, once saw a

southern berg bearing large pieces and nearly covered with mud and specimens of which were obtained. long intervals, ice is very scarce or almost absent in the Southern Ocean, while several years without a break, near ship navigating those waters, reports fallen in with ice. In Fourth Month the barque Earnock passed an icebergs south, 20 degrees east, and hours later was completely surrounded by the words of Coleridge:

The ice was here, the ice was there,
The ice was all around;
It cracked and growled, and roared and
Like noises in a swound.

For several successive days and nights sailed eastward between long rows of ice. At one instant her commander, Captain, counted not fewer than 100, and it was estimated that without any exaggeration a vessel passed over 900 bergs. In Fourth Month 1896, the Aberdeen White Star ship *Damasus*, on her way to Australia, passed 954 bergs in three days, and number 708 were counted in one day and a half in a watch of four hours. Several ships have been damaged during this period, extending from 1891 to 1895 in the Southern Ocean, and a few were seriously damaged.

In Seventh Month 1894, the bark *Albatross* had an awe-inspiring experience. After being for several days in sight of numerous massive bergs, she passed one in 40 S., which showed signs of human beings having been on it for some time. A beaten path well in evidence, an apparently safe place had been formed in a hollow at the summit, and five dead bodies of men prostrate on the ice. Captain Hathorn compelled to give up any attempt at landing on the berg, inasmuch as night was coming and the breeze unpleasantly strong. First to Fourth Month of 1854, between 40 S. 20 W., many ships passed the island shaped like the letter J. The island for sixty miles, the shorter side for 10 miles, and inclosed by these icy promontories was a broad bay quite forty miles long. Several vessels were entrapped, and totally lost, under the mistaken impression that they were sailing between two icebergs about forty miles apart. Some are of opinion that a fall in the sea surface temperature is invariably experienced in the presence of an iceberg, and others assert that the summers are due to the extraordinary prevalence of icebergs in the North Atlantic. Both views are erroneous. On cross margin of the gulf stream and the Labrador current, the sea temperature sometimes 20 degrees without a sign of ice, and not very at all when ice is in sight. The coolest summers do not necessarily occur when icebergs are in evidence to the westward.

"THE Lord is long suffering, and merciful, forgiving iniquity and transgression, and by no means CLEARING THE GUILTY."
Num. xiv: 18.

FOR EVERY guilty deed holds in itself seed of retribution.

Never Be Above Your Business.

"said the head clerk to a young man in a large carpet establishment, "take up a sample of carpet over to Mr. Craft's, and let him see the pattern will suit. You may as well take a rule and measure the room as you are there."

"Right," replied Frank, putting on his hat. But when he noticed the size of the roll—a sample one containing about a yard—he exclaimed: "You surely don't expect me to carry that big roll, do you?"

"Only a sample and Mr. Craft is in a hurry for it," replied the clerk.

"What are the boys here for? I think I might send one of them over with it. If anything I detest, it's carting bundles around."

The proprietor, who happened to overhear the conversation, told the clerk, privately, to let the young man go and take his arguments and send the carpet after him.

"I did arrive at the house and was busy with a man when he came to the door with all of carpet under his arm and was in the room where he was. Looking at the roll, I was surprised to recognize his boy, with the roll of carpet in his arms."

"That is your carpet young man. I hope I kept you waiting for it. If you have any other orders, I'll take them now," said the proprietor. The young man was astonished he hardly knew what to do, and stood staring in amazement at his boy, who left the house with a polite bow.

"Did you get the carpet this afternoon?" asked the clerk, laying his hand on the young man's shoulders, when the latter returned.

"Yes," said Frank, looking up from his pocket, "but, do you know, I cannot understand why Mr. Green brought it around. I am more surprised in my life."

"I am," said Mr. Green, "but I am sure Mr. Green told me to ask you to take it to his office when you returned."

"Why," said his employer, as he entered the office, "I overheard your conversation this morning, and what I did was for your benefit. I should never be above his business; I am proud to give personal attention to the smallest detail. He should be prepared for any duty that comes legitimately before him."

"I have orders from those in authority. You must consider no part of a business too small for you to give it attention. I will carry for yourself rather than miss the opportunity or risk the loss of a customer."

"Above your business."—*Success*.

"As soon as we set our eyes on things of any stone and steel and fail to see beneath into the clear ether of spiritual truth, we sometimes grow despondent and are unable to achieve more than the material ends. We must remember, however, that our least deed is an arrow, shot into the air and will surely fall back; that our slightest word is a song, sent out into a world where many hearts, and that do as we may, none of us or words can ever die without leaving some one."—*Mitchell*.

works in you to will.

How Coins are Made.

While, perhaps, there are few things more generally seen and handled than coins, still to watch them turned out by machinery in hundreds with the rapidity and ease of buttons is something which can be done in but three cities in the United States. The only mints in this country are in the cities of Philadelphia, New Orleans, and San Francisco. Of these the largest and finest, as well as the first to be established, is in Philadelphia.

It was Robert Morris, the Quaker financier of the Revolution, whose efforts finally induced Congress in the year 1792 to establish the first mint of the United States.

Naturally with the rapid growth of the country the output of coin had to be greatly increased, so that by the year 1849 the mint was moved from the little building it first occupied, near Seventh and Filbert streets, to the more pretentious structure on Chestnut street.

As great an advancement as was this move to better quarters, it was, however, a still greater one when the mint established itself, in the year 1901, in the impressive structure of marble and granite, which it now occupies, on Spring Garden street.

To the new spectator there is something decidedly novel in seeing coins manufactured just as if they were any ordinary product. The first step in the process of money-making to be shown to the visitor is in the melting room, where the raw material, great ingots of silver it happened to be at the time of our visit, is melted in earthen crucibles into a mobile mercury-like liquid.

While in the liquid state the silver is quickly cast in iron molds into uniform bars, less than a man's forearm in length, which, after they are cooled in water, are subjected to an acid bath to remove all impurities from their surfaces.

And all of this melting, a process which in most places is accompanied by volumes of fume and grime, is here done over gas ranges, with as little smoke and disorder as a chafing dish fudge party. But the feature of the melting room which, perhaps, will appeal to the housewife first, is the floor. This is made up of separate pieces of iron grating, a foot in diameter, so constructed that the entire floor can be picked up and laid aside in a very short time. This is done at the end of each week, in order to sweep the smooth floor below of the scraps and dust which have sifted through the iron grating. The "sweepings" thus obtained yield, it is estimated, about \$25,000 worth of metal each year.

Let us follow one of the trucks bearing the silver ingots into the milling room. Here each of the bars is passed several times through a heavy rolling machine. Under this pressure it is transformed into bright metal strips, equal, perhaps, to a man's height in length, and several times the width of the coin which is to be made from it.

When these "ribbons" of metal have reached the desired thickness, or thinness, rather, a fact determined by a most accurate gauge, they are passed through a cutting machine, where they are cut into small metal discs with an ease and lightness of biscuit.

From the milling room great quantities of the smooth metal discs, or "blanks" as they

are called, are carried into the adjusting room, where they are carefully weighed on the most delicate of scales. Each coin has a standard weight from which these blanks are allowed to vary by a very small fraction. Should any of them exceed this allowance or "tolerance" they are given a quick rasp with a file, which generally brings them down to the required weight. Then if they fall below it they are cast aside to be again melted in the crucible.

Great truck loads of these planchettes are now conveyed to the coining-room. Here, after a careful cleaning with alcohol to insure facility in handling, they are fed to ponderous stamping machines, which not only make the impressions on the obverse and reverse of the coin, but also where it is required do the milling on the edge. Although running with but the slightest noise, these machines are capable, as in the case of stamping the double eagle, of exerting the enormous pressure of one hundred and seventy-five tons, at the same time turning out perfect coins at the rate of eighty a minute.

But to many people the most interesting feature of the Philadelphia mint is the cabinet room, which doubtless contains the most complete collection of coins in America. (Of its many curious and unique specimens perhaps one extreme is the large bar of bronze which was once the standard "coin" in use among the Scandinavians. The other extreme to be found near at hand is the "Lepton," an ancient coin, hardly so large as a pea, which is commonly believed to be the time-honored "Widow's mite.")

In looking over the many rare and ancient coins of the cabinet room we are impressed with the fact of how closely the monetary system is linked with the history of a country. In ancient times one of the most common ways of commemorating an event or honoring a ruler was to strike off a coin picturing the theme which it was proposed to honor. And it is by means of these old coins which, after hundreds of years have been unearthed, that we are able to corroborate some of the most important dates and historical events which would otherwise have been handed down as legends.

And when we recall, too, the slow, crude processes by which all this ancient money was made, we cannot but wonder at the thoughts of one of those old-time coin-makers could he have visited the Philadelphia mint with us and seen there the twenty-five ponderous machines which each day turn out fifty thousand of the "little wheels" upon which our commerce runs.

—*Allen Biddie, in Youth.*

Notes from Others.

The colporteurs of the Bible Society are permitted to sell in Greece the New Testament in the original Greek alone.

George Albert Coe in the *Morning Star* says: "Denominationalism, from being a doctrinal squabble, has become loving emulation in good works."

Oxford University Press issues on an average forty Bibles every minute, and this number can be readily doubled. Every year six hundred tons of paper are used for Oxford Bibles alone.

St. Clair-Tisdall, who has lately superintended

for the British Bible Society the printing of the new edition of the Persian Bible, is now translating the ancient cuneiform tablets discovered by Professor Hilprecht at Nippur.

Bishop Brent says: "I am not particularly concerned in trying to impress the Filipino people with the unity of Protestantism only, but I am anxious to stand for the deep, imperishable unity of the whole Christian Church, that some day will break forth into a visible and permanent form."

Charles Booth after the most exhaustive researches into the methods and results of religious, social and philanthropic efforts in London writes of the failure of the fight with the terrible evils existing there, of the demoralized poor who are "gospel-hardened and sick of religion" and declares that the unquestionable fact is that "London is a heathen city."

"I maintain," says Conried, of American theatre managers, "that the theatre can do as much good as the church." Even should this be admitted to be true, would it not be equally true that the theatre can do as much harm as a Mephistopheles? And which of these two conceivable results does the English-speaking theatre come nearest to accomplishing at the present time?—*Providence Bulletin*.

By the aid of a photograph the faculty and students of Notre Dame (Ind.) University on Fifth Month 1st heard the voice of Pope Leo XIII in solemn benediction and the responses sung by the cardinals and the members of the papal court which they occurred at his jubilee celebration Third Mo. 3rd in Rome. The cylinder was presented to Dr. Zahn by Bettini, the scientist, the day the doctor left for Paris. The one condition on which he permitted the cylinders to be made was that they should not be used for commercial purposes. This recital was the first given in America.

J. Elbert Cutler, a post-graduate student at Yale, has just completed an exhaustive investigation into lynchings in the United States for the last twenty-one years. He finds that the total for this period is 3233, of whom 1872 were negroes and 1257 were whites. There were sixty-one women lynched in that period, twenty-three of them white women, of whom nine were lynched for murder. In the South 1091 negroes and 593 whites were lynched. Statistics cannot be made to show more than thirty-five per cent. of negroes lynched for crimes against women.

Nowhere is the spirit of militarism found in a more offensive form than in Prussia. It is one great reason for the unpopularity of Prussia and Prussian methods among Bavarians, Saxons and other Germans. That spirit is not of recent origin. Neither the emperor nor any other living Prussian can be held responsible for its existence. It is an inevitable result of the history of Prussia. It has been a military state, depending for its life on the efficiency of its soldiers. The traits which have been developed since the days of Frederick the Great cannot be eradicated in a generation.

Prussian statesmen do not seem to consider the dangers of militarism and of making officers little gods. The emperor's intelligence ought to reject the doctrine which exalts the soldier so greatly above the civilian, and which establishes for the officer a murderous "code of honor," but he, too, is tainted by the Prussian vice—for vice it is. So far it has not taken deep root in the other German states, but it has spread like a cancer since the creation of the empire. If militarism is not checked gently it will be checked violently by a popular revolt.—*N. Y. Sun*.

SUMMARY OF EVENTS.

UNITED STATES—President Roosevelt, since leaving the Yellowstone Park, has visited several cities in the West, including St. Louis, where he was present at the gathering intended to commemorate the Louisiana purchase from France one hundred years ago. In an address before the National and International Good Roads Convention he commented on the influence which good roads may have in keeping young men and women from giving up farm life and removing to cities, and spoke of the benefits to the country districts of the trolley line, the telephone and the rural free delivery, and closed by asserting that good roads would prove to be of benefit to all.

A despatch from St. Paul, Minn., says: W. H. Murray, representing the California Promotion Committee of the commercial organizations of San Francisco and California, arrived here to speak of laborers to assist in harvesting the fruit crop. He will go as far as New England on this mission. He says that the labor situation in the fruit districts is a very serious one. The cause of the labor shortage, he states, is the Chinese Exclusion act.

The announcement of the discovery of the cause of smallpox has been made by Dr. William T. Connelman, Professor of Pathology in the Harvard Medical School. It has been determined that smallpox is caused by a micro-organism representative of the lowest form of animal life. This fact serves to show a relation between smallpox and such diseases as malaria.

A despatch from Philadelphia & Reading Railway Co., has lately said: "My policy, in the face of the present unrest, is to get several millions of tons of coal of all sizes stored, so that should any calamity threaten again we shall be prepared for it, and the public will not suffer. I hold it poor policy for the coal companies to put all their coal on the market at a loss to avoid the expense of storage. The Reading Company has about 400,000 tons of coal in various places along its line."

The thermometer in Philadelphia on the 30th ult. registered 90°. On the 29th snow fell in Michigan and Wisconsin. It is reported from Kansas City that snow and frost did great damage to corn, wheat and fruit crops in Texas, Missouri, Kansas and Nebraska. The loss was estimated at several millions of dollars.

Information came from southwestern Georgia that recent frosts there have injured the crops greatly. In New Jersey similar results have occurred. One observer states that the cold has destroyed millions of insect eggs. The insects by reason of the extreme heat developed very rapidly, and had laid their eggs on growing plants.

Forest fires have done great damage in various parts of Central Pennsylvania, southern New Jersey and in New York State. A recent fire from Williamsport, Pa., to the 1st inst., says: The fire is the worst that has ever visited the counties of Potter, Clinton, Clearfield, Jefferson, Elk and Lycoming. The blaze started two days ago, and the fierce wind that came from the west yesterday swept down through the counties mentioned and fanned the flames into a hurricane of fire forty feet in height, which sped along at race horse speed. Hundreds of men have been fighting the fire since yesterday, but have not been able to retard its progress.

The actual amount of money of all kinds in the United States on Fourth Month 30 is stated to have been \$2,679,340,000, and the per capita circulation was \$29.58.

The United States Supreme Court decided against a negro, who brought suit to test his right to register as a voter under the new Constitution of Alabama. The case did not go into the merits of the case on the strict validity of the Alabama Constitution, but denied the relief sought by the negro on the ground that the case was political.

A report made by General Miles to the War Department, upon his observations in a visit he made to the Philippines, has been made public. A despatch from Washington, says: It shows a short state of affairs to have existed in the islands, and, it is believed, may reopen some of the cases involving cruelty and other improper conduct of American soldiers. He denies that the people have been pacified, and says that the number of troops needed in the islands is still problematical.

Four million six hundred and sixty-eight thousand one hundred and eighty-eight eggs, of the 1806 variety, were received in Philadelphia in one day lately. This was by far the largest number of eggs ever received here in one day.

There were 505 deaths in this city last week, reported to the Board of Health. This is 21 less than the previous week and 46 more than the corresponding week of 1902. Of the foregoing 269 were males and 236 females; 62 died of consumption of the lungs; 70 of influenza; 10 of the lungs and surrounding membranes; 11 of diphtheria; 13 of cancers; 20 of apoplexy; 25 of typhoid fever; 4 of scarlet fever, and 4 of small pox.

FOREIGN.—The reported designs of Russia to retain possession of Manchuria have been denied by its Repre-

sentative in this country; and a despatch from V. ton of the last instant says: Secretary Hay has gracefully acknowledged Russia's statement of purpose relative to Manchuria, involving her request of assistance in that quarter. The Secretary addressed to Count Cassini, expresses regret that it should have been a temporary misconception or to Russia's position in the matter, and seizes the opportunity to return the thanks of this Government for frank and satisfactory declaration of Russian policy, and reported that China has yielded to the demands of the Powers, and has agreed to pay the indemnity in gold.

A monastery in Marseilles, France, occupied by Capuchin friars has been taken by the police in the siege of several days' duration, and their sympathies the building were arrested. These monks were among the religious congregations expelled under the law of 1880, and restricted to various steps in the civil authorities to dispossess them of their property and drive them from the country. The French men's campaign against the religious orders is the contention that they are disloyal to the Republic, that their teaching is revolutionary and reaction tendency.

King Edward of England arrived in Rome on the 28th ult., and was cordially received by Victor Emanuel, a large concourse of people. On the twenty-first visited the Pope, and remained with him alone for twenty minutes. The subjects discussed are said to have been on the part of the British sovereign, the taken by the Pope on the principal social question of day, and, on the part of Pope Leo, the situation of the Church in the British Empire.

A despatch from London of the 28th says: The Association at its annual meeting in St. James' night Edward, with only three dissenting voices, to King Edward at Rome a protest against his visit to the Pope, similar in expression to that sent yesterday to the Protestant Alliance. This protest expressed his "intense regret that our Protestant King should visit the Pope, who is described in the homiletic established church as anti-christ."

King Edward arrived in Paris on the 1st inst. and was warmly welcomed.

The town Kischeneff, the capital of Bessarabia, western Russia has lately been the scene of a massacre upon the Jews residing there. A despatch from London of the 28th ult. says: Over 1000 Jewish stores in Kischeneff were wrecked. Not a house of the Jewish quarter was spared; there was much looting on the fashionable thoroughfares, and only the protection saved the banks and commercial houses.

Ten thousand Jews have fled from Kischeneff. The town of Frank, N. W. T., has been nearly destroyed by a landslide of the earth. The mountains, on the town. An immense quantity of rock and debris tumbled over the vicinity, causing death and damage throughout a wide area. The whole side of Turtle Mountain was observed to have fallen away, and the distance of two miles was entirely choked up by debris piled up to an average height of sixty feet and more. The falling of the rocks from Turtle Mountain an immense fissure on the east side of the northern side of Turtle Mountain. About fifty men are reported to have been killed.

Hurricanes, followed by a severe earthquake, alarmed inhabitants of Arica, Chile.

Emperor William, of Germany, has lately visited Pope in Rome, and had a private interview with him for thirty minutes.

The Santa Maria volcano in Guatemala has been in active operation.

Declarations of the Faith of Friends.

The first written declaration of faith, representing some of the leading doctrines of Friends, is given in Bowden's History as the Declaration, issued by Christopher Holder, John Wood and Richard Doudney, soon after the establishment of the two former in Sandwich, Massachusetts. It is dated: "From the House of Creation, the 1st of the Eighth Month, 1651 in Boston."

"We do believe in the only true and living God, the Father of our Lord Jesus Christ, who hath made the heavens and the earth, the sea and all things in them contained, and doth uphold all things that He hath created by the word of His power. Who at sundry times and in sundry manners, spake in time past to our fathers by the prophets, but in these last days hath spoken unto us by His Son, whom He hath made heir of all things, by whom He made the world. The which Son is that Jesus Christ, who was born of the Virgin; who suffered for our offences, and is risen again for our justification, and is ascended into the glory of the heavens, and sitteth at the right hand of the Father. Even in Him do we believe who is the only begotten Son of the Father, the full of grace and truth. And in Him we have trust alone for salvation; by whose blood we are washed from sin; through whom we have access to the Father with boldness, and are justified by faith in believing in His name. Who hath sent forth the Holy Ghost, who is the Spirit of Truth, that proceedeth from the Father and the Son, by which we are made adopted sons and heirs of the kingdom of heaven. From the which Spirit the principles of truth were given forth, as, saith the Apostle Peter, 'Holy men of God spake unto you, as they were moved by the Holy Ghost.' The Scriptures were written for our admonition, on the ends of the world are come; and are profitable for the man of God, to reprove, to exhort, and to admonish, as the Spirit of God bringeth them unto Him, and openeth in Him, and giveth Him the understanding of them."

"That before all men we do declare that we believe in God, the Father, Son and Holy Spirit; according as they are declared of

in the Scriptures; and the Scriptures we own to be a true declaration of the Father, Son and Spirit; in which is declared what was in the beginning, what was present, and was to come.

[The only doctrinal matter which follows is contained in an exhortation to turn to the Spirit], that sheweth you the secret of your hearts, and the deeds that are not good. Therefore while you have light, believe in the light, that you may be the children of the light; for, as you love it and obey it, it will lead you to repentance, bring you to know Him in whom is remission of sins, in whom God is well pleased; who will give you an entrance into the kingdom of God, an inheritance amongst them that are sanctified."

In the following year, 1658, or ten years after George Fox commenced his ministry, the following confession of faith was published by Richard Farnsworth. In 1668 and 1671 this was reprinted, with some other treatises, by John Crooke, William Dewsbury, Humphrey Smith, Isaac Penington and Alexander Parker, in a work entitled "The principles of Truth, being a Declaration of our Faith who are called Quakers."

"We profess and confess faith in God the Father, and in Jesus Christ his eternal Son, the true God, and the Holy Spirit. And we do acknowledge the Holy Scriptures of the Old and New Testament to be the words of God; this we testify; and we are not ashamed to confess and profess faith in God the Father, and in Jesus Christ his eternal Son, and in the Holy Spirit, as the Scripture saith; but we do believe in them, and acknowledge subjective and dutiful obedience unto them, viz: the Father, Son, and Holy Spirit. And moreover, we do hereby declare and testify to all true Christians, God's elect, what God we do own, and profess faith in, even in that God that appeared unto Abraham, the father of the faithful, when Abraham was ninety-nine years old, and said unto him, I am the Almighty God, walk before me and be thou perfect (Gen. xvii.). The everlasting God, the God of heaven and earth," &c. [After giving a number of Scripture passages illustrative of the majesty and glorious attributes of the great Jehovah, he proceeds]: "And this is God the Father, which we own and profess faith in, and in Christ Jesus his eternal Son, who said, 'I and my Father are one' (John x: 30), upon which saying the Jews took up stones to stone him; yet notwithstanding, the same Christ that the Jews hated, we love, believe in, and own; who was delivered up to be crucified for our offences, and was raised up again for our justification (Rom. iv: 25), who is the true God; and Him we own and profess faith in, and in the Holy Spirit, God, together equal with the Father and the Son, one God over all, God blessed forever."

George Fox's celebrated reply to priest

Stephens is considered to have occurred in the year 1644. In 1659 he replies to another in his "Great Mystery"—"Christ gave himself, his body, for the life of the whole world; He was the offering for the sins of the whole world, and paid the debt and made satisfaction; and doth enlighten every man that comes into the world, that all, through Him, might believe; and he that doth not believe in the offering, is condemned already."

In the same year, 1659, we find Edward Burroughs answering: "As for the word Trinity, it is invented, and he hath learned it out of a mass-book, or common prayer book; but we own the doctrine of the gospel of Christ, that Christ is God, and the Spirit is God; and there are three that bear record, the Father, Son and Spirit, and these are one." So, more fully, Francis Howgill in the same year.

To pass now from earliest individual declarations of the faith of Friends, we take up the first that we can find as issued by the Society in its official capacity.

In the year 1668 the Society of Friends issued a tract, entitled, "An Epistle from the people in scorn called Quakers, for all people upon earth to read over, that they may see what the people called Quakers hold, concerning God, Christ, his death, his resurrection, his blood, his offering, redemption, salvation, justification, faith and hope. This Epistle was drawn up by George Fox and Ellis Hookes, who was clerk of the first Yearly Meeting of Friends (London), held in 1675 (the first held in America was at Newport, in 1672.) The following is an extract from the Epistle:

"Christ Jesus the Immanuel, God with us; whom all the angels must worship. Christ offered himself through the eternal Spirit, without spot to God, and by his blood purges our consciences from dead works to serve the living God. And so we know that Christ, by one offering, hath forever perfected them that are sanctified. And so as people walk in the light, they have fellowship one with another, and the blood of Christ cleanseth from all sin. And Christ, who his own self bare our sins in his body on the tree, that we being delivered from sin, should live unto righteousness, by whose stripes you are healed. And we, being justified by the blood of Christ, shall be saved from wrath thro' Him. For if when we were enemies we were reconciled to God by the death of his Son, much more being reconciled, we shall be saved by his life (Rom. v: 8)."

Postscript.—And this is to clear us from all those pamphlets which are scattered up and down among people, that we should deny the Godhead, his eternal power, or his offering, or his blood, or that we should be bought with a price. For it pleased the Father that in Him the fulness of the Godhead should dwell bodily, and the Father, and the Son, and the Spirit, we do own. And so let all stop their

mouths that say that the Quakers' principles are hid till now, for we have manifested our principles both in our printed books, and would that all people know our inside as they know our outside; and we do know, and also others know it, that we have an esteem of Christ's sufferings and death, and blood, and the Scriptures of the Prophets and Apostles, more than any other people.

GEORGE FOX,
ELLIS HOOPES.

The following, as given in the *London Friend*, was presented to Parliament in 1689, and may be found in a pamphlet entitled "the Christianity of the Quakers asserted against the unjust charge of their being no Christians. It is in the form of questions and answers.

"Q.—Do you believe the Divinity and humanity of Jesus Christ, the eternal Son of God, or that Jesus Christ is truly God and man?

"A.—Yes, we verily believe that Jesus Christ is truly God and man, according as Holy Scripture testifies of Him; God over all, blessed for ever; the true God and eternal life; the one Mediator between God and men, even the man Christ Jesus.

"Q.—Do you believe and expect salvation and justification by the righteousness and merits of Jesus Christ, or by your own righteousness and works?

"A.—By Jesus Christ, his righteousness, merits, and works, and not by our own; God is not indebted to us for our deservings, but we to Him for his free grace in Christ Jesus, whereby we are saved through faith in Him, not of ourselves, and by his grace enabled truly and acceptably to serve and follow Him as He requires. He is our all in all, who worketh all in us that is well-pleasing to God.

"Q.—Do you believe in remission of sins and redemption, through the sufferings, death and blood of Christ?

"A.—Yes; through faith in Him, as He suffered and died for all men, gave Himself a ransom for all, and his blood being shed for the remission of sins, so all they who sincerely believe and obey Him receive the benefits and blessed effects of his suffering and dying for them; they, by faith in his name, receive and partake of that eternal redemption which He hath obtained for us, who gave himself for us that He might redeem us from all iniquity; He died for our sins, and rose again for our justification; and if we walk in the light as He is in the light, we have fellowship one with another, and the blood of Jesus Christ, his Son, cleanse us from all sin."

In 1693, Friends being greatly misrepresented, another Declaration was published, signed by George Whitehead, Ambrose Rigge, James Parke, William Fallowfield, Charles Marshall, John Bowater, John Vaughton, and William Bingley. The following appeared in it:

"We sincerely profess faith in God by his only begotten Son Jesus Christ, as being our light and life, our only way to the Father, and also our only Mediator and Advocate with the Father;

That God creates all things; He made the worlds, by his Son Jesus Christ, He being that powerful and living Word of God, by whom all things were made; and that the Father, the Word, and Holy Spirit are one, in Divine being inseparable, one true, living, and eternal God, blessed forever."—*Scwell's History*, (Vol. 2, p. 449).

The above extracts, compiled mostly from Evans's Exposition, have been selected with reference to their earliness rather than to the doctrine delivered. They are intentionally defensive rather than comprehensive. One has to put several books or treatises together to find all points of the doctrine of Friends fully stated.

UNLADYLIKE EXPLETIVES.—We were not pleased, on seeing in our last number a note concerning Hannah More, to find we had not, as was intended, erased the two last of the words "scared to death,"—words used by some one to express her natural fright at a fly or a mouse, in contrast with her composure when in view of immediate death.

As regards the frequent light use of that extravagant expression, we often have occasion to ask young people to think twice about its meaning, and to ask them if those words have their foundation in truth. "Awful" and "awfully" are words much abused by young women, also "never in all my life,"—and so on, one could catalogue a good (or rather bad) many of such expressions heard in the course of a week, which cultivate a regardlessness of truth in the mind of the speaker. But we observe that those who scruple to violate truth by plural pronouns for singular, or by titles of superiority where facts are otherwise, are not guilty of those other gushing falsities with which much of the conventional speech of the day is vehemently weakened and degraded.

The Church and the World.

It is not well with the church when it is on good terms with the public. It was sent to be at war with the world, to be a stranger and a sojourner, a wilderness prophet, and a missionary pioneer. It is a rebuke to the world no less than a refuge. Its ache is something more than the welt-schmerz (world-pain); it is the Saviour's woe. See to it that there be no sleeping. It is a vigilant, suffering church, a crucified church; not chiefly a militant church, but a sacrificial church, a church that has not priests, but is as the world's Priest—that is, the church that [bears its cross and co-operates with our] Great High Priest. There is no foundation of public righteousness for any nation but the revelation of the public righteousness of God in the death of Christ. The kind of stalwart that we need is made only by an inward humiliation, which we lack. And we lack it partly because Christianity is being construed so largely in the interest of the young; and humiliation, which is moral strength, is a youthful dread.

It is true where the Spirit is there is liberty; but there always comes [an eye to the world and a lukewarmness] when we care more for latitude than for obedience, for freedom than for faith. We have abundance of religious energy out of all proportion to our religious influence, and we have a depressing sense of waste and of losing with it all. We are frittered by our very sympathies more than we are gathered by a ruling faith, or recharged with a royal power. The whole history of "the church" is shaped by its relation with world-power. And the world-power is no longer feudal or dynastic. It is finance. We are in the hour and power of the plutocracy.—*Forsythe*.

The Confessors of Peace from the Second Century to the Era of Mahomet.

IX.

The Roman Empire, on the death of stantine, "the Great," in 337, was divided among the three sons of the latter, Constantine, Constans and Constantius. Britain, Gaul, and Spain went to the first of these; the east had Italy, Illyricum and part of Africa, while to Constantius fell the Eastern division, with Constantinople as its capital, and the seat of its government for succeeding centuries, until the conquering Moslems, crossing the Bosphorus, should reach it there.

The family of the great Constantine, it may be frankly admitted, proved not to be exemplary Christians. They hardly commended the way of peace to the outside barbarians, the elder of the brothers having been defeated by the armies of Constans, was killed, and only in the twenty-fifth year of his age, Constans himself was murdered in his bed, after a reign of fourteen years, while Constantius manifesting much cruelty and arrogance in the course of his march against Julia's cousin, who had been proclaimed Emperor of his soldiers. Constantius was then (A.D. 350) in Gaul, of which province he had been appointed the governor, and which he had successfully defended against the onslaught of the Germanic tribes.

Julian had early come under the influence of the sophists, and, although he is designated as "the Apostate," it does not appear that he at any time embraced Christianity. On assuming the purple, he made a profession of the old religion of Rome, and was crowned as high priest to the gods, ordered the pagan temples rebuilt, and, notwithstanding, he issued an edict of religious toleration and enmity against the Christians was maintained, and a severe persecution and reaction (the East) against them followed. Julian had received a liberal education, partly at Alexandria, where Basil of Cappadocia, and Gregory Nazianzen, both eminent Christians, were his associates; he was author as well as warrior, but his talents were mischievously used in crying the religion of the Lord Jesus Christ. His short reign of less than two years was brought to an end during a campaign against Sapor, the king of Persia, when he received a mortal wound in his side from a javelin that had not yet reached the age of thirty years.

Julian, in his non-acceptance of the Christian religion, evidently stumbled at the guiding example of his relatives and immediate predecessors in power, who made professions of that faith. Had he lived up to his declarations he would have earned a character for consistency. "Ye are all," he wrote, "brothers one of another. God is the common father of us all. * * * I maintain that it is a sacred duty to impart rest and food even to our enemies, for the love of humanity, not the disposition of individuals regulates our giving." Rendall, in his history, says of him: "Not only did he practice strict continence and abstain from the festivities of the theatre and exciting spectacles of the amphitheatre with determination, but in his private life he

a strict asceticism. It has been thought that his reign acted beneficially upon the growth of Christianity, which, or the appearance of which, had spread too fast, running in license, losing its purity in its popularization.

Berthson, in his "History of the Christian Church," says of Julian: "When Christians appealed to him against the illegal violence of the mob, or of mobs, he reminded them that the religion enjoined on them the duty of abstinence from wrong. He deprived them of military and military employments, and excluded them from the courts of law; and he alleged as his reason that the gospel forbids worldly ambition, bloodshed and law-suits." Thus the rapidly degenerating Christianity of that period was rebuked by one stigmatized as an apostate, and indeed, by his life, seemed to be less than Constantine and his contentious courtiers.

Likewise Libanius, the celebrated sophist and rhetorician, the preceptor of Basil and Theodoret, and friend of Julian, and of whom it has been remarked that he was "the great-est detractor that Constantinople ever produced," in the course of his plea for the pagan temple refers all the calamities of that time to the change of religion, while he appeals to the Testament precepts in proof that the persecuting zeal and the forcible measures of the Christians, were contrary to the spirit which the own faith inculated.

In the introduction to the Fifth Book of his "Ecclesiastical History," Eusebius, bishop of Caesarea, (4th century) makes the following language of peace: "Others, indeed, that contemporary historical narratives, would record nothing but victories in battle, the trophies of arms, the warlike achievements of generals, the bravery of soldiers, sullied with blood and innumerable murders, for the sake of children and property. But our narrative notices that conversation and conduct which is acceptable to God; the wars and conflicts of a most pacific character, whose ultimate agency is to establish the peace of the soul. We, also, who have manfully contended for the truth, rather than for their country, and have struggled for piety, rather than for the dearest friends. Such as these our narrative would engrave on imperishable monuments. The firmness of the champions for the true religion, their fortitude in the endurance of innumerable trials, their trophies freed from demoniacal agency, and their victory over their invisible antagonists, and the lessons that have been placed upon all these, should proclaim and perpetuate by an everlasting remembrance."

Now, Eusebius, as a sympathizer with and founder for the Arian creed, was a close friend of Constantine, who is hardly to be held upon as a consistent exponent of peace. At the synod of Tyre (A. D. 335), convened for the purpose of deposing Athanasius from the bishopric of Alexandria, Eusebius appeared as the presiding officer—yet it is the "evangelist" Athanasius that we would now look upon as one who "manfully contended for the truth," as a "champion for the true religion." And, also, when we find Eusebius (in his 10th book), referring to "the peculiar heresy of those who in the pomp of their imagination call themselves Cathari," we are ad-

monished that in any historical search for the simple truth, great names and elaborate expositions, even though, as in the present case, presented by "the Father of church history" are to carry with them nothing more than their just meed of weight. The truth will be found often to discover itself under the undeserved epithets of heterodoxy and heresy. Prefacing some account of several of the minor sects which arose in the period now under review, Neander makes the following observation of value:

"Such phenomena of the Christian life are often very significant symptoms of disease in the life of the church; they betoken deeper wants of the Christian consciousness, which are seeking after their satisfaction. Opposite errors, or tendencies bordering on error, by which they are called forth, lend them a partial justification. As reactions of the Christian consciousness, although they may be in many ways disturbed reactions, they point to a purer reaction reserved for the future, which shall some time or other push its way victoriously through.

"We have already remarked, that worldly-minded bishops and ecclesiastics, instead of endeavoring to cherish and promote serious, vital Christianity, did everything in their power to suppress it, because it presented such a strong and to them vexatious contrast to their own mode of life. Serious and piously disposed laymen were persecuted by such clergymen, as dangerous censors of their conduct. Often they were excommunicated from the church, or they separated of their own accord from such spiritual guides, because they could not believe it possible, that men so polluted with every vice should serve as instruments for the work of the Holy Spirit. Others of like persuasion joined with them; and they became the founders of minor sects, in which, after the separation had once taken place, there arose, out of the opposition that had reference at first only to matters of practice, certain doctrinal differences also, which sometimes had no other ground than in the more sensuous mode of apprehension among uneducated laymen."

The same spiritually gifted writer says, in another place, where he cautions against estimating the whole Christian life of the period according to the standard of the mass of nominal Christians, to the exclusion of the evidences of an unobtrusive, "progressive work of the Holy Spirit": "it was natural, however, that the bad element, which had outwardly assumed the Christian garb, should push itself more prominently to notice in public life. Hence it was more sure to attract the common gaze, while the genuine Christian temper loved retirement, and created less sensation, except in those cases, which were not unfrequent in this period, where opposition elicited the hidden Christian life, and made it appear brighter in the conflict. 'Watch the oil-press,' said Augustine to those who saw nothing but the evil swimming on the surface; 'Watch it a little more narrowly, and do not look at the scum alone that floats on the top. Only seek, and you will find something.'

(To be continued.)

THEY are never alone that are accompanied with noble thoughts.—*Sidney.*

FOR "THE FRIEND,"

The Testimonies of Friends.

It has been customary to treat of the principles and testimonies of the Society of Friends in connection, and we may further say it has been admitted by those of deep religious experience that the adoption of the one necessarily leads to the practice of the other. Among what have been marks of distinction there may be some that have been merely habits. Where these have been accidental it has been a weakness to claim for them any Divine authority. But even when not fundamental they have their value, and when any under our name from temptation of conformity with the world have yielded in minor points, they have commonly lost further ground by yielding the badges that are essential to a Christian character.

The departure in dress and manners has become so extensive that it has raised the question in many minds how far this testimony to plainness is obligatory. We have based it upon conformity to the will of God, and it was a maxim with J. Dymond that "the will of God being known, human duty is ascertained." It is an excuse on the part of some that they do not perceive it to be the Divine will that they should bear these testimonies. This may be true for the moment. But if one sets about leading a religious life it is not expected that conformity in dress and manners with the standard of Friends will be the first outward evidence. Our Saviour testified that the change in his followers should commence within, and all experience goes to show that in the way of holiness the first step is the work of regeneration. When this takes place; when the heart is cleansed the outside afterward becomes clean also.

We may see this all-important work, as it is gradual, in all stages of fulfillment. At first the temper, the countenance, the manner of expression are necessarily affected. The speech of dedicated ones "betrays that they have been with Jesus." In the case of early Friends they found it to be a call of duty in various ways to confess Christ before men.

To preach the Gospel publicly may be the work of but few, but to bear some testimony in everyday life is a service for which all are fitted, and we may say is required from all. It should be borne in mind that each of us is accountable for the influence he exerts in passing through the world. Any one who has been divinely visited and led in some degree to "bear the yoke" is likely to be influenced in shaping his heavenward course by the example of those around him. Some of these perhaps have "stumbled at the cross," and become callous in regard to their unfaithfulness. Others are encouraged in a compromise with the world, by association with such as have fallen short in duty, and the more creditable these evil examples may be, the greater is their influence. Thus the evil goes on. And when these nominal members, imbued with the spirit of the world are placed in positions of trust in the Church, it greatly magnifies their unconscious power, for spiritual weakness. It would ill become any who have attained some stature in Christian growth to cast aspersions around them upon others they may think less favored. They cannot, however, but fervently desire the overthrow

of the doctrine that the Truth no longer leads in these paths of self-denial. That the followers of Christ must bear his yoke is an ever-during testimony.

Christ is spoken of as our example in a sinless life. He could weep with the sorrows of mankind, but there is no intimation that He ever indulged in what the world calls pleasure. His service does not entail upon us a life of gloom and dejection. He does forbid participating in delights that are at war with his perfections, but to those who wholly follow Him He gives "the peace of God which passeth all understanding," a fountain of enjoyment the world knows not. I am inclined to think that the deficiency in attainment of the present day is somewhat referable to taking ideas obtained from studying the Scripture as the beginning of a religious life. If there is no heart work preceding it or co-operating with it, a religion obtained in this way will be wanting in vitality. Its growth will be unhealthy, and when beset by the allurements of the world on the one hand, or its frowns on the other, will yield to its force. Some of our members who highly value religious consistency, but do not appear as Friends, may flatter themselves that their line of usefulness lies in conformity with customary usage. But I apprehend that this sphere of action is not just what God designed for them. Perhaps if they would carefully trace back their past lives they would find some places where duties were pointed out which they failed to comply with. A few such mistakes would account for all the defections that appear. I believe there should be no compromising the difference between those who observe our testimonies and those who but partially do so, and there is no unity to be arrived at but by going back to Bethel, and noting from thence the waymarks of our pilgrimage.

LLOYD BALDERSTON.

COLORA, Fourth Month 4th, 1903.

READ BEST BY STUMBLING.—A few years ago a blind man had taken his station on the bridge over a canal in the City Road, London, and was reading from an embossed Bible. A gentleman on his way home from the city was led by curiosity to the outskirts of the crowd. Just then the poor man, who was reading in the fourth chapter of Acts, lost his place, and while trying to find it with his finger kept repeating the last clause he had read, "None other name—none other name—none other name." Some of the people smiled at the blind man's embarrassment, but the gentleman went away with a new thought in his mind. The words he had heard from the blind man were like music to his soul. "None other name given under heaven or among men whereby we must be saved," was the message which awoke him to a new life.

THE TWO MARYS AND JOANNA.

A threefold bond of sadness at the tomb,
With weary feet allied to wailing heart,
As yet 'tis dark, the stars are clouded o'er,
The lantern of their love the only light.

The earth has quaked and opened wide the door,
And light supernal takes the place of gloom,
And feet, with heart, and tongue with beauty move
To bear the burden of the great acclaim!

H. T. MILLER.

BEAMSVILLE, Ont.

The Line Upon Which to Extend the Influence of Friends' Schools.

The report of the Educational Committee of our Yearly Meeting last year contained the interesting and significant statement, that about two thirds of the children attending our schools were non-members of our religious society, and that the reason of their being sent to these schools was due more to the parent's recognition of Friends' schools as being exponents of a healthful religious and moral influence, than for any superiority of intellectual training which they might afford.

Strenuous efforts have been made during the past two decades in the direction of the introduction of up-to-date educational methods with the object of retaining the confidence which for generations has been implicitly reposed in our schools, until their efficiency in this particular can scarcely be questioned, when compared with other schools of like grade. They have in common with other denominational schools a more select patronage, and hence, on the whole, a higher morale than the undenominational schools. The usual respect paid by the community at large to the Society of Friends, based upon the high moral plane reached in the lives of its consistent members, has been handed on to its institutions of learning, which, with one notable exception, are now open to all children of average moral character. The effect of this influx of "outsiders" has been in some ways to impart an influence which some of us believe, in the main, to be wholesome, though we cannot but observe an increasing tendency towards "worldliness," which affects not only our schools, but the society as a whole. And here, we would observe, we are adverting to tendencies only, and would not be understood as advocating a policy of greater exclusiveness as a corrective, but rather the encouragement of a fuller realization of our possibilities and power for good, by simply holding fast to some things which are known to be of good report amongst men, and of the value of which we are assured again and again by those not of our own persuasion, when they are urged with sincerity and lived out with consistency.

Coming now to the real question which concerns us—as to how Friends' schools may widen their influence for good, it seems to me there is no field in which we can be found laboring with higher promise of assured success, even in this dawn of the twentieth century, than by reasserting and exemplifying in our lives some truths as old as the dawn of the first, but which in these days are somehow being obscured by the rising tide of commercialism, which, sweeping all before it, is invading our homes and our schools. There is no department of human activity but which will admit of the injection of a fuller interpretation of the Sermon on the Mount. Imagine the effect upon the world of one hundred, or even ten men possessed of the conscience and strength of character of John Woolman! The work upon the heart of the child, which should begin at the family hearthstone, should by all means be continued in the schools, and the indifference of the one must be made up by the watchfulness of the other, if our boys and girls are to go out into the world fully equipped for the duties of life.

The ideal school, if we may be allowed to

judge by the defects in our present educational methods, is still a long way off, and an unmistakable advance has been made during the past few years even, and this is due to a better understanding of the work of the child mind. Results are still, however, as always, dependent upon the personality of the teacher, and the capacity of the pupils to respond to the forces applied for his intellectual awakening. True teaching means creation of a desire on the part of the pupil to grow and become, to repress the base and exalt the higher life within him.

And this thought leads at once to a new plane of reasoning, in the connection between Friends' schools means anything at all while, it means the implanting and fitting within them of those principles for which we as a society stand. The reason for the existence of our schools is one with that for the existence of our society as a distinct religious body. In other words, the extension of the influence of our schools, means the apprehension and inculcation of the principles of Quakerism. And in this presentation of the case, no one need charge us with a desire to proselyte, for such has not been our success within the past one hundred years to make this imminent. But it may mean a culture of heart, (which is, after all, the true nature of character), as to be of far more importance than mere intellectual development. We naturally value that most highly which we most stand in need of. That which is but shadow or repetition of something else already in hand, can never fully satisfy the real, helpful nature of those seeking for the truth. They want something in the way of a school, which has a strength of its own, upon which they can rely, when the weakness of the child comes to the surface, and his needs are projected, it may be, not only on the plane of his home-life, but upon that of the school to which he has been entrusted for the reception of his education.

If, then, we would extend the influence of a school, we must look towards the enlargement of its personality. If a school succeeds in the work of inducing the child to look closely into the working of his own soul, to the extent of discovering his defects and temptations, and of helping him to the correct remedy, that school has discovered the secret to an influence far greater than as if it had passed the child along successfully over various subjects of the curriculum, and then left him, to face the duties of life with an unsharpened intellect, it may be, but with a sharpened religious sense and a shrunken moral reality. Let us educate, but by all means let us inculcate the soul.

We want a knowledge of things practical, 'tis true, that we may be enabled to interpret aright our material advancement, but at the same time we want to be preserved from formalism in our religious and social life, running parallel to the secularizing tendencies of our age.

The decline of a just sense of the importance of religious teaching in our schools, apart from instruction in ethics and morality, is something to be deplored; for the serious absence of such teaching may not only

unrmine the faith of the child, which has
an implanted and nourished, it may be, in a
Christian home, but may be the means
of sowing the seeds of skepticism in his mind,
at least of inclining him to think too well
of a tendency to substitute culture and
manners for the simple faith in the Divine
act, as an abiding power for the soul's
well-being, and which will conduct into the
light of that truth which makes men free
people.

Anhere, in this education of the *inner life*,
the regards theory and practice, Quaker-
ism is a distinct type of Christianity, and
it is a rare advantage ground for a work both
valuable and lasting. To those who are members
of school committees, or teachers, or inter-
ested in any way in the work of our schools,
the subject of the implanting of the funda-
mental principles of our religious belief in
the schools must be one of assured and last-
ing interest, if we are to hold our prestige as
agents of the religious influence referred
to at the beginning of this paper.

Quakerism is one with the Hebrew cultus,
in that it recognizes an over-ruling God, sin,
guilt and holiness, but with this it unites
the Greek thought, which recognizes the
presence of God as the Logos, Light and
Love, in whom are all things, and by whom
all things consist. The one recognizes in
Christ the Lamb of God that taketh away
the sin of the world; the other sees Christ as
the eternal Word, that enlighteneth every
man that cometh into the world." And this
Christ is have as a Divine and princely heri-
tage, handed down through the ages of the
Christian era, now and then obscured by the
vanities of men's souls, or by ecclesiastical
politics, but never lost sight of, until once
it burst forth in meteoric splendor in
the day of George Fox, who brought it, as
we therefore, to fit the practical needs of our
times, to brighten and comfort with its genial
light all those who are really seeking a
religion which may be relied upon for meeting
the exigencies of storm and stress that beset
the life.

Faith that needs no apology, though
the simplest of the grandest ever written; for
it is only to be cherished and upheld in its
simplicity by those who embrace it, and
the world will grow more and more to
the Quaker and his singular, though sin-
cere, and will accord him a respect
worthy of his profession.

Our schools are, as they should be, the
outlets of these our deepest convictions as
to what is best for our own children, in all
the use of knowledge, they should wear the
character of these convictions, and have thrown
into them the very best religious atmosphere
which can afford. We can then say to
our patrons from beyond our own denom-
ination—"Let us have thy child in fellowship
with us for awhile, and we will do him good;
our fellowship is with the Father, and with
our Jesus Christ."

WALTER L. MOORE,

to short to waste
the ship or cark bark, quarrel or reprimand;
it can be dark;
and thine own aim, and
the mark!

An Extract from John Ruskin.

Looking back upon my writings for the last
twenty years, I believe their failure has been
very great, in part owing to my compromise
with the infidelity of the outer world, and my
endeavor to base my pleading upon motives of
ordinary prudence and kindness, instead of the
primary duty of loving God, foundation other
than which no man can lay.

I thought myself speaking to a crowd which
could only be influenced by visible utility,
nor was I in the least aware how many entirely
good and holy persons were living in the fear
and love of God, as vividly and practically,
now, as ever in the early days of Christen-
dom; until chiefly in consequence of the great
illness which for some time after 1878 forbade
my accustomed literary labor, I was brought
into closer personal relations with the friends
in America, Scotland, Ireland and Italy, to
whom if I am spared to write any record of
my life, it will be seen that I owe the best
hopes and highest thoughts which have sup-
ported and guided the force of my matured
mind. These have shown me with lonely in-
itiation in how many secret places the prayer
was made which I had foolishly listened for at
the corners of the streets; and on how many
hills which I had thought left desolate, the
hosts of heaven still moved in chariots of fire.

But surely the time is come when all the
faithful armies should lift up the standard
of their Lord—not by might, nor by power,
but by his Spirit bringing victory; that they
should no longer be hidden nor "overcome of
evil but overcome evil with good." If the
enemy comes in like a flood how much more
may the rivers of Paradise? Are there not
fountains of the great deep that open to bless,
not to destroy?

And the beginning of blessing, if you will
think of it, is in the promise, "Great will be
the peace of thy children."

All the world is but an orphanage, so long
as its children know not God their Father;
and all wisdom and knowledge is only more
bewildered darkness, so long as you have not
taught them the fear of the Lord; not to be
taken out of the world in monastic sorrow, but
to be kept from its evil in shepherd's peace.

Science and Industry.

CANNEL coal is a variety of bituminous
coal which burns with great freedom, the
flame of it affording considerable light. It was
called "candle coal" by the English peo-
ple who first used it, as it often served for a
substitute for candles. The name became
corrupted to "canal" and has so remained.
It is more compact than ordinary bituminous
coal, and it can be wrought into a lathe and
polished. A certain variety of it found in
Yorkshire, England, is manufactured into a
kind of jewelry known as jet.

AN ELECTRIC PLANT IN AFRICA.—It is pro-
posed, says "*Cassier's Magazine*," to utilize
the Victoria Falls of the Zambezi River, dis-
covered by Dr. Livingstone in 1855, for power
to run an immense electric plant similar to
the one at Niagara. The Victoria Falls are
nearly 400 feet high and it is estimated that
the volume of water passing over them would
furnish 35,000,000 horse-power.

The projected "Cape to Cairo" railway will
cross the Zambezi directly in front of the falls,
over a steel arched bridge of five hundred
feet span, four hundred feet above the river.
This bridge will be built on the cantilever
principle to carry a double track with provision
on a lower deck for a wagon road. The
country within reach of this projected electri-
cal centre is rich in minerals and great results
are anticipated.

A GREAT CITY.—A recently published book,
"*London, Historic and Social*," by C. D. Fran-
cis, is authority for the following:—

"This enormous city, whose several streets,
if placed end to end, would form a line some
1400 miles in length, and which is said to
contain more Scotchmen than Edinburgh,
more Irishmen than Dublin, more Jews than
Palestine, and more Catholics than Rome, is
peopled by some 4,655,713 human beings,
living in some 500,000 houses, and consuming
an annual average of 4,500,000 tons of coal,
2,000,000 quarters of wheat, 400,000 oxen,
150,000 sheep, 130,000 calves, 250,000
swine, 8,000,000 domestic and game fowls,
400,000,000 pounds of fish, 1,200,000 lobsters,
these eatables being washed with 180,000,000
quarts of beer, 8,000,000 quarts of spirits
and 31,900,000 quarts of wine, not to men-
tion the 175,000,000 gallons of water supplied
daily by nine different water companies.

THE cause of labor, if rightly understood,
is the cause of humanity. What labor desires
first of all is, not charity, but justice. We
Americans are using up too rapidly the re-
sources of nature, and we are using up too
rapidly human lives. One of the greatest
fallacies of the age is that money is equivalent
to human lives. The spirit of commercialism
is sinking deeper and deeper into us.
Whatever a man sets his heart on must in-
crease or it ceases to satisfy him. What we
need in America is a realization of spiritual
ideas, and the realization that the best things
in life are not procured by money. Wages
are never the full equivalent for human work.
There is a quality in all men which goes far
beyond the question of wages. One of the
great curses of the modern world is the vast
conglomeration of people in huge cities. The
idea of civilization is a country of cities of
from 20,000 to 50,000 inhabitants. If it were
not for these great cities we could do away
with the evils brought upon us by corrupt
politicians.—BISHOP SPALDING, of the Coal
Strike Commission.

DR. LOUIS SAMBON, in this month's *Climate*,
gives a most interesting popular account of
the life history of the malaria parasite. As
an illustration we may quote this description
of the spread of the parasites after the devel-
opment of one of them in a single corpuscle.
"At last, the corpuscle bursts open like a
mature seed pod, the segments (of the parasite)
separate, acquire a globular form and
float freely in the plasma. It is an anxious
moment for the young parasites, because, un-
less they manage very soon to get inside a
fresh corpuscle, they are sure to fall a prey
to the large white cells which guard the red
corpuscles, just like sheep-dogs guard their
flocks. Even on the glass-side, under the

microscope, the white corpuscle will stretch out its shapeless body, creep up to the parasite you are examining, and engulf it under your very eyes." It has been calculated, we are told, that at least 250,000,000 parasites must be present in the blood in order to produce a paroxysm of fever.

WORK OF THE FISH COMMISSION.—The current number of "The North American Review" contains an interesting article on the United States Fish Commission, from which the following items have been taken.

The Commission operates thirty-five hatcheries, four railroad cars, and an extensive equipment for carrying on its valuable work. Atlantic and "land-locked" salmon are cultivated at Green Lake and Craig Brook, Maine; cod, lobsters and other marine species are propagated at Gloucester and Wood's Holl, Mass.; the steamer "Fish Hawk" operates in the Delaware River, hatching shad, while stations in Maryland, North Carolina and at Washington, D. C., are mainly devoted to this toothsome fish. Five hatcheries on the Great Lakes are devoted to white-fish, pike, perch, lake-trout, etc., while the work at St. Johnsbury, Vermont; Nashua, New Hampshire; Wytheville, Virginia; Erwin, Tennessee; Cold Spring, Georgia; Northville, Michigan; Quincy, Illinois; Manchester, Iowa; Neosho, Missouri; San Marcos, Texas; Leadville, Colorado; Spear Fish, South Dakota, and Bozeman, Montana, is principally with brook trout, black spotted trout, grayling, rainbow trout, black bass, crappie and bream. There are also six stations on the Pacific coast cultivating the various species of Pacific salmon.

During the year ending Sixth Month 30th, 1902, the output from the various stations was 1,488,673,000; including 594,490,000 white fish; 237,099,000 pike-perch; 212,001,000 codfish; 168,133,000 flat-fish; 104,986,000 shad; 81,020,000 lobsters; 53,599,000 salmon; 27,257,000 lake trout; 6,142,000 brook trout; 1,785 grayling; 1,183,000 rainbow trout.

Of yearling and adult fish there were distributed 6,780,000, principally 2,006,000 shad; 1,488,000 black spotted trout; 735,000 crappie; 606,000 sun-fish, 492,000 rainbow trout; 487,000 brook trout; 281,000 salmon; 262,000 black bass; 77,000 steel-head-trout; 37,000 rock bass.

The increased catch of shad since 1888, when results of cultivation began to appear, approximate 8,000,000 annually, representing a yearly revenue to fishermen of \$2,000,000, more than fifty-fold the cost of propagation.

A HEROINE'S LONG DELAYED RECOGNITION.

—Upon the publication of Eva Emery Dye's graphic narrative of the expedition of Lewis and Clark to the Pacific Coast the *Inter-Ocean* editorially directed attention to the services of Sacajawea, the heroine of that famous exploration, and suggested that she should be enrolled among the nation's notable women. It was further suggested that the women of the country should erect a statue to the Indian woman at the Louisiana Purchase Exposition at St. Louis, the starting point of the expedition of 1804.

It now appears that the suggestion of the

Inter-Ocean has been taken up in far-away Oregon. Portland is to hold in 1905 a Lewis and Clark centennial in celebration of the first crossing of the continent. The women of Oregon, Washington, Idaho, Montana and the Dakotas have taken up the project of erecting a monument to Sacajawea suitable to the occasion. It is proposed to erect a statue to cost about \$6000. It has been thought fitting that the sculptor should be a woman and a Westerner, and Alice Cooper of Colorado, has been suggested.

Readers who are familiar with that great American classic, the Journal of Lewis and Clark, will remember Sacajawea and her services to the explorers. Lewis and Clark found her in their winter camp among the Mandans. She was a captive Shoshone girl of sixteen, and the slave wife of a French half-breed interpreter. She would have died in child-birth had it not been for the aid of the explorers. In the spring she and her husband and babe went west with the party.

When the explorers had abandoned their canoes and were approaching the Gates of the Mountains, they stood face to face with failure, because of the lack of horses. It was Sacajawea who pacified the Shoshones, obtained horses, and smoothed the way through the Flatheads and the Nez Percés. Passing over her many services during the winter spent at the mouth of the Columbia, it was Sacajawea who guided the party on the return trip. She seemed to have the instinct of the homing pigeon, and time and again she found the way out of the wilderness.

Sacajawea understood the importance of the expedition, and was as earnest for its success as were its leaders. Her services were great, even if she was not the rescuer of Lewis and Clark. Yet when and where she died is not known, and no stone marks her resting-place.

The importance of the expedition of Lewis and Clark is brought strikingly to mind by the fact that the wilderness through which Sacajawea guided them one hundred years ago is now thickly studded with flourishing cities that purport to erect a statue to their guide.

—Chicago *Inter-Ocean*.

TEMPERANCE.

The matter under this heading is furnished monthly to THE FRIEND, on behalf of the "Temperance Association of Friends of Philadelphia," by Benjamin F. Witsen, 401 Chestnut street, Philadelphia.

As the headlines of this column and the accompanying announcement are brought for the first time to the attention of readers of THE FRIEND, there will doubtless be comment varying in character. It is natural that it should be so, and probably better so; else we might not feel sufficiently the weight and delicacy of our undertaking, and the need of wisdom, not of ourselves, in order that these pages may be made both useful and unifying.

It is not our intention to advocate herein any solution to the "Temperance Question" or the broader question of temperance, other than the daily living of those virtues and Christian attributes that compel, first the putting away of all intemperance in the individual believer, and next, through his influence,

the drawing of others to the same thinking and living.

Doubtless many will say, "This is teaching, but not specific; Christian service should do more than express itself, it must be aggressive. 'Individual responsibility' the teaching that pleases the vicious, leaves them free-handed to continue their viciousness, and makes the possibility of overthrow by concerted action exceedingly remote."

To this we reply by admitting the truth of it, but asserting that our apprehension of vice through the medium here afforded us to formulate or defend specific methods to endeavor to inform our readers as to methods are being suggested or experienced, and what effort is being set forth to cleanse society from the contaminating influences of a stupendous evil.

There is ground for fear that many members of the Society of Friends are undervaluing their opportunities and unappreciating their personal accountability, because of ignorance as to the insidiousness and enormity of evils of intemperance, and as to the relative to temperance effort successful or wise.

It will be our aim to arouse such ears to hear, and to invite them to lay prejudice and pre-conception aside, and to know what our Heavenly Father would have his children do in the presence of a scoffs at Him and thwarts his purposes. Our plea is not for cant or argument, but for open-mindedness and self-sacrifice.

THE importance of protests from Friends and associations as a means of checking proposed legislation of a vicious character is forcibly illustrated in the recent defeat of a bill introduced at Harrisburg with a license gambling at horse races. It was in our Yearly Meeting by a Harrisburg Friend, himself a Friend, that the work of the Meeting for Sufferings had been a chief factor in the overthrow of this intemperate measure. Said the writer to this reporter: "Would not that bill have been defeated how?" "I doubt it very much," said the writer. "I think it would have passed the Legislature, at least, for the 'orders' were to 'put it to rest' but Scattergood and Dillingham came by the request of the Meeting, and called attention to it in every way they could, till the members began to say, 'Why, what's wrong with this bill anyhow?' and when they read the gambling clause they did not like it." "Cooper goes to work and has the bill passed, so as to leave out that clause of it, but course killed it. Its own makers did not have any more about it then." "Well!" replied the writer, "Friends seem to have more moral political headquarters than we had hoped for." "Oh, yes," he continued, "when the matter was stirred out, it is a sure sign that a new movement is begun. Lots of the legislators do not half the bills they vote on. They are told they are to do, unless some people in judgment they respect, say something about it. After that they have a conscience about their own. It isn't so hard to make the political bosses as one might think. These remarks should lead more persons to the writer to consider the door of opportunity open."

ens here, revealing a responsibility that is not to be shirked.

It is stated on good authority that the number of protests reaching the Governor in respect to the afore named bill were one hundred and eighty-one petitions signed by "citizens," from a commonwealth of seven million inhabitants. "Only one teacher in the land appealed to the Governor against a bill which would have educated the young by means in dishonesty."

The earnestness that makes us watchful of our rights and the faith that prompts us to believe that we can, as pedestals upon which the greatest reforms are builded.

Liquor traffic can never repay its cost, no matter how high we make the license.

Our papers are commending the Bartenstein Abstinence Societies, claiming that "business principles" a bartender should have clear brain and a steady hand. On what grounds, we would ask, do the promoters of such factories condemn the use of their product?

THE INTERNATIONAL ALCOHOLIC CONGRESS meets biennially in Europe has closed its session. This body of fourteen hundred members, notable in science and in the service of humanity came from fifteen different nations of two hemispheres.

Questions of religion and politics were excluded out of such a varied assemblage. Subjects discussed were the teachings of science concerning a moderate use of alcohol, the effect of its use on every phase of progress. Two schools of thought were presented, the moderates, who called themselves the "Temperate school," and the total abstainers, who are called the "Abstinence school."

The applause for the testimony of science and experience on behalf of total abstinence was given to the moderates to be in the minority. The statement of Dr. August Forel, one of the foremost authorities in the world on brain and nervous diseases, that neither science nor experience furnishes evidence to justify calling alcohol a food, called out prolonged applause. The papers read by notable members of the congress during these six days will fill four or three volumes and will soon be made available for wide distribution.

A paper on "Alcohol and Art," by Professor H. Dusseldorf, director of the German School of Art, was a classic. He said that alcohol, by dulling the spiritual aspirations to the greatest work, is an enemy of the highest attainment in art.

A paper on "Scientific Temperance Education in the Public Schools in the United States," by Mary H. Hunt, led to a discussion of twenty speakers took part, and nearly all of them recommended the extension of the scientific method for the prevention of disease.

On the great results of the International Alcohol Congress just concluded is the statement of all workmen's abstainers' societies. Germany under the leadership of a popular member of the Reichstag of Hamburg.

In the opinion of the delegates the convention just closed achieved more practical results than any that have gone before. In Vienna two years ago, when it was proposed to hold the next meeting in Germany, the proposal met with strong opposition on the ground that the beer-loving Teuton would injure the work by unsympathetic comment. Happily the Germans adopted quite a contrary attitude.—*Union Signal*.

THE ANNUAL MEETING OF THE TEMPERANCE ASSOCIATION OF FRIENDS OF PHILADELPHIA was held on the evening of Fourth Month 22nd, 1903, and was well attended. The work of the Executive Committee for the past year was interesting and met with approval. The coffee stand at Front and Margaretta streets had been enlarged and will now accommodate fourteen persons. It is believed that many of the men who come here are kept from the saloons by this means.

Protests and Remonstrances have been sent to the Pennsylvania Legislature against bills providing for radical and dangerous changes in the license law of the State. All these bills failed to pass.

The Literature Committee reported the distribution of twenty-nine thousand four hundred and ninety-nine pages of temperance tracts. A large percentage of these have been given out on the small streets, in the slums and at the factories during noon hour by two of our faithful members. Several endorsed Physiologies and some temperance leaflets were sent to the workers in the girl's school belonging to the mission in Japan. Five hundred temperance papers have been distributed at Trenton and in colored First-day schools at different places. Several Talks on Scientific Temperance Instruction were given before Teachers' Institutes by Elizabeth Lloyd.

For a number of years past the Executive Committee has recognized the principles of "reclaiming society by the redemption of the child." Consequently efforts have been made to induce the superintendents and instructors of our public schools to make the Scientific Temperance Instruction provided by law effective rather than half-hearted. We believe that the labors of Ella B. Greene, who has been employed by the Association a part of each year for several years past, have been most valuable in the line above alluded to. She has visited at our request nearly every county in Pennsylvania, encouraging principals and teachers to a conscientious compliance with the law. She is now engaged by the Association for additional work in the State of New Jersey. Being tactful in manner and feeling a special call to this labor, she is worthy of our confidence and encouragement. Testimonies to the value of her work comes to us from many quarters.

After the business of the meeting had been transacted, a deeply interesting but informal address was delivered by James Wood, of Mt. Kisco, N. Y., who spoke by appointment on "The Proposed Inter-denominational Conference and the Results it is hoped to Accomplish."

Items Concerning the Society.

Sarah Caroline Hadley, from Wilmington Ohio, has been engaged in visiting the Quarterly Meetings

in their course, and several particular meetings in their neighborhood.

The last session of West Grove Monthly Meeting, Pa., was marked by the admission of three new members and the application of a fourth to be received as into membership; also the consideration of the acknowledgment of a gift in the ministry as conferred on another, and by the liberation of Elizabeth C. Cooper for religious service in Eastern Quarterly Meeting, N. C.

At the same Monthly Meeting, Henry T. Outland, of North Carolina, was in attendance, as also at the Monthly Meeting held at Medford, N. J., on Seventh-day last. On the week following the Yearly Meeting he proceeded to the neighborhood of Muncy Monthly Meeting, Pa., attending the meeting held at Pennsdale, visiting most of the families there, and returning in time to attend Philadelphia Quarterly Meeting. Since which he has been visiting several meetings as they came in course.

The Westtown Old Scholars' Association of Westtown Boarding School proposes to hold its Seventh Annual Session at Westtown, Pa., on Seventh-day, the sixth of Sixth Month, 1903; the meeting to be held in their large new tent, special trains run by the Pennsylvania Railroad, and interesting speakers engaged to address the meeting. This will probably be the largest gathering of Friends in this vicinity in 1903.

Notes from Others.

It costs less to send sixteen thousand students through a State university than to build a battleship.

W. G. Ballantine says in the *Congregationalist*: "Up to this time the theory of all our Sunday school work has been exegetical. The advance will come in teaching the Christian life vitally and dynamically, not bookishly."

Official announcement is made that the Fiji islands are now nominally Christianized and civilized, and will no longer need to be cared for by the Wesleyan Missionary Society. The islands contributed for missionary purposes last year \$25,000.

Tao Teh King, the only writing left to posterity by the philosopher and seer, Lao Tze, who lived six hundred and four years before the Christian era and upon which Taoism, one of the three religions of China, is based, has been translated by I. W. Haysinger and gives an excellent idea of the original Taoist belief.

Archdeacon Wilson, in *Contemporary Review*, last month in an article entitled "Scientific Training and Religious Truth" says: "I have personally known distinguished men of science who have spoken to me of their early religious teaching (which was exceptionally bad) as a crime committed against them—a crime which they could never forgive and of which they could never obliterate the effects. The Bible was 'spoiled for them forever.' There is no stronger reason for the most scrupulously truthful religious teaching than this terrible, and very common reaction in the minds of those who have been ill taught. The way to avoid and minimize this most serious effect of scientific training on the reception of religious thought is to teach religion in every home, and every school, from the infant school to the university, that men and women shall have as little as possible to unlearn; or, in a word, to prepare religious thought for scientific training by making the religious teaching truthful, and not inconsistent with [true] scientific methods and results."

Andrew Carnegie has given six hundred thou-

sand dollars to Tuskegee Institute in Alabama, on the condition that out of this sum provision shall be made for Booker T. Washington and his wife. No more worthy object could have been selected. The Tuskegee Institute does in many respects a work exactly opposite to that of public libraries, to the establishment of which Carnegie has given so many millions. No doubt public libraries are capable of doing a beneficent work; but one can hardly study their actual use without reaching the conclusion that they often do quite as much harm as good. The taste which they chiefly appear to stimulate is a consuming appetite for rapid fiction, the gratification of which not only keeps the hands in idleness but enervates the will and fills the brain with a riot of disordered fancies. Nothing more calculated to unfit the average boy or girl for the mechanical tasks that would naturally fall to his or her lot can be well imagined. Now the training in Tuskegee is in the highest degree practical—in the direction of maximum industrial efficiency. It teaches the crafts and trades. It sends out yearly a band of trained negroes who are doing more for their race than any other class in the community is doing for it.—*Country Gentleman*.

FREE FICTION.—The only reasonable principle on which to base the acceptance of Carnegie's offer to the city of one million five hundred thousand dollars for the erection of thirty branches of the Free Library, with the enormous expense which will be entailed thereby, is that the practically indefinite extension of the system will place within reach of every resident of Philadelphia the best books by the best authors, ostensibly free of charge. A further glance at the annual report of the Free Library, just issued, shows how the present facilities of the institution are appreciated, and what use is made of them by the army of free readers. Of the one million six hundred and ninety-one thousand four hundred and fifty-two volumes taken out of the central library and the fourteen branches during last year, one million three hundred and three thousand nine hundred and forty-one volumes were classed as "fiction," leaving only three hundred and eighty-seven thousand five hundred and eleven volumes in all the other departments of literature. Nearly four-fifths of the books circulated during the year were novels of varying degrees of worthlessness as educational and elevating agencies. Contrast the work of the free library system as a whole with that which has been carried on for years past by the Friends' Free Library, in Germantown, among the fifteen thousand or twenty thousand volumes in which institution there is not a single novel.—*Evening Telegraph*.

SUMMARY OF EVENTS.

UNITED STATES.—In Omaha, Judge Manger, of the U. S. District Court, has lately issued an injunction to prevent 3000 union teamsters, who had struck, from interfering in any way with non-union teamsters. The injunction is said to be the most sweeping of the kind ever issued in the West, and, among other things, restrains them from any conduct to humiliate the strike breakers, from applying vile epithets, from congregating in crowds anywhere, from publishing any rules, notices, or orders or directions from the officers, from picketing, intimidating and various other actions inimical to the interests of the employers.

President Roosevelt has reached California, and received a warm welcome in several places he has visited on the way.

Statistics show that during the last twelve years lines of electric railways have increased in length from 8123 miles to 22,589 miles.

An appeal to the Supreme Court of Pennsylvania was made by a congregation of Christian Scientists against the decision of the Court of Common Pleas in this city which had refused to grant the congregation a charter. This decision was confirmed by the Supreme Court. One of the reasons assigned is the manner of healing or curing disease, is injurious to the community and opposed to the general policy of the law of Pennsylvania relative to the existence and treatment of disease.

Nearly 100,000 Bibles and Testaments in forty languages, including those in raised characters for the blind, were distributed by the Pennsylvania Bible Society in this State last year.

A negro rural free delivery letter carrier named John C. Allgood was lately warned over Gallatin, Tenn., by masked men not to make another trip. The Postmaster has accordingly suspended delivery on these routes, and has stated that there were five applicants under the civil service rules for appointment as rural carriers. The three men passing the highest on the list were all colored. Under the civil service rules there is no option with the Department except to appoint the person who stands highest on the list; therefore, the negro, Alfred Dillard, who had resigned about three weeks ago, and the Civil Service Board certified the second man on the list, John C. Allgood, also a negro, and he is the carrier who has been held up by masked men and ordered to resign.

There were lately sent in one day from Wilmington, N. C., 34 refrigerators cars, holding about 27,000 quarts of strawberries, to cities in the Northern and Middle States. There were 495 deaths in this city last week, reported to the Board of Health. This is 7 less than the previous week and 42 more than the corresponding week of 1902. Of the foregoing 268 were males and 230 females; 66 died of consumption of the lungs; 69 of inflammation of the lungs and surrounding membranes; 9 of diphtheria; 5 of cancer; 3 of scarlet fever; 25 of typhoid fever; 2 of scarlet fever, and 2 of small pox.

FOREIGN.—A despatch of the 7th from Paris, says: Baron D'Estournelles de Constant, the French Deputy who was delegate of France to The Hague Peace Conference, to-day gave a statement regarding the political meaning of King Edward's visit to Paris and the advancing world movement in favor of arbitration. The Baron says he will conclude in a few days the arbitration treaties between the great Powers, and declares the United States is entitled to the credit for initiating this world movement. In his statement the Baron says: "While King Edward did not utter a word on politics from the time of his arrival in France to the moment of his departure from the country, yet I am convinced that his visit will have a happy effect on popular relations between the two countries. Only a year ago Europe sought to let The Hague court die a silent death; but President Roosevelt saved the tribunal, first by submitting to it the question in dispute between Mexico and the United States; second, by obliging Germany, Great Britain and Italy to take their Venezuelan complications to The Hague court. Finally, Andrew Carnegie's magnificent gift of \$1,810,000 to the Hague Court, thanks to America and the Americans, the tribunal is not doomed to slow death, and even Europe has been awakened to its merits."

A fire, suspected of being of incendiary origin, destroyed about 250 houses and millions of feet of lumber in Ottawa, Ont. About 2000 persons were made homeless.

The British Foreign Secretary, Lansdowne has announced in Parliament the policy of the British Government in regard to the Persian Gulf in the following language: "I say without hesitation," he declared, "that we should regard the establishment of a naval base or a fortified port in the Persian Gulf by any other Power as a very grave menace to British interests, and we should certainly resist it with all the means at our disposal." A despatch from Paris, says the same Secretary of State has become one of the great questions of the day, and both sides are closing their ranks, and it is generally recognized that a grave crisis is imminent.

In a recent address in London Andrew Carnegie attributed the success which has attended his business career largely to the system of sharing profits with the employees. He said that in his business he has been successful in all kinds, and especially in manufacturing, where a small saving in each process means fortune, is a liberal division of profits among the men who help to make them, and the wider distribution the better. We may look forward with hope to the day when it shall be the rule that the workman is partner with capital, the man of affairs giving his business experience, the workman his mechanical skill to the company, both owners in the shares and so far equally interested in the success of their joint efforts, each indispensable, without whose co-operation success were impossible. It is a splendid vista along which we are permitted to gaze."

After much delay the agreements to refer the Venezuela controversy to The Hague Tribunal has been signed by representatives of the American Powers, and by Minister Brown representing Venezuela.

A purchase of 2,000,000 acres of timber land in Newfoundland has lately been made by Canadian and American capitalists, with the view of developing the business of paper-pulp making.

William Morrison, of Lexington, Ky., who has a years in the Congo Free State as a missionary, has died, according to a despatch from London, as a live report to the Congo State authorities, to the can and British Ministers at Brussels and to Fore Secretary Lansdowne, detailing the results of his investigation and showing that the situation of the blacks is daily growing worse, and that the monopoly's introduction of forced labor, virtually leading to slavery. On his way to the coast William travelled eight hundred miles of the Kasai River, thickly dotted with villages, and he says it now less than a dozen villages there, the people fleeing into the forests to escape the tyranny of the Reports show that at least one hundred Jews are now acting in sympathy with them were in Kischeneff, the capital of Bessarabia, between Month 20 and 23. The sufferings of the Jews in Galatia have awakened the sympathy of their brethren, who have forwarded money for their Aid. Another massacre of Jews is reported from Tiro. A lamp has been designed by Hans Kolisch, of which phosphorescent micro-organisms produce without heat. It is described as a flask-shaped vessel filled with gelatine. Into this is put a spoonful of a certain kind of bacterian culture germs. The germs called the micrococci phosphorescent, and after introduced into the lamp grows with great rapidity, gelatinous solidifies and forms a light in two days, a pale blue phosphorescent light thrown out. This continues for about two weeks.

There are 41,000,000 people in England, of whom stated, more than half live on less than \$12 a week, while 7,000,000 of them have no more than 10 pence a week.

NOTICES.

Meeting at Lansdowne.—A meeting for the appointed for Chester Monthly Meeting will be held at meeting-house at Lansdowne, on Fifth-day evening, Month 21st, 1903, at 8 o'clock.

WESTERN QUARTERLY MEETING OF FRIENDS.—The meeting at West Groves, Pa., on Fifth-day evening, Month 22nd instant, will be met at West Groves, Pa., (free of charge), those desiring to attend the Quarterly Meeting of Friends, to be held at London, Chester County, Pa. It would assist the committee intending to come would inform by postal notice.

TRUMAN C. MOORE,
GEORGE R. CHAMBERS, Jr., Com.

WESTTOWN BOARDING SCHOOL.—For cover persons coming to Westtown School, the station is leaving Philadelphia 7:16 and 8:15 A. M., and 4:32 P. M. Other trains are met at West Groves, Pa., 15 cents; after 7:30 P. M., 25 cents each. To reach the school by telegraph, wire Westtown, Pa. Phone 1144. EDWARD G. SMEDLEY, Superintendent.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and the terms of instruction and discipline should be addressed to

WM. F. WICKESHAM, Principal.
Payments on account of board and tuition, and communications in regard to business should be forwarded to
EDWARD G. SMEDLEY, Superintendent,
Address Westtown P. O., Chester Co., Pa.

NOTICE.—Suburban Friends having flowers wild or cultivated, will confer good upon many of the surroundings in the city—members of sewing mission schools and others—by sending flowers. Five cent package express to Broad Street Station, Reading Terminal on Sixth-day or Seventh-day morning to the care of MARTHA S. CALLEY. Postal notice thereof to her at No. 4234 Pine St., Philadelphia, will be helpful.

MARRIED.—On Fifth-day, Fifth Month 7th, Friends' Meeting House, Haverford, Pa., RACOM ALSON, daughter of the late SAMUEL ALSON, of Esther Kite Alsop, to JOHN DARRINGTON CHAMBERLAIN, of Haverford, Pa.

DIED. at his residence at Ashley, Newtowne Square, Haverford, Pa., on Third Month 17th, 1903, ROBERTS, in his seventy-ninth year; a member of Philadelphia Particular and Chester Monthly Meeting of Friends.

Finding the Verb.

The life and meaning of a sentence is not discerned till we find its verb. Therein its life and action is centered. Amidst all the other words one says nothing till his verb comes into sight; and when, as often in the Bible, the verb is held in reserve till the end of the sentence, the hearer's attention must be held on the alert till that word is reached; when thereupon throws back its light and over all the preceding words, quickens them in their own activity, and binds them together in their relation to itself. So the verb, from its being the soul of the whole sentence, was named *Verbum*,—the word of power.

When we inquire what is hindering a man in his translation, the answer is, "I cannot find the verb." When that is pointed out, the countenance lights up as the sentence once leaps into life. The other words were good and correct, all in their right place, and arranged well, but they were all as dead words, till the word came and spread through them its life. The Verb was the one voice waited for by the gathered words stand up as living and active, and to reveal their thought and meaning.

There is a sacred Scripture which says, "The Word of God is living and active, . . . dividing asunder of soul and spirit, and quickening the thoughts and intents of the heart" (Heb. iv. 12). Also that "Without Him the Living Word was not anything made that was made,"—even Christ "through whom the worlds were made," and "who upholds all things by the Word of His power;" and the Word was made flesh and dwelt among men," and that the name of Christ which is still announced in the Revelation called "the Word of God."

As a religious Society we continue, in con-

sonance with the Scripture, to acknowledge Christ, "the same yesterday, to-day, and forever," as the Word of God; who speaks the secret counsel of the Father directly to our spirits, and is the "one Mediator between God and Man," "who can speak to our condition," "And this is the Word which by the gospel is preached unto you,"—even the in-speaking Word of Life to every man's heart. And this is the living and essential Word which the congregation or the man must wait upon in every season of devotion, if his worship is to be "in spirit and in truth."

Apart from the Living Word, worship can do nothing. Many words and many views may come into the mind, and they seem so sound and good in themselves, that we think that they might, if given to the air, edify others. But they all remain as a dead letter, till in a living waiting we find the living Verb,—that Word which as a quickening Spirit starts them all into life and breathes through them a message of grace.

Worship can afford, in order to be worship, to look for and wait for its Verb,—its living and active Word of Life,—that makes all the otherwise dead bones of its language or of its silence stand up and live. It can afford no substitute voice as an easement of impatience. "Tho' the vision tarry, wait for it." Only Life, whether wordless or vocal, can be ministry. Only the Life can be worship. Praying is spirit-life, else it is not prayer. Praise is the life of the spirit, else tuning in its name is dead intonation. And the words of Christ to a man, scriptural or voiceless,— "they are *spirit* and they are *life*." He that in all these things "hath the Son, hath life, and he that hath not the Son of God," in his work or acts of worship, "hath not life."

Christ the Word is thus the Bible's Verb, and worship's Verb. Christ has and is the key-note that opens Scriptures to our understanding; the key-stone that binds the disjointed fabric of truths into one solid arch of Truth. He is the living nucleus about which all the atoms of worship co-ordinate in harmony. Let worship find its Verb, and wait till He is found, else it renders a spurious translation and a forgery.

He is "the better part," at whose feet Mary sat to hear the gracious words that proceeded out of his mouth. And not by bread

alone shall man live, "but by every word that proceedeth out of the mouth of God." The silence of all flesh is often the one possible condition in which we can hear that Divine voice; which they that hear shall live.

The Testimony of Hugh Stammer, of Lurgan, Ireland, near his departure out of this life.

About twenty friends being present, he said, "I die in the same faith that I have made profession of, and lived in, and suffered for these twenty-three years. . . . All the desire I have to live, is to see Truth prosper, and if sufferings come, I am willing to suffer for it. There is no weight or burden lies at my door. I have wronged no man, neither have I been burdensome to any, but always if there was any difference, I suffered wrong for peace-sake. I have not oppressed any man. So, my dear friends, walk in love one to another, passing by infirmities, forgiving one another, for even as Christ said, "if ye forgive not one another, how shall your Heavenly Father forgive you?" even as he who would not forgive his brother missed of pardon. Keep the heart void of offense toward God and man, and when any evil doth appear, judge it down with the light. . . . Walk humbly before your God and be of a pure mind to him in true love one towards another, and stand not at a distance one from another, for envy and strife lead from God, and eat as doth a canker. Blessed be the Lord God forever. Bear up your heads, and give not away your crowns for any visible thing here below, for they are but trifles, and things of no value . . .

"Dear friends, in the suffering of all things you shall come to wear the crown. 'No cross, no crown,' take notice of that; that your bow may abide in full strength in the needful time, when the pains of death come upon you, which will come upon all. Death troubles me not, for blessed be the Lord forever, since I lay on this my bed of sickness, there is nothing but peace on every side.

"My dear friends, I desire you in tender love, to love one another, and you will be an honor to God and one to another. Bear the daily cross that you may be crowned when time shall be no more. . . . 'If the righteous scarcely be saved where shall the wicked and ungodly appear?' Oh! the joy and endless felicity that shall be upon the righteous, and what horror and misery shall be upon the wicked. And dear friends, have not a bare profession, but walk answerably to what you profess, that your bow may stand in full strength, as mine doth at this time.

So my dear friends, do not run in your own wills, but wait daily upon the Lord, and let your whole dependence be upon Him, that you may come in at the right door, for whosoever

climbeth up another way is a thief and a robber. Cast your care upon the Lord, and He will in no wise cast you off, but He will work in you, and for you, and you will become the children of the day, and of the light. . . . Friends, you know these things before: this is to stir up your minds, to stand steadfast in the Truth. Be faithful in the day of small things, and despise them not, and the Lord will make you rulers over much. So shall you be honorable, men and women, and He will shower down multitudes of blessings upon your heads". . . .

Just before he died he sat up in his bed and spoke these words, "Now, Lord Jesus, receive my soul into thy everlasting kingdom of glory, for thy kingdom is from everlasting to everlasting."

He departed this life the ninth of the Seventh Month, 1676, aged about sixty-five years.—*Selected.*

Jewish Situation in America.

Jews of America are not divided so much upon theology as upon traditions and present conditions. All are orthodox, in that they cling to the essentials of Jewish theology, and to the Seventh-day Sabbath, for in no quarter in this country has the proposition to change to a First-day Sabbath, made serious headway. Jews in America may be divided into three distinct classes. First, there are the commercial Jews who, like so many Protestants, are such only in name. They rarely go to religious services, save perhaps at holiday time. Second, there are a comparatively small number of faithful men and women, Americans in all respects, and profoundly impressed with their responsibility to Judaism of the past, and to their fellow Jews. Finally, there are the hundreds of thousands of foreign Jews, here during the last ten years, speaking a foreign tongue and thinking foreign thoughts. They are from Russia, chiefly, and very poor. They are poor not alone in finances, but in ambition, in ideas. They cling to the old form of worship. Their synagogues suggest Orientalism and not Americanism. Men sit on the main floor, while the women are huddled into the gallery, often behind a screen. Men wear their hats during service, and much of the time walk about and chat with their neighbors. For the most part these Jews are crowded into the lower East Side of Manhattan—New York city. Estimates have been made putting the number of Jews in New York at six hundred thousand, but the number is too high by two hundred thousand, certainly by one hundred and fifty thousand. Even so, New York is by far the greatest centre of Jewish population in the world, London, Vienna, Chicago and the rest not being in any degree in the same class. A stroll on the lower East Side of New York will cause one to meet Jeremiah, Hosea, Habakkuk, indeed all of the biblical characters one ever studied. They are there in the flesh as truly as they were in Jerusalem in the time of Christ. Dr Kohler has been for twenty years rabbi of the temple in Fifth avenue, whose gilded dome rising above the trees on the east side of Central Park is familiar to all strangers. Temple Beth-El Congregation is not unlike the congregation of churches, Protestant and Catholic, near by. Refinement and Occidental cus-

toms prevail. It is this congregation that gives up its rabbi to Cincinnati. The New York seminary, representing the well-bred, religious Jew, who is faithful to essential Judaism of the past, but who realizes that the world moves. This class, small in number, is trying to keep alive Judaism in America, and these two seminaries, one in Cincinnati and the other in New York, both with new financial resources and new presidents, are for the training of rabbis of the modern American type. This class of Jew is also tremendously alive to its responsibility for the Oriental Jew who is in America in such vast numbers. Zionism is an example of effort put forth to benefit either those already here or to prevent others from coming. In the same uplifting agency list there are to be placed the Jewish Chautauqua, the National Jewish Farm, and the Baron de Hirsch charities. Such is the Jewish situation, religious and social, in America at the moment, and such some of the efforts to improve it.—*Boston Transcript.*

An Indian Hero.

It was hot; we were thirsty and tired; even the ears of our donkeys hung flopping along their faces as we slowly scuffled along through the dust of an Arizona desert towards a Zuni pueblo. We could see it in the far distance, a black, square hill outlined against the horizon.

Soon we came to little patches of potatoes, watermelons, beans, onions; in fact, all sorts of garden truck. After having lived several months on surveyors' stores, tinned stuffs, and smoked meats, we were glad to see the gardens.

A queer village it was. Just one great house, looking for all the world like a lump of mud on the end of a shingle. It was four stories high, with not a window-frame in all the three hundred rooms. The Zuni Indians made us welcome and brought jars of water to us for drinking, washing and cooking purposes. And water is the most precious thing in that region for hundreds of miles. As soon as we had rested a little while we started to look about, and almost the first person we met was a young Indian dressed in uniform—not quite a soldier's uniform but very much like it. We approached each other and, after shaking hands, he addressed us in faultless English, making us welcome to Zuni; hoped that we would find it convenient to stay a long time, and asked us to make his home our headquarters while we were in that vicinity.

In travelling this wide world over I have never come across a braver man than that Indian. Amid poverty, squalor and want, he was living the life of a Christian gentleman among his people, unashamed of his life or theirs, doing all he could with skill and tact to lead them to better things, both in their method of work and in their spiritual life. He was a graduate of the Indian school at Carlisle, Pa. He loved his people with a surpassing love. They were poor, ignorant and superstitious. He was a highly-cultured gentleman, and here he was giving them—without any hope of pay—the fruit of long years of toil in learning the laws and lessons that have made the white man what he is. He had one room in the house fitted up with the conveniences of civilization. His days were spent in

the fields, teaching his people how to cultivate their soil in the best way, how to breed sheep, work in wood, and wool, and iron; and as had apprentices he read to them the Bible and other good books—all the while himself living the higher life. It was slow, discouraging work; the custom of centuries cannot easily be altered.

It takes a braver man to live a life of this kind than it does to face a cannon, and win the victory is won for the right, as it surely will be, it is a victory of peace, which always counts for more than the bloody victories of war.—*S. Dubois in the Presbyterian.*

The Confessors of Peace from the Second Century to the Era of Mahomet.

X.

A resident of Gaul, at the time of Julius was Sulpicius Severus, the historian. In the life of Martin of Tours, a contemporary, Sulpicius says of him that he had been bred to the profession of arms, but on his conversion to Christianity, he declined the service. In answer to Julian for the reason of his conduct on this occasion, he used the words previously employed by so many of the faithful—"I am a Christian, therefore I cannot fight." Similar was the rejoinder, some years earlier, of one who, being found in the army, but refusing to fight, underwent examination at Tarsus, of Cilicia, the city of the Apostle Paul. Replying to the query as to his name and condition, he replied: "I am called Sulpicius by my father; but my military name is Victor. I have led a military life, and am a Roman. I was born at Claudiopolis, a city of Isauria, and because I am a Christian I have abandoned my profession as a soldier."

Now, in the middle of the fourth century, we may seek almost in vain for the like of this testimony on the part of the clergy. Chrysostom's remark hereabout may be appropriately quoted: "It had been formerly held unlawful for Christians to fight at all: it was now suborned as if it was allowable if they fought under the banner of Christian emperors, whose bloodshed in war was more excusable in the cause of virtue and religion. This new interpretation of the old tenet afforded a satisfaction to the consciences of many, and helped to make the idolatrous oath was modified) to take that other part of the objection to a military life which consisted in the unlawfulness of fighting. Hence the unlawfulness of fighting began to be given up. We find, however, that here and there an ancient Father retained it as a religious tenet; but, by dropping off one after another it ceased to be a doctrine of the church, and he to all the deep war-degeneracy of subsequent ages." Thus early, after the long testimony-bearing of multitudes, do we see this tenet so honored in the Beatitudes, fading on the wane, and becoming year by year more dim, and on the verge of seeming tinguishment.

Martin, of Tours, having been made bishop of Avila, in Spain, was afforded an opportunity to manifest in a notable manner his adherence to the Scripture testimony of peace and his opposition to the shedding of blood. The occasion arose in connection with what was stigmatized as the heresy of the

sect of the Priscillianists. There is a deal of confusion of statement as to what the doctrinal belief of those people, and they practised—their adversaries being witnesses. Mosheim makes the admission, "to ascertain the real doctrines of the Priscillianists, is very difficult, and perhaps impossible," and again: "No one of the ancients has accurately described the doctrines of the Priscillianists; on the contrary, some of them have perplexed and obscured the subject."

Their tenets appeared to be more or less tinged by Manichæism, with its complex metaphysical theories of light and darkness. Their opinions are represented as being after the same order, enjoining austerities of all sorts, rejection of flesh food, disapproval of marriage. Presumably, being opposed to the killing of animals for food, they prized Christianity's principle of peace. While maintaining their connection with the church, they avoided taking the elements in the Lord's supper; but secretly they celebrated Divine services in their own manner, allowing women to officiate (Schaff).

The name of this very much persecuted sect was derived from a rich and gifted Spaniard of a distinguished family, named Priscillian. Living aside from a life of luxury and frivolity, he early gave his attention to philosophical and moral studies, and, being dissatisfied with the abused condition of Catholic Christianity, he devised a system which ultimately took his name. Two bishops joined themselves thereto, and a number of women united, but, other than shops, men reputed of a worldly life (Ithacius and Ithacius), violently opposed the system, which, at the synod of Saragossa (380), was condemned, and all Priscillianists declared excommunicate. The schism still remaining, an appeal by the hostile bishops to the emperor, Gratian, resulted in an edict of permanent banishment. Then followed the assassination of the emperor, to whose successor, Maximus, the Catholic bishops successfully addressed fresh appeal.

At this critical juncture appeared the good bishop Martin, of Tours. At that time he was residing at the city of Trier (later, known as Treves), on the Moselle, the second metropolis of the Roman empire from the time of Constantine, and a great ecclesiastical centre. Maximus having come thither, to him Martin addressed earnest protest that it was an unheard-of thing that a matter of distinctly church disciplinary discipline should have been thus referred to the adjudication of a secular court, principles of the civil law. He hence enquired the emperor to at least spare the lives of Priscillian and his associates, who had been especially condemned, and to rest content that the bishop's synod had declared them false teachers, and that they had been deprived of their churches. The trial was thus delayed, and Maximus gave his promise that there should be no shedding of blood.

The promise proved as futile as a millstone later, did the safe-conduct of Sigismund, saving Huss from the Council of Basle. The emperor taking his leave, yet other bishops followed him with their commendation of severity, re-enforcing the money considerations of cupidity in thus making it easy to secure the estates of the

rich Priscillian and his followers. A fresh impeachment was also introduced, to wit, that the tendency of the false doctrines was to encourage impurity. By this subterfuge the matter could be brought before the civil court. The hearing of the case having been entrusted to a severe judge, Priscillian was condemned not only as a false teacher, or heretic, but, further, as a violator of the laws, and upon him and his principal adherents was inflicted the penalty of death by the sword. This occurred at the imperial city of Treves in 385.

"It was the first time," says Schaff, "that a Christian was punished with death on account of heresy, and all Christendom felt the shock." "The instigators of this capital execution for heresy," remarks another, "were, however, regarded with abhorrence by the bishops of Gaul and Italy; for it was not yet considered among Christians as a pious and righteous act to deliver heretics over to the civil power to be punished." Later, indeed, the ecclesiastical power itself with rack and torture and pyre of faggots, became judge and executioner, and the rancorous zeal of Ithacius and Ithacius, of Spain, under Galerian and Maximus, did foreshadow the bloody inquest of Torquemada under Ferdinand and Isabella, called "the Most Catholic."

Again Martin, of Tours, returning to Treves, found there one bishop of the condemnatory synod, Theognist, who, fearless of the emperor's displeasure, declared most emphatically against the whole proceeding, and testified his disunity with all those who had taken any part in it. Ere Martin entered the city, however, he had been warned by Maximus that he must keep peace with the bishops. Worthy was Martin's answer, that he "would come with the peace of God." The emperor's appeals to Martin and Theognist were to be reconciled to Ithacius and his party proved unavailing, and he dismissed them in anger. Maximus had already resolved to despatch a military force to Spain to suppress the Priscillianists. Now, the tribunes with plenary powers, were actually sent to the peninsula. To save many unhappy creatures from ruin, it is said that Martin acceded to the emperor's desire to restore the bishops to church fellowship. Nevertheless, when Ambrose of Milan, came somewhat later to Treves, he took the same stand that Martin had originally done, accounting the offense of the bishops so grievous a one that their claim to stand as teachers of the people ought not to be countenanced.

It remains to be said that the bloody removal of Priscillian and his friends, with a fresh condemnation by the synod of Toledo, in the year 400, failed to arrest the progress of the movement. When the Visigoths, who held the Arian belief, passing over the Pyrenees, broke into the Iberian peninsula, the peaceful Priscillianists fared badly. The new occupants of the land had little appreciation of the non-fighting testimonies prevailing in the earlier centuries. The sect survived till the latter part of the sixth century.

(To be continued.)

"THE blossoms of spring are the prophets of autumn, so a joyful service in youth promises a rich fruitage in after years."

Inhabitants of Our Southern Mountains.

Dr. William Frost, President of Berea College, in the mountains of eastern Kentucky, recently delivered an interesting address on "Our Contemporary Ancestors in the Southern Mountains."

These millions of people—American for four or five generations—who are living to all intents and purposes in the conditions of the colonial times! these people form an element unaccounted for by the census, unreckoned with in all our inventories of national resources. And their remoteness is by no means measured by the mere distance in miles. It is, as it were, a longer journey from Northern Ohio to Eastern Kentucky, than from America to Europe; for one day's ride brings us into the eighteenth century.

Now, the ancestors of our mountain friends "went West" under the same mighty impulses which peopled Western New York and Ohio. But they unconsciously stepped aside from the great avenues of commerce and of thought. This is the excuse for the Rip Van Winkle sleep. They have been beleaguered by nature. The vastness of the mountain region which has enveloped this portion of our fellow-countrymen, has been concealed by the fact that it was parceled out among so many different Commonwealths. The mountainous back-yards of nine States abut upon the lofty ridges which separate the Virginias, bound Kentucky on the east, divide Tennessee from North Carolina and Alabama. This is one of God's grand divisions, this Appalachian America. It has no coast like Scotland, no inland lakes or navigable rivers like Switzerland. The surface varies greatly in elevation and geologic structure, but as a place for human habitation the entire region has one characteristic—the lack of natural means of communication. Its highways are the beds of streams; commerce and intercourse are conditioned by horseflesh and saddle bags. I recall an early experience when enjoying the hospitality of a mountain home.

"When you cannot get what you need at this little store down by the creek, where do you go?"

The mountain woman answered with a frank smile, "I go without."

And it appeared that she had never been to any town or city in her life. Is the lamp chimney lacking? The mountain potteries are still making flambeaux, lamps of almost classic patterns, in which grease is burned with a floating wick. Is the sawmill remote? In the high mountains, where streams are small and mills impracticable, the whipsaw is brought into use, and two men will get out 300 or 400 feet of boards from the logs in a day. Handmills for grinding can still be constructed by well brought up mountain men, and in some places they have not yet lost the tradition of the fashioning of the old English crossbow. And who does not have a feeling akin to reverence in the presence of a handloom? When a mountain maid speaks of her "wheel," she does not refer to a bicycle, but to a spinning wheel of our ancestors, her use of which here in our mountains calls to mind the sudden and entire disappearance of cloth making from the list of household industries.

In examining social life and its variations in the mountains, we discover a new kind of

CHRISTIAN works are animate love and faith.

isolation, a higher potency of loneliness. The people are not only isolated from the centres and thoroughfares of the world, but isolated from one another. The families who live along one valley form a community by themselves, and the children grow up with almost no examples or analogies of life outside these petty bounds. As we need a fresh air fund for the little ones of the city, we need a fresh idea fund for these sons and daughters of solitude.

A word deserves to be said of the native refinement of many of the mountain women. The staid combination of a black sunbonnet and a cob pipe is not unusual, and the shrill voice that betokens desperation in life's struggles may be heard. There is an utter frankness in questioning a stranger. "Who might you-all be? Where are ye aimin' to go? What brung ye up this air way off branch? Where do ye live at? Where's yer old man? (This to a lady engaged in extension work!) How old be ye?" Yet there is withal a real kindness and a certain shyness, and often a passionate eagerness to note points of superiority which may be imitated. As a rule, the proprieties of life are observed to a surprising degree; and a mountain woman certainly suggests her descent from Eve when she appears at a meeting on the hottest summer's day wearing woolen mitts as her tribute to conventionality!

The narrowness of their horizon may prepare us to understand their religion. They have lost the Protestant idea that a minister must be an educated man. Ignorance makes men positive, and the barriers of orthodoxy have been raised to a very commanding height. The habit of literal interpretation has raised up many champions of the doctrine of a flat earth. "Dew yeou purpose to take Joshuar inter yeour leetle school and larn him the shape of the yearth? Don't the Bible tell us that the yearth's got eends an' foundations an' corners? And that the sun runs from one eend on hit ter the other? Let God be true and every man a liar!"

The few representatives of this obscure people who have made their way to regions of greater opportunity have shown no mean native endowment. Lincoln himself is an example. How the mountains are to be enlightened, however, is a double problem—first, as to means, and secondly, as to the method. The first question is one of philanthropy, and the second question is one of pedagogics. There could not be a clearer call for the intervention of intelligent, patriotic assistance. We are sometimes remonstrated with for breaking in upon this Arcadian simplicity, and we have had our own misgivings. But it must be remembered that ruthless change is knocking at the door of every mountain cabin. The jackals of civilization have already abused the confidence of many a highland home.

The means for extending this saving aid must be furnished by the patriotic people of the nation. It cannot be left to the States concerned, for these are all poor Southern States, inexperienced in popular education. Appalachian America is a ward of the nation—such a ward as we never had before. The mountain man is not to be compared with the negro, except in the basal fact of need. Nor can he be compared with the Western pio-

neer, for the Western frontier had always a certain proportion of educated leaders, and it was closely knit by family and commercial ties with the older and richer part of the land. But Appalachian America is a frontier without any related back tier, and must be dealt with accordingly. The native capacity of the mountain people is well established, and their response to well directed efforts has been surprisingly ready.

"THY GENTLENESS HATH MADE ME GREAT."

(Ps. xviii. 35.)

BY W. T. SLEEPER.

Our Heavenly Father's gentleness
Doth make his servants great,
And loyal to their sovereign,
They on his bidding wait.

The sun arising calmly

Awakes ten thousand tongues,
Leaving his chamber softly

He's hailed by myriad songs,
The placid moon in silence

Uplifts the mighty main,
The dews descending gently

Refresh the wide world-plain,
Vast mines and balmy islands

In silent chambers grow,
Through countless paths and creatures

Life-currents noiseless flow.

Not in the wild tornado

Nor fiery Vulcan's noise

Did God bespeak the prophet,

But in a still small voice.

The world's most mighty forces,

Ordained mankind to bless,

Show not their strength in passion,

But in sweet gentleness.

—Boston Transcript.

THE TEACHING OF TRUE RELIGION.—True religion teaches the soul a high veneration for Almighty God; a sincere and upright walking, as in the presence of the invisible, all-seeing God. It makes a man truly love, honor, and obey Him, and therefore careful to know what his will is. It renders the heart highly thankful to Him, as his Creator, Redeemer, and Benefactor. It makes a man entirely depend on Him, seek Him for guidance, direction, and protection, and submit to his will with patience and resignation of soul. It gives the law, not only to his words and actions, but to his very thoughts and purposes; so that he dares not entertain any which are unbecoming the presence of that God, by whom all our thoughts are legible. It crushes all pride and haughtiness, both in a man's heart and carriage, and gives him a humble state of mind before God and man. It regulates the passions, and brings them into due moderation. It gives a man a right estimate of this present world, and sets his heart and hopes above it; so that he never loves it more than it deserves. It makes the wealth and the glory of this world, high places, and great preferments, but of little consequence to him; so that he is neither covetous, nor ambitious, nor over solicitous, concerning the advantages of them. It makes him value the love of God and the peace of his own conscience, above all the wealth and honor in the world, and to be very diligent in preserving them. He performs all his duties to God with sincerity and humility; and, whilst he lives on earth, his conversation, his hope, his treasures, are in Heaven.—Matthew Hale.

Science and Industry.

The well known De Forest Wireless Telegraph Company will equip the fast train the New York Central with wireless telegraph systems. The experiment will continue two months. The successful accomplishment of this will prove a great benefit to rail traffic.

STATISTICS which have just been published in France show that the State sold during past year over 2,600,000 kilograms of cigars and 1,800,000 of cigarettes, quantity of tobacco disposed of amounting about 34,000,000 kilograms. The inhabitants of France smoke annually at the rate a little over two pounds of tobacco per head with an average expenditure of eleven francs for each. But addition to the narcotic varies in different localities. For instance, in the population of the Department of the Loire, contrives to get through upward of 10 grammes per head in the course of a year, that of the Lozere uses only an average of 400 grammes. The Parisian's average expenditure on smoking comes to nearly two francs a year.

MALARIA IN THE SOUTH.—Prof. Hervey of the Mississippi Agricultural College, in an article published in *The Popular Science Monthly*, states that malaria is responsible for more sickness among the white population of the South than any disease to which they are now subject, there having been during the year ending Fifth Month 31st, 1900, approximately 635,000 cases in the five States, Louisiana, Mississippi, Alabama, Georgia and South Carolina.

While fully realizing the gravity of the situation the Professor feels certain that the day is soon coming when "chills and fever" will have lost their terrors because we will surely learn how to avoid them, remembering that it is most propitious that recent wonderful discoveries in regard to malaria and yellow fever were made on the eve of the South's great awakening on educational and industrial subjects.

THOSE obliged to live in one room boarding house will be glad to know how to free their clothing from the musty, stuffy odor that sometimes affects it. Dried lavender flowers, encased in thin muslin bags and placed among garments in the trunk or drawers will help somewhat, but oil of lavender will do a potent, faithful and unfailing friend. Put a few spots dropped into a cup of hot water with a few drops of perfume and the steam will perfume the air subtly and with a fragrant, resistibly clean and charming, and a glass vessel of this steaming and perfumed water set in a closet or wardrobe, or beneath the chair across which dusty-smelling garments are hung, will work wonders also. The perfume is not expensive, and a few drops will go a long way. A small saucer containing a few drops of this pungent oil, will drive the musty odor from a dining-room very speedily.

FRESH air and plenty of sunshine are absolutely indispensable to give the bloom of life to the skin. The bed-room windows should be kept open at the top, even during the coldest winter nights. Whether the weather

a quick walk in the fresh air must be part of the day, even if it involves a slight risk of catching cold. In these times of brain exhaustion from continual over-exercise, fresh air is the very condition of life, and it is far better for the neurotic woman to run the chance of an occasional cold than to accustom herself to become a coddle. The veil, thought by many to be a protection, is often, curiously enough, a cause of much mischief to a sensitive skin. The veil is of the most costly make, and the threads will rub the face, making it sore, and the dye may also be most injurious.

WISDOM OF COMMON SENSE.—A little wit is better than a great amount of muscle. It is told of a Pittsburgh iron company that bought a large amount of old iron bells for the iron that was in them. The bells were not loaded but in order to get them it was necessary that they be broken into pieces. An attempt was made to remove them with a sledge hammer; but to no effect and the project was given up thinking it would be of little use to them. Some day a man came along who said, "I understand you have a job for a man here," and he wanted that pile of bombs broken," and he replied, "How much will you pay?" He told him you give 6½ cents a piece if you will break them all." "I'll take the chance," said the man. It was a cold day and he immediately set to work. But he did not use a sledge. He carefully poured each bell into his mouth and therein poured until they were full, then went into the cellar, made out his bill and told them he had all in the morning for his pay. The bells having frozen during the night in the cellar the bombs were found nicely broken.—*Swanston Mirror.*

SCIENCE AND FAITH.—"Every religious man," Murphy says, "believes that God is in his creation; he may therefore reasonably expect that those discoveries which reveal the secrets of the universe, and the processes which it has assumed its present form, will be reflected light, not perhaps upon the material, but on the Divine government; and if it is unable to see any such connection between the things of Science and Faith, his inference will be, not that there is no connection, but that it is yet to be discovered."

The same writer, Joseph John Murphy, of New York, is quoted by the late Professor Cope as saying, "There is no action which may not be habitual, and no habit which may not be changed."

Dr. Joseph Henry, in United States National Office Report: "The great aim of science is the discovery of truth; and the professional man is entertained for it by the profession is a sure indication that truth, the whole truth, will always be conducive to the progress of nations or individuals, and to present it simply as a proposition of special application is the best means of preventing error."

LOYALTY AND HOUSEKEEPING.—Four years ago in a suburban town in New Jersey, two ladies were having between them eighty-seven

cents in money, started a business enterprise. One of the boys had always enjoyed helping his mother in her housewifery, particularly when the season came round for making preserves and pickles. When a summer of invalidism laid the mother aside, the family made up their minds that the next winter would be marked by a diminution of the canned and preserved fruit, of which all were fond, but they reckoned without the pluck and energy of the eldest son. He used his vacation in doing all by himself what his mother had formerly done, and in the autumn her preserve closet showed fully supplied shelves. It was this experience that emboldened him and a companion to go, very simply and modestly, and undertaking to fill only small orders at a small profit, into the business of making preserves. To-day, after four years, one young partner having retired and gone into other business, the original beginner is the proprietor of a large and paying plant. He supplies housekeepers over an extended area with their jams, jellies, canned fruits and pickles, for a whole season; his trade-mark stands for excellent work; he has a line of business that an older merchant might envy. This is a demonstration of what good sense, thoroughness and push will do, when united with practical knowledge and a very little ready money.

Why are mothers in general so reluctant to let the boys assist in the housework? There is no reason in the wide world why a boy should not make beds, wash and iron, and wash dishes, quite as handily and neatly as a girl, and the muscles that respond so eagerly to the demands of base ball and football can be trained without trouble to the lifting of many a domestic load. Whatever you do, mothers, or leave undone, do not forget so to bring up the boys, that they may feel some of the responsibility of the home. They will be better sons and brothers for this training, very possibly better men of business for it, and very certainly, better husbands by and by, for girls who are fortunate to marry them.—*Christian Herald.*

As announced in our news columns for Fifth Month 2nd, Miller Reese Hutchinson, an electrical engineer, has invented an "Acousticon" which, it is claimed, will enable the deaf to hear. The device involves all the important principles of the telephone, plus Hutchinson's inventions, the effect of which is to give such intensity to sound waves that they will penetrate ears that have never before heard a sound.

The "Acousticon," as described in the New York Sun, is in three pieces, which may be carried in the pocket. That called the receiver—which in the telephone would be called the transmitter—is a vulcanized rubber disc about three inches in diameter. To its back is attached a hook by which it may be suspended from a waistcoat pocket. The reverse face of the disc is hollowed in and the hollow contains gases, the composition being known only to M. R. Hutchinson, as hermetically sealed.

The other two pieces are the earpiece, which corresponds to the receiver of a telephone, and the battery. The latter is about three inches long, two inches wide and half an inch thick. It contains several cells, which

supply the electric current. Wires connect the three pieces of the machine.

When Hutchinson is operating his invention he stows the battery away in his waistcoat pocket. The sound that is to be transferred, whether it be the voice or some other sound, is caught by the receiver and intensified before it passes to the ears of the subject.

M. R. Hutchinson recently gave a successful test of his instrument in New York. Dr. Van Tassel of the deaf-mute institute said that the invention would reduce to a minimum most of the difficulties that have to be met with in teaching a mute to talk. With the "Acousticon" the mute can hear himself or herself talk, and thus hear what speech sounds like. Last year M. R. Hutchinson went to England and gave several tests of his instrument. One test was given at Buckingham Palace and Queen Alexandra bestowed a gold medal upon the inventor.

A Noble Experience of Dr. John Fothergill.

How say they that scandal is always an appendage to the Tea Table; that its subjects are ever drawn from the very reprehensible and poisonous source of defamation? I am happy that I have seldom been able, experimentally to acknowledge the propriety of this assertion; this afternoon hath been one of the many which I have seen devoted to recounting deeds of worth. Among other exalted characters, and memorable anecdotes, the celebrated Doctor Fothergill has been introduced; he figures in the line of the gentle virtues; it vibrates sweetly upon my ear in the recital, and I will by transcribing it infuse the substance at least upon the page of memory. He was upon the road and alone; a highwayman crossing his path demanded his purse; the assailant was a youth whose agitated frame visibly betrayed the perturbation of his soul. Fothergill expostulated, but the unfortunate invader persisted in his demand—"Thou art," said the humane physician, "in the morning of life, and unacknowledged in the walks of vice; thy mind is abhorrent to thy present course; extraordinary circumstances must have conspired to drive thee upon so desperate an expedition;—here is what may answer thy present exigencies," and he presented his purse; "this is no place for particular enquiries, but my name is Fothergill; I practice physic in London—possibly thou mayst have heard of me; if thou canst put confidence enough in me, call upon me there, my lodgings may easily be found, and I promise thee I'll be thy friend." How dignified are the steps of a man seeking to reclaim, by such extraordinary efforts too, a fellow creature posted in the high road to destruction.

Some mornings after the good doctor is seated at the breakfast table, a stranger very importunately requests to see him; he supposes a patient, and his humane feelings are immediately engaged; it was indeed a patient, his disease, however, of the mental kind. The son of adversity presents—"I come, sir, relying upon and confiding in the fame of your unsullied virtues"—and he prostrated himself at his feet; they instantly retired to a private apartment, and the unpracticed culprit unbosomed himself to this excellent man "An erroneous education, sir, has been the source of my ruin; my father bred me a gentleman,

yet in that character it was not in his power to support me. I was early initiated into a life of dissipation, and amid the licentious round I am stripped of every farthing; no friendly hand presents; the walks of rectitude are barred against me, nor is there an avenue which I can enter; but one alternative remained, either to arm myself against my own life, or point the pistol at the breast of another; a love of existence prevailed, and I have assaulted, with impious despair, the man on whom the welfare of a very large proportion of my fellow creatures depended, yet my reliance on your honor, sir, is implicit; and if, by your means, I could be placed anywhere out of the knowledge of those who have witnessed my misfortunes, where I might obtain support, my obligation to you would be eternal." White robbed mercy still triumphs in the bosom of the doctor; after some deliberation he proposed to the young man some honorable employment abroad, he said he could have no objection, provided he could be taken out of the country which had witnessed his misfortunes. The man of feeling rejoined, he would consider what might be done for him. This he did effectually, for by his interest in the course of a few days he was provided for, in the East India Company. The start of the young adventurer was lucrative; two or three years enriched him beyond his utmost hopes; and he returned penetrated with the deepest sense of his patron's benignity; once more he prostrates himself at the feet of the doctor. "Take, sir, the life of the man you rescued from destruction!" The comments upon this anecdote so much to the honor of Doctor Fothergill, are obvious; and the result such as reason would teach us to expect. A useful member of society is restored to his family, to his friends, and to himself; a good citizen is saved to the State, and by proper exertions of lenity an unhappy being is stopped in his career of iniquity.

It is not worthy of consideration whether it would be of much more utility viewed as a political object only, for every government to endeavor to reclaim instead of cutting off, in the midst of their days, those who have but just entered the devious walks of vice.

CONSTANTIA.

NEW YORK, Second Month 25, 1808.

(Copied for Elizabeth Pearsall).

How one Woman Endured.

It has often been noted, that when undergoing great physical stress and hardship, woman endures the strain better than man, and is delivered from the emergency with her faculties more perfectly under her control. And the peculiar part of it all is, that the more finely bred she is, and the higher-strung the condition of her nervous system, the better is she able to withstand trials that cause the utter collapse of those possessing much greater physical strength. A remarkable instance illustrative of this, is related by Charles F. Lummis in his account of California's Death Valley, and the fearful trip across it, that gave it its gruesome name.

"There is on the globe no other spot so forbidding, so desolate, so deadly. It is a concentration of the hideousness of that whole hideous area; and it has a bitter history.

"One of the most interesting and graphic

stories I ever listened to was that related to me, several years ago, by one of the survivors of the famous Death Valley party of 1849—J. W. Brier, an aged Methodist clergyman, who preached the first Protestant sermon in Los Angeles.

"A party of five hundred immigrants started on the last day of September, 1849, from the southern end of Utah, to cross the desert to the new mines of California. There were one hundred and five canvas-topped wagons drawn by sturdy oxen, beside which trudged the shaggy men, rifle in hand, while under the canvas awnings rode the women and children. In a short time there was division of opinion as to the proper route across the pathless waste in front; and the next day five wagons and their people went east to reach Santa Fe (whence there were dim Mexican trails to Los Angeles), and the rest plunged boldly into the desert. The party which went via Santa Fe reached California in December, after vast suffering. The larger company traveled in comfort for a few days. Then they entered the Land of Thirst and for more than three months wandered lost in that inconceivable realm of horror. It was almost impossible to get wagons through a country furrowed with canyons; and presently they abandoned their vehicles, packing what they could upon the backs of the oxen. They struggled on to glittering lakes only to find them deadly poison, or but a mirage on barren sands. Now and then a few spring in the mountains gave them new life. One by one the oxen dropped; day by day the scanty flour ran lower. Nine young men who separated from the rest, being stalwart and unencumbered with families, strayed into Death Valley ahead of the others, succumbed to its deadly thirst, and, crawling into a little volcanic bowl to escape the cold winds of night, left their cuddled bones there—where they were found many years later by Gov. Blaisdell and his surveyors, who gave Death Valley its name.

The valley lies in Inyo County, and is about one hundred and fifty miles long. In width it tapers from three miles at its southern end to thirty at the northern. It is over two hundred feet below the sea level. Most of Inyo County is a great plateau, averaging five thousand feet in altitude, and in it, in the south end of the Sierra Nevada range, towers the loftiest peak in the United States—Mt. Whitney, fifteen thousand feet high. So, as you can imagine, there is a terrible 'jumping-off place' when one comes to the brink of this terrible valley. From five thousand feet above sea level to two hundred feet below, it is a good deal of a drop; and in places it fairly looks as if one might take it at a single jump. The valley is walled on each side by savage and appalling cliffs which rise thousands of feet in apparently sheer walls. There are but few places where it can well be crossed from side to side; for by the time one has trudged over those miles of alkali one is generally too far gone to climb up the farther rocks to safety. It is the very last place. There is nothing so deadly even in the hottest parts of Africa. Not even a bird flies across that hideous waste—nature is absolutely lifeless here. It is the driest place in the world—the place where one will soonest die of thirst, and where the victim soon becomes a perfect mummy.

When the melting snows of the Sierra come roaring down the slope in great torrents they do not reach the bottom of Death Valley. Long before the stream can get it swallowed up into the thirsty air and the arid sands. The main party of pioneers in Death Valley at about the middle of the year is but a few miles wide, but suffered fully there. With every day their condition grew worse. The gaunt oxen were so dead that their meat was rank poison; the last starving band had no food for three weeks save ox-hide scorched and then eaten to a bitter jelly. Day by day some of the number sank upon the burning sands to rise again. The skeleton survivors were too weak to help the fallen. One poor fellow revived enough to crawl four awful miles on his hands and knees in pursuit of his companions, and then died.

The strongest of the whole party was the wee, nervous wife of J. W. Brier, who came to Colorado an invalid, and who, with her boys of four, seven, and nine, and that indescribable tramp of nine hundred. For the last three weeks she had to lean on her athletic husband from the ground every morning, and steady him a few moments before she could stand; and she was able to help the giants, who a few months before, could hold her upon their palms. When they reached the home of a wealthy Spaniard, her husband had wasted from one hundred and seventy pounds to seventy-five, and the others in proportion showing the suffering and agonies they had undergone.

Love's Spelling-Book.

Harry found an old English spelling-book about the house which his grandmother used in school and which had a very new way of spelling many words. He was going over some of the funny spelling when his mother called him to her.

"How many ways of spelling love have you found, Harry?" she asked.

"Only one," he replied. "It is just the same in this book as it is in my spelling-book at school."

"Why," said his mother, "I know can than one way. I think there must be at least a dozen ways—possibly a hundred or more."

Harry opened his eyes wide in surprise.

"Just now," said his mother, "you are part of your dinner that the poor boy might have a good meal. You must send a word in the basket, because you do not want your right hand to know what your left hand did; but nevertheless there is a word in the basket spelled out in velvet letters. Can you guess what it was?"

"Was it love?" asked Harry.

"Yes," answered his mother. "A week when you put your dime into the missionary bank you did not say anything that rattled down among the other coins but it speak very distinctly a word which is not catch. Do you know what it was?"

"It must have been love," again a Harry.

"Yes," said his mother, "that was one way of spelling love. And a little while ago as I was watching you play your game in the yard, I saw you step out to make love for James Marshall. What was that?"

"ay," exclaimed Harry, "that was because I thought it was his turn, altho' I was mine, and so were all the rest of us; but I gave up to him just because I thought he had a good time."

"Did you spelled the word in another way," said mother.

"No, I declare!" said Harry, "it is such a beautiful word that it ought to have a book all to itself."

"That," answered his mother, "Our whole family are intended to be primers of love, in which we should be constantly spelling out love by kind, thoughtful actions so as to have the world a beautiful, happy place in which to live."—*Exchange.*

HEROISM.—To sum up, then, heroism is based upon two qualities: truthfulness and selflessness, a readiness to put one's own interests aside for that of others, to be courageous, all kind to those younger than ourselves, helpful to your parents, even if that requires demands some slight sacrifice of your pleasure. You must remember that the two qualities are true signs of Christian character. If one is to be a true Christian, one must be a Christian hero. True heroism is inseparable from true Christianity, and as it is the former I would urge most strongly and earnestly the practice of the latter.—*Home Missions.*

"FILIAL YE MY JOY" (Phil. ii: 2).
Filled with divinest thirst,
And pressed with strong imperious claim,
Within the midst of boundless store,
Thy moistened cup all unbounding,
I fill up my heart with unalloyed joy,
To rest until beside the margin
Of the fullness of the Master's mind,
In the reflections of thy saintly grace.

H. T. MILLER.

WILLE, Ont.

Items Concerning the Society.

FROM ENGLAND.—There are so few that we have where we are, endeavoring to conserve our precious (and there is so much) in our beloved Quakerism, and yet willing to see the light which is coming along, and which if we are not so slow and cautiously received will tend to open and enrich the truth that we already possess. It is a position that will most surely lead to a light and to heavy burden-bearing, but it is a position that there is no other position open for us. If we are living to hold our own and are unwilling to be faithful in our day and age.—*Correspondent.*

FROM NEW HAMPSHIRE.—Some one sent me a FRIEND, and I find much comfort in reading. I cannot unite with the [recent] departure from the principles of our early Friends. I am called "bigoted," "narrow minded," and I know what else; but all this don't move me a firm in the belief that our principles are in accordance with Christ's teachings, and our Friends so easily depart from them? Heart-reaching, heart-tendering sermons were given to forty or sixty years ago are fresh in my mind now. If we had such preaching in our day, there would not be so many vacant seats as there are now. Those sermons, of love and tenderness, had a gathering in which those not members of our Society were convinced of our principles in silence. They felt that there was an influence over the meeting which they did not find in other meetings. It is cause of mourning when we

see how it is with our meetings to-day. Yet I am comforted in believing there is a precious remnant of faithful ones, and I firmly believe that remnant will increase.—*Correspondent.*

In Dublin Yearly Meeting on Fourth Month 29, John Orr Green thought that in its reply to an American Yearly Meeting some notice should be taken of the system of appointing pastors. He deprecated the manner of holding some meetings in the United States, and suggested that the hope might be expressed that Friends there might be prevented from sliding away from the principles of the Society of Friends.

Several agreed with him on the ground that when once an assembly of Friends in their meetings restrict the liberty of individual members to speak under Divine guidance, it ceases to be a Friends' meeting for worship. The liberty or absence of liberty in this particular settles the question.

The final view before the meeting was to the effect that by abstaining from sending advice to pastoral Yearly Meetings in this particular, some would be left in a better condition to see their way out from under the burden of this experiment, into the open exercise of gifts, as every man had received a gift, in the waiting worship of a waiting ministry.

After an animated discussion on the stand that should be taken against the increasing wave of militarism, it was concluded to ask London Yearly Meeting to extend to Ireland the visit of the large Peace deputation which it had appointed.

A member queried, were we to abandon the advocacy of what we think to be rights, because we were brought into strange companionship? Discussing the subject of peace once with a stranger, the latter, after hearing his arguments, said, "You talk like a Quaker." He wondered if the conversation of some of our members on the subject would have elicited a like remark.

The total membership of the Yearly Meeting was shown to be 2,529, an increase of one member. Ten per cent. of these are officers (ministers, elders and overseers). This was occasion of one speaker saying, "We are like a vast piece of machinery, holding meetings, sending out deputations, but lacking sadly in the power of the Holy Spirit to drive it." Others testified to encouraging favors manifest of the demonstration of the Spirit and of power. One said, on the state of the Society, "We want the ministry of the opened vision, that will make us feel that we are in the presence of our Lord and Master." Another: "Our whole organization seems like a beautifully laid fire, needing only a match to ignite it." Another: "We are not ashamed of the Gospel of Christ, but are sometimes ashamed of the way in which it is set forth."

These are but gleanings—not a report, and we trust, not distortions—from the London Friend's account of the first two days. More may follow, as they have point, for our notice or instruction hereby. The discussion on peace, and probably some other subjects, would be interesting to our readers if copied more in full.

Notes from Others.

Pope Leo. XIII has outlived all but one of the sixty-one cardinals who elected him.

Bishop Thoburn recently baptized 757 candidates at Thasara, Gujarat, India, in a single day. It was probably the largest number of baptisms ever administered in one day by any minister of the M. E. Church.

Bishop Frederick Burgess of the Protestant Episcopal diocese at Long Island has declared strongly against raising money for churches through card parties or church fairs in which the element of gambling enters.

The *Congregationalist* believes that "The same business reasons exist for the merging of denominations doing the same work in the same field on the same principles, as exist for the merging of great business enterprises."

A. H. Bradford says: "Some time bigotry and controversy will cease, and fraternity begin. Then the Church will move as one man against vice, cruelty, bigotry, and all that works lies and hinders brotherhood will flee away."

The College of Confucius, the old university of China, has for three thousand years borne the name of Kwotsekie. Its main building, the finest temple of Confucius in China, has three hundred volumes in its court, on which are engraved the names of its sixty thousand graduates.

The Wayside Chapel in Malden, Mass., is the one Universalist Church in which service is held every day in the year. A woman called "Rev. Mrs. Bruce," editor of *The Myrtle*, is the pastor. She has been a preacher for over twenty-five years, and was ordained in her own chapel shortly after the dedication.

Samuel A. Eliot says in the *Christian Register*: "Unitarians have so completely outgrown the bad habit of 'pitching into the orthodox' that they are often surprised to discover how incoercible is the habit of the self-appointed guardians of the faith once and forever 'delivered to the saints' of pitching into the Unitarians." [On this we repeat a former caution: "They who would contend for the faith once delivered to the saints, must do it in the spirit of the saints, which knows no rancor." Yet perhaps if the liberals felt the relation of a correct faith to salvation as the "orthodox" feel it, they would be equally aggressive. But do some of the orthodox realize that in the very act called "pitching in" or personal denunciation, they cease to be orthodox?"—*Ed.]*

The Protestants in Australia have been aroused to great indignation by the burning of the New Testaments belonging to the native converts in the Rewa district, Fiji. They were a recent translation, and belonged to a tribe who, under the coercion of their chief, were perverted from the Methodist Church to the Roman Catholic. They were burned by Sisters of Mercy under the direction of one of the Fathers. The Cardinal has explained that the Bibles were burned because the natives used them as idols.

William Morrison, of Lexington, Va., says the *Presbyterian*, who is returning to this country after six years' work along the Kasai River, about 1,200 miles in the interior of the Congo State, fully confirms the stories of the abuses in the Congo Administration. He reports that his personal investigation has revealed that, as a result of the rubber monopoly's introduction of forced labor, a virtual slavery has been imposed upon the natives. Villages have been forsaken and the inhabitants have fled into the forests to escape the tyranny of the oppressors. It has been utterly impossible to get any redress from the Congo State officials for the flagrant cruelties and abuses, and an appeal has been made to the American and British ministers at Brussels, and the State Department at Washington will be furnished with evidence on the subject. That such conditions should exist at the beginning of the twentieth century, and at this stage of the world's progress in civilization, is deplorable, and it is to be hoped that the right means may speedily be adopted for the correction of the existing evils.

The Winnipeg *Free Press* gives an encouraging account of recent events among three of the colonies of Doukhobors which were affected with the wandering idea, and who sent their horses and cattle adrift. As a result of Verigin's influence

the Doukhobors are now making entry of their homesteads. The committee made a house-to-house visitation throughout the forty-four villages of the colonies. With three exceptions, every Doukhobor of more than eighteen years of age gave to Verigin a power of attorney authorizing him to make the necessary entry, all the homesteads thus settled being with one exception communal property. In the colonies alluded to, a total of 1743 entries has been made. Including the Rosthern colony, the total is 1902, compared with 207 in 1902 and 62 in 1901. Large purchases of heavy draft horses and stock have taken place; numbers of Doukhobors have attended lectures on grain and fruit culture; latest machinery is being introduced, and considerable preparations are being made for the education of the children. All this betokens a change of view, and is full of hope for the future. An illustration of the spirit of brotherly love existing is found in the handsome gift recently made by the brethren of the Rosthern colony to their neighbors of the North, South and Good Spirit Lake colonies. The members of the former not having joined the pilgrimage, remained in comfortable circumstances. In Third Month they sent a present of \$8,000 in cash and thirty-eight fine horses to their fellows of the three colonies to help them to a fresh start in life.

SUMMARY OF EVENTS.

UNITED STATES.—A bill passed by the Legislature of Pennsylvania has lately become a law by the approval of the Governor, which is to prevent the publication of unjust and defamatory statements respecting individuals. It provides "That from and after the passage of this act, civil action may be brought against the proprietor, owner, publisher or managing editor of any newspaper published in this Commonwealth, whether the same be published monthly, bi-weekly, semi-weekly or daily, to recover damages resulting from the negligence on the part of such proprietor, publisher or managing editor in the ascertaining of facts and in making publications affecting the character, reputation or business of citizens."

A despatch from Washington says: Manufacturers which enter into the international commerce of the world are valued at four billion dollars, according to a statement just issued by the Bureau of Statistics of the Treasury Department. Of this sum the United States furnishes four hundred million dollars, or ten per cent.

A new industry, the raising of Sea Island cotton, it is said, is to be started in Porto Rico by a company, whose directorate includes several prominent American capitalists.

A law has recently been enacted in Pennsylvania changing the limit age of children working in the coal mines from fourteen to sixteen years.

The Mayor of Philadelphia lately stated his belief that "city and municipal government of our city depend entirely for its success upon the Christian people living in our community."

A despatch from Omaha of the 12th inst. says that Judge Dickinson, in the District Court, to-night, on application of the labor unions whose members are on strike, issued an injunction against the business men and employers even more sweeping than that issued by the Federal Court against the unions last week.

The order restrains the business men from refusing to sell goods to dealers who employ union labor; prevents them from boycotting union labor; requires the Business Men's Association to cease holding meetings or conspiring against the unions or in any way interfering with the unions in the management of their affairs.

A recent storm during which 8.40 inches of rain fell in twenty-four hours has done great damage to Jacksonville, Fla., and its neighborhood.

The executive committee of the Carnegie Institute reports that the entire sum of two hundred thousand dollars allotted to grants for original research has been distributed among scientists for the purpose of aiding in making scientific investigations.

ing the total appropriations made by the Fifty-seventh Congress amount to one billion five hundred and fifty-three million six hundred and eighty-three thousand and two dollars, an increase over the Fifty-sixth Congress of one hundred and thirteen million one hundred and ninety-three thousand five hundred and sixty-seven dollars. This is accounted for in part by increases in the appropriations for the postal service of fifty four million dollars; for the naval service of seventeen million five hundred and thirty thousand dollars; for rivers and harbors twenty-nine

million five hundred thousand dollars; for the isthmian canal fifty million dollars; for the agricultural department two million five hundred thousand dollars; for legislative, executive and judicial expenses four million two hundred thousand dollars; for public buildings throughout the country ten million dollars; for the Philippine Islands three million dollars.

Reductions are made in the appropriations for the military establishment of sixty million dollars and for pensions ten million dollars.

The movement to assist the poor in Philadelphia by allowing them to cultivate vacant lots in the suburban districts has gradually extended so that while only twenty-seven acres were cultivated in 1897, five hundred and twenty-eight unemployed benefited and six thousand dollars earned; in 1902 one hundred and ninety-eight acres were cultivated, three thousand seven hundred and seventy-five persons were benefited, and fifty thousand dollars earned.

During the same time the cash cost per garden or family has decreased from eighteen dollars and twenty-five cents each in 1897 to seven dollars each in 1902.

There were 474 deaths in this city last week, reported to the Board of Health. This is 24 less than the previous week and 78 more than the corresponding week of 1902. Of the foregoing 247 were males and 227 females; 51 died of consumption of the lungs; 75 of inflammation of the lungs and surrounding membranes; 1 of diphtheria; 13 of cancer; 17 of apoplexy; 27 of typhoid fever; 3 of scarlet fever, and 1 of small pox.

FOREIGN.—A dispatch from London, of the 12th inst. says: Colonial Secretary Chamberlain announced in the House of Commons to-day that as a result of the British military operations in the Sokoto and Kano district, ending with the capture of the Emir of Kano, 100,000 square miles of territory has been added to Northern Nigeria and would be administered by the Government of that territory.

The district of Sokoto is said to have a population of 12,000,000, and is located near a branch of the Niger river in Northwestern Africa.

In order to test the correctness of the statement that coal deteriorates in its steam producing power by exposure to the atmosphere, an experiment has been entered upon in England by submerging 20 tons of Welsh coal enclosed in wooden cases, which after a year is to be raised and tested.

In the recent protocols referring the Venezuela claim to the Hague tribunal it is provided that the Czar of Russia shall appoint from the members of the permanent court of the Hague three arbitrators to determine and settle the question; the proceedings are to be conducted in the English language, although, with the permission of the Tribunal, arguments may also be made in other languages. Any nation having claims against Venezuela "may join as a party in the arbitration provided by the agreement."

A French airship lately made a successful trip of about 24 miles. It started out in a light rain, with a breeze blowing, passed over a number of towns near Paris, circled around and returned to the starting point and landed without accident. The trip took 96 minutes.

Culion, one of the islands numbering from 1400 to 18 in the Philippine archipelago, it is stated, is to be apart for the exclusive use of lepers, of whom there believed to be at least 10,000, and possibly 15,000 in the archipelago.

The recent massacre of Jews in Kischeneff in South-west Russia was attended with revolting cruelties which have excited the abhorrence of their co-religionists of others throughout the United States, and elsewhere. Urgent requests have been made that the United States Government should remonstrate against these barbarities.

The number of Jews and Jewesses killed is now put between sixty and seventy, and the number of seriously injured is estimated at about 500.

The report published in the United States that a massacre of Jews, similar to that at Kischeneff, had occurred at Tirsonol, is officially denied.

"The Kischeneff Relief Committee in Russia states: 'Thousands of families, representing all classes, including storekeepers, merchants and laborers, remain without clothing for their bodies and without a piece of bread to eat. The dwellings and homes have been destroyed

Their furniture and household utensils have been broken or stolen. Cash, money and valuable documents have been torn and burned, and long accumulated wealth scarcely remained in the smallest quantity to support the broken bodies and souls." The authorities cooperated at the riots, and the police openly sympathized with anti-Semites. Some even assisted in the rioting. Jews of England have protested.

It is stated that 3000 suits for damages have been

stituted against the State of Kischeneff. The damages to the amount of \$1,500,000.
Lieutenant General Von Reaben, Governor of

abia, the capital of which is Kischeneff, has been removed to St. Petersburg.

Mexico is reported to have entered into a trade agreement with Argentina, Peru, Bolivia, Chile, Ecuador, El Salvador, Paraguay and Uruguay to submit all disputes between these countries to arbitration.

Of European nations the Norwegians and Swedes have the longest lived, the Spaniards the shortest. According to a foreign statistical return recently issued, the average age duration of life is as follows: Sweden, 46 years and 50 months; England, 45 years and 3 months; Belgium, 44 years and 11 months; Switzerland, 44 years and 10 months; France, 43 years and 6 months; Austria, 42 years and 8 months; Bavaria, 36 years, and Prussia, 35 years and 4 months.

A dispatch of the 14th, says: Mount Colima in a violent state of eruption. A vast volume has been pouring from the crater for the last without interruption, and the greatest alarm Tuxpama, twenty miles distant, and at the other of that neighborhood. The eruption far exceeds violence that of a few weeks ago.

NOTICES

Notice.—Friends visiting Warwickshire will find a meeting at 11 on first days held in the Meeting house at Warwick, twelve miles from Coventry, and two-and-a-half miles from Leamington.

WESTTOWN BOARDING SCHOOL.—For con persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.18 A. M. and 4.32 P. M. Other trains are met when Stage fare, 15 cents; after 7.30 P. M., 25 cents. To reach the school by telegraph, wire Westtown, Pa. 11.12. EDWARD G. SMEDLEY

WESTTOWN BOARDING SCHOOL.—Applicants for admission of pupils to the school, and letters to instruction and discipline should be addressed to
WM. F. WICKERSHAM,

Payments on account of board and tuition
communications in regard to business should be
EDWARD G. SMEDLEY, Superintendent
Address Westtown P. O., Chester

NOTICE.—Suburban Friends having flower wild or cultivated, will confer good upon our surroundings in the city—members of sewing mission schools and others—by sending flower five cent package express to Broad Street Reading Terminal on Sixth-days or Seventh-days to the care of MARTHA S. CALLEY. Postal-thereof to her at No. 4234 Pine St., Philadelphia be helpful.

Westtown Old Scholars' Association
Seventh Annual Reunion (Fourth Westtown)
the Old Scholars' Association is planned for
Sixth Month 6th, 1903, on the School ground
town.

All old scholars, their husbands, wives and all others interested, are invited to become members of the Association. The members are invited to the Reception which will be held from 9 a. m. to 5 p. m.

Special trains will be met by stages at Winton. The meeting will be held at 11 o'clock. O. S. A. tent; it will be addressed by interlopers, whose names will be announced later. Lunch will be served in the school building. Noon will afford an opportunity of viewing games, walks, and having the more social old school friends.

Friends' Library, 142 N. 16th Str
Open on week days from 11.30 A. M. to 2

—Open of week
3 P. M. to 6 P. M. The new additions include

BEYCE, JAMES—Studies in Contemporary

Distinctiveness.

"We would that all people knew our inside as they know our outside," said George Fox. But is for lack of knowing our inside,—our spiritual principles,—that people think that Quakerism consists in our outside. Failing to have now-a-days the distinctive externals by which Friends were formerly recognized, they think Quakerism itself is well-nigh gone. Much superficial talk of that sort has appeared in the pages of late. The most internal system of doctrine and in the Christian church is sought by writers otherwise intelligent, to be eternal, or nothing. A distinctive way of living tends to make a distinctive way of speaking, but the outward letter is by no means all there is of the inward spirit. It is a law of life that a distinctive principle will form about itself a distinctive expression. Throughout creation this is done, else all classification and every natural science would be impossible. Distinguishableness is kinship to fellow-mortals everywhere. If the Scriptures do not prescribe it, what do the Scriptures' God do? He gives every man his face his distinctive outward appearance. He wisely distinguishes Haggai from Isaiah and Matthew's style from Paul's. He sends that the inner germ of one apple-seed will uniformly produce a Baldwin, and that of another always a pippin. As is the interior principle throughout his works is the exterior form. And we are told this is not Christianity. It is, if it was through Christ "that all things were made, and without Him not one thing made that was made." It is Christianity in natural law, if it be Christ, as declared, "who upholds all things by the word of his power." It is by Christian law, and brotherly kindness, that such on earth are distinguished from other professions and the conception of a ministry by the Spirit, and be from hire, of worship by immediate and sent Divine intercourse, of the immediate-

ness of Christ's dealing with us as our sufficient Mediator and priest, of abstinence from oaths and wars, of renouncing all display or appearance that caters to vanity or pride, of the conformity of daily conduct and religious work to the perceptible witness of Christ's Spirit, of baptism and communion as by the Spirit only,—that such disciples, so differentiated from other professions inwardly, should let their true inwardness have the advantage of generally understood signs,—signs practically of those principles' own producing. The studied absence of such outward indexes comes pretty close to a confession that there is nothing distinctive at heart to stand for. Accordingly it is not without reason that the public think Quakerism is gone, where it is not earnest enough at heart to confess itself. The public's error, and sometimes an unsympathetic member's error, is in resting Quakerism on its outward badges rather than its inward life;—which life is, indeed, possible without this or that form of testimony, but yet in human weakness less likely to be kept steadfast.

We would not reflect on some who truly have the root of the matter in themselves, but have not seen the call to testify of it in the usual way. There are, indeed, such precious spirits. Sometimes their way for the testimony has been closed up by injudicious or harmful presentations of the subject; or by the outward testimony of some being found to cover a vacuum, as regards life in the principles. The Searcher of hearts knows each one's peculiar impediments, and we would judge no one. Nevertheless the principle stands throughout this universe, that inward and outward distinctiveness as a rule mutually correspond. Even vanity will have its distinctive tokens of dress and address, and why not sanity? All words are made language by distinctiveness, all atoms and molecules make science possible thereby. It is a kindness in nature, it is also a duty in doctrines. Our protest against forms is not as testimonies of truth, but only as rituals assumed to have a sacerdotal value.

The Presbyterian sustains Friends in their view of the relation between testimonial dress and conformity with the world. The omitted sentence, in our copy following, is this: "The change of dress doubtless affected but little, if any, their spiritual life, save as they made it a

part of their religion." The effect on spiritual life in each case will depend on the amount of obedience or disobedience of the witness of the Spirit that is involved. The changes,—the giving up of the outward testimonies,—must naturally affect one's care to discriminate so sharply as he did before, the grounds whereon he is concerned to be a Quaker. One generation of general non-distinctiveness already shows multitudes under our name ceasing to know their right hand from their left, as regards the standard and doctrines given us to display because of the Truth. Even simplicity itself assumed as an escape from "plainness," has been wofully sacrificed, and loud gaiety largely evolved, by throwing overboard the special plainness that stood as our testimony for simplicity. By many essaying to adopt a simplicity cut loose from testimonial form, simplicity is vanishing among the things that were, and doctrinal latitude and indifference setting in.

But let our great peculiarity be the Holy Spirit without which all other peculiarities are empty.

The Presbyterian on Wordly Conformity and Significant Plainness.

At the recent Yearly Meeting of the Friends held in this city, it was distinctly noticeable that among the younger generation of the sect, the former sombre garb and characteristic headgear was discarded and in their stead a conformity to the prevailing styles and fashions of the world adopted. The change of dress . . . is suggestive of the tendency in the lives of the followers of Jesus Christ which leads to serious and dangerous ends.

Conformity in the manner of dress, the style of living, the character of amusements, the choice of vacation places, and in many of the lesser incidents of life has become a part of existence. The same spirit is entering into a religious life and is much to be deprecated. The yielding in what have been termed the non-essentials, has made easier the yielding in the matter of truth once delivered to the saints. The conformity to men's dictates and customs becomes a habit of life and its influence on the spiritual nature is evidencing itself in a conformity to the world that clearly ought to be guarded against.

Convictions that form the bulwark of belief and the ground of faith are esteemed more or less lightly. The world scoffs or jeers, or mocks, and in that the ardent disciple discovers himself to be a peculiar person is found the basis of his discomfiture. The truth that seemed so necessary yesterday is regarded more or less indifferently to-day. The act that was the result of an ingrained belief seems

out of keeping with its surroundings. The life that is fashioned along the lines of its suggestion is not in accord with the lives of men, and the result has been a yielding, at first only like the change of an outer garment, but because of its relations to the spirit that dwelt beneath, it has marked the beginning of the giving of a vital faith. If one be able to give a reason for the faith that is within him he has a sure foundation on which to build, but if the foundation itself is removed, then there remains only a structure built upon the sand which cannot withstand the shocks and assaults of the storm. It is the conviction maintained, and defended, and contended for that proves a means to the development of character and the upbuilding of the real life.

The same is true of the purposes that dominate the career. It is the purpose carried out in act which proves of value. The good intention that ends with intention is only disastrous. In the tendency to conformity to the world the purpose has been forgotten. The weakening of it has wrought a change in Christian character. The enthusiasm of service loses some of its fervor when it is discovered that it stands well nigh alone. The careless, indifferent, lukewarm endeavor casts a chill over the life. The natural sequence is a pulseless Christianity that has the semblance of the real, but it has been so conformed to the spirit of man that it has been robbed of its vigor. It is not good form to be too enthusiastic, or zealous, or earnest, at least in Christian service, and the consecrated purpose is overwhelmed.

Such a condition is not the result of a moment but is the product of a gradual change of sentiment. It began with the partial yielding and it has culminated in a lost stability of life. Whether it has been due to the world's influence upon the Church, or to the Church's attempt to meet the demands of the world matters little, but the fact remains that the distinguishing characteristics of the disciple are hard to discover. The old Jewish people hid their religion under tradition until tradition itself became their supreme revelation, and mayhap the Christian world to-day has yielded so much to the world of sin that its real truths if not forgotten, have, at least, been too much concealed.

It was Pilate's error when "willing to content the people" he submitted Jesus to the scourging, and then delivered Him to be crucified. It was the spirit of conformity to what seemed to be demanded that led to the crucifixion of the Divine Son. In the life of the professed follower the Master is again on trial. The verdict is being given in the devotion or non-devotion, the full pledged allegiance or half-hearted indifference that is manifested. The world's non-conformist is the need of the hour. The man who has convictions and stands for them, who has purposes and will carry them to execution, who lives not in the fear of man but in the sight of God, who struggles not to suppress the better instincts of his nature to conform them to the world's mold, but who gives them free scope for their development—will attain to the more abundant life. This freedom from the world's restraint will lead out to a glorious liberty, a heritage that belongs by right to the child of God, and the life itself will reflect in clearer effulgence the Divine glory.

Confidence in Friends as Educators.

Friends who are interested in the schools of our Society will undoubtedly find much to encourage them in the article that appeared in THE FRIEND Fifth Month 10th, entitled, "The Line Upon Which to Extend the Influence of Friends' Schools." It is significant that one of our teachers has been favored clearly to interpret to us, what we believe to be the correct line upon which to continue the work, and that the Educational Committee of Philadelphia Yearly Meeting does in these days of vaulted "high standards," control the school patronage of hundreds of children who are non-members of our religious Society, indicates, in our judgment, that a blessing has attended "the strenuous efforts of the past two decades," and has assured to the committee a missionary field, the boundaries of which are unlimited.

SALEM, OHIO.

A. V. HUTTON.

Doukhorbor Notes.

Extracts from a letter of Cornelius Jansen to J. Elkinton:

Yesterday I wrote thee a postal card, saying that I was going to meet with Peter Verigin. They were to come to my room at the hotel (in Winnipeg), and I waited till almost eleven o'clock, and when I had made up my mind that it was not to be, a telephone message told me that P. V. and the interpreter were at the Exchange Hotel, and that they were very tired, and if I would not come up? Of course, I went right up, finding P. V. already in bed, yet we had a very satisfactory conference. His interpreter is a young Doukhorbor, of perhaps 18 years, who speaks English fluently, and I think faithfully translated our conversation.

I wish I could write thee all we spoke about, but that is impossible, and I will jot down what comes to me as I write. Remembering Commissioner Smith's suggestion, I did not press the School question; and, in fact, at first I found him very non-committal; but afterwards he grew more and more friendly, and gave me very directly to understand that he was very much in favor of having schools and education for and among the Doukhobors, and has already, at Yorkton, and will continue to give his influence in behalf of their schools.

When asked about the position of the Doukhobors on the Saskatchewan River with regard to the school, he said that he had only been there five days in all—far too short a time to get any very definite information—but that he had got the impression that they were rather in favor of having a small school house in each village.

It is plainly to be seen that Peter Verigin has been a very, very much occupied and busy man, for he told me, with a shade of sadness, that of the three months he has already been in Canada he has had only *three days with his mother!*

He said that words failed him to express to the Quakers the debt of gratitude felt for all they had done, and still were doing, for the Doukhobors, and that it was his firm intention to come to Philadelphia this summer.

He asked many questions about the Friends

(in fact, he seems to have a very child-mind), if they all lived in town, or were farmers, etc., etc.

When I told him that I thought the Friends would help him defray the expenses of coming to Philadelphia, he said: "How we expect them to do that, when they I already done so much for us? No; I will myself."

He told me his intention is to return Russia this summer in order to labor for release of some 100 Doukhobors who exiled. When I said that I hoped very much that he would soon come back, he said don't know; perhaps the Government will let me to Siberia, also."

This morning Peter left on an early train to go back to Yorkton with a carload of horses, brought here for the Doukhobors, under the personal attention of Superintendent Speers, whom, by the way, I have found very kind-hearted, considerate man.

On Peter's return to Yorkton the fall will be taken with regard to the 2000 he had steady entries, for which he and two of Doukhobors were appointed Commissioners in order to expedite matters.

"Wait on the Lord."

PSALMS XXVII, 14.

It may seem an easy thing to *wait*, but one of the postures which a Christian soldier learns not without years of teaching. Making and quick marching are much easier than God's warriors than standing still. These hours of perplexity when the most will spirit, anxiously desirous to serve the Lord, knows not what part to take. Then we shall it do? Vex itself by despair? Fly in cowardice, turn to the right hand in fear or rush forward in presumption? No, simply wait, *wait in prayer*, however long. Upon God, and spread the case before Him, tell Him your difficulty, and plead his promise of aid. In dilemmas between one duty and another, it is sweet to be humble as a child and *wait with simplicity of soul* upon the Lord. It is sure to be well with us when we feel we know our own folly, and are heartily willing to be guided by the will of God. But *wait with faith*. Express your unshattering confidence in him; for unfaithful, untrusting waiting but an insult to the Lord. Believe that if you keep your tarrying even till midnight, yet will come at the right time; the vision shall come, and shall not tarry. *Wait in quietness*, not rebelling because you are under affliction, not blessing your God for it. Nor murmur against the second cause, as the children of Israel did against Moses; never will you could go back to the world again, but accept the case as it is, and put it as it stands simply and with your whole heart, without self will, into the hand of your covenant God, saying, "Now, Lord, not my will, but thine be done. I know not what to do; I am brought to extremities; but I will wait until thou shalt cleave the floods, or drive back my foes; I will wait, if thou keep me many a day, my heart is fixed upon Thee alone, O God, and my spirit waiteth for Thee in the conviction that Thou wilt yet be my joy and my salvation, my refuge and my strong tower."—C. H. Spurgeon.

MAKING A MAN.

"Worry the baby as fast as you can,
Worry him, worry him, make him a man.
O with his baby clothes, get him in pants,
P'd him on brain-folds, make him advance,
H'dle him, soon as he's able to walk.
In the grammar-school, cram him with talk,
P his poor head full of figures and facts,
K'p on a-jamming them in till it cracks.
O boys grew up at a rational rate,
N'y we develop a man while you wait.

"Push him through college, compel him to grab
O'very known subject a dip and a dab.
G'd him in business and after the cash,
Ally the time he can raise a mustache.
L'ch him forget he was ever a boy;
Mie gold his god, and its jingle his joy.
H'd him a-hustling and clear out of breath.
U'rl he wins—nervous prostration and death."

—The Argo Patrika.

The Confessors of Peace from the Second Century to the Era of Mahomet.

XI.

thenasius, who stood so stoutly in defence of the Nicene creed against the Arians was several times banished from Alexandria, and finally died there in 373, having been bishop for six years. Although on a number of occasions his life was in great jeopardy, it does not appear that at any time did he make appeal to the sword for his defense. The following declaration is in line with the sentiments avowed by Tertullian and Cyprian:

"Nothing more forcibly marks the weakness of had cause than persecution. Satan, who has no truth to propose to men, comes with arrogant sword to make way for his errors. Christ's method is widely different. He teaches the truth, and says: 'If any man will come after Me and be my disciple;—when He comes to the heart He uses no violence, but says: 'Open to me, my sister, my spouse.' If we open He comes in; if we will not open He rebuffs: for the Truth is not preached with swords and spears, not by bands of soldiers, but by counsel and persuasion. But of what use an persuasion be where the Imperial Ego dominates? Or what place is there for counsel when resistance to Imperial authority must terminate in exile or death?"

When Julian was killed in his campaign against the Persians, in 363, Jovian, who was serving with him in the army, was proclaimed by the soldiers to be his successor. Yet Jovian professed to be a Christian of the orthodox faith. Making peace with the Persians, he returned to Antioch, but, on his way thence to Constantinople he died of suffocation, or was so dealt with, after a reign of only seven months. Again the army dictated a successor, in the person of Valentinian, who upon assuming the purple associated with him his brother Valens. The latter thence became emperor of the East, and Valentinian of the West, his capital being Milan instead of Rome. Valentinian had been scarcely two years emperor when a violent contest arose for the see of Rome, for even then the bishopric of that city began to be looked upon as the highest ecclesiastical dignity in the world, and those who held its possession were scarcely gifted with the humility and self-renunciation of Peter and Paul.

In the first two centuries it had been the

custom for the whole Christian population of district over which the bishop was to preside, to decide upon his fitness. Cyprian says, that a true and just ordination was one wherein the suffrages and judgment of both the clergy and the people united. In the year 366 a great struggle arose for the see of Rome, Damasus and Ursinicus being the chief contestants. While the latter was being consecrated in the Julian basilica, Damasus, with a disorderly mob, burst into the building and stopped the proceedings. Violent contests of a similar kind followed, frequently accompanied by bloodshed. At one time as many as one hundred and thirty dead bodies strewed the pavement of the Basilica Licinius. Finally, Damasus, who was a favorite of the Roman ladies, was triumphant. Thus it may be seen that the Romans were still largely pagan, notwithstanding their assumption of the Christian name, and that they yet favored the contest by main force, although the scene might be transferred from the arena of the amphitheatre to the pavement of a Christian basilica.

Chrysostom, then a young man, living at Antioch, subsequently referred to the foregoing and similar most discreditable scenes of strife, when he said: "I will pass by, lest they should seem incredible, the tale of murders perpetrated in the churches, and havoc wrought in cities by contentions for bishoprics. The elections were generally made on public festivals and were disgraceful scenes of party feeling and intrigue. The really important qualifications for the office were seldom considered."

The Mennonite writer, Twisck, in his Chronicle, says of Chrysostom: "This golden-mouth, John Chrysostom, taught also mightily against cruelty, tyranny, war and bloodshed, maintaining that it is altogether improper for Christians to wage war, and that peace and quiet are to be taught in the kingdom of Christ. Christ, he says, compels not, drives not away, oppresses not, but accedes to each his free will, saying that the tares (to which the heretics are compared) are not to be rooted out, which he says Christ spoke for the purpose of preventing and forbidding bloodshed. No violence is to be employed in heavenly things, the wicked teachings which have proceeded from heretics are to be reprehended and anathematized; but the man we must spare."

A little further on we will have further to say of Chrysostom. It will be proper here to briefly allude to several others whose personalities and writings fill a prominent place in this latter half of the fourth century, which produced so many defenders of the Nicene creed, and not a few who appeared as champions of the views of Arius. Among the former were Basil and his friend Gregory Nazianzen, of Cappadocia, both of whom received their education in part at the university in Athens, where Julian, afterwards emperor, was at the same time also a student. Basil, whose name is distinctly associated with the promotion of monasticism in both the East and the West, was involved in controversy with the Arian emperor, Valens, who inclined to manifest toward him a persecuting spirit. Gregory on the accession of Theodosius (A. D. 380) received the call to the high place of bishop of Constantinople, but he liked not the

intrigue, turmoil and contention of the imperial city, and soon returned to his quiet retreat in Cappadocia. Being invited by the emperor to attend a Synod at Constantinople, he replied: "To tell the truth, I am in such a temper of mind that I shun every assemblage of bishops, because I have never yet seen a good issue to any synod, have never been present at any which did not do more for the multiplication than it did for the suppression of evil. An insupportable thirst for contention and rule prevails in them; and a man who dares to lift up his voice against what is base in others, will be far more certain to bring down reproach upon himself than to succeed in removing such baseness."¹⁰

The name of Ambrose, bishop of Milan, is associated among other things, with the humiliation of the great emperor Theodosius. The latter was at Milan at the time of the serious tumult over a chariot race, in Thessalonica, referred to in a preceding chapter as followed by a shocking tragedy of wholesale murder of his own instigation, at the circus in that city. Ambrose peremptorily refused to condone this iniquitous offence of the emperor, but instead, refused him admission to the church, and restored him only after eight months of severe penance. The prelate's excommunicating displeasure and condemnation of the heinous offence were abundantly called for, though the power thus put forth has proved to be a dangerous one to be lodged in or claimed by a mortal. Ambrose nevertheless, defines a limit to the manifestation of condemnation in saying:

"The violence of worldly opponents must not be overcome with worldly, but spiritual weapons; and heretics must be punished only by exclusion from the church; for the champions of Christ seek neither weapons nor iron balls." The emperor Valens had no scruples of that sort. According to Robertson, he ordered (A. D. 373) that monks should be dragged from their retreat and should be compelled to perform their service (civil and military) as citizens, under the penalty of being beaten to death. The Egyptian deserts were invaded by soldiers commissioned to enforce the edict, and many of the monks suffered death in consequence. These favored the Nicene declaration of faith; the emperor, as already said, was an Arian. The army had declared itself Christian.

At the time of this edict of Valens against the monks, Chrysostom, who was then twenty-eight years of age, was living with a community of recluses who dwelt in separate huts in the mountainous regions south of and near to Antioch, having withdrawn themselves that they might live a life removed as they hoped, from the corruption of the neighboring city, laboring with their hands to supply their necessities and those of the poor. Chrysostom wrote a treatise defending the recluses against

¹⁰Eleven hundred years later, we find Cramer using this language to a friend who had unwisely recommended another to a vacant ecclesiastical office. "Ye do know what ambition and desire of promotion is in men of the church, and what indirect means they do use, and have used, to obtain their purpose; which, their unreasonable desires and appetites, I do trust that you will be more ready to oppress and extinguish, than to favour or further the same; and I recommend to your judgment and wisdom, how in an unreasonable thing it is for a man to labour for his own promotion spiritual."

the advisers and abettors of the persecution. He contends that the struggle for virtue ought not to be thus beset by a Christian emperor, while vice is allowed to prevail unchecked. "I see," he says, "a constant perpetration of crimes which are all condemned by Christ as meriting the punishment of hell—adultery, fornication, envy, anger, evil-speaking and many more. The multitude which is engaged in this wickedness is unmolested, but the monks who fly from it themselves or persuade others to take flight also are punished without mercy."

At the end of the fourth century, Theodosius dying in the year 395, the empire was divided between his two sons: Arcadius, a lad of eighteen years—weak in moral principle as in body, the easy tool of designing individuals—being given the eastern division, and his brother Honorius the western. The lapsed conditions at Constantinople like those at Rome were significant, as indicative of the degeneracy of Christianity following the assumption of hierarchial and state supremacy. Rufinus, cruel and perfidious minister of state, Eutropius the vile eunuch of the palace, Gainas, the general who ravished instead of defended the empire and so invited the irruptions of Vandals, Goths and Huns,—these formed a trio well calculated to facilitate the wreck of a great empire.

Aiming at the deposition of Chrysostom from the patriarchate of Constantinople, Theophilus, bishop of Alexandria, instigated by jealousy though concealed under plausible pretences, fomented discord in the city of the Bosphorus. A synod of hostile bishops being convoked there (403) to consider certain false or trivial charges against Chrysostom, the latter was declared guilty, and, by the Emperor Arcadius and his very worldly wife Eudoxia, was ordered into banishment. On the following day an earthquake occurred, which shook the palace, and especially the bed chamber of the empress. Alarmed at what she considered a marked display of Divine displeasure, Chrysostom was immediately recalled and was enthusiastically received by the populace. Two months later, however, there happened an event which again involved the bishop in serious trouble. Eudoxia, despite her high professions of orthodoxy, which she sought to establish by acting as patroness and builder of church edifices, seems to have been a decided worldly in her everyday life, her court, perhaps, not being noticeably different from that of the pagan sovereigns of prior generations. Chrysostom's denunciations of the corruptions of the time, the attendance at the theatrical spectacles and the games of the circus, but particularly his plain talk against female extravagance and levity and the wearing of gay apparel, had at all times been received with an ill grace by the empress, who appeared as the leader of the fashion of the day.

Ambitious also to be the recipient of homage equal to that accorded Arcadius, Eudoxia ordered a statue of herself to be erected, in the forum. It was a brilliant silver image, mounted upon a column of porphyry, and was placed directly in front of the vestibule of St. Sophia—the occasion being celebrated with music and dancing and all the pagan festivities commonly observed at the adoration of the image of an emperor. That such heathen-

ish ceremonies should occur at all, and especially in front of the cathedral, greatly offended Chrysostom, who made an appeal to the prefect of the city. Eudoxia, angered at this, caused a second hostile council to be convened. Although no condemnation appears to have been pronounced on the patriarch, the imperial authority was invoked against him. Upon the eve of Easter, the cathedral of St. Sophia was the scene of a great tumult, the thousands there assembled were forcibly ejected by the soldiery, and when the people reassembled in the Baths of Constantine, the Thracian Band was instructed to follow them, and the former scene was reenacted. Sentence of banishment to a village on the border of Armenia was then declared against Chrysostom. Palladius, who has minutely related these occurrences, says: "The angel of the church went out with him." It is also remarked that "the spirit of lawlessness and selfishness which was let loose during this period of misrule, dealt a blow to morality and discipline from which the church at Constantinople never recovered."

(To be continued.)

FOR "THE FRIEND."

Body and Members.

That "no man liveth to himself and no man dieth to himself" remains to be true of all men who live that true life which has been "by the gospel bro't to light" as an immortal life. As living branches of the one Vine, and as members one of another," because "members in particular" of Him who is the Head over all things to his living Church, it concerns individual members of that mystical Body to ponder their relationship to the Body in both the origination and the operation of that relationship. In the first place it behooves them to consider that society is not a mere aggregation of individuals, fortuitously evolved from individual persons, as the individual person is assumed by an erratic philosophy to have been evolved from individual atoms. In that Divine concept to which our groping human conceptions must normally tend, the vast mass of mankind may be presumed to have been an original unit, whose fragmentary offshoots, all too lamely and slowly are accomplishing the original purpose of the Divine counsel and inception. While therefore individual and society are alike of Divine origin and design, we may for purposes of strict doctrine and true practice, regard the individual phase of life as secondary or parasitic to the social phase, and not the reverse. At least in that educational stage of experience in which we have need to hear from fellow-beings the injunction, "Know the Lord," the living church as his representative element in the promiscuous mass of mankind, demands our loyalty, and inaugurates our needful intellectual sustenance, as representing the present mentorship of Christ upon earth. "Ye," said He, "are the light of the world."

While however that living church of representative humanity must be regarded as a compact and continuous whole in the original purpose and progressive administration of its Divine Ordainer, that essential unity or solidarity is necessarily held in seeming abeyance, as a mere mystical principle, for that in each successive historic era neither the raw re-

cruits nor the trained veterans in the warfare can worthily reflect in their own personality the crowning glory and authentic prestige of the Church Triumphant. T church-unity is, to the world, a necessary invisible fact. The same afflictions are to be accomplished in Christians as are in the world, though to more substantial purpose. They are still more or less largely as deceivers and yet true; as unknown, and yet well known; as dying, and behold they live; chastened, and not killed; as sorrowful, always rejoicing; as poor, yet making much; as having nothing, and yet possessing all things" (2 Cor. vi: 8-10; iv: 7-10). That of that coming completion of Divine revelation (John xvi: 13), in which "spirit and understanding" shall be indeed harmonized, claim of entire catholicity by any Christian denomination must be premature; and the world, while apprehending the body of church as the mere aggregation of such nondescript or paradoxical constituency, can never consciously realize and recognize the leadership of the church as it actually exists.

Therefore it is that, while the intellect the highest plane on which the spiritual can approach the unspiritual consciousness, the leadership of the church in the world is one of warfare and conquest rather than mere logical demonstration. That warfare, conflict of custom or morality rather than argument, wherein the previous worldliness, subdued, or convicted and converted, by authority of a truthful manner of life, became amenable to the "sweet reasonableness" of true logic. As the faithful and persevering neophyte of the church, the convert from the world will graduate through the successive stages of faith and experience which are spiritually symbolized by the blade, the ear, and the full corn in the ear, into that maturity of character which will make him in turn a dispenser of that sweet reasonableness which he has erewhile professed. He will come not only measurably weaned from dependence on church tutelage, but qualified in like measure to represent the church in controversy with the wisdom which "cometh not from above." But still, as has been readily intimated, the relationship of the individual membership to the Body is not limited to the operation or conduct of that outside missionary service; and so it becomes a matter of vital interest to consider what is the definite, abiding duty of the individual membership, as distinguished from the mission of the body at large to the world at large.

And thus the observation seems to be called for, that while the church upon earth, in its relation to the world, is pre-eminently a church militant, the individual members of that church are divinely forewarned that a man's foes shall be those of his own household. The circle of the Christian's external conflict in the world is to be narrowed to those most intimate relations of worldly life, in which his new foibles and eccentricities and his wilful prices will elicit the swiftest and presurably the kindest rebuke. A due regard to the lessons of experience will then inculcate the view that his individual duty of conflict is wholly an internal duty, consisting in the combatting of his own temptations and infirmities which is synonymous or identical

the cultivation of character. Culture, more military parlance, "drill," would seem to be the comprehensive term for dual as distinguished from social duty. "open secret" of social efficiency lies in that the truly attractive life is nearly, though indeed often unconsciously, just truly aggressive life upon all evils. Only be it specified, that a true life must be a progressive culture, and truly attractive life an integral life, to turning of all the slothful or traditional notions which would preclude its being "all things to all men." The of Col. ii: 18, as now restored in the old Version, is cogently suggestive of a military equipment in that progressive culture which ensures a progressive revelation. The love of truth is an all-enlightening as an all-conquering influence; and so becomes a characteristic of the aforesaid in competition or custom or morality upon the church and the world, that while upon the side of the victor, right necessarily constitutes might, on the side of the conquered, might, as necessarily, constitutes weakness. The mere rule of faith, in its incipency, is one of "violence, and not of harmony. Let the Christian soldier loyally follow the holy Captain of heaven in having that single eye to a bear witness (John xviii: 37), unto the whole world, which will take timely cognizance of the germs of deadly sin in mere conventional morality! "First pure, then peaceable," the truly missionary, is one of truly irenic spirit.

Howell said that "duties are ours, and are God's." The conviction and comfort of the sinful soul is doubtless a glory; but there seems a danger of our losing the letter of the familiar text which reads the very practical Epistle of James, the due magnifying of the human agency in dealing with that object, and to a heedless leaning upon the Divine prerogative in the act. Here, if anywhere, the subordination of objective may be found the "mode of entering" of that "cross of our Lord Jesus Christ," which an illuminated writer of the past age has defined as "an inward and not an outward thing." According to this view, objectiveness, as objective, is simply subordination to the attractiveness as subjective, even to the canon to power, or as effect to cause. May our eye be single to the leaden door, and may we overlook no accessible remembrance of the deliverance of our several generations to the world!

R. R.

When he became Lord Chancellor of Ireland. When he was a little boy he read the words which made a deep impression upon him. "God claims you!" Those three words became his life motto. They led him himself to God. They followed him through college and into Parliament, and when he became Lord Chancellor, when he was appointed to that great office, he was teacher of a large Bible class. His minister said to him, "Now I shall be obliged to give up your name," he answered, "I will not."

Science and Industry.

EQUAL parts of ammonia and spirits of turpentine will take paint out of clothing, no matter how dry or hard it may be. Saturate the spot two or three times and then wash out in soapsuds.

SOUTH AFRICAN SNEEZE-WOOD.—Among its many peculiarities, South Africa includes the "sneeze wood" tree which takes its name from the fact that one cannot cut it with a saw without sneezing, as the fine dust has exactly the effect of snuff. Even in planing the wood, it will sometimes cause sneezing. No insect, worm or barnacle will touch it. It is very bitter to the taste, and its specific gravity is heavier than water. The color is light brown, the grain very close and hard. It is nice-looking wood, and takes a good polish. For dock-work, piers, or jetties it is a useful timber, lasting a long time under water.

DISTINGUISHES COLORS WITHOUT SIGHT.—Sixty-five years of sock knitting and quilt piecing is the unique record of the life-work of Lucy Read, of Danbury, Vt., who has been blind since her tenth year. Previous to that she had lost both hearing and speech also. When about fourteen Lucy Read was sent to Boston to be educated, where for a time she was the friend and companion of Laura Bridgman. Since then her time has been given to the making of mittens, socks, quilts and fancy articles. Lucy Read designs her own patterns for all her work, doing all the cutting for patchwork without assistance. Different colors she assort by the sense of taste or smell, and rarely if ever makes a mistake, even in the threads used, and she also threads her own needles.

TALKING FISH.—Professor Holder, a patient investigator of things that other people do not notice, announces that there are something like seventy different kinds of fish which produce sounds. Most people have heard of the grunting carp, but there is a fish which wanders about saying "umph, umph, umph," and another which marches through the silent places of the deep saying "boom, boom, boom."

The fish that says "umph" is the blue catfish, sometimes called the midshipman. Then there is the sunfish, which imitates the typewriter, by rushing about chattering out "click, click, click;" while the solemn dogfish of Newfoundland gets through life with an occasional "roik." In view of Professor Holder's discoveries, "mute as a fish" is an expression which finds small support in actual fact. Apparently fish sounds may be produced by the pharyngeal bones, but in general they proceed from the pneumatic duct and the swimming bladder.

CALIFORNIA'S GOLDEN TREE.—Everybody is familiar with the fame of California's gigantic sequoia trees. Hardly less wonderful for size and far more useful than those trees, are the first cousins of the giants, the redwoods, Sequoia sempervirens. Unlike the Sequoia gigantea, the redwoods avoid the mountains and follow the seacoast, keeping a few miles back, but always within reach of the fogs. Of late there has been a revival of the red-

wood lumber industry, and the great excellence of the wood has never before been so fully recognized as it is now. Of a light salmon color when cut, it gradually turns a deep red. It is hard, and remarkable for its resistance to fire. It gives fine results in carving, and when used for piano cases is said to increase the resonance of the instrument. It polishes beautifully, and is used for house interiors and many decorative purposes. The annual product is now more than three hundred million feet, and it is estimated that the supply will last for one hundred and fifty years.—*Youth's Companion.*

AN OLIVE ORCHARD.—The largest olive orchard in the world, and probably the most remarkable and successful experiment in the history of American agriculture, is located at Sylmar, twenty miles from Los Angeles.

This ranch is a big project in any light in which it is considered. It contains more than 120,000 trees. There are 1,200 acres under cultivation, covering an area whose greatest length is three miles and whose breadth is two and one-half miles. Besides this, the ranch includes an additional 800 acres, which will shortly be planted to olives. There are forty miles of roads within the ranch. One could drive all day without leaving its boundaries. Two hundred and ten thousand dollars have been invested in the orchard and \$15,000 in the factory which treats the olive crop. Olive culture in the United States, which was, at first, deemed a great experiment, has proven successful, for the crop this season from the Sylmar ranch is valued at \$225,000. When the entire 2,000 acres shall be in bearing, at the present rate of increase, the ranch will produce an annual income of between \$300,000 and \$500,000.—*Pittsburg Dispatch.*

Those who enjoy stories of nature will be glad to know of Olive Thorne Miller's forthcoming book for children, entitled "*True Bird Stories from My Note-Books.*" "This is a rather clumsy title," said she in speaking of her work, "but there are so many untrustworthy stories of birds and nature foisted on the public, that I wished to make the reliability of this book apparent in its name. They are all my own observations, and were mostly made in my own home. All are authentic, hence the title. I had a room in my house fitted up with shelves and cages. Here I brought some native birds and after they were comfortably established in their new quarters, I was ready to learn all I could about them. Every morning after they were properly cared for, their cage doors were left open and they enjoyed the freedom of the room. Then, with my note-book, I sat down in an out-of-the-way corner to watch them. I made no effort to tame them; I wanted to learn their natural ways. They often apparently ignored my presence altogether, while I sat quietly taking notes of all that they did. I usually go to the country about nesting time and take up my quarters at some convenient farmhouse. I try to locate the nests of several birds, then armed with a camp-stool, field-glasses, and note-book, I make my way cautiously to a good point of observation. I always wear a plain dark gown and try to become, you might say, a part of the landscape as much as possi-

ble. I don't want the birds to notice me in the least. There are some days when I scarcely move for hours at a time, except to take notes."

Here, in part, lies the secret of Olive Thorne Miller's success. She never depends upon her memory or her imagination. With the utmost care her observations are jotted down on the spot, and at night, while the incidents are still fresh in her mind, they are written out. Her first and second books of birds are very well known. She is a New Yorker by birth, and now lives in Brooklyn.—*Presbyterian*.

TYPHOID FEVER SPREAD BY IGNORANT DAIRYMEN.—The following article is of value as very pointedly calling attention to the way in which typhoid fever is frequently disseminated. The proper care of milk is a subject which should be better understood.

During the past winter, a dairy formerly of good repute, lying about four miles from Palo Alto, was leased to a Portuguese family. In this family, in March, a death occurred from typhoid fever. Two of the three houses stand on the brink of a brook which bounds the cattle yard. From this brook a wooden channel carries water to a large wooden trough within the yard. In this trough the cans and pails of the dairy were washed.

From the house, the excreta of the fever patient seem to have been thrown, Latin-fashion, on the ground, to be washed by the rains into the brook, and thence into the trough.

One of the milkmen supplying the town of Palo Alto bought milk from this Parreiro dairy. About April six cases of fever appeared in Palo Alto. The water supply of the town, as well as that of the university, from deep-driven wells, was found above suspicion. This dairy was examined, bacilli were found in its milk, and on April 8 the milk route was closed. In this period, however, many people had taken the milk, and in the next three weeks there were upwards of one hundred and fifty cases in the town, eighty of them being students of Stanford University.

On the university campus, a mile away, about eight hundred and fifty of the one thousand four hundred and eighty students of the university live. Two fraternity houses on the campus were served with milk from Parreiro's. In one of these houses fourteen out of twenty persons were attacked. In the other four out of twenty. In the university dormitories, and in the remaining fraternities there have been a few cases, persons who had eaten at a Palo Alto restaurant or had been guests at some infected house.

About one hundred and ten cases have developed among the students of the university, and there have been four deaths, all in Palo Alto. The source of infection was promptly detected. The period of incubation, about three weeks is now past; every care has been taken to prevent secondary infection, and thus far there have been no cases from such infection.

The chief lesson lies in the need of closer inspection of the habits and methods of dairymen and gardeners who come from the south of Europe.—*Science*.

THE ORANGE SECRET.—It was told me by

Maritza, a little Greek girl, in far-away Turkey; and I am going to tell it here and now to every one, because I have never found any American child who had discovered it.

I was finishing my breakfast one morning, when I heard a little sound at my elbow. It was Maritza, who had slipped off her shoes at the outer door, and come so softly through the open hall that I had not heard her.

After I had taken the parcel of sewing her mother had sent, I gave Maritza two oranges which were left in a dish on the table. One of them was big, and the other quite small.

"One orange is for you," I said, "and the other you may carry to Louka. Which one will you give him?"

Maritza waited a long while before answering. At any time she would have thought it very rude for a little child to answer promptly or in a voice loud enough to be easily heard; but this time she waited even longer than good manners required. She looked one orange over and then the other. After a little more urging from me she whispered, "This one." It was the big one.

Curious to know of the struggle which had made her so long in deciding, I said, "But why don't you give Louka the small orange? He is a small boy."

Maritza dug her little stockinged toes into the carpet and twisted her apron hem before she answered.

"Is not Anna waiting for me at the gate?" she said. "Anna and I will eat my orange together. Mine has twelve pieces, and the other only eleven. Anna would not like to take six pieces if I had only five."

"You cannot see through the orange skin, Maritza, to tell how many pieces there are. How is it you know?" I asked.

Then Maritza told me the orange secret, and this is it.

If you look at the stem-end of an orange, you will see that the scar where it pulled away from the stem is like a little wheel, with spokes going out from the centre. If you count the spaces between these spokes, you will find there are just as many of them as there will be sections in the orange when you open it; and so you can tell, as Maritza did, how many "pieces" an orange has.

Perhaps you think every orange has the same number, just as every apple has five cells which hold its seeds; but you will find it is not so. Why not? Well, I do not know. But, perhaps, away back in the history of the orange, when it is a flower, or perhaps when it is only a bud, something may happen which hurts some of the cells or makes some of them outgrow the rest. Then the number of cells is fixed; and, no matter how big and plump and juicy the orange becomes, it has no more sections than it had when it was a little green button, just beginning to be an orange.

The next time you eat an orange, try to find out its secret before you open it.—*Julia E. Twitchell in Little Folks*.

DESPISE not the little things. A word of one syllable, a nod of the head, a motion of the hand are each very small matters, but they are frequently the difference between truth and falsehood, between right and wrong.—*Kennett Advance*.

The Patience Pail.

There was once a man in China who many other people in the world, was very given to letting his temper get away from him without its giving him sufficient wa He would often get angry at some little vocation and then repent very sadly leisure. He wished that there could be covered some method for keeping him constantly reminded that he must not get in such way that he could not be taken guard. It was suggested to our C friend that he get a "patience pail"—a pail in which one is supposed to be put his anger and then cover it up with a good strong lid to keep the anger in must carry it always. That would keep always reminded.

He thought that would be a very good so he obtained a patience pail and star satisfied and glad. Now his anger was out only after he had exercised due de tention and should open the pail.

By and by a boy began to follow him, having his curiosity excited at seeing him carrying the pail, asked, "Say, Mister, what is that you are carrying?" "It is a patience pail," said the man enthusiastically. "What is that for?" asked the small boy. "It is to keep me from getting angry," said the boy with an intimation of mischief and not inquiry, in his tone. He followed in silence and asked again, "Say, Mister, what is that you are carrying?" "What is that you are carrying?" "Oh! Another two of silence following and the question repeated, "Say, Mister, what is that you are carrying?" "It is a patience pail," signs of losing ground. Another time passes and the little rascal asks, "Say, Mister, will you not tell me what that is you are carrying?" "It is a patience pail, but you must not ask too much"—signs of inward mischief. The little monkey is full of mischief. After another silence and a moment more, he says, "Say, Mister, do you know what that is you are carrying?" "What is that? It's a funny thing you can't remember anything two minutes! You are scoundrel, if I could catch you (rumor him) if I wouldn't warn you! I have a patience pail. I lost my patience. You are good is a patience pail."

He went off sadly repenting, while the rascal went off laughing over his success in making the poor stricken one fail.

How often we, in trying to trust in our own strength or some worldly plan, are deceived by some little messenger of Satan, how often we fail! But what a joy when we find a real helper in Christ, our Saviour. This Chinese story lets us know that the Chinese, too, do have sorrow in their human weaknesses and that they struggle long and hard to be good, to recognize no Saviour to help them, and to useless schemes like having a "patience pail." They struggle on in their own way, without the clear knowledge of God and mighty Redeemer.—*H. G. C. Hooper in the Presbyterian*.

ALTHOUGH good never springs out of evil, it is developed to its highest by combat with evil.—*Ruskin*.

Reflecting the Glory.

On a summer day, when walking on the slope of a hill—the sun setting behind me, right across the valley I espied a most remarkable light, it was more brilliant than the light, and seemed to rise from the sun. At first I supposed that some one had kindled a fire with resinous wood that sparkled and shined, but there was evidently no smoke, and as though some angel had dropped down and strewed down there upon the ploughed field, that it was burning itself out. Finally, on my reaching the spot, I discovered a small piece of broken glass had caught the light of the setting sun, and was bathed in a supernatural glow. An old piece of bottle, yet so brilliant,—the bottle glass being visible, because of the light that it reflected!

It is the apostle's thought. We are to be like Jesus, as a mirror reflects and flashes the light that falls upon it. If there be a heaven the mirror and the sun, there is the possibility of its reflecting the radiant sun, and if there is any sin upon your heart it hinders your fellowship with Jesus, and the possibility of your passing on his life. Only remember that the mirror is only polished the light is seen. So shall it be with us—"We preach not ourselves, but Jesus as Lord, and ourselves as your servants for Jesus' sake." And so we all with unveiled faces reflecting the mirror the glory of the Lord, are changed into the same image from glory to glory even as from the Lord the Spirit." *Corinth. 18.—Anon.*

The Use of Enemies.

When a man complains of his enemies, it only shows that his heart is filled with rancor, and that he would not hesitate to take opportunity should offer, but also he lacks wisdom as well as charity in not seeing how useful an enemy could be to him. Advise and faithful friend once spoke of acquaintance upon this subject, as follows:

You are ever complaining of the wrong done to you suffer from your enemy, and regret that more than half your troubles come from your own heart, for when you give such an evil disposition to your enemy you do no harm as long as you do that is just and honorable in the sight of God. Guard more against yourself, you will have less reason to fear other enemies, for open enemies are far less dangerous than secret ones. The man is an enemy to himself who indulges in hatred to his neighbor, and meditates revenge against those of whose hostility he complains; for by his harshness a temper of mind he makes himself an enemy of the God who condemns unprovoked and malevolence of disposition. Consider the matter calmly, and you will see how much good you may derive from an enemy; so much, indeed, that you will be able to esteem him as a friend, and God that so much good can come of

Items Concerning the Society.

The return of Asa S. Wing to Philadelphia has been welcomed after his fourteen weeks' absence on a visit to Japan.

JOHN PIM, an elder, from Belfast, Ireland, who arrived in Philadelphia on the 20th, in time to attend a portion of Western District Monthly Meeting, was much interested also at Western Quarterly Meeting held at London Grove on the 22nd, and in the meeting at Germantown on First-day the 24th. He has been diligently forming acquaintances with the several members of the Pim family in these parts. On the 25th he departed for Tennessee, Kentucky, and Georgia, and aims shortly to conclude in Canada his fortnight's visit to America.

Notes from Others.

"The Methodist Discipline tells the ministers to 'make out what they take in hand.'"

The Pope has granted an "indulgence" to every Catholic who will read for fifteen minutes every day the translation of the Gospels and the Acts which has been issued with the approval of the Vatican.

Herbert Booth, son of General Booth, who has left the Salvation Army, is to start a mission in which he will preach "the gospel" by means of Bible dramas, illustrated in up-to-date fashion by the cinematograph.

The *Churchman* states that Roman Catholics in England are in no way behind the Americans in the zeal of their conversion to Bible reading. They are ridding themselves of the notion that the Bible is a Protestant book.

It is reported that Mwanga, the cruel king of Uganda, who murdered Bishop Hannington and burned at the stake scores of native Christians, has just died in exile on one of the Seychelles Islands in the Indian Ocean.

The *Universalist Leader* says: "Our creed makers and religious teachers have not yet discovered that religion and morality are the two halves of one living thing, and you cannot kill one without killing the other."

J. C. Paton of the New Hebrides writes that there are over 16,000 worshippers of God now on the islands. There are yet 40,000 and more cannibals on this group of islands. On Malekula and its surrounding islands the natives are still savages.

A heathen in Burma obtained a copy of the Psalms left by a traveller who stopped at his house. For twenty years the man worshipped the God revealed in the Psalms, then a missionary appeared, who gave him a copy of the New Testament, which he received with great joy.

In an article on "The Childless Church" the author, Charlotte Brewster Jordan says: "The world waits for the coming of the one who will do for the children's church what Froebel did for the children's school. When that comes the reproach of the childless church shall be taken away."

George Cadbury of England has presented to the Society of Friends his Woodbrooke estate with an endowment of £12,000 for "management and upkeep," as a permanent settlement for training in religious work. Accommodations will be provided for forty students.

The religious community called the Society of Harmonists has sold all its property in Sewickley Valley, Pa., for \$2,500,000. This society was founded in Wurtemberg at the close of the eight-

teenth century, and because of persecution came to America in 1803. Their creed was the Bible and they held to the doctrine of community of goods, and celibacy. Their numbers now are very few and of greatly advanced age.

Lectures before a Christian Worker's Association are announced on the following topics:—1. Theology—2. Angelology.—3. Anthropology.—4. Hermatology.—5. Soteriology.—6. Ecclesiology. These are at the same time rightly explained as meaning respectively: "The Doctrine of God," "The Doctrine of Angels," "The Doctrine of Man," "The Doctrine of Sin," and "of Salvation," and "The Doctrine of the Church."

The *British Weekly* is said to have a fine editorial on "The Future of Quakerism and the Salvation Army." "If," says the article "General Booth were to create an order of preachers—and no man in the country has such opportunities—he would give many of his converts the highest opportunities of benefiting others and spiritualizing themselves." But a man-created order of preachers and a spiritualizing ministry are a contradiction in terms.

JOSEPH CHAMBERLAIN AND THE BOERS.—A few weeks ago Joseph Chamberlain arose in the House of Commons and retracted the charges that for a series of years he had laid before the House of Commons concerning the character and conduct of the Boers with respect to their treatment of their Kafir servants. He went on to say that the Boers were absolved of the charges of brutality, of violent misconduct toward the natives, or of ill-treating them, and testified that the Boers seemed somehow or other to have understood the native character. "*Harper's Weekly*" of a recent number gives a summary of the speech on which this note is based.

WHY RECTOR?—Rector is from the Latin, *regere*, to rule. In this sense a politician could be a Rector, while it requires one called and ordained of God to fulfill the office of a Pastor. If this Biblical and more beautiful name for the ministry must be blotted out, and the Rector take its place, on what grounds do you make the change?

We do not deny that Rectors have not always existed, as frequently perhaps, among the laity as among the ministry. Laymen who denounce the Papacy with the strongest language often pose as little popes in their own little parishes. Whoever the Rector of the parish may be, whether the officiating minister or the self-called layman, let him remember that this office has no sanction from God's Bible, and that according to apostolic order no one was ever ordained Rector.—*Euclid Phillips, in Episcopal Recorder.*

"The things that I care for most in our Church," said Van Dyke, Moderator of the Presbyterian General Assembly, "are not those which divide us from other Christians, but are those which unite us to them. The things that I love most in Christianity are those which give it power to save and satisfy, to console and cheer, to inspire and bless human hearts and lives. The thing that I desire most for Presbyterianism is that it should prove its mission and extend its influence in the world by making men happy in the knowing and doing of the things which Christ teaches."

"The Church that the twentieth century will hear most gladly and honor most sincerely will have two marks. It will be the Church that preaches the central truths of Christianity most clearly, strongly and joyfully. It will be the Church that finds and shows most happiness in living the simple life and doing good in the world. May that Church be ours."

In response to the call which went forth to many churches to observe last First-day as "Emer-

gence works without haste, but without stelly."

son Sunday," the *Christian Advocate* says: "To commemorate Emerson as a genius, as a literary star of the first magnitude, as a citizen, as being of considerable value to the symmetrical development of thought by opposing bald materialism, as one who has extended the fame of the United States far and wide by his poems and essays, as a person of unusual sweetness of disposition, and the sympathizer with the elevation of mankind and the removal of inequalities, is as unobjectionable and as praiseworthy as the vote that placed him so high in the Hall of Fame; but for orthodox Christians to take the hours set apart for religious worship to magnify the life of one who used his powers to denigrate Christ as in any special degree the Son of God, and attached no value to His sacrifice for the salvation of men, except as a mere martyr, would be most incongruous except for Jews, Unitarians and Deists."

Captain Mahan, of the United States Navy, speaking before a recent meeting of the Episcopal Church Club, in New York, is reported as having said:

"Has not the world, within the last thirty years, learned from the Church that man's personal piety is a matter of small consequence alongside of his benevolent activities? Has not the Church come to teach, consciously or unconsciously, the external activities, outward benevolence, are not merely the fruit—for that they are—of Christian life, but the Christian life itself—that doing these things is the all-sufficient living before God?"

If that statement, says the *Presbyterian*, correctly states the lesson that the world has learned from the Church, there is the demand for a fuller presentation of the need of personal piety. Real fruitage is the witness to life and not its end, it is only the external evidence of the regenerated soul. Benevolence and philanthropy of themselves avail nothing, but "in his name" become deeds of righteousness. The Christian life consists not in doing, but in being. To the end of any real service regeneration is a necessity, and that means new creatures in Christ Jesus.

SUMMARY OF EVENTS.

UNITED STATES.—President Roosevelt in a speech at Salem, Oregon, on the 21st inst., referred indirectly to the persecution of Jews in Russia, protesting the outrages and expressing gratification that this country is free from religious hatred and persecution. He also said: "There is but one safe rule to follow in public life, as in private life, and that is the old rule of treating your neighbor as you would like your neighbor to treat you; the rule of decency, of honesty, of square dealing, as between men and nations, treating the neighbor as you would like to be treated, as between nations, so long as they have the fundamental virtues of decency, of courage, of common sense, just so long we may rest assured that this country will go onward and upward until it occupies a place among the nations of mankind such as has never before been known since the days when history was first written."

Dr. Robert H. Jones, of the Frankfurt Asylum, has started to a late report of insanity in this country, and appears to be increasing. He says: "From the best information at hand, we conclude it is probably true that there is still an increase in insanity. In the United States immigration has a potent bearing on the results of these computations. This may easily be seen when it is considered that while only one-eighth of the population are foreign born, one-third of the insane belong to this class."

Under a certain contract between the Pennsylvania Railroad Co. and the Western Union Telegraph Co., the latter agreed to remove its poles and wires from the lines of the Railroad Company, upon receiving six months' notice to do so. This notice was given, but the Telegraph Company not only refused to remove its poles, but applied to court to restrain the Railroad Company from it. On the 21st inst. Judge Bullington, of the United States Court, at Pittsburgh, declined to issue such an injunction, upon which President Cassatt, of the Pennsylvania R. R. Co., directed that the poles and wires should be removed, which was done immediately by employees of the company. Poles and wires which had cost at least \$300,000 have been rendered useless. The work covered 1200 miles of track, and included about 55,000 poles, upon which were

strung 15,000 miles of wire. From every point east of Pittsburgh, except in the northern part of New Jersey, which is not embraced in the division, and along the Philadelphia, Baltimore and Washington Division of Pennsylvania, it is reported that not a pole or foot of Western Union wire remains on the railroad right of way. It is probable that litigation upon this subject will be carried to the Supreme Court.

A dispatch from Great Falls, Mont., of the 19th, reports that a great snow storm had prevailed for the past three days, which had caused a great loss of sheep and cattle, and the herders have abandoned the hills, and every head and led for safety to the settlements and ranches. Nothing like the fury of this storm has ever before been witnessed in Northern Montana. It is stated that 1,500,000 sheep, worth \$3,750,000, perished in blizzards in Montana the past winter.

In consequence of the recent advance in the price of cotton, attention has been called to the large area of land in Mississippi which might be utilized in producing it and other valuable crops. This is in the Delta, lying between the Mississippi and Yazoo rivers, extending from Memphis to Vicksburg, and Yazoo area, adjacent to the Delta, together comprising nearly 200,000 acres. A portion of this land, however, will require protection from floods and from malaria.

The total annual loss from forest fires in this country is estimated at from twenty-five to fifty millions of dollars.

There were 472 deaths in this city last week, reported to the Board of Health. This is 2 less than the previous week and 4 more than the corresponding week of 1912. The foregoing 242, including 114 males and 128 females, 63 died of consumption of the lungs; 56 of inflammation of the lungs and surrounding membranes; 11 of diphtheria; 22 of cancer; 18 of apoplexy; 31 of typhoid fever; 4 of scarlet fever, and 4 of small pox.

FOREIGN.—The strong opposition existing in England to the Government's London Education bill was manifested on the 23rd in that city, in a public demonstration against the bill. The numbers, including men, women and children, were 500,000 persons; a general protest was voiced in a resolution condemning the Education bill because it "destroys the School Board, excludes women from control and imposes religious tests upon teachers."

A dispatch from Washington says: Great Britain has decided to accord China the same terms in the settlement of the Boxer indemnity as those accepted by the United States.

The State Department has been informed that the English Charge at Peking has signified the willingness of the Government to accept payment on a silver basis for a term of years, reserving under bond the right to receive payment of any deficiency that might exist should it hereafter be decided that the payments should have been made in gold. The United States has expressed the attitude of the United States in its almost single-handed contention for payment on the silver basis.

The permanent treaty between the United States and Cuba, in which is incorporated all the provisions of the Platt amendment, was signed on the 23rd inst., at Havana. Under the terms of the Platt amendment the following points are required among others to be incorporated in the treaty:

Cuba will never enter into any treaty or other compact with any foreign Power or Powers which will impair the independence of Cuba, nor in any manner authorize or permit any foreign Power to obtain by colonization or for military or naval purposes or otherwise lodgment in or control over any portion of the island.

The United States shall exercise the right to intervene for the preservation of Cuban independence, the maintenance of a government adequate for the protection of life, property and individual liberty and for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States.

The imports into the United States consist chiefly of cotton goods, kerosene oil and flour, and during the year 1912 were the largest known. They were nearly 30 per cent. larger than in 1901 and amounted to nearly thirty millions of dollars in value.

Evidence appears that the recent massacre of Jews in Kischenev was encouraged if not instigated by Russian officials, but without the knowledge of the Czar, who, it is believed, was kept in ignorance of the proposed movement. It is stated that the Jews in Russia are concentrated in sixteen Governments, being forbidden to dwell anywhere else, and, moreover, are confined to the towns, and prevented from spreading themselves over the country. Under these circumstances they are unable to compete in the labor market, and consequently, suffer from terrible poverty.

The statement made to the United States Government in 1895, by Andrew D. White, formerly Ambassador of

the United States, at St. Petersburg, it is stated restrictions upon the Jews are by no means co-residence, they extend into every field of activity, the parts of the empire where the Israelites are free they are not allowed to hold property in fee, to take mortgage on land nor to farm land, and they have even been, to a large extent, prevented from living on farms and have been thrown back into villages.

"Perhaps the most painful of the restrictions upon them is in regard to the education of their children. In the regions where they are concentrated, only 10 per cent. of the scholars in high schools are allowed to be Jews, but in the number allowed them is but 5 per cent., and St. Petersburg and Moscow only 3 per cent."

Resolutions have been passed by different bodies of Jews in this country similar to the following: "Resolved, that the President of the United States, head of a Government recognizing religious liberty as one of its cardinal principles, is in duty bound to human kind, and is hereby urged to take action through the Department of State as would the Russian Government to a realization of its obligations towards its subjects of dissenting religious opinions. That the further urge said Government to punish and to make a recurrence of such atrocities possible."

NOTICES.

A young woman Friend desires some light work on Seventh and Eighth Months. Address J. Office of FRIEND.

WESTWOWN BOARDING SCHOOL.—For convenience persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M.; Other trains are met when they leave Stage fare, 15 cents; after 7.30 P. M., 25 cents each. To reach the school by telegraph, wire Westtown, Pa. Phone 114a. EDWARD G. SMEDLEY, Superintendent.

WESTWOWN BOARDING SCHOOL.—Application of admission of pupils to the school, and letters to instruction and discipline should be addressed to WM. F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent, Address Westtown Pa., O. Chestnut St.

Westtown Old Scholars' Association.—Seventh Annual Session (Fourth Westtown Boarding School) The Old Scholars' Association is planned for Saturday, Sixth Month 6th, 1903, on the School grounds, Westtown.

All old scholars, their husbands, wives and all others interested, are invited to become members of the Association. The members are invited to the Session which will be held from 9 a. m. to 10 p. m.

Special trains will be met by stages at Westtown. The meeting will be held at 11 o'clock, O. S. A. text; it will be addressed by interest in the school. The names will be announced later; a luncheon will be served in the school building. The afternoon will afford an opportunity of viewing the school games, walks, and having the more social enjoyment of old school friends.

DIED, at his residence in West Philadelphia, on the 13th day of Third Month, 1903, LEONARD G. COTT, a member and elder of Woodstown Meeting, N. J., in the eighty-third year of his age. This valued Friend was among the teachers of the Lord Jesus, and was zealous in his allegiance to Him by diligent attendance on the Word of God. His character was marked by his adoption of the course her religious convictions as the way of Truth; and the energy with which he pursued her calling in earlier years distinguished his later life by efforts to promote righteousness and fill his part in carrying on the work of our Society. His example may be safely followed by those who desire to leave a life to represent the Father in the Father of Friends. Those who knew her have a precious memory which has been made more than

THE FRIEND.

A Religious and Literary Journal.

VOL. LXXVI.

SEVENTH-DAY, SIXTH MONTH 6, 1903.

No. 47.

PUBLISHED WEEKLY.

Price, if paid in advance, \$2.00 per annum.

Subscriptions, payments and business communications received by

EDWIN P. SELLEW, PUBLISHER,

No. 207 WALNUT PLACE,

PHILADELPHIA.

Box from Walnut Street, between Third and Fourth.

Articles designed for insertion to be addressed to

JOHN H. DILLINGHAM, Editor,

No. 140 N. SIXTEENTH STREET, PHILA.

Entered second-class matter at Philadelphia P. O.

Sample Copies—New Subscribers.

With a view to securing new subscribers to THE FRIEND, interested Friends have furnished (by name) to whom sample copies are being sent each week. The Friends who are receiving these copies are hereby requested to become subscribers by sending two dollars to Edwin P. Sellow, or by writing him that they wish to have their names entered as such. Persons subscribing now will receive the remainder of the present volume free.

They who seriously ask, "Is life worth living?" are such as may be existing but are not living. No one knows what living is who is without the spiritual life, or who lives without its privileges.

We acknowledge the worldling's weary deliverance,—"vanity of vanities!"—or that "to be carnally minded is death." But the Christians see to the higher living, which finds that to be spiritually minded is life and peace.

The Anti-Christ of a nominal Christianity is continually cropping out, and sometimes starves to a civilized world by diabolical atrocities. We find it in our wars, we find it to-day at the sacrifice in the Russian church members' massacre of Jews less unchristian than they. We find Anti-Christ bearing the Christian name in emperors, bishops, churches and peoples who have been exposed to just abhorrence in the series of articles going on in our columns under the title "Confessors of Peace." "Chr't," says the *Springfield Republican*, who washed the feet of some rather dark-skinned persons in his day, might have some efficacy nineteen hundred years later in recognizing those who profess his name, whether they be found in Russia or America." Until

that superstition is cleared away which regards an assent to some church machinery as Christianity, the conversion of its members from the heathen state is still afar off. Christianity, if anything, is Christ-likeness, and we by being individually exponents of Christ's Spirit on earth, shall best illustrate to men's minds the true Christianity in contrast with the false.

A Leader to Antichrist.

The beginning of Peter's denial of Christ was his taking the sword. Though this act was intended in defence of the best of causes, yet the Prince of Peace rebuked it, saying, "Put up again thy sword into its place. For all they that take the sword shall perish with the sword." And in his spiritual life Peter was at once found to be perishing. In a sense of his alienation from the Spirit of Christ, he forthwith followed Him "afar off." And when the moment of testing came, and a maiden could banter him with being "one of them," he added swearing to his swording, and denied Christ, by saying, "I know not the man!" The consequence of the spirit which could use the sword was a shirking behind or a laggard following of Christ; the consequence of following Him afar off was denial; while a consequence of following Him close to, would have been fellowship and spiritual life.

The same consequences follow the spirit of militarism in our day—discipleship perishing by the sword. Christendom's denial of Christ began where Peter's did. How sad is the wail which rings through our periodicals generally over the waning of the Spirit of Christ in this mammonizing generation, the lukewarmness toward other races which the "missionary boxes" complain of; the increasing violence of atrocities, lynchings, massacres, committed by professedly Christian peoples. "The nation," as we quote elsewhere, from our English contemporary, but it applies to us with other nations lately dechristianized with war,— "is going back to the moral standards of Greece and Rome. The old-fashioned teaching that men of different races and nations are yet brothers, that the best defence is the consistent practice of national justice and righteousness, is scoffed at as sentimental rubbish." Accompanying this decline, the simple faith in the Lamb of God who taketh away the sin of the world, is visibly becoming sapped in churches that were once strongholds of the profession of Him

who gave his life a ransom for the sins of many.

We speak now of the popular mind, as vitiated by the bane of militarism,—not of the hidden seed of life which we believe is by Christ growing in prayerful hearts, preparatory to its coming up into dominion above all this work of the enemy,—but that spirit which takes the sword has evidently been having its following in the practical denial of Christ, or a callousness to the spirit of Christianity. It gives "its strength and power to the beast; but the Lamb and they that are with Him shall overcome them."

One week ago there was an intended popular decoration of the principle of self-sacrifice as represented in soldiers through whom the Union was saved. The principle of self-sacrifice, as a gospel principle, we can but honor. But practically bound up with that observance was the decoration of war and the inflaming of the military spirit. Two of its representatives were seen clasping each other in the gutter, and whoever was atop bruising the other with his fist. "Is that the gospel of Decoration day?" said a passer-by. The next day was what some people call the "Lord's day." Such scenes were not in evidence, or not to be expected then. Why was the angry fight which seemed to the crowd not out of character with Decoration Day, a spectacle which would have seemed a sacrilege on the day following?

Two Kinds of Reading.

A young boy found that he could read with interest nothing but sensational stories. The best books were placed in his hands, but they were not interesting. One afternoon, as he was reading a foolish story, he overheard someone say: "That boy is a great reader; does he read anything that is worth reading?"

"No," was the reply; "his mind will run out if he keeps on reading after his present fashion. He used to be a sensible boy, till he took to reading nonsense and nothing else."

The boy sat still for a time, threw the book into the ditch, went up to the man who said his mind would run out; and asked him whether he would let him have a good book to read.

"Will you read a good book if I will let you have one?"

"I will."

"It will be hard work for you."

"I will do it."

"Well, come home with me, and I will lend you a good book."

He went with him, and received the volume the man selected.

"There," said the man, "read that, and come and tell me what you have read."

The lad kept his promise. He found it hard work to read simple and wise sentences, but he persevered. The more he read, and the more he talked with his friend about what he read, the more interested he became. Ere long he felt no desire to read the feeble and foolish books in which he had formerly delighted. He derived a great deal more pleasure from reading good books than he ever derived from reading poor ones. Besides, his mind began to grow. He came to be spoken of as an intelligent, promising young man, and his prospects are bright for a successful career. He owes everything to the reading of good books and to the gentleman who influenced him to read them.—*Christian Guardian*.

Doukhobor Notes.

The following has been received from Joseph H. Nelson, who has taken much interest in the establishment of a hospital in Yorkton, N. W. T., which is worthy of the consideration of those who have the wherewithal at command to assist institutions to relieve suffering humanity.

The hospital at Winnipeg has been a blessing to disabled Doukhobors, but it is about three hundred miles from Yorkton, which may be supposed to be the nearest point to the main body of Doukhobors where it would be practicable to maintain a credible hospital, and would be desirable on account of the expense and fatigue incurred by the long journey to be assisted.

The letter is dated the 22nd instant:

"We are making an effort to clear off the debt on the Cottage Hospital here, also to complete the building which will amount altogether to about two thousand dollars, and knowing the sympathy that you have in this matter we make an appeal to you and your good Friends to help us.

Some months ago I wrote you on this subject, but your reply at that time was, that you would wait a little while and see how the Doukhobors would act, as you remember it was about the time they went on their pilgrimage. A great change has come over them since then, and since Peter Verigin has been amongst them, and now with the exception of a few they are settling down nicely and are doing well. We have had some of them, both men and women, in the hospital, and they have paid their fees when they went out, but as you know the profits on these charges will not pay off the debt.

"We have had sixty-nine patients treated since we opened in October last and only two deaths. I trust therefore that you will give this request your kind consideration, and will see your way clear to help us in this matter."

A letter from Peter Jansen under date of Winnipeg, Fifth Month 25th, 1903, contains the following:

"Just returned from the Northwest where I found things very prosperous and the outlook for crops fine. The great majority near Roshtern are doing splendidly in their farming operations, and the grain dealers here tell us they bring in the cleanest wheat and oats."

JOSEPH S. ELKINTON.

The Confessors of Peace from the Second Century to the Era of Mahomet.

XII.

A century before the time of the Emperor Julian, Christianity was introduced to some extent among the Goths as the result of an irruption made by that people into Cappadocia and adjoining parts of Asia. A number of Christians being carried back to the homes of their captors, some of these became converts to the new faith. In the reign of the Emperor Valens (375) the Visigoths in Pacia, [the present kingdom of Roumania], being pressed by the Huns from Asia, crossed the Danube by permission of the Emperor. A dispute arising with the Romans two years later, the Goths invaded Thrace, and in a decisive battle at Adrianople defeated the imperial army, Valens being slain.

The translation of the Bible into the Gothic language by Ulfilas, was an important incident of this period. Ulfilas appears to have been a descendant of one of the Cappadocian captives just alluded to. He received a liberal education at Constantinople, and being appointed bishop of the Goths resided among them a number of years. It is recorded that when he made his translation into the vernacular he excepted the four books of The Chronicles and Kings, being fearful that they might encourage the martial spirit of that sufficiently warlike race, among whom he had taken his abode.

It was the Arian form of Christianity that was imparted to these Goths. It has been observed that the Arian Christ (not held to be essentially One with the Father) "found responsive acceptance in the Teutonic mind. They pictured Him as a king upon earth, moving about the highways of Palestine, attended by troops of loyal followers, from among whom He had chosen the twelve as captains. When He went up into a mountain and took His seat His captains stood in obedient readiness before Him, and all below and around, the faithful host was waiting to hear His commands." Well, we get from the Goths or Saxons our ordinary days' names of the old pagan time, as Tuesday from Tuisko, their Mars or god of war, Wednesday from Woden, synonymous with the Mercury of the Romans, Thursday from Thor, the god of thunder. What wonder that some tender minds (more particularly of the religious society of Friends) scruple to use these in the place of the plain nomenclature of Scripture?

Alaric, King of the Visigoths, had been invested by the Emperor Theodosius, with the command of his Gothic auxiliaries. Angered afterward at being refused command of the armies of the Eastern Empire, he invaded Greece, and, later, though hindered awhile by Stilicho, the able general of Honorius, he advanced into Italy and in the year 410 made himself master of Rome. It was the first occasion during the 1163 years following its foundation that it had been entered by a foreign enemy. The sack of the city continued for six days, and yet it is said in defence of Alaric's humanity, that "even in that hour of terror, when at midnight the awful Gothic trumpet sounded in the streets of Rome, the Arian Goths showed more compassion and more sense of religion than the Roman Cath-

olic soldiers of Charles the Fifth, when sacked the city of their own Pope eleven dreed years afterwards."

In the year of the Gothic capture of the Vandals, an allied German tribe, whose name is from the Teutonic term, which means to wander) having passed the Gaul, set up a kingdom, Vandalitia—now dalusia—in Spain, and thence under leader Genseric, crossing into Africa, possessed themselves of a large part of Roman provinces along the Mediterranean. They subsequently crossed over into Italy (A. D. 455) plundered Rome. It will be appropriate here to quote from Judge Grimke, who, writing upon the *Delusion Suicidal Results of War*, says:

"The Roman Empire, the grave of a dreed states, was destined to illustrate remarkably than all the preceding that the law of violence is a self destruction. Her power had been constantly ebbing nearly eight hundred years, till a single hour had swelled to the magnitude of an embracing the fairest portions of Africa, Europe and Asia. But her law had ever and was still, the law of violence. Her shout of defiance had pierced the deep of the Hercynian forest; and the Gothic Burgundian, the Vandal and the Hun, down to the feast of victory at the triumph summons. Their progress was terrible when the mountain torrent rushes in time to sweep away the vineyard and the peasant's cabin, the shepherd and his flock. The Pyrenees, the Alps and the E range were feeble barriers against the dren of eternal snows, and, as the barbarians poured down from those mountain snows the wild music of their battle songs over beautiful and delicious regions of Italy and Greece, the Roman Empire came in her agony of fear, that the sword was only title to all her dominions from the Alps to the setting sun."

The learned Jerome was born in the district of Venitia, at the head of the Adriatic, A. D. 346. He has left on record the saying that "He that is spiritual persecutes him that is carnal. I have learned from the command of the apostles, to avoid heretic, but not to burn him. Christ would not smite, but to be smitten. He that is smitten, follows Christ; but he that smites follows anti-Christ."

Jerome was indeed a man of great learning—none more so in his time—yet he was posed to be vain of his acquisitions, and often passionate and resentful, though he credit not continuously so when yielding to the Holy Spirit's arrest and conviction. We need only recall here, in mentioning him, his hermit life of several years in the desert east of Antioch, and subsequently for a much longer period, in his old Bethlehem, diligently occupied in translating the Bible into Latin—the so-called Vulgate of the Roman Catholic Church, of which the council of Trent (1546) held that "The Vulgate edition shall be held authentic in public lectures, disputations, sermons and expositions and none shall to refuse it."

Jerome's friend and correspondent, Augustine was born in Numidia in 354. Always a

To exclude such a book from the schools and deny pupils the benefit of its teachings at a period when their character is forming is a mistake, and it is encouraging to see that the public is coming to recognize the fact. Intelligent people will agree with President Faunce when he says: "I do not believe that we should require the students of our schools to study the antics of the Greeks and Roman deities and the dubious moralities of Mt. Olympus and not know the fifty-fifth Psalm." And with this change in public opinion will doubtless come a restoration of the Bible to its rightful place in the school.—*Daily Paper.*

LABOR.

Heart of the people! Working men!
Marrow and nerve of human powers;
Who on your sturdy backs sustain
Through streaming time this world of ours;
Hold by that title, which proclaims
That ye are undimayed and strong,
Accomplishing whatever aims
May to the sons of earth belong.

Yet not on you alone depend
These offices, or burdens fall;
Labor, for some other end,
Is lord and master of us all.
The high-born youth from downy bed
Must meet the morn with horse and hound,
While industry for daily bread
Pursues afresh her wonted round.

With all his pomp of pleasure, he
Is but your working comrade now,
And shouts and winds his horn, as ye
Must whistle by the loom or plow;
In vain for him has wealth the use
Of warm repose or careless joy,
When, as ye labor to produce,
He strives, as active, to destroy.

But who is this with wasted frame,
Sad sign of vigor overwrought?
What toil can this new victim claim?
Pleasure, for pleasure's sake besought.
How men would mock her flaunting shows
Her golden promise, if they knew
What weary work she is to those
Who have no better work to do!

And he who still and silent sits
In closed room or shady nook,
And seems to nurse his idle wits
With folded arms or open book;
To things now working in that mind
Your children's children well may owe
Blessings that hope has ne'er defined,
Till from his busy thoughts they flow.

These all must work; with head or hand,
For self or others, good or ill;
Life is ordained to bear, like land,
Some fruit, be fallow as it will;
Evil has force itself to sow
Where we deny the healthy seed;
And all our choice is this—to grow
Pasture and grain, or noisome weed.

Then in content possess your hearts,
Unenvious of each other's lot,
For those which seem the easiest parts
Have travail which ye reckon not;
And he is bravest, happiest, best,
Who, from the task within his span,
Earns for himself his evening rest,
And an increase of good for man.

Science and Industry.

A HAMMOCK swung firmly according to the following directions will be safe and comfortable: The rope that secures the head end should be twelve inches or so in length, while that at the foot should measure four and a half feet. Arranged in this way the lower part only will swing free and the head kept nearly stationary.

A NEW process for the manufacture of artificial marble has been patented in Berlin. Asbestos, dyeing materials, shellac and ashes are pounded into a stiff mass and then subjected to a high pressure. The product is surprisingly firm, and tough, not brittle, is very easily worked by means of tools, can be given a fine polish, and in appearance can not be distinguished from genuine marble.

GLOXINAS are a beautiful group of plants, with large foxglove-shaped flowers, of a numerous variety of tints and produced in great profusion from the base of a deep rich green velvety foliage. They flower all the summer and are the finest ornaments of the greenhouse from Sixth till Ninth Month. The bulbs may be potted in spring, and when done blooming may be placed away during the winter in any warm place till the season of growth commences, keeping them quite dry.

LIEUTENANT PEARY says that the tribe of Eskimos living on the shore of Whale Sound in Greenland are the most northerly people in the world. Their isolation has differentiated them from all other races. They do not exceed two hundred in number, and are being destroyed by an unknown disease which appears to be a slow malignant fever. Lieutenant Peary became personally known to every man, woman and child belonging to this remote and perishing community of human beings.

GARDENING ON VACANT LOTS.—Philadelphia has been using its vacant lots for gardens for the unemployed. The first year twenty-seven acres were worked. Last season more than two hundred acres were under cultivation. About eight hundred men, a few women, and many children harvested vegetables on vacant lots in Philadelphia last autumn.

The use of the unoccupied land is given by landlords, and hence no rent is charged. Neither is there expense to the gardener for plowing, harrowing, fertilizing, seeds, advice, information and supervision. The gardeners are chiefly the worn-out, the disabled, the incompetent, the men with large families, and small salaries, widows with small children, the aged, the half-sick, and school children.

ROLLED gold is a cheap substitute for solid gold, and consists of brass, covered on one side with a thin coating of gold. It is made by brazing a thin plate of gold on to a thick plate of brass, and then rolling the ingot out into a thin sheet, from which the articles are manufactured. Gold of nine or ten carats is that usually employed. In the best qualities the gold is sufficiently thick to bear engraving without cutting through into the base metal. "Rolled gold" is mostly of German origin, but it is also manufactured to a considerable extent at Birmingham, England. Articles made of the poorer qualities of "rolled gold" are often "dipped" before being put on the market, but the exceedingly thin film of gold thus deposited soon wears off. When brass is covered with gold on both sides it is known as "filled gold."—*Engineering and Mining Journal*.

WHEN A MAGAZINE IS MANUFACTURED.—When *Harper's Magazine* is being printed, the women who are employed to sort or gather together the different sections of one copy of the periodical, handle one million of these sections in one day. This gives some idea of the work involved in getting out one edition of a popular magazine. A statistician in the Harper factory has also computed that each of these women, while gathering together the separate sections of the magazine preparatory

to binding, walks from five to seven mile day. The women are incredibly swift movement, their hands whirling back and forth like humming birds, and in collecting the separate sections from the great wiles of printed sheets the eye can scarcely follow their rapid motion. In cases of editions, like that of Christmas, the above figures are largely increased.—*The Inland Printer*.

PENN'S TREASY TREE.—"The Treasy Elm does that still exist?" a young man asked antiquarian. "No," said the old man; was blown down on the night of March 1810. This tree, as its concentric circles showed, was two hundred and eighty-three years old. No great age, that, for a tree [A grand-son of Penn's Treasy Elm plant near the south-east corner of the yard Friends' Meeting-house on Twelfth street, low Market street, in Philadelphia, has come a large and flourishing tree.] There in England, a Cowthorpe, an oak that is supposed to be eight hundred years old. English yews often reach an almost incredible age. The celebrated Ankerwyke yew is a thousand one hundred years old, and there are others of an equal age. Some of the American pines can hold their own in respect of age with the European trees. One of the pines, on being cut down, have shown as many as one thousand one hundred concentric rings running from the heart out to the bark. You know who first showed how to tell a tree's age by its rings? It was Montaigne, the sayist."—*Philadelphia Record*.

ABOUT BEAVERS.—In his habits the beaver resembles the muskrat; he likes to live near the bank of a stream, not too swift. He is decidedly voracious in his tastes, using the food green cornstalks, grass, weeds, and the bark of trees, such as the quaking asp, poplar, low, cottonwood, etc.

The only entrance to his nest is from the bottom of the stream; it is often to be found under a clump of overhanging willows, the roots of which help to keep the dirt from falling in. He digs upward, plastering his walls with mud and bracing it with sticks and logs gets high enough above water level to form his nest. These animals are wonderful workers. I have known them to stop up a three-inch pipe with grass, mud and moss. They have been laid to the centre of their pond, in some cases four feet of water. The pipe at the top had a strainer placed over it. The pipe at the bottom was about one hundred yards from the bottom of the pond. I do not know of but every morning, and sometimes in the afternoon the workmen had to go to the pond, wade in and clean off the end of the pipe.

Besides being the most patient of all mammals, the beaver is a model housekeeper. A house as a beaver" should be considered a neatness as a high compliment. Every inch is carried out of the nest after the bark has been peeled off for food, and thrown into a stream.

He sometimes builds a house, but he does not sleep deep enough to allow him to hibernate for the winter in its bed. He is shallow it is quite likely to freeze up and

from his winter's supply. He lays his fresh-cut poles close to the bank, he butt ends up-stream to prevent their sliding down and away from his hole. The helpless on land, he is perfectly at home in the water, his broad paddle-shaped webbed hind feet making elegant "oars." His front feet, strange to say, are laid close to his belly in swimming. Even with the exception of some oriental people who use their toes about their daily work as cleverly as their hands), the beaver uses his "hands" in doing his work. A story about him using his tail for a prop is not reliable to any extent.

The animals usually herd together in small numbers, go up stream during the spring freshets and remain there. If their dams are broken, a dog can be sent into the hole and occupants driven out. They are then easily caught and killed, as they are so clumsy and see but little. They have a wonderful instinct, which makes it impossible to trap them on land. To trap them even in water requires more or less practice on the part of the trapper. He has a cunning creature to deal with, and he must proceed carefully.

Like a muskrat, the beaver can swim a long way under the ice by breathing upward, making again as he swims across. This is seen to collect in bubbles under the ice in occasional "air-hole" also serves to show that I have known him to cross under a mile and a half wide.—*Forest and Stream*

FOR "THE FRIEND."

What is a Miracle?

Between the two definitions of a miracle, one that it is a suspension or reversing of the laws of the universe, and the other that it is the transcending of a lower law or a very one that is higher or stronger,—a respondent thinks that the first view "increases" the difficulty to faith that has no existence.

Present his further language: "Illustration, we may refer to the walk of a fish upon the water. We need not suppose there was any change in the law of vibration. But a stronger force was exerted on it;—the power into which Christ himself walked upon the sea. And so of all miracles; we may believe there was the action of higher laws beyond our knowledge, than control winds and waves, and heal the sick and restore life to the dead.

It seems to me that without such a revelation of the manifestation of God in the realm of the supernatural, as is shown us in the work of his Son, we could have no true conception of Him.

Scientists who would revolt against the thought of God reversing his own laws, might find difficulty in accepting the Christian's higher and deeper laws of the universe than at beyond our ken.

Thoughts like these have helped me and I hope they may help others.

"Truly thy friend,
"JOEL BEAN."

ENLIGHTENED virtue is the highest virtue, and a Godless learning is the lowest form of education."

THE SHINING PATH.

Sometimes the thought of God's great love to me seems almost overwhelming in its might; It fills my heart, and bathes my path in life With a rich glow of never-failing light; I think without the knowledge of that love My day would fade to deepest, darkest night.

What matters it where'er my path may lie?
My Father reigns; and in his loving hand I'll lay my own, in childlike hope and trust,
Knowing 'twill guide me to that better land Where I shall dwell with those who love the Lord,
And sing his praises with the angel band.

My Lord, I thank Thee for this wondrous love,
Which gladdens and enriches all my way,
And sheds its beams of tender, shining light
Around my steps, e'en when they go astray;
May grace upon my path shine more and more
Unto the radiance of the perfect day!

—*Mary Louise Hornbrook.*

Richard Jordan in France.

From the Monthly Meeting of Friends held at Congenies, in the south of France.

To Friends of Rich Square, in the county of Northampton, in North Carolina, and other parts of America where this shall come: Under a lively persuasion, that the religious visit of our very dear and well beloved friend, RICHARD JORDAN, has been a restoring balm which has healed our wounds, and strengthened us in the love of the Lord, and that he has been a precious instrument in the hand of Providence to unite us in that spirit of order and love which speaks the same language to all the peoples of the earth,—

Many members of our Meeting have expressed their ardent desire that it may be recorded in our minutes, and also that it would be very pleasant to us, if on our part he would receive a testimony of the lively satisfaction, which our souls have experienced in his assistance and fraternal exhortations, persuaded that he is a minister whom the Lord in his merciful goodness, has sent to help us in our weakness, and to strengthen us in the faith.

In that tender love which unites all the children of the Saviour, in whatever part of the earth, they may be situated, and which not any distance can dissolve, we fraternally salute you.

Benezet, Marie Raboal, Majolier Benezet, Marie Majolier, Susanna Roux, Elizabeth Dubeney Fayol, Louis Majolier, Jean le Cointe, P. Rabelin, T. Langes, Jean Benezet, François Rabelin, Perdian Etienne Rabelin, P. Marignan, Samuel Brun.

19th of Tenth Month, 1891.

If you wish to advance in your position don't form the habit of waiting to be told to do a thing, but be always on the lookout for something that needs to be done and then do it. No one ever advances who waits for direction. You should free yourself of the impression that you are only to do what your employer directs you to do. It is your duty to your employer to devote your entire time to his interest and when you are not engaged in doing that which he directs, to see if you can't find something that needs being done. Original work demands attention and will be worth a great deal to you in receiving a promotion.—*Freedman's Friend.*

The Angel in the House.

I am going to tell you of a girl who, from being one of the most careless girls it was possible to meet, became a gentle follower of Christ, and, as her mother often said, "An angel in the house." A friend and I were staying at a little village by the sea, and in the house next to where we were lodged lived a mother and her daughter of whom we heard the following:

The mother, a widow, was very delicate, but she worked for her child from morning till night. Before she left for school in the morning, Bessie would go to her mother and say: "I don't like the way you have done my hair—you must do it over again." Then she would pull off the ribbon and tangle her hair, and worry her mother until it was to her liking.

She would play on her way from school, and reach home at the last moment, late for dinner. Then she would call out: "Oh, mother, I must have my dinner this minute, or I shall be late for afternoon school. What is there for dinner?" And if it was not what she fancied, she would put herself into a terrible temper, and go to school dinnerless.

I cannot repeat the many ways in which she proved to be a trouble, rather than a blessing to her invalid mother, whose failing health made her unable to cope with the ill tempers of her self-willed child. At last, just after Bessie's fifteenth birthday, and when her chief thoughts were of going out, reading and dressing, the doctor called her aside and spoke seriously to her: "For years," he said, "your mother has waited on you, and in this way she has increased her illness. Now she will never walk again, and it is your turn—you wait on her. There is One whom your mother knows and loves, who will take all you do for her as done for Him; it is the highest service—are you prepared to enter it?"

Bessie was ashamed. In a moment her heart was touched. "Oh! I see how selfish and selfish I have been!" she cried. "Oh, Dr. Blair, is it true what you say of my mother?"

"Every word of it," was the reply. "Just ponder on it."

Bessie crept upstairs weeping, with a feeling in her heart that the world had somehow suddenly come to an end.

She listened outside her mother's door, and she heard her praying: "Dear Father, who lovest my child more and better than I can love her, soften her young heart and help her to bear this burden. O Jesus, open thine arms very wide that I may more closely lean upon Thee, for I need Thee in my helplessness more than ever."

Bessie heard, and, rushing into the room, she fell at her mother's bedside, and in a fit of remorse, exclaimed: "Oh, mother, my heart is broken! Forgive me all the past, and by God's help I will devote myself to you every hour."

Mother and daughter became united in the sweetest bonds, for Jesus was their Saviour and Comforter, and it was beautiful and touching to see them together in the days of the mother's dependence on the daughter—the elder leaning on the younger.

"What first touched you most?" we asked Bessie.

"Mother's gentle trust in God and the way she prayed for me," was the reply. "I had often heard her pray before, but the doctor's words, 'She will never walk again,' seemed to break my heart, and I felt as if God had put her into my idle arms to fill them."

We used to watch Bessie wheel her mother into the sunshine, and the mother's happy smile would follow her as she went in and out, and waited upon and cheered the invalid every hour of the day.

A letter came one day from an uncle in America, asking Bessie to come out to him and his wife, and they would make her heir to all they had, for they were childless. Bessie wrote: "I have a most blessed charge in a sick mother whom I would not leave for all the wealth in the world. For fifteen years she spent her life for me, and God had to lay her aside before I could be brought to see the evil of my heart and ways, and the selfishness and uselessness of my robust health."

This so stirred up the uncle and aunt that they came to England to see the widow and Bessie, and the perfect unity and sweet Christian life of mother and daughter won them both for Christ.

Bessie is a bright example. Many careless daughters have seen Christ in her so really that they have been caught by the beautiful likeness, and in the desire to be like Him have been "transformed by the renewing of their minds." I wish you could know Bessie. But perhaps you know Bessie's Saviour? Ah! if you do I need say no more, as your happy mothers would tell me, for "Who teacheth like Him?"—*London Christian.*

An Indian Letter.

[The following extract from a letter written by one of the graduating class of 1903 at the Boarding School for Indians near Tunesassa, N. Y., was addressed to one of the Committee who had sent a letter and a copy of "*Golden Gleanings*" to each member of the class as a graduating present.]

TUNESSASSA, NEW YORK, FOURTH MONTH, 3RD, 1903.

DEAR FRIEND:

Your letter received a few days ago encouraged me very much in doing what is right. It was a comfort to read such a letter.

The Friends are doing a noble work for the Indians. Thousands of dollars are spent every year for the benefit of our people. I think they will be greatly rewarded by our Heavenly Father, for they are doing a great work.

I have been here for several years, and I have always been well provided with food and shelter at the expense of the Friends.

They have given me education which I value very much.

They are doing a great deal in trying to bring us up to live the right kind of lives:

I can only repay your kindness by a truer, better life. Many temptations come in the way but we have to strive to overcome them. Every temptation we overcome makes us stronger.

Indeed it was very kind of you to present us with such nice books, for which I thank you very much. I know it will be a help to me in reading it."

I will now close,

Your Friend.

And hath man the power with his pride and skill To arouse all Nature with storms at will? Hath he the power to color the summer cloud— To allay the tempest when hills are bowed? Can he waken the Spring with her festal wreath, Can the sun grow dim by his lightest breath? Will he come again when Death's vale is trod? Who then shall dare murmur, "There is no God?" —*Whittier, in 1829.*

The Two Natures.

A man was riding in a trolley-car in Philadelphia. It was just after six o'clock, when people were going home from their work as fast as they could, and the cars were crowded. Three boys came in together. They were bright boys, with clean faces, and they were good-natured fellows; but they were full of fun. They pushed each other and talked rather loud, and they annoyed a lady who sat next to them by pushing each other.

Then a big man, who was standing up reading his newspaper, after asking the boy once or twice to be quiet, took hold of the noisiest boy by the collar and pulled him out of his seat. He told him he must be quiet or he would have to get out of the car. After that the car was pretty still, as you may believe.

The gentleman who saw this began to think why it is that boys cannot manage themselves. In every boy there are two boys—a good boy and a bad boy. The good boy wants to be master; he wants to speak the truth, and to be clean, and kind and obedient. But the bad boy in him wants him to be noisy, and mischievous, and do just as he pleases.

A boy, perhaps, does not mean to be bad; but somehow he is bad, because the bad boy in him gets stronger than the good boy. The good boy needs help. Don't you think he does? Do you know how he can get it? Let us ask one of the good men of the Bible. His name was Paul. He says, "I can do all things through Christ which strengtheneth me." If we ask Christ to help us, we believe He will; and with his help the good boy will be stronger than the bad boy.

The real trouble is, most of the boys fail to know that the good and the bad in them are struggling for the mastery. And it is one of the tragedies of life that very often natures most sensitive to impressions are found amid sordid surroundings, where every touch is degrading. The clever criminals that come from the dark places of our cities, who seem to be little else than beasts of prey after a time, are, as a rule, men and women of this temperament. They were peculiarly sensitive to the sights and sounds, and to the moral impressions about them, and in the formative period of their lives these were evils only. So the life in which there were such possibilities took a permanently evil bent.

There are too many homes where the coming of the son or the daughter is awaited with shrinking. From too many of our homes the children pass out into the world with as little regard as if they were changing their boarding-house. It was not so in the olden times; it need not be so now.

And just here we would enter our protest against much of the prevalent discussions in connection with the religious training of the young in our churches. Much of it takes for granted that there shall be no training in the home, and that the Sabbath school and the

Christian Endeavor Society shall not supplement but practically take the place of such home training. That is a fatal error. The home must retain its place as eminently the institution for the Christian training of the young. If it has fallen to its proper standard, let us do our utmost to lift it up again, but under no consideration should we entertain the idea that outside agencies can do what the home alone has the right to do.—*Zion's Watchman.*

Items Concerning the Society.

We have received from Heady Brother, don, "A History of the Adult School May by J. Wilhelm Rowntree and Henry Bryan L. A review of this work in store, awaiting our examination.

The Friends' School at Providence is to hold one hundred and nineteenth anniversary on 23d day of Sixth Month next, on the school premises. The principals for more than half a century are expected to be in attendance.

Joseph S. Elkinton has been liberated by the Philadelphia Monthly Meeting to pay a religion to all the remnants of Indian tribes dwelling in New York and the New England States, and within the Dominion of Canada.

Dover Monthly Meeting (New Hampshire) Monthly Meeting, we understand, of Joel B. his younger days, and which several months received Joel and Hannah E. Bean, of San Francisco, on their certificate of transfer, and hers, has since recorded them as ministers of the Society of Friends.

We acknowledge the receipt of an engraving of "Nat. Franco, Comedian and Impersonator," advertised to perform "at Friends' [somewhere], Thursday, February 26th, 1903, P. M." The date possibly relieves the occasion being connected necessarily with a gathering of worship.

"The march of intellect seems to be the spirit among Friends, judging from the reports one reads. There are, of course, exceptions, and there had needs be, in our judgment. Intense refinement may exalt the culture at the expense of the weightier matters of the law."—*Australian Friend* "correspondent."

A pamphlet of 134 pages now reaches us (the kindness of Norman Penney), giving in advance the sitting of London Yearly Meeting, its uses and Reports which are to come up for minutes or subordinate Meetings, including monies concerning deceased Friends: James Barber, Charles Barnard, John Bellows, C. Brewster, Francis Dix, Robert Horne Penney, and Pumphrey.

Hannah Bellows, daughter of the late Joel Bellows, of Gloucester, England, who was taken by his death from going to teach among the heathen one year ago, has lately been visiting interested Friends in and about Philadelphia. On last Second-day, the 1st instant, she left for her distant field of service among the Dunkhobors.

Helen Morlan, who preceded Hannah Bellows one year, is said now to have an interest of thirty children, ready to hand over to the care of Hannah Bellows, previous to her own departure to England.

To send a circular to a Friends' school to place a sergeant on its staff and to boys with carbines, is, as the *Australian*

... a stroke of humor of which only the diligent routine of the War Office could be... The headmaster of the Sidcot school... his "humiliation" at finding the military... apparently so ignorant of the principles... which the Friends stand as to send him... setting forth "the advantage of an early... training to the youth of England." What... people may think on the question of military... schools, they will agree that such action... not a lack either of knowledge or of taste... ought not to pass without protest.

The *British Friend* called attention to the above... as instancing a grave national peril... being to go back to the standards of... ancient Rome. . . . The old-fashioned teaching... of different races and nations are yet... that the best defense is the consistent... of national justice and righteousness, is... as sentimental rubbish. . . . but we... forward bravely even in what may seem a... battle. How often have the idealists, the... the leaders of lost causes shaped the... future.

JOHN YEARLY MEETING.—We continue glean-... such expression in the recent sessions as... of rather general application or of interest... Mr Pim would aim at limiting the Meeting... Ministry and Oversight to those alone who felt... called to the work. In regard to the... he felt he feared there was a tendency to exalt... power rather than spiritual insight... as of the first importance.

John Bell queried how far was there a... are called-out people, within the Society... and those who know what it is to be baptized... (Christ? Such are the hope of the Society... as about building up the Church, but none... are builders, at the most we are stones for... latter Builder to use.

... the pendulum. would not swing... in the direction of exalting a cultured... We did not undervalue culture. . . . We... men like Paul, but also men like Philip... though unable to give a long address, could... "come and see." We needed the ministry of... to in the school of experience, in the midst... and temptations, had learned lessons they... never have learned in any theological semi-... from reading theological books.

... Shemeld referred to a sentence he had... in recently-published book—"It is impossi-... a Christian to live and act up to his prin-... and convictions in the world we live in;" a... is characterized as entirely untrue. . . . He... feared there were Friends who believed... very similar to it. We could not, in-... be the life without faith in Him who gives... power to live it. He must be to us our Ruler... Governor, the first and the last.

William W. Davidson felt it difficult to work... generally and helpfully, without the confidence... press gives. But he believed God meant to... us work in us and by us.

John Allen, referring to the predominant... expressed in our deliberations, respecting... of more spiritual power, said this might... be platitudinous, or it might be a statement... really felt to be our need, and which we... as the remedy for our condition. The... of Jesus Christ may be preached in our meetings... Redeemer; the doctrines taught may be... and Scriptural; but was the teaching effect-... our preaching influence people to throw... with the Lord Jesus Christ; and did... bearing bear fruit in the lives of our mem-... Our ministry seemed to fail in reaching... younger people. This was a greater danger... generation back. It was not from the... guess that the complaint came, but from the... and the religious, that they did not get... of teaching their souls redeemed. Were

we not suffering from the want of a deep search... into the things of God? Why should there be any... antithesis between spiritual earnestness and the... desire to be taught? Why should not our words... be put in the way best adapted to achieve their... end? He felt that we were in danger of substituting... for the inspired Word of God a theology of... man's invention. There are increasing signs of... heresy hunting, a disposition to pick out some... little slip, and magnify it out of all proportion. Truth is many-sided, and no man has the whole of it. There are different conceptions and different presentations of truth, but these are consistent with unity in the truth.

Anna Hogg considered that definite evangelistic work on the part of our members had been unduly insisted on, as if the only way in which a person could serve God was in undertaking such work. But not every one had gifts in that direction. Those who brought practical religion into the affairs of daily life did God's work as much as if they spoke in meetings.

William K. Wigham said we had heard a good deal about power; the power was present if we would but use it. The early Friends got hold of the right principle and lived it out, and hence exercised so great an influence. Because they were willing to suffer they won liberty of conscience, and contributed very largely to bring into prominence the principle of arbitration as opposed to war.

William Henry Haydock desired sympathy with middle-aged Friends, who had been brought up with certain ideas of religious truth which were now assailed.

Edgar A. Pim urged the teaching of the history and principles of Friends to children.

Several other Friends addressed the Meeting before the deliberation on the state of the Society closed.

It was concluded to have no written reports of meetings for worship and discipline at next Yearly Meeting, and the subject of the spiritual condition of these meetings was also left to be introduced by Friends who feel it laid on their hearts when the state of the Society again comes up for consideration.

Fifth Month 4th.—Anna Hogg called attention to the fact that many Boer families had lost their much prized family Bibles, containing in many cases the family register. Many of these Bibles had found their way to these countries, and were kept as curiosities. If they were now restored to the original owners, it would be in the interest of peace, and A. Hogg recommended any Friends knowing the whereabouts of any of these Bibles, to seek to prevail upon the holders to restore them to their owners, who were so sorely feeling their loss. Much unity was expressed with Anna Hogg, and the matter was commended to Friends in their individual capacity.

A minute from the sitting of the Women's Yearly Meeting which had just been held was read, asking the Yearly Meeting "to alter its constitution, so as to make it consist of men and women Friends with equal responsibility for any action that may be taken or arrangements made."

The Clerk read from the Discipline a section which declares that "the Yearly Meeting of Friends in Ireland consists of all Friends who are members of any Monthly Meeting within the limits thereof."

After some deliberation a minute was made accepting the view that the Yearly Meeting consist of men and women Friends with equal and co-ordinate rights and responsibilities, and that power should be retained by the men and women Friends respectively to meet separately when it appeared desirable to do so. A committee was appointed to consider the matter further in detail, and to propose to next Yearly Meeting what changes in our present usages might be desirable.

In view of their approaching Yearly Meeting the

London Friend says:—"It is possible to expect too much from the decisions of our Yearly Meetings, as of all other Church conferences and convocations. That very many hearts may be refreshed and stimulated to higher and more earnest endeavour all devoutly trust, and we desire that our collective and increasing membership may move forward under a yet clearer sense and understanding of the mind of God. But it does not therefore follow that it is wise for Yearly Meeting to be looked to as though its regulations were to be an easy guide for every member's conscience. It is true there are corporate functions of united testimony to foundation truths that find expression relative to the bearing of those truths on the questions of our time; but it is well for every member amid the varied circumstances of life to have large play for the working of the individual conscience, that he may grow in the knowledge and comprehension of the immediate prompting and restraint of the Spirit of God."

Notes from Others.

John Eliot's Indian Bible of 1665 is owned by the town of Natick. The book is in an excellent state of preservation. Two other copies of this Bible are in existence, one in Connecticut, the other in Europe.

The Association of the Congregational Churches of the State of New York, lately took action, "earnestly requesting the American Bible Society to publish or sell the recent revisions and not confine itself to the translation of 1611."

It is said that nowhere in the Old World do the Jews enjoy such a degree of liberty as in the country where their fathers were once slaves. This is probably because Egypt is subject to British rule. In Cairo there are five synagogues.

J. L. Harbour says, in the *Pilgrim Teacher*: "It is a well-known fact that not one man in a hundred is gifted with the ability to really interest and hold the attention of Sunday school scholars, and the 'remarks' of a great many speakers are valueless on this account."

A magazine has recently been started in India which promises to answer every objection against Islam, and to discuss every question bearing upon religion. The editor, Mirza Gulam Ahmad, of Oadian, promises an "impartial review of the existing religions of the world, Christianity, and Islam in particular."

Secretary Barton of the American Board of Commissioners for Foreign Missions says that Ellen Stone will probably return to the scene of her captivity among the brigands in time, and he urges that this Government should secure the payment of indemnity for her ransom from the Turkish Government.

A cordial response has been given by Philadelphia ministers to co-operate in open-air services during the summer. The leading ministers from all denominations have expressed their willingness to engage in the work, some offering to give up part of their vacation for the purpose. The campaign is to be inaugurated by Campbell Morgan.

The Bible, translated into the language of Tibet, is now being carried even into that forbidden land, in advance of foreign commerce and travel. The Russian Government, while hitherto intolerant of missionaries, gives the Bible itself free course among the people. It is admitted free of duty, and has often been transported free of charge.

Rabbi Hirsch, in a lecture before the Epworth League in Chicago recently, said: "If Jesus Christ should return to the earth to-morrow, he would be

welcomed in every Jewish synagogue in the land.

So far as the modern Jew is concerned, they regard Jesus as one of the noblest spiritual teachers that ever appeared in the world."

"I believe it is far better to have little knowledge of the Bible, with reverence for its teachings, than to have much knowledge without reverence," says John D. Prince, commenting on the attitude of mind in which many pupils receive Bible instruction either in dull indifference or in frivolous disrespect, mainly those from twelve to sixteen years of age.

SUMMARY OF EVENTS.

UNITED STATES.—A despatch from Halifax on the 25th ult. says: "The Marconi station at Tablehead, C. B., is in perfect order, and within a few days messages will probably again flash across the Atlantic and the first long distance wireless service on a commercial basis be established."

From New York comes the announcement by the Marconi Wireless Telegraph Company, that Thos. A. Edison has become a member of the Board of Technical Engineers of that Company, and it is said that Edison, having become a stockholder in the above Company, will turn over certain patents he owns.

The Philadelphia Milk Dealers Exchange has decided not to reduce the price of milk from 8 to 6 cents a quart. Poor pasturage due to a lack of rain is assigned as the chief cause for this action. If the drought continues many days longer, it is likely 9 cents will be asked.

During the first half of this month nearly 100 clerks of the Census Office will be dropped for the reason that the work of that office is being rapidly completed and there is no longer necessity for retaining the present clerical force.

The Lake Mohawk Conference on International Arbitration opened on the 27th ult. The opening address was made by former Secretary of State, John W. Foster.

In referring to the submission of the boundary dispute between Chile and Argentina to arbitration, he said:

"Probably the most edifying and auspicious event has occurred in a quarter of the world to which Anglo-Saxons have been looked upon as the great examples in good government and salutary public law."

Referring to the value of the Hague Tribunal, he says: "The Venezuela imbroglio has also served to bring into prominence the value of arbitration and the utility of The Hague Tribunal. It was a high compliment to President Roosevelt to be solicited to act as arbitrator of that dispute. But it enhanced his reputation as the champion of the offer, and to refer the contending parties to the tribunal, which his own Government has done so much to create."

"In no country did this act of President Roosevelt receive greater commendation than in France, some of whose representatives at The Hague conference were the most ardent supporters of the scheme adopted by that body."

In summarizing the work of the past year, another speaker pointed to the fact that disputes between 12 nations, have been referred to special arbitrators, or arbitral commissions, while decisions of cases referred to arbitration, before The Hague Court was set up, have been rendered, affecting twelve countries.

It was estimated that about 10,000 workmen were idle in various parts of New York last week, as a result of strikes ordered by different unions, and the lookout decided upon by material men and contractors, in their fight against the unions." With a view to ending such pernicious practices in the future, a committee of five union men was appointed by the Board of Building Trades to obtain evidence that employers in the building industry are engaged in any effort to stifle competition and to crush lawful organizations of workmen. This evidence is to be laid before prosecuting authorities, and is also to be made the basis for public denunciation of the employers.

In this city, building operations, costing upward of \$12,000,000, are tied up as a result of the carpenters' strike, and nearly 10,000 are afflicted with the building trades idleness. Of this number, about 5,500 are carpenters, who are demanding 50 cents an hour, and the remainder includes plasterers, bricklayers, laborers, marble setters and polishers, and other trades identified with building construction, who are out in sympathy.

Clarence S. Darrow, the Chicago lawyer who appeared before the strike commission as counsel for the building trade workers, and is looked upon as a legal champion of Labor, in an address to the Henry George Association

on "The Perils of Trade Unionism," said: "When all is said and done, the power of public opinion is the one controlling power in the world. A sufficient public opinion will prevent trade unionism. A strong enough hostile public opinion will destroy it."

The greatest strike of Textile Workers, ever known in the trade, was inaugurated on Second-day, when 95,000 operatives forsook their looms and spindles. They demand fifty-five hours for a week's work, instead of the sixty before made, and ask pay only for the hours worked. For Government statistics, the strike is 95 per cent. of the carpets made in this country, come from Philadelphia. In the upholstery trade, 98 per cent. of the output is made here. 500 mills are affected, while 48 firms have conceded the shorter working scale.

Floods of unusual severity are devastating portions of Nebraska, Iowa, Oklahoma and Kansas. A vast island of water is pouring over the Kansas prairie, and the gas and electric lights are extinguished, the water works shut down, and the railroad service is feeble and uncertain. 20,000 people are reported homeless. The food supply is falling, and grave fears are entertained. At Topeka 34 persons are known to have perished and the loss of property has reached vast sums. The War Department is exerting its full power, and has sent the entire force of the law in aid of the food sufferers in the West.

A tornado in Gainesville, Georgia, is reported to have killed from 85 to 100, mostly employers of the Cotton Mills in that vicinity. One of the largest of these, a three-story building had its two upper floors swept away.

There were 444 deaths in this city last week, reported to the Board of Health. This is 28 less than the previous week, and 1 less than the corresponding week of 1902. Of the foregoing 228 were males and 216 females: 54 died of consumption of the lungs; 45 of inflammation of the lungs and surrounding membranes; 7 of diphtheria; 17 of cancer; 14 of apoplexy; 27 of typhoid fever, and 5 of scarlet fever.

FOREIGN.—From a most authentic and semi-official source from London, the capital of Great Britain, it is learned that the Colombian Congress is almost certain to reject the Panama canal treaty in its present form. It is added that open opposition to the measure is encountered everywhere.

Owing to what was termed the hostile tone of his correspondence, the St. Petersburg correspondent of a London paper has been expelled. He had to sign a promise to leave Russia within three days.

Secretary Chamberlain's protection policy has caused a ferment in England, and is being discussed on all sides.

Both the French and Spanish authorities have forbidden the continuance of the Paris-Madrid automobile race, six persons having been killed, and thirteen seriously injured. A speed of from 60 to 88 miles was attained in the race, and the motor cars of the Paris-Perpignan, President of the Middle European Automobile Association, referring to the race, said: "This is what comes of madness, for I regard it as madness to drive along streets or roads at more than thirty kilometers an hour." He admitted that automobile races were necessary for the development of perfect machines, but they should take place over a specially built course. No doubt the whole world was capable of velocities of 100 kilometers an hour.

President Loubet will return the state visit which King Edward has just paid to Paris. While Emperors, Czars, Sultans, Shahs, Kings and Khedives have visited London, this will be the first time in the great city of the nation where the President of a Republic will have paraded of its hospitality, and it is thought that the interchange of visits, by the rulers, will strengthen the peace of the two nations.

Apparently the United States and Great Britain are alone willing to make the payment of the debt easier to China, the other governments consulted having disapproved of the indemnity scheme proposed by Great Britain.

A despatch from St. Johns says the Havana Congress has decided to still increase the duty on coffee from 312, the present rate, to \$18 per hundred kilos. The measure is intended for the protection of Cuban growers against Brazilian and Porto Rican coffee.

A deputation of Jews from Kischeneff arrived at St. Petersburg, to ask the Russian Government to protect their race against future massacres and relieve their financial distress. The deputation was accompanied by the Minister of the Interior von Plehve, was such as to impress the delegates with the display of his amiability, and by the attention with which he listened to their complaints and requests.

A despatch from St. Johns, says: The Allan Line steamer City of Bombay reports having passed an unusual number of icebergs on her voyage across the Atlantic. The iceberg in one place. The British steamer *Sidra*, which arrived from Halifax, passed 47 icebergs off Cape

Race. Several sailing ships report similar ones and the presence of heavy fogs in the track of sailing ships. It is reported that the deaths from the plague Punjab from First Month last to Fifth Month 26 numbered 141,879.

NOTICES.

A young woman Friend desires some light work Seventh and Eighth Months. Address J. Office FRIEND.

Haddonfield Quarterly Meeting will be Mt. Laurel, N. J., on the eleventh of Sixth Month A. M. Coaches will be waiting at the meeting-Moorestown on the arrival of the trolley leaving 7.55, and of train leaving Market Street Ferry at 8.20, to convey Friends to Mt. Laurel and Thence intending use of coaches will please notify E. Kaighn, Moorestown, N. J., not later than the 10th.

WESTWOWN BOARDING SCHOOL.—For convenient persons coming Westwown School, the stages of trains leaving Philadelphia 7.10 and 8.18 A. M., and 4.32 P. M. Other trains are met when they reach Stage fare, 15 cents; after 7.30 P. M., 25 cents each. To reach the school by telephone, wire Westwown Phone 1144. EDWARD G. SMEDLEY, Superintendent.

WESTWOWN BOARDING SCHOOL.—Application admission of pupils to the school, and letters in to instruction and discipline should be addressed to WM. F. WICKERSHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent, Address Westwown P. O., Chester.

Westwown Old Scholars' Association Seventh Annual Reunion (Fourth Westwown Reunion of the Old Scholars' Association) is planned for Seventh Month 6th, 1903, on the School grounds at Westwown. All old scholars, their husbands, wives and all others interested, are invited to become members of the Association. The members are invited to the Reunion which will be held from 9 a. m. to 4 p. m.

Special trains will be met by stages at Westwown. The meeting will be held at 11 o'clock in O. S. A. tent; it will be addressed by interesting speakers. All old scholars will be announced for luncheon will be served in the school building. The lunch will afford an opportunity of viewing the buildings, walks, and having the more social enjoyment of old school friends.

DIED, at New Providence, Iowa, on Fifth Month 1903, JULIA ANN MARTIN, aged eighty-two years and six months. For more than half of that time she ministered in the Society of Friends, and was a true and faithful servant. Though a member of the large Iowa, her sympathy was with the conservative Meeting, and she was present at the first meeting by Norwegian Friends in Marshall County, Iowa, nine years ago, which has been kept up twice every year since, and is now known as Stanger's Meeting of Friends. This dear Friend suffered from a long illness for several years, but she was permitted a season of relief for both body and spirit, and in quietness and confidence exchanged earthly temporal tabernacle, for that which is eternal.

At her residence in Philadelphia on the eighth of Second Month, 1903, EDWARD HENRY MARTIN, aged thirty years and six months, died. He was the youngest son of the late Monthly Meeting of Friends of Philadelphia, Northern District. Of his condition in active life it is said, "Not stotful in business, fervent in serving the Lord," while in his declining years he manifested that humility, patience, tenderness of love, which mark the mature Christian.

At Greenwiche, New York, on Fifth Month 19, 1893, at the age of sixty-three years and eleven months, died an esteemed member of Greenwich Monthly Meeting of Friends, the was the youngest daughter of Zephaniah and Anna Bridsall, and was born in Ulster County, New York, in 1810. Removed to Ohio in 1835, she was united in marriage to Merritt Brown, who died in 1857. Short years was removed by death in 1857, and she was left a widow with six children. She was a devoted and long years of lonely widowhood, trusting in the Saviour. She was a life-long member of the Society of Friends, and firmly attached to its doctrines and principles; was quite frail for many months, but she remained home, we trust, as "a shock of corn fully reaped the heavenly garner."

Unionism.

It is of great concern to be looked after in Unionism, for which some in these times are making plans, is whether God draws men into Unionism is their god.

There is a unity which God draws men into, and all true churches it centres in Christ, and that is the unity of the Spirit, and that is their bond of peace. There is also a unity of mind of man, as ripe for unity as a nation, when it uneasy now to be turning its back, or now for building its babylons, for doing's sake,—which must be felt as a great stumbling block to promoters of the unity.

Between the poetic sentiment for union and the fact for combinations and trusts, there is much danger of the idolatry of union as a basis hope of the unity of the Spirit. If merely syndicate motives are to prevail, and with that popular indifference to essential differences which likes the association and tolerates its truth, then "Say not ye to one another, 'A Confederacy!' Neither fear ye, neither fear nor be afraid. Sanctify the Lord who is before him, and let Him be your fear, and let Him be your dread, and he shall be for you as a Father." (Isaiah viii: 1-24).

The basis of union is not the swapping of doctrine or the leveling of some points and the giving up of others, but it is the Spirit of Him from whom the gathering of the people shall be. Union can be a unity of spirit and honest, helpful difference of opinions, healthy because extended in the bond of peace. When we as a people report that love and unity are maintaining, we believe that there is a unity of spirit and purpose alive among us, steadily minding the one essential thing; and perhaps all the more because true to differing convictions of different aspects of Truth. The unity of the Spirit does not mean uniformity of opinions.

These belong to the head rather than the heart, and may be left to follow the lead of a heart that is concerned to be right towards God. It is not right to respect others' opinions of every sort, but it is right to respect others who are honest in their opinions. In running with one another the race that is set before us, are we called upon to copy exactly each other's steps and so get our eyes off the Goal, or to be looking unto "the Author and Finisher of our faith, who for the joy set before Him endured the cross despising the shame?" If we, with eye fixed on Him, so run as to obtain, He will not criticise us for our individual gait, but the uniform aim of eye and step towards Him will be the unity with which He is well pleased.

Good and pleasant as it would be for all Christ's brethren on earth to be found dwelling together in unity,—even of organization if that need be, but we doubt it,—yet we cannot see that it is not better at present for the professing church at large that some of its different bodies should continue to preserve their individuality. The maintenance of living principle in the Truth by some individual denominations is a more eminent service to all churches, than the sinking of those testimony-bearing denominations into a common ecclesiastical mass could possibly be. This, in the present state of the church, would be a drowning of the most living instances of the unity of the Spirit in the uniformity of deadness. Union is not for the sake of union, but for the sake of the Spirit, and the better to band men together in maintenance of his testimonies and the furtherance of Christ's kingdom.

While it is conceivable that most Protestant churches might combine without real loss of any spiritual principle for which they stand, though not without several changes of mode and form,—yet the one absolutely non-priestly religious society of them all would have to remain distinct or else be utterly cancelled. It is wholly unmixable with the other systems, without the surrender of all the points which made it a Society. In its case union would be simply obliteration. Such obliteration of most but the name has already, over large areas, come to pass, through attempts to accommodate principle to the usages of others. In such cases the distinctive principle simply

drops out, and the principle of worship, of ministry, of usage and of doctrine generally which obtains in other churches sets in and keeps on under cover of our name. So church-unionism, consistently applied to the rest of us, would have to mean the annihilation of all that is distinctive in Quakerism. Without naming now our several fundamental tenets that gave our system a separate existence, we leave to any one so disposed to see if he can blend them, one by one, with the practice of other church-systems without surrendering them. We are glad to hear of the growing spirituality of the churches, and hope it is true. But until their standards (we compare no individuals) reach a higher level still, or ours a lower one, our religious Society must stand separate, or be submerged in the common tide. And yet how many, swept along in that tide, we have heard calling out to us, "Oh Friends, keep true to your special principles, and show to the church at large the more excellent way!"

On the whole we join the *Christian Instructor* in fearing that "the schemes of union of the churches of our time means a leveling down to the plane of the churches that have made lower attainments . . . It is questionable whether a union formed under these circumstances would be endeavoring to keep the unity of the Spirit."

"I HOPE," says a correspondent, "that those who have the care of THE FRIEND will continue to impress upon the minds of its readers, that the foundation of true Quakerism is the revelation of Jesus Christ in the heart of every one, agreeably to the teaching of Jesus Himself;

"Flesh and blood hath not revealed this unto thee, but my Father which is in heaven." The revelation of the Father being the revealing of his Son, so Jesus Christ revealed in us becomes the foundation of all true living spiritual experience. Out side of this there is no spiritual experience that will satisfy the longings of the true seeker after righteousness and true holiness, and the peace of God that passeth all understanding."

We are indebted to another for the following:

The *Springfield Republican* recalling the massacre of Chinese at Rock Springs, observes:

—“With no Rock Spring massacre to our credit, no slaughter of Italians, no roasting to death of negroes, no lynching, no savagery in labor wars, America would be in a better position to tell the Czar that his people were a very barbarous set, and that all of us, in this blessed land of civilization and humanity were indescribably shocked by the reports from Bessarabia. Until our own skirts are cleaner, this should be a cardinal feature of our policy—to mind our own Kischeniffs, and pray that other nations may be saved from the brutal and passionate excesses of mankind.”

Doukhobor Notes.

We, Gregory Michaelovitch and Praskovita Vassilyevna Popov and all our family of Popov send our greeting to Jos. S. Elkinton, Joseph Elkinton, George M. Comfort, Ephraim Smith, Jonathan E. Rhoads, Samuel Morris, William L. Bailey and William Evans, with our beloved partners and also with your dear children and also to all your Christian household of faith, to you who are the partakers of the same faith with us. You our much beloved brethren and sisters in our Lord Jesus Christ, we send you our hearty greeting from the depth of our souls, and we praise the Lord God for his great mercy in bringing us to Canada to this free country as he has blessed us to live here.

Moreover we have a greater joy, which I am unable to express with my tongue or describe with the pen, that is, how my heart feels that there are so many of our Friends who have been sending us help and supporting our bodies by sending us carloads of clothes and also flour and were having compassion with us as with their own children. And up to now, dear Friends, your love has not grown cold, but has become warmer. Now, dear Friends, you have sent a messenger who came to build for us a school.

As to us, we were very glad when Cors. Jansen gave us such a precious word that you do not deprive us of your love and you desire to have our children taught in Rosthern in school, and then I was exceeding glad, so that from gladness I could not refrain the tears in my eyes, and I respond to your gracious dealing and your desire towards our children. I believe also our children ought never to forget you for such a great love of yours. I have also therefore given away my children Tenia and Peter to be taught in Rosthern. Dear Friends, we are not able to thank you enough for your great love.

We remain, wishing you all the riches of God's love, forever loving you,

GREGORY MICHAELOVITCH POPOV AND WIFE.

A “LOVING DEFINITION OF MYSTICISM,” cited in the review columns of the *Atlantic Monthly*, for Fourth Month, 1903:

By mysticism we mean, not the extravagance of an erring fancy, but the concentration of reason in feeling the enthusiastic love of the good, the true, the one sense of the infinity of knowledge, and of the marvel of the human faculties. When feeding upon such thoughts, the wing of the soul is renewed and gains strength; she is raised above “the manikins of earth” and their opinions, waiting in wonder to know, and working with reverence to find out what God in this or in another life may reveal to her.—*Jouett*.

From a Letter of John Crooks to Isaac Pennington:

“Sure I am, none can be so weary, but He takes care of them; nor none so high fainting but He puts his arm under their heads; nor none can be so beset with enemies on every side but He will arise and scatter; nor none so heavily laden, but He takes notice of them, and gently leads them, and will not leave them behind unto the merciless wolf, because they are his own, and his life is the price of their redemption, and his blood of their ransom; and if they be so young that they cannot go, He carries them in his arms, and when they can feel nothing stirring after him, his bowels yearn after them: so tender is this Good Shepherd after his flock.

“I can tell, for I was as one that once went astray, and wandered upon the barren mountains, and when I had wearied myself with wandering, I went into the wilderness and there I was torn as with briars, and pricked as with thorns, sometimes thinking this was the way and sometimes concluding that was the way, and by and by concluding all was out of the way, and then bitter mourning came upon me and weeping for want of the interpreter, for when I sought to know what was the matter, and where I was, it was too hard for me. Then I thought I would venture on some way, where it was most likely to find a lost God, but found it not, until I came to see my heart swept from those thoughts and imaginations and willings and runnings, and to die to them all, not heeding them, but watching against them, lest I should let my mind go after them.

“And here I dwelt for a time as in a desolate land uninhabited, where I sat alone as a sparrow upon the housetop, and was hunted up and down like a partridge upon the mountains and could rest nowhere but some lust or thought or other followed me at the heels, and disquieted me night and day, until I came to know Him in whom was rest, and no occasion of stumbling; in whom the devil hath no part, and He became unto me as a hiding-place from the storms, and from the tempests. Then came my eyes to see my Saviour, and my sorrow fled away, and He became made unto me all in all, my wisdom, my righteousness, and my sanctification, in whom I was and am complete, to the praise of the riches of his grace and goodness that endure for ever.

“Therefore be not discouraged, O, thou, tossed as with tempests! nor dismayed in thyself; because thou seest such mighty hosts of enemies raising up against thee, and besetting thee on every side; for none was so beset and tried and tempted as the true Seed was; who was a man of sorrows and acquainted with grief. But be thou still in thy mind, and let the billows pass over, and wave upon wave, and fret not thyself because of them, neither be cast down, as if it should never be otherwise with thee. Sorrow comes at night, but joy in the morning; and the days of thy mourning shall be morning, and the accuser will God cast out for ever.

“For therefore was I afflicted, and not comforted, and tempted and tried, for this end, that I might know how to speak a word in due season, unto those who are tempted and afflicted as I once was: as it was said

unto me in that day when sorrow lay upon me.

“Therefore be not disconsolated, neither give heed unto the reasonings and disput of they own heart; nor the fears that therefrom, but be strong in the faith, believe in the light which lets thee see them, and grace thou wilt know to be sufficient for thee, and his strength to be made perfect in weakness. And so wilt thou rather glory in thy infirmities, that his power may rest in thee, than in thy earnest desires to be rid of them, for by these things thou wilt continue in the life of God, and joy in God, glory in tribulation, when thou hast been in all conditions to be contented; and thy trials and deep exercises, is the way to this lesson.

“Therefore watch that thou fall not into temptation, and my God and Father keep thee in the arms of eternal love, over all, unto his praise. Amen.”

FOR “THE FRIEND.”

The Mark of Modern Saintship.

BY AGNES L. TIERNEY.

Religion has been defined as the connection between man and God, and the expression of that relation in human conduct.

If one have occasion to pass judgment on the religion of another people, organization or individual, we necessarily confine ourself in that judgment to the second element of religion—its expression in human conduct. We are too circumscribed and limited in our knowledge of the workings of the infinite up to finite to feel anything but reluctance to another's claim to relationship with God. We almost instinctively judge the genuineness of a man's religion by his conduct, his conformity or non-conformity to certain standards acknowledged by his generation. As thus it has happened that different ages and their varying development of ethical principles, have set up different standards of judgment of the outward expression of religion. Observance of the law under the Jewish dispensation, obedience to the church in the Middle Ages, acceptance of certain fixed interpretations of Scripture in early Protestantism, were each in their turn the acknowledged witnesses to men of the soul's relationship with God. If we ask what is our present modern test of the reality of a man's religion, I think we can answer, “his attitude toward his fellow men.” In previous epochs of religious history we find no widespread reliance on this modern standard of judgment, the adequate fruits of religion. In the Middle Ages we have the most complete and lofty expression of the religious attitude toward fellow men, faith, trust and deepest adoration. In the Middle Ages the religious attitude toward man was Davidic. His enemies were the enemies of God. The command, “love your enemies” was a searching question, “He that loveth his brother whom he hath seen, how shall he love God whom he hath not seen,” was the fruit of a new dispensation, the spiritual fruit which were borne long after David's time.

The early Christians, we must believe, possessed to an unsurpassed degree the religious attitude toward men. The inspiration of the new and lofty faith fused all its common and into one spirit of self-sacrificing love.

church, in the fulness of its hierarchical power and material glory, soon cooled that splendid passion for humanity which burned in the hearts of its founders, and substituted for its devotion to its worldly interests and loyalty to its commands.

It is in the midst of its formalism and because of its corruption there appeared men and women whose lives were passionately devoted to a religion expressed as an attitude toward God. These are known in history as the medieval saints. Here and there were those whose relationship with God bore fruit in their attitude toward men. Francis of Assisi and Elizabeth of Hungary, are types of these. But the record of a large proportion of the lives of the saints is full of painful efforts to gain favor of God through self-mortification, or to become so absorbed in the contemplation of heavenly things that the world receded almost entirely from their vision. "St. Simon, who stood for thirty years on a bed of straw between the meadow and the cloud," was an extreme example of the first class. In the second we find some interesting examples described in Prof. James' recent book on "Religious Experiences." One was "St. Margaret Mary," the founder of the Day of the Sacred Heart. She grew so absorbed in Christ's love that she became almost useless to the convent. They tried her in the nursery, but without success, in the kitchen, she everything dropped out of her hands, and finally they put her to teach in the school, where the little girls cut pieces out of her notes for relics, but where she was too much absorbed to pay the necessary attention.

Another example is that of "St. Louis" (Nizaga, who died in his twenty-ninth year), who is known as the pattern of all young people. He felt it right to forget the number of his brothers and sisters and to think of his duty only to pray for them. He guarded himself so carefully that when one day, by chance he looked upon a companion he reproached himself severely for lack of modesty. He cultivated silence in order to be relieved from the sins of the tongue, and not after false accusations and unjust reprimands as opportunities for humility. When another died he took it as a particular attribute of God to himself and wrote a letter of advice to his sorrowing mother, whom, at the age of twelve, he had avoided seeing and conversing with alone.

Any of the Protestant mystics did not avoid extravagances and asceticism of the church, and, while, perhaps, it is possible to be unduly on extreme instances, it is well known that the whole religious tendency of the remarkable period of history known as the Middle Ages was toward cloistered contemplation and passive ecstasy.

The last century began with a stern revolt against any form of religion that abstracted itself from human life and activity. The first of the nineteenth century was humanity, its text the brotherhood of man. In the midst of its scientific reasonings, its questions, its doubts and its negations, service to humanity became with large numbers the basis of religion. So widespread was the revolt against religion without love, that the church lost many allies, whom at a later and more liberal period they would have gladly

retained. In defence of the great-souled among these, Whittier wrote:

"Call him not heretic whose works attest
His faith in goodness by no creed confessed,
Whatever in love's name is truly done.
To free the bound and lift the fallen one,
Is done to Christ. Whoso in deed and word
Is not against him labors for our Lord.
When he who, sad and weary, longing sore
For love's sweet service sought the sister's door,
One saw the heavenly one, the human guest,
And who shall say which loved the Master best?"

At the beginning of the twentieth century we find two tendencies at work. On the one hand is a reaction toward the formalism, mysticism and self-centered emotionalism of another age. On the other hand a ceaseless, breathless activity in good works which must at times lack the essential qualities of true service, sure leading, real devotion, faith and perfect sympathy. If we, as Friends, are to stand between these two tendencies and hold the scales at balance, we must examine our standard carefully.

From their beginning Friends have bridged the chasm which divided the mystic from the humanitarian. Mystics they have always been, but mystics with a leading into the world, not out of it. Those prominent in the earlier annals were pioneers in the many-sided humanitarian movement. Their reverent spirits, bathed in that divine love which saint and mystic sought in retirement, saw in each human being a brother or a sister. In the light of the revelation of love they detected and mitigated wrongs which society at large had not fully recognized. So much of their power came from their simple, human attitude, that we do well to inquire how much of this force we are losing or gaining to-day. What should be our attitude toward our fellow men? What is the mark of modern sainthood?

"Manners maketh man" is an old saying. "Manners do not make the man, but manners reveal the man" is the revision of a great scholar who puts second in his five evidences of an education, "those refined and gentle manners which are the expression of fixed habits of thought and action." "Real manners," he continues, "the manners of a truly educated man or woman, are an outward expression of intellectual and moral conviction. Sham manners are a veneer that falls away at the dampening touch of the first selfish suggestion. Manners have a moral significance and find their basis in that true and deepest self-respect which is built upon respect for others. . . . It is by the amount of respect, deference and courtesy shown to human personality as such that we judge whether one is on dress parade or whether he is so well trained, well educated and so habitually ethical in thought and action that he realizes his proper relation to his fellows and reveals his realization in his manners."

The religious attitude towards others means all this and more. It realizes an actual communion of the best within one's own nature with the best in another. It recognizes that common humanity which underlies all attainments, all exterior differences of opportunity and environment. It delights in other souls as revealers of varying aspects of truth. Nothing but a true baptism of sympathy can give this attitude. We recall how George Fox was

troubled because he was allowed to see and understand the evil in the hearts of others, and he cried to the Lord saying: "Why should I be thus, seeing I was never addicted to commit these evils," and the Lord answered that "it was needful I should have a sense of all conditions; how else should I speak to all conditions." Few of us can hope for such an overwhelming sense of insight as this. But through the humility which comes from a genuine recognition of our own weaknesses, and through an earnest desire for that wondrous spirit of penetrating love which Jesus radiated on all about him, we may be prepared for a life of helpful sympathy and real service.

When I was a school girl I learned from a short paragraph in the Outlines of the World's History that Socrates was one of the most remarkable of men, because he said: "Know thyself." It seemed to me then a curiously overrated remark, for, I reasoned, if one does not know himself, what can he possibly know? The deep wisdom of this classic injunction is revealed only to those who have had experience with themselves for a long time. Meditation on the difficulty we all have in recognizing the counterparts of what we call weaknesses, faults or sins in others, will bring it home to us all.

As members of a religious body with an inheritance of tradition, settled policy and social standing, most of us have led unusually secluded lives, protected for the most part from those temptations which ambition, necessity or hardship bring to others. But a week's rigid inspection of our motive, in each act, of our prowess to yield to slight temptations to evade truth, to lose tempers, to slight work, to think or speak ill-naturally of others, to break small promises, to withhold perfect justice, to choose the easier of two courses, will convince us that human nature is strong within us, and that it may be only the absence of greater temptations that keeps us from the struggle which often overwhelms others. The barriers that separate individual from individual, class from class, are much thinner and more artificial than we realize. Few of us know sufficiently well the strength and weakness of our own natures to judge others except in the spirit of sympathy. The world is coming to believe more and more in the power of spirit. Nature and art, body and mind, make the strong appeals, but it is the spirit that quickeneth.

We all know what it is to be attracted or repulsed, even helped or hindered by the stranger who simply crosses our field of vision. We have no means of measuring the diffusive power of a spirit of outreaching sympathy. Its messages are by wireless telegraphy, its receivers human souls.

There are no such discerners of spirits as those upon whom the burden of the world's labor falls. Hence there is a reason, and we younger Friends cannot reflect upon it too often, why the "Quaker of the olden time" held an unrivalled place in the affections of the poor and oppressed. They had "those refined and gentle manners which are the expression of fixed habits of thought and action," and added to this, a sense of the value of the human soul, a serious, tranquil, pervasive sympathy, and that highest and most modern of spiritual achievements, "the separation of

sin and the sinner." This is the spirit we all need in our work to-day.

"Do our works revolve about ourselves, our own activities, our own sensibilities," writes President Hyde, "then we are philanthropists, workers, anything you please, only we are not Christians. For true love shares the whole personal problem of its object and strengthens the will of him whom it serves by sympathy even while it helps him bear its burden."

Another great teacher has written: "From the love of man we do not necessarily rise into the love of God; but from any true love of God we inevitably descend into the love of man, his child, his image, the object of his benediction and the sharer of his immortality." And the greatest of all teachers said, "Thou shalt love the Lord thy God with all thy heart and with all thy soul and with all thy mind. This is the first and great Commandment, and the second is like unto it. Thou shalt love thy neighbor as thyself."

We are often reminded that no people, in proportion to their numbers, give so largely to philanthropic and charitable enterprises as Friends. We are proud of this distinction. But let us not forget that the most precious possessions we all have are the thoughts, the aspirations, the principles and the love that guide and animate our own lives. Let us not deny what we can communicate of these in word, deed or spirit to the least or greatest of our fellow beings. Let us so order our hearts and lives that we shall serve our generation as true Friends of God and of humanity—not as mediæval but as Modern Saints.

"No monkish garb he wears, no beads he tells,

Nor is immersed in walls remote from strife;

But from his heart deep mercy ever wells,

He looks humanely forth on human life.

In place of missals or of altar dreams

He cons the passionate book of deeds and days;

Striving to cast the comforting sweet beams

Of charity on dark and noisome ways.

Not hedged about by sacerdotal rule,

He walks, a fellow of the scarred and weak.

Liberal and wise his gifts, he goes to school

To justice; and he turns the other cheek.

He looks not holy, simple is his belief,

His creed for mystic visions do not scan;

His face shows lines cut there by others' grief,

And in his eyes is love of brother man.

Not self nor self-salvation is his care,

He yearns to make the world a sunnier clime

To live in; and his mission everywhere

So strangely like to Christ in olden time.

No mediæval mystery, no crowned

Dim figure, halo-ringed, uncanny bright,

A modern saint, a man who treads earth's ground,

And ministers to men with all his might."

To RECEIVE a heavenly vision is a great honor and privilege. The only way to manifest our gratitude and deserve the privilege is to obey the vision. It is much easier to admire, wonder and believe, than to obey. The new-born Christian is always tempted to stop short of obeying, and content himself with adoring the grace that saves him. But he is called to serve, and expected to obey.—*C. C. Adams.*

SAY what is true; speak not agreeable falsehood.—*The Code of Manu.*

John Bellows.*

"He that dwelleth in love dwelleth in God" (1 John iv: 16). This truth was abundantly manifest in the life of our friend John Bellows, and it seems right to us at this time briefly to bear testimony to the life and labors of one whose name will long be precious, not only to many in our Society, but also to others.

John Bellows, son of Wm. Lamb and Hannah Bellows, was born at Liskeard, Cornwall, the eighteenth of First Month, 1831. He was apprenticed as a printer at Camborne, and in 1851, at the close of his apprenticeship, removed to London; but his health failing, he remained only six months, returning to his home at Camborne. Shortly after this he removed to Gloucester, where he was engaged as manager in a small printing establishment for several years, after which he commenced on his own account, and built up a large and flourishing business.

During the early part of his residence in Gloucester he was brought in contact with a clergyman who insisted on the need of water-baptism; this led him to study the question more fully, and having Barclay's "Apology" sent him, he was convinced most strongly that it was his duty to become a Quaker in all respects.

In 1869 he was married to Elizabeth, daughter of the late Mark Earnshaw, of Clitheroe.

During the Franco-Prussian war, in 1870, a number of Friends went to France to distribute help to the non-combatant victims, and he was one of those who volunteered to go, spending a month in this work. In 1892 went to Russia with Joseph James Neave, who had concern to visit that country to endeavor to get the authorities to ameliorate the condition of the persecuted Stundists; and it was on this visit that he met with the Doukhobors in the Trans-Caucasus, which led to the interest he afterwards took in these people, resulting in their migration to Canada.

In 1896, with his wife, he visited Constantinople, and entered into the cause of the oppressed Armenians. Sir J. W. Whitstall stated lately that the labors of John Bellows "and those of others like him had saved thousands, not only from death by starvation, but from perversion to Islam."

1899 saw him again going abroad, this time with Edmund Wright Brooks, to St. Petersburg, to endeavor to get the release of about one hundred and twenty of the Doukhobors who were in exile in Siberia.

As a delegate to the Peace Conference at the Hague he was found on the side of peace; and he went to Sweden to endeavor to get some mitigation of the imprisonment of Norwegians because of their refusal to bear arms.

Although he did not enter into municipal life, yet he took an interest in matters concerning his adopted city, becoming one of its most esteemed citizens, whilst for the Society of which he was a member he undertook the position of Elder, and was an appointed member of the Meeting for Sufferings. His strong conviction of what he believed to be the right work and methods of the Society led him at one time to resign membership, but after awhile he again sought to be united with us, and continued in membership for the rest of

*A testimony of Gloucester and Nailsworth Monthly Meeting concerning John Bellows, an Elder, deceased.

his life. His utterances in our Meeting for Worship were not of great length, but such as gave help to the meeting, and in things for church affairs his views were helpful.

John Bellows' life was a full and busy and yet in it all he maintained that quiet of spirit which is the inheritance of those like the Psalmist, can say, "All my strength is in Thee," and who have learned to their strength by waiting upon the Lord, quietness of spirit, coupled with faithfulness to what he believed to be right, was a leitmotif in our friend's character, and showed itself in every department of his life. He was an individual manifestly seeking to live under the control of the Spirit and to walk in God.

His allegiance to personal conviction led him frequently to differ from those he respected, causing at times pain both to himself and others; but his honesty, honesty, and unflinching courtesy led even those who differed from him to respect him, and encouraged him to all who knew him.

Numbers of clergymen and others, not sharing all his views, have written expressing his sincerity, while his friends and correspondents were to be found in all parts of life and in many lands.

His visit to America with his wife in 1892 to see a son who was settled there, seemed to have brought on an attack of asthma, with complications, was the cause of his suffering, and although for many weeks towards the close he could only sit up in a chair, yet no murmur escaped him. Though ill his illness he was only once known to give way to depression, and that but for a brief time.

On the return of his son from America the latter asked him, "Is all well with thee?" to which he replied, "Yes; all is well; we have not followed cunningly devised fables. We know in Whom we have believed." His memory will long be cherished by the rescued and oppressed communities of the world, who attracted his deepest sympathy and most practical help. He died on the fifth of Fifth Month, 1902, aged seventy-one years. His funeral at the cemetery of Painswick, the ninth, was largely attended by persons of all shades of political opinion, and by representatives of most of the religious denominations and of the civic authorities.

ONE FLOCK.—Our Lord says to his disciples that there are other sheep not of the flock whom he is to gather. "There shall be one flock and one shepherd." Not one flock but one flock. There are many innumerable many outward organizations called "Flocks," but Christ is the shepherd of all true sheep. As Dr. Thompson, of Berlin, well says, "The mark is on the sheep, not on the fold." We need not go from door to door to find the Divine mark; the mark is on the Christian, not on the organized church, as such.—*Adams.*

The fields in some places are not only barren but precious grain is being shed because the sheaves have not been carried to the garner by the few and fainting laborers.—*A. C. Thompson.*

Confessors of Peace from the Second Century to the Era of Mahomet.

XIII.

Early contemporary with Augustine and Jerome was Patrick, through whose faithful labors the Christian religion witnessed a good establishment in Ireland. There have been given very many accounts of the life of this so-called "patron saint," but a large part of the matter is simply legendary and fictitious. In his own "Confessions," which furnish us with a trustworthy narrative, we are introduced to one who appears, after his conversion, to have closely followed the leadings of the Holy Spirit. Without the great learning of either of the renowned "Fathers of the Church" just named, Patrick was one who has the savor of an excellent name unmarred by the blemish of a persecuting or of a bitter-tongued temper.

The gospel had been introduced into England more than a century before the time of Constantine, in whose reign we read of three Irish bishops attending the Council of Arles, A. D. 314. Patrick was born about sixty years after the latter date. His father, Calpurnius, was a deacon and his grandfather a presbyter. The village where he was born lay on the banks of the Clyde near the southern coast of Scotland, and it was his lot, at the age of sixteen, to be carried away by Irish raiders, who sold him into captivity in his own land. The place was near the foot of Slensish. His master employed him in tending cattle, and here the grace of God found him. "While I was feeding cattle," he writes, "I prayed frequently every day, and my love and fear of God and faith in Him continually increased. I dwelt in the woods upon the mountain, and woke up to pray before the dawn. I felt no pain, nor frost, nor snow, nor rain, nor any sense of indolence, nor the Spirit was burning within me."

Patrick, like Paul, was a chosen vessel of the Lord. Frequently in dreams, in visions of the night, the tender mercies of the Lord were felt, and fervent desires to walk in his own way, were impressed upon him. He freed from slavery to his own land, but afterward while he heard the inward voice calling him to return. "Again, on another night,—I knew not, God knoweth, whether it was in sleep or near me—I heard distinctly words which I could not understand except these at the close: 'He who gave his life for thee, is he who speaketh in thee.' And so I awoke rejoicing." He rejoices indeed that his call came not at all from man, but directly from God. He says: "I testify in truth and in joy of God, before God and his holy angels, that I never had any reason except the gospel and the promises for ever returning to that people whom I had formerly escaped with difficulty." There is no evidence that he was ever in Rome, or had any commission from its bishop, patriarch or pope.

The Druidical religion was that which maintained in Ireland before the coming of the Christian. According to Dr. Joseph Sanderson, who has compiled a discriminating life of Patrick, the Druids invoked their divinities in the name of their friends, and for this purpose used incantations upon a mound or elevated spot near the field of battle. By auguries

from the heavenly bodies, clouds, wind and smoke, the flight of birds, and other phenomena, they determined the propitious and the unpropitious times for fighting a battle, or for any other important action. Their birds, like those of the Northmen, cast into rude verse the deeds of their heroes, reciting them upon public occasions and at all great festivals. A Druid was the most jealous of beings, and woe to the individual who excited his jealousy. A single word from the Druid, and the man was cut down like grass. A Druid had always the king's ear, and at his whisper the order went forth to slay the hated man. Yet they taught a belief in the immortality of the soul, a future state of rewards and punishment, and also it is said, in the unity of God, though mixed with many superstitions.

When Patrick in the course of his long extended tours throughout the island, came to Moy Slecht in County Cavan, then the seat of the great national idol, Crom Cruach, the people having been won over to a belief in Christianity, the great idol was demolished by the preacher and so an end put to pagan worship at its centre. "In this way this great missionary in his gospel tours, dealt many death blows to the cruel paganism that held the inhabitants of Ireland in its merciless grasp, striking the fetters of error and superstition from their minds and hearts by the use of the sword of the Spirit, which is the word of God. His weapons were not, except in such a case as this at Moy Slecht, carnal, but spiritual, but they were nevertheless mighty through God to the pulling down of strongholds."

"Since the days of Paul," is Dr. Sanderson's tribute, "to a greater missionary has ever lived. The grand motive power of his life was love of souls, and like another Paul or Peter he preached the gospel with the Holy Ghost sent down from heaven. The prodigious effect produced on the minds and hearts of men was a clear indication that God was with him. King's daughters were among the honorable women who yielded to the Truth as spoken by his lips. Leaders of hostile clans, whose trade was war, beat their swords into plow shares and their spears into pruning hooks, and onward Patrick went with his good work from county to county, and from province to province, till in a few years he had carried the tidings of salvation from Howth Head to the borders of Clew Bay, and from the glens of Antrim to the dreary wilds of Kerry. From that time forward, during several centuries, there was no country more distinguished than Ireland by the possession of Scripture truth. She had a pure gospel, a free Bible, an unclouded day of grace, a rent veil into the holiest of all, a religion that will run on parallel, in all eternity, with the benign results of the redemption of Christ. Colleges were founded, congregations were organized, a bishop as he was then called, had charge of each congregation, and, according to Archbishop Usher, Patrick organized during his life three hundred and sixty-five churches and placed over them three hundred and sixty-five bishops who were simply pastors."

The church established by Patrick, he it is said, was not subject to the jurisdiction of the bishop of Rome, and did not become so until the eleventh century. While not prepared to en-

dorse the common legend of Patrick ridding the island of the whole brood of serpents alleged to have been formerly existent there, it is interesting to recount (as given by John Horland Finlay) the list of certain things ecclesiastical which the same worthy did not perniciously settle upon the people, to wit: "Neither holy water, nor the incense, nor Christmas, nor Easter, nor saints' days, nor purgatory, nor transubstantiation, nor the mass, nor auricular confession, nor the elevation of the host, nor the seven sacraments, nor the Virgin Mary, nor extreme unction, nor papal infallibility, nor any of the modern theological doctrines of the Roman church, appears to be found in any of Patrick's genuine writings. He loved his Bible; he read it carefully; he preached it faithfully."

In his poem "Erin's Old Song of Peace," Horatius Bonar sings:

"Through the green valleys of Erin
For the glad lay of love—
The love that passes knowledge,
Descending from above;
The love of Him who brought us,
And sought us in our sin;
The long shut gate who opens,
And bids us enter in.
Peace, peace, from God to men,
Good-will, good-will. Amen!"

It has been stated that Christianity was introduced into Britain a good while before the time of Constantine, yet it was considerably more than a century after the death of Patrick before a systematic endeavor formally to set up a Christian church in the distant isle was attempted. The favoring opportunity appeared in the fact that Bertha, a Frankish Christian princess, had wedded Ethelbert, king of Kent, of the Anglo-Saxon Heptarchy. In the year 597, the Roman bishop (or pope) Gregory, called "the great," commissioned Augustine, a Roman abbot, with forty companions, to proceed to Britain. Ethelbert, though a Pagan, met them in a friendly way, furnished them with a dwelling and means of support at his capital, Canterbury (then known as Dorovern), and told them they had permission to convince such as they could of the truth of their religion, and afterwards to baptize them. "The example and influence of the monarch," says Neander, "and the sensuous impression produced by the miracles, which the people supposed they beheld, induced great numbers to receive baptism; with many of them, however, as shown by succeeding events, the faith had taken no deep root."

It has been said of Gregory, "that with all his zeal for the diffusion of Christianity, he was most gentle in his treatment of heathens and Jews," and, according therewith, we find him writing very earnestly to the abbot Augustine (then become bishop), carefully to observe love and humility toward the people among whom he was sent. This counsel appeared to be called for, inasmuch as Augustine, in his rigid attachment to the forms of the Romish church early ran against the simpler faith and practice of the Britons. Urging the latter to submit all things to the ordinances of the Roman church, the abbot Deynock, of the monastery in North Wales, one who was held in great esteem for his piety and good judgment, made this excellent reply: "We are all ready to listen to the church of

God, to the pope at Rome, and to every pious Christian, that so we may show to each, according to his station, perfect love, and uphold him by word and deed. We know not, that any other obedience can be required of us towards him whom you call the pope or the father of fathers. But this obedience we are prepared constantly to render to him and to every Christian."

At the suggestion of Ethelbert, a conference on the questions in dispute was held, according to the ancient German custom, near an oak. Augustin, however, was unyielding, and the Britons declining to enter with him into any terms of agreement, he is said to have replied, "Well, then, as you are unwilling to recognize the Anglo-Saxons as brethren, and to preach to them the word of life, you shall have them as foes, and experience their vengeance."

And so it fell out a little later. Ethelfrid, king of the Angles, advancing with a large army to Caerleon, in the beautiful valley of the Usk on the border of Wales, saw there standing apart in a place of safety "a great company," so the old historian Bede testifies, "of priests and monks, who, having fasted three days, were come to offer prayers to God for their people. Although," he said, "they are unarmed, yet if they cry to their God against us, it is the same as if they fought against us; let them be first attacked." Thereupon there ensued a great slaughter. The method of Augustin, the monk, and the way of his contemporary, the calif Ali, "the faithful," are equally far removed from the non-resistant practice of the early Christians.

(To be continued.)

FOR "THE FRIEND."

The Higher Lawlessness.

Man's deepest grudge is against the disturber who wakes him from his sleep and bids him resume his march onward. Those times of awaking are ever the crucial points of history. We watch what is going on with breathless interest. It is like the moment in the life of a butterfly when the grub state is exchanged for the new form and sphere of a winged creature. It is the grandest sight this world affords the spectacle of some man of destiny to whom the new law has been committed, revealing the mystery of life to his astonished contemporaries.

And these men are all law-breakers. Luther, with his justification by faith, is the iconoclast of a thousand venerable traditions; George Fox, with his freedom of the spirit and sufficient priesthood of the individual, shocks Protestantism almost as much as Luther had shocked Catholicism; Wesley, with his bold gospel campaigning, tramples under foot at every step the orthodox conventions of his time. To-day we know that their law-breaking was all law-making, and that the world's highest interests could not spare one of the strokes they struck. There are times when the highest law that such men know imperiously demands a seeming lawlessness. In obeying this they tread a path their Master trod before them. The question came to Meissner, one of the examiners at the prosecution of Jacob Boehme, "Who knows what stands behind this man?"

J. B.

Science and Industry.

THE working world understands that the only man who really knows things is the man who can do things; that no man is really skilled and wise whose whole knowledge has been got out of books.—Portland Oregonian.

NASTURTIUM is a word the derivation of which will occur to few who see it. Yet there is a laugh in it that you may recall when next you eat water cress and bread and butter, or see the plant sharing ditch or stream side with its little four-leaved blossoms. The word is derived from *nasus torsus*, a convulsed nose—an effect supposed to be produced on the human eater by its acrid and pungent qualities. The famous old remedy of spring juices, beloved by our great-grandmothers, was concocted of the water cress mingled with brook lome, or scurvy grass and Seville oranges.

HOW OYSTERS GROW.—A man who has devoted much time to the study of the oyster says that this bivalve is born with his shell on and that he grows only in the summer time. The beard of an oyster is not only his breathing organ—that is, his lungs—but it also serves to convey food to his mouth. When the warm, calm days of Sixth Month come, the oyster opens his shell, and, by means of his beard, begins building an additional story to his house. This he does by depositing very, very fine particles of carbonate of lime, till at last they form a substance as thin as silver paper, and exceedingly fragile. Then he adds more and more, till at last the new shell is as hard as the old shell.

WOMEN who are in the habit of using soap bark as a cleanser may be interested to learn a little something about it, says an exchange. The small, thin bits that are procured at the apothecaries, are the inner layers of the bark of the quillaia saponaria, a middle-sized tree found in Chile. In Chile it is commonly used as a soap, and has been for many years. No doubt it was in use by the native Indians, when Magellan discovered them in their country, about 300 years since. Quillaia comes from a Chilian word, which means "to wash." The bark of the tree contains saponium, an alkali compound which makes it useful as a soap. In preparing soap bark one ounce of the bark should be allowed to simmer in two quarts of water until the two quarts have been reduced to one quart. It is then ready to use and it can be bottled. Colored goods are cleaned by placing on a board and rubbing the soiled parts with a cloth wet in the soap bark infusion. The cloth should be the same material as the garment that is to be cleaned. There must be no rinsing. If possible, the wrinkles should be ironed out with the hand. If black goods are to be cleaned, a table-spoonful of ammonia should be added to a pint of the cleaning fluid.

A DOCTOR FOR FISHES.—The very latest thing in the medical profession is the fish doctor, who goes from aquarium to aquarium instead of from sick-bed to sick-bed. He prescribes for the fish, performs surgical operations and looks after their diet and surroundings.

Fish surgery is difficult, not because it to be done outside the aquarium (for a can be kept out of the water for six or so minutes without hurting it), but because flesh heals so slowly after it has been cut, wounds should be kept dry, but, unfortunately in the case of a fish this requirement is easily met. Therefore, operations must be simple and slight. The most familiar is trimming tails which have become enlarged fungus growths. Japanese goldfish, for instance, have tails bigger than their bodies so when these become enlarged they are able to swim well and often "drown"—the float with their heads out of water and from asphyxiation. Other surgical operations are removing tumors, lacerated scales splintered bones.

Fish sometimes have to take medicine. When one grows very fat and unwieldy doctor calls it a case of swollen swim bladder and prescribes castor oil. His is one drop, slightly diluted, given either a spoon or quill toothpick. Sometimes they become weak and thin, taking no interest in his food and surroundings. In this case stomach is out of order, and a drop of vomica is needed to make him active and cheerful again.

CLOCKS NOT NEEDED IN CUBA.—When asked Senora D. if she would tell us the day that we might set our watches, smilingly replied in her quaint foreign English: "I have not the least idea and there is no clock in the house." Then, in answer to our look of surprise, she added: "I did not watch once, but I lost it, and over a year my clock was stolen. It was a beautiful clock, too; it cost \$70." (Senora D. discovered had a weakness for good round wares.)

"And you have lived over a year without time-piece in the house?" we gasped.

The senora smiled placidly again. "How do you manage with the servants? do they know when to get the meals?"

"Oh, they guess at it," was the reply they go over to one of the shops and think of an American woman running a house, with two children and three set in it, and not a sign of a time-piece! But do things very differently in Havana. Soon found out that clockless houses are a general rule and in the course of time too, fell into the universal "manana" leaving our watches unwound and practically ignoring the flight of time. Had The Gautier but lived in Cuba he would never have recourse to the expedient of flinging the clocks out of the house, as he did or in disgust at their impertinent ticking reminder of old Father Time.

To an American woman, overworked and nervous, there is something refreshingly familiar about the Cuban home, with its high-studded rooms, simple bent-wood cane furniture, and almost entire absence of bric-a-brac and pictures. Even the clocks becomes something to be grateful for after having lived day after day with only a time-piece and the other on some work which must be rushed through.

Cuban women, say most outside observers, appear to do nothing but read novels and

ing chairs. While this seems true of majority it must be acknowledged that busy and capable housekeepers to find among them as well as clever needlewomen. To be sure, they do not emulate American sisters and wrinkle their faces on their bright eyes with trying to do a things at once, and even the best of keepers leave the marketing entirely to others, nevertheless there is no doubt that apparently indolent Cubans only need opportunities and education to follow in the path of their American sisters. A young woman in charge of a Cuban household was with enthusiasm of the work of odd nurses under her. "It is perfectly prising the way they are taking hold of the work," she said. "But little more than a day or so it was necessary for me to employ Cuban nurses and now they are all Cubans," she added emphatically, "they are all able, faithful workers, too."—*The Brooklyn Daily Free Press*.

There are briars besetting every path that call for patient care; there is a cross in every lot, and need for constant prayer; it is a lowly heart that leans on These happy anywhere."

Items Concerning the Society.

Rev. R. Gifford, a minister of Providence, R. I., died here one hundredth year last Fourth-day.

Eastern Quarterly Meeting of Friends, N. C., at Piney Woods, commencing Fifth Month 30, 1903, was well attended, the usual business having transacted, it was concluded not to send any delegate or to appoint any representatives to the Yearly Meeting. We were favored with religious services at our meetings, and had the company of some from Ohio and Philadelphia Yearly Meeting, whose minutes, whose gospel services were acceptable. Our Heavenly Father was very good to Jesus being exalted as our Prophet, Priest, and King, had over all things to his people, our light of salvation, whose teaching is free. We had new account of our schools, particulars being given as to how the children of school age are being educated.

A. F.

FRIENDLY HOME IN THE CITY.—Many who are needed in a boarding home for Friends in Philadelphia find matter of interest in the *Intelligencer's* allusion to the "Pennington," an apartment-house on property adjoining the 15th Street Friends' house in New York. The "Friends' Boarding Committee" lately made report on this "early Meeting." The "Pennington" is indicated as "headquarters for Friends in New York," and those who wish to board near the heart of the city and near the meeting, and for those whose business or visiting in the city. The Friends' Association, to which the Pennington belongs, incorporated body which has put itself in such relation to the Yearly Meeting, that it may, through its committee, make reports to the Yearly Meeting information; and that in case of its dissolution any time the property would go to the Yearly Meeting."

Notes from Others.

Imperial sentence of Emperor William's letter to the "Intelligencer": "Religion has never been the object of science, but an outpouring of the heart in being of man, caused by his intercourse with God."

The little arctic church edifice in Baffin's land, which was made of seal skins, was eaten

up by famishing Eskimo dogs. Now a good house and decent church buildings have been provided by kind friends.

Not until recently have the Japanese bookstores been willing to carry the Bible in stock, for fear of offending their Buddhist patrons, but now Bibles are so eagerly sought that they are for sale at all the prominent bookstores in Japan.

The British and Foreign Bible Society reports that although it has circulated Bibles in one hundred languages, there are still five hundred and fifty million people on this earth who have not a copy of the Bible in their own language.

WESLEY AS A DISCIPLINARIAN.—"After diligent inquiry made, I removed all those from the congregation of the faithful, whose behavior or spirit was not agreeable to the gospel of Christ; openly declaring the objection I had to each, that others might fear, and cry to God for them."

It is said of Charles Cuthbert Hall's work in India that he has won by his sympathetic appreciation "of all that is best in Hindu philosophy and religion and in Indian character, the kindly appreciation of Christianity of very many Indians whom no amount of disputation would have helped."

Boston has now the largest library of Congregational literature in the world. The library is especially rich in Pilgrim and Puritan history, and is also rich in literature bearing on controversies in the Church of England. The library of the late Bishop Stubbs, of Oxford, adds over six thousand volumes to the 50,000 books and 50,000 pamphlets, which composed the library.

At Oxford it is reported an influential section of Nonconformists have issued a long manifesto, which concludes with the expression of a determination not to pay the education rates. "Dr. Fairbairn, principal of Mansfield College, and Dr. Massie, professor of New Testament exegesis in the same college, have remitted their rates minus the education tax."

The agent of the American Bible Society in Shanghai reports that more Mandarin Bibles have been issued in the last three months than would have been an ample stock for eight years, a decade ago. The demand for Bibles and Testaments comes from all parts of the Chinese empire, and there has never been such a spirit of inquiry concerning the word of God.

A special despatch to the *Philadelphia North American* says: "Existing social conditions were denounced in an address given by Newell Dwight Hillis, pastor of Plymouth Church, Brooklyn, before the annual conference of the Orthodox Friends at the meeting house in Gramercy Park. To-day we are raising pampered sons and daughters," said Dr. Hillis, "surrounding them with every luxury and idle satisfaction of desire, and they are rotten before they are ripe. I repeat it, they are rotten before they are ripe, and the boys in many cases are sinful before they are bearded."

INTERNATIONAL ARBITRATION.—The Ninth Mohonk Conference on International Arbitration was held at Lake Mohonk on the 27th, 28th and 29th of Fifth Month, and was the largest of the gatherings held there to forward this important subject, and consisted as heretofore, of men and women eminent in many walks of life, a lively and encouraging interest was manifested.

John W. Foster, Secretary of state under President Harrison, and the adviser of the Chinese Government in the negotiations that closed the war with Japan, presided; his knowledge of international affairs and wide experience enabled him to speak with authority on the questions under discussion.

It was a source of congratulation that the United

States Government, which was actively instrumental in establishing The Hague Court, was one of the first parties to submit a case to that Court. "The Pious Fund" case with Mexico, which was quickly settled and both parties accepted the decision as final, and also the Venezuelan case, which will be settled in the same manner.

Benj. F. Trueblood, Secretary American Peace Society, gave an interesting resume of the progress of arbitration during the past year; during which time many cases of differences between nations have been referred to special arbitrators or arbitral commissions, of which the following are some:

The controversy between Italy and Guatemala as to the treatment of Italian immigrants.

The question of claims of citizens of France against Venezuela.

The controversy between the United States and San Domingo over the claims of the San Domingo Improvement Co.

The question between Great Britain and Portugal over the location of colonial boundaries in South Africa.

The question of the claims of Sala & Co. of New York against the Republic of San Domingo.

The Alaskan Boundary Dispute between the United States and Great Britain, which has been referred to a mixed Commission.

And many cases have been thus amicably settled to the satisfaction of all parties concerned.

The boundary dispute between Argentine and Chile has been settled by arbitration by the King of England, and these two countries have agreed to stop the construction of naval vessels, and to sell those they now have and to reduce their armies—an excellent example to nations who have considered themselves more enlightened than these South American Republics.

A remarkable evidence of growing sentiment in favor of International Arbitration is the formation of what is called "The International Arbitration Group," composed of about two hundred members of the French Parliament with the object of the promotion of this cause. Another gratifying sign of progress of public sentiment is the change in the tone of the public press. At the time of the establishment of The Hague Court it was lightly spoken of as visionary and impractical; now many influential journals strongly urge that difficulties of international character shall be taken there. What is now most needed is for some of the prominent nations, the United States and Great Britain for instance, to have some important case settled at The Hague, when other nations will soon follow this good example.

It is well to remember that there were many doubts expressed about the usefulness of our own Supreme Court when it was established, and there was not a case submitted to it for about two years.

The following platform gives a true insight into the real spirit and attitude of the Ninth Mohonk International Conference:

"The principle of international arbitration has secured the approval of the civilized world. This fact is solemnly recorded by The Hague convention. It is gratifying to state that, largely through the influence and example of the United States, which has so much to do with the success of The Hague conference, prestige has been given The Hague tribunal by the submission to it of international differences.

"This conference thanks our Government for what it has done in this behalf, especially in the recent Venezuelan controversy, when its efforts averted war. This conference believes that the next step in the steady march forward should be the conclusion of a treaty of obligatory arbitration between the United States and Great Britain, to be followed by similar agreements between the other signatory nations to The Hague convention to refer disputes to The Hague tribunal. Such treaties would make the present implied obligations of the

nations signing them explicit, binding and permanent, instead of leaving them, as now under the Hague convention, voluntary and to be determined from time to time, and largely by circumstances.

"This conference believes that the best public opinion of the United States and Great Britain, neighbors and kinsfolk as they are, recognizes the wisdom and justice of such an arrangement, and that the example thus set would be followed speedily by the other Powers. It would lead all the nations to the Hague Tribunal.

"With a deep sense of the fatherhood of God and the consequent brotherhood of man, the conference looks forward to new victories for its cause even more remarkable than those already won, notwithstanding the difficulties in the way of extending the application of international arbitration. Many motives may inspire arbitration—fear, horror of war, dread of expense, but justice is the only safe foundation for the world's peace. In the Alaskan boundary dispute, who should not prefer that justice should prevail, even if we make no gain of bills and harbors. America should conduct this claim with such loyalty to justice as to win the honor of the nations.

"This conference summons all possible agents to teach and preach the gospel of justice—business men and great corporations, teachers in schools, ministers of God, the public press; let our whole country accept the great motto and seek to live up to it. "America loves justice." It appeals to every man and woman to aid in increasing and organizing the general sentiment in favor of international arbitration so as to secure, by the invincible power of public opinion, the employment of it in the maximum number of possible cases, in the hope that wars may cease and that peace may prevail.

SUMMARY OF EVENTS.

UNITED STATES.—The floods are subsiding and condition becoming more normal in the vicinity of Topeka. In Armourdale, a suburb of Kansas City, 16,000 people are homeless, and an appeal for help has been issued. Topeka's death list now reaches seventy-eight, and close to the State of Kansas is estimated at \$12,000,000.

The great volume of water sweeping down the Mississippi is surging past St. Louis like a mill-race, and on the Mississippi and reached the city of thirty-eight feet, the highest since 1858. Seven hundred people are reported imprisoned on a lowland, twenty-five miles northwest of St. Louis, and in peril of their lives from the rising waters of the Missouri. Relief boats have been unable to ascend the river on account of the swift current and the inability to pass under the bridges, owing to the abnormal height of the water.

The Sky levee, which is seventy miles in length, has broken, and 100,000 acres in the vicinity of Louisiana, Mo., are flooded.

A cloudburst at Spartansburg, S. C., drowned twenty-five people, swept away several mills and caused losses aggregating \$2,000,000. Fifty lives were lost, five hundred left homeless, and many killed, among them at Clifton, S. C., Columbia and Greenville, in the same State, were also deluged, and suffered severely.

The President returned to Washington on the 5th inst., having traveled 14,000 miles without accident or delay. The journey covered sixty-five days.

Forest fires have been raging in New Jersey, Long Island, the Adirondacks, New England and Canada. The unusual drought of nearly seven weeks has rendered the fires very dangerous. In Vermont sixty square miles were ablaze, while the Adirondacks have suffered damage beyond precedent, and will not recover for twenty-five years. Three thousand men were fighting the flames, and the Governor authorized the use of State funds to subdue the fire. A pall of smoke, reaching from Albany and Boston to Washington, D. C., nearly obscuring the sun, hung for two days over the intervening country, rendering navigation extremely difficult and causing much delay.

The steamship *Deutschland*, which sailed from New York on the 4th inst., went aground in New York Lower Bay, owing to the dense smoke. After being detained over twenty-four hours, she was floated and proceeded to sea. In addition to her 750 passengers, the vessel has on board \$1,000,000 in gold, on which the company may pay interest at the rate of 3 per cent. for the time consumed by the delay.

Under the auspices of the Geographical Society, a largely equipped expedition of scientists has sailed from Baltimore, to make a survey of the Bahama Islands.

The executors of the estate of Clementine Cope have presented to the Wm. Penn Charter School, for a playground, an estate of twenty-two acres, located in Germantown. It is thought to be worth at least \$125,000.

Sixty-eight mills, employing 17,000 textile workers, have closed their doors in the last few days of the strike, but about 100,000 workers who operate in over 550 mills, are still out. A few workers have gone back on employers' terms, but the strikers hope to carry their point.

A conference to formulate rules for the better inspection of milk will be held in the Mayor's office, by Mayor Wood, the Director of the Department of Health, the Chief of the Health Bureau and the State Veterinarian. It is expected that the conference will also result in a request to the State Board of Health, to act in conjunction with the local health authorities to secure the marketing by some dairymen, of a better grade of milk than the city is now receiving. Dairymen will also be asked by the Department of Health to conform to certain reasonable requirements in the care of the cows and the stables. The inspection of milk shops has revealed unsanitary conditions in some quarters, and the owners have been forbidden to sell milk until the places were made sanitary.

Dairy and Food Commissioner Warren has ordered prosecution against forty-nine Philadelphia dealers in lard. Out of sixty-six samples from the city, forty-nine have failed to stand analysis by the State Chemists. The principal ingredient used for adulteration is cotton seed oil.

The strike of carpenters, which has been in force in this city since the first of last month, is practically over, a compromise of forty-five cents an hour having been agreed on. They had been receiving forty cents and struck for fifty cents. During the six summer months of the year, five hours will constitute a week's work, and forty-eight hours remaining six months.

There were 427 deaths in this city last week, reported to the Board of Health. This is 17 less than the previous week and 29 more than the corresponding week of 1902. Of the foregoing 211 were males and 216 females: 54 died of consumption of the lungs; 45 of influenza and pneumonia; 34 of pneumonia; 24 of diphtheria; 20 of cancer; 14 of apoplexy; 25 of typhoid fever; and 2 of scarlet fever.

FOREIGN.—Both Houses of Legislature in Japan have passed the bill extending the Formosan camphor monopoly system to the whole Empire. Japan, owing to her acquisition of Formosa, controls the camphor product of the world. The Chinese yield has never exceeded 220,000 pounds, while the yield in Formosa has in recent years averaged over 6,000,000 pounds. In the rest of Japan the annual production is about 300,000 pounds.

Elaborate measures have been taken to guard the Formosan camphor forests and the border residents. Within certain limits the Japanese Government does not interfere with the manufacture of camphor, but the entire production must be sold to the Government at a fixed price, and the Government fixes the maximum amount to be produced in order to prevent the markets being oversupplied.

Secretary of State Hay has designated the 15th inst., at the request of the Emir Briti, to receive its Executive Committee, which desires to make representations respecting the treatment of the Jews in Russia.

The Commission of Enquiry has been understood to be fortified with a mass of detailed testimony respecting the terrible happenings at Kischeneff.

There is no diminution in the number of letters directed to Secretary Hay respecting the Kischeneff horror, not only from prominent Jews, but from Christians. It has been impossible for the department to reply to these separate letters.

The *Christian Herald* has received from M. Loponkhie, Director of the Police Department of the Russian Empire, a statement giving an official version of the Kischeneff massacre. This came in response to a cablegram to the Czar, asking for an official statement of the facts as to Kischeneff, and is remarkable, not only as an authoritative report, but as an announcement of Russia's future policy with respect to the Jews. The cables state that the Siberian mines await hundreds of the rioters; that orders have been sent out to the Governors all over Russia to make immediate use of fire-arms in cases of anti-Jewish disturbances, but the Government cannot give the Jews new rights of citizenship, as this would be sure to drive the Russian population by new excesses against the Jews. The correspondence from Bulgaria and the United States, accompanied by a message from the Russian Emperor, was read in the Senate and then referred to the Committee on Foreign Relations.

In view of the apparent plentifulness of money down, the Government organ *La Discusion* at that Senator Montoro, the Cuban Minister at London, has been instructed to ascertain the attitude of the financiers regarding the prospective Cuban loan of \$500,000.

The legality of President Castro's decree closing ports to Venezuela now in the possession of the insurrection, will probably be decided by the United States Government. Technically this decree does not constitute blockade, but practically the consequences of merit would be similar to one. No foreign vessels right to trade in a closed port under pain of seizure.

The several international commissions which determine the amount of the claims of the several nations against Venezuela, have been notified by the United States.

Owing to the activity of Robert G. Morris, of the United States' case, it is expected that the Italian claims can be adjudicated within a month.

The Times' correspondent at Peking says there is a possibility among the other Ministers to regard more favorably the British proposal toward relaxing the conditions of the indemnity payments. The proposal, which modification of last year's schedule, would require payment in silver until 1910, after which payments are to be made in gold. The disposal of fiscal accumulated in the interval must be considered subsequently. Such relaxations are to be conditioned on China's signing the gold bonds in accordance with the Powers, except America, consider an equitable proposition for the protocol of the indemnity claims.

A despatch to the *Times* from Burgas, in Roumelia, says that the situation in the village of Rionia demands the attention of the Powers, rather than the condition of Macedonia. The presence of hundreds of refugees in the Bulgarian villages adjacent to the frontier indicates the unsatisfactory state of affairs. At Rionia, Macedonia, in the last six weeks owing to the French troops, accompanied by punitive measures, between the outlaws and fugitive peasants in the mountains on the one hand and Turkish troops at bazouks on the other are a frequent occurrence.

The French passenger steamer *Libana*, was wrecked near Marseilles on the 7th, sinking within 17 hours. Over 100 lives were said to be lost, and at least 500 were missing.

There is a wholesale emigration of miners and men from the iron districts of Austria to the United States, in consequence of the unprecedented state of the iron industry.

Hundreds of men have been discharged since the beginning of the year and the mines and iron works are operating on short time.

NOTICES.

A WOMAN FRIEND desires position as companion lady for the Summer months, or permanently in the Address W. Office of THE FRIEND.

WESTTOWN BOARDING SCHOOL.—For convenient persons coming to Westtown School, the stage trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when they leave Stage fare, 15 cents; after 7.30 P. M., 25 cents. Write to reach the school by telegraph, wire, or telephone 1114.

EDWARD G. SMEDLEY, Proprietor.

WESTTOWN BOARDING SCHOOL.—Application for admission of pupils to the school, and letters to instruction and discipline should be addressed to

WM. F. WICKESHAM, Principal.

Payments on account of board and tuition, communications regarding to business should be forwarded to

EDWARD G. SMEDLEY, Superintendent.

Address Westtown P. O., Chester Co., Pa.

DIED, at Haddonfield, N. J., RACHEL M. COX, born Seventh Month 14th, 1821, and died Fifth Month 4th, 1901, a member of Haddonfield Monthly M. Friends.

—, in Chicago, at his home 208 North Mead Fifth Month 21st, 1903, JOHN M. RASMUSSEN, a native of Norway; aged 64 years. A member of the S. M. Friends, and much interested in their principled reader of all that concerned them in a practical.

—, at her residence in Philadelphia, This 8th, 1903, MARY ANN, widow of George W. W. 82 years. A member of the Monthly Meeting of Philadelphia for the Northern District.

The Editor's address for the summer months expected to be WEST PALMOUTH, MASS.

Sample Copies—New Subscribers.

With a view to securing new subscribers to the FRIEND, interested Friends have furnished names to whom sample copies are being sent each week. The Friends who are receiving these copies are hereby requested to inform their subscribers by sending two dollars to Edwin P. Sellow, or by writing him that they wish to have their names entered as subscribers. Persons subscribing now will receive the number of the present volume free.

Our humble reliance on the teachings of the Friend and a diligent use of the Sacred Scriptures were the means of leading our forefathers into all those distinguishing views and principles which are described in their writings. If this be true, and we have abundant evidence for believing it to be so, what ought our course? Shall we turn our backs on the Christian views of the spirituality of our worship? Shall we return to ceremonial observances? Shall we make way in our meetings for a ministry which one man prepares, and another appoint? Shall we borrow our testimony against all pecuniary contribution in the church? Shall we forget the earnestness and solemnity of true silence? Shall we surrender our Savior's standard of holiness, and no longer refuse an oath of expediency is supposed to demand it? Shall we, after all our peaceable professions, go into the warfare of the world? Shall we lose our simplicity in dress and language? Shall we break down a hedge which so usefully separates many of our beloved young people from the vanities of the world? In short, shall we renounce that unbending adherence to the rule of right in which our forefathers distinguished? If such, through the influence of Satan, should be our course, how awfully affecting must be the consequence. The sacred purpose for which we are raised up is a people who will be frustrated through want of faithfulness.—Selected.

A Mistaken Foundation.

While the Supreme Being rests civil government upon spiritual foundations, fallen man has chosen to rest his State governments upon no broader foundation than the edge of the sword—their ultimate appeal. So ill-balanced a State is kept constantly fearful of tottering. The doom that "all they that take the sword shall perish with the sword," has been suffered piecemeal by many a monarch in the daily dread of assassination, or else in the fearful looking for of judgment. There is more than one "sick man of Europe" because of his own sword, and suspicion of its reaction. For many a nation, and we believe for any, the sickness of militarism is unto death, for death is its trade. And whether the sentence of death within itself be spelled in terms of moral decline, of physical consuming by uneasy woe, or of a murderous ending, the word of Christ comes true. Not that the monarch and heads of Serbia were sinners in this matter above all them in Europe that consent unto the sword for their standing—they lived by the maxims they had been taught and which clergies endorse, and we judge not them while noting the law under which they perished—but if their system cost them only their physical life, how much lighter this than the wages of sin in the spiritual death of any who by their armies deliberately step deeper into human slaughter and woe, to make lives of fellow beings playthings of their State policy! But how much sorer judgment have the late assassins assumed with the sword. Is it not time that the world saw the more excellent way? Is it to be called by a series of judgments to accept at length the Prince of Peace and his gospel?

THE FRIENDS' BOARDING HOME.—Attention is called to the notice of the meeting to be held on the 23rd instant of all Friends who are interested in the establishment of a Boarding Home and temporary lodging for our members who may live or sojourn in this city. The encouragement recently given in Philadelphia Yearly Meeting to such as felt it in their hearts to carry out the concern has been responded to by a meeting already held, whose committee is now prepared to report the result of their investigations, and their practical recommendations. The guarded employ-

ment of youth is of one interest with the guarded education of youth, and the ancient concern of one of our Queries that these go not forth into the world under employment except as "placed among Friends" for their fostering care, retains all its original importance. Although no control of their liberty may be made obligatory on the part of the institution, save the reasonable rules of such a house, still a moral control will substantially result from the safeguarding interest in their welfare which the members of the household should feel thrown around them, and from the association under the same roof of members who have come from homes of the better sort. The advantages expected under this godly concern are obvious, without noting them in detail here; and it is hoped the project will be responded to by Friends in the country, who are largely concerned in the existence of such a place for members of their families who may come to the City.

THE RELEASE INTO THAT FROM WHICH WE WERE CALLED OUT.—The program of a Biblical Institute under the name of Friends is announced, giving as the exercise of its opening day, sometime next month, a sermon at 8 P. M. The newness of such an arrangement for a professedly Friend minister is not, however, in the practice, but, so far as we have seen, in its freedom from disguise. Under other phraseology pre-announcements of sermons by individuals named in Yearly-Meeting weeks have virtually been going on for years; and the correspondence of result with announcements shows what these uniformly mean, and often the speakers' papers of notes displayed during delivery confirm that meaning. Would the introduction of an inspired exercise in the announced time on which the prepared sermon has a lien, be resented as an intrusion? Is the free gospel ministry to be smothered by the ministry which is bound? And likewise week by week,—what an extinguisher to the arising of gifts in the prophetic ministry, the incubus of a stated ministry must become.

A dead silence is also an incubus on public worship. We were as much called out from that, as from artificial discourses under the name of ministry. But a living silence will be sure of living ministry,—living when audible, and very much alive also in "that soul-

less voice which the soul utters when its appeal is to the invisible."

Prayer.

BY JOHN BELLOWES.

The following weighty definition of Prayer, by Isaac Penington, will appeal to everyone who has had experience of the spiritual worship of which Christ spoke to the woman of Samaria, and to which the Society of Friends was raised to bear witness:—

"Prayer is the breath of the living child to the Father of life, in the Spirit that quickened it, which giveth it the sense of its wants, and suitable cries proportionate to its taste, in the proper season thereof. So that—mark—Prayer is wholly out of the will of the creature; wholly out of the time of the creature; wholly out of the power of the creature; in the Spirit of the Father, who is the fountain of life, and giveth forth breathings of life to his child at his pleasure."

All prayer is included in this, so that which breathes inwardly and which ought to be "without ceasing," and that which is uttered by the lips when, like Isaiah's, they are touched by the live coal from off the altar—by the present and living sense of the Divine requiring which purifies the spoken word and endues it with power. It was this present sense of his soul's wants that prompted the cry of the publican, suitable to his state, "God be merciful to me a sinner!"—this that gave to the dying thief on the cross faith in the Divine nature of Jesus Christ and in the coming of his kingdom.

It is the realization of the truth that prayer is wholly out of the will and time and power of man, that is the reason for Friends beginning their worship in silence, and keeping silence until they are made sensible of a call to speak, whether in preaching, or prayer, or praise. Every one who has experience of this true spiritual worship knows that every Friends' meeting in which the presence of Christ is sought, whether in silent watching unto prayer or in words spoken in his name—that is, in *his power*—is, in very deed and truth, a "prayer-meeting," under the direct leading of Him who declares that "Where two or three are gathered together in My name there am I in the midst of them." This gathering in the name of Christ is something deeper than a formula. It is the gathering into the sense of his power; into the "strong tower" spoken of in Proverbs xviii: 10: the dwelling in the secret place of the Most High, and abiding under the shadow of the Almighty, which was witnessed to by the writer of the ninety-first Psalm.

More than this even the redeemed spirits in heaven cannot attain to. Less than this no man can rest on without falling into the sin against which we are warned in Ecclesiastes v., and offering "the sacrifice of fools," who "consider not that they do evil" in asking, even for good things, without the Spirit of the Master who tells us: "My time is not yet come, but your time is always ready" (John vii: 6). We may "ask and have not," even for the gift of the Holy Spirit itself, if we "ask amiss." "I will pray with the Spirit," said Paul, "and I will pray with the understanding also." That is, the Spirit must en-

lighten the understanding with a present sense of our wants: of what we ought to pray for. But we have also a natural idea of our wants and of the wants of others that springs from the understanding alone, apart from the Spirit, (Rom. viii: 26), to give utterance to which is not true prayer, but a kindling of sparks of our own which we are assured shall end in our lying down in sorrow. It is from this we are warned to refrain as "the sacrifice of fools."

It is nothing to the point to say that the majority of Christians do not see, with Friends, the necessity of coming to this silence of the will before offering words to the Almighty, and that they are nevertheless accepted of Him. Every man is accepted according to his faithfulness to what he *does* see; but if we try to walk by what others do *not* see, darkness will blind us, and we shall stumble we know not whither. If, on the other hand, we abide faithful to our calling, and hold steadily the light the Master has given us, we help others to find a path that they have not yet known.

Our calling is in a special degree to show the reality of the promise of Christ, "When He, the Spirit of Truth, is come, He shall guide you into *all truth*," to testify that this Spirit of Truth is manifested, in the unlimited love of God, to *all men*; and that it is the co-operative action of this Spirit—this Divine life—in the hearts of a company of men who unite in obeying it, that can alone constitute a Church of Christ, with power to bind and loose on earth that which is bound and loosed in heaven; or, in other words, to discern that which is, and that which is not, in accord with the Divine will, and so to approve or disapprove of it. This is made clear in Matthew xviii., where the promise in the eighteenth verse, that if "two shall agree on earth as touching anything that they shall ask, it shall be done for them of my Father which is in heaven," is made contingent on the presence of Christ being in the midst of them (verses 19th and 20th), and therefore guiding each of them by the revelation of his will.

When the London Meeting for Sufferings lately endorsed by a minute the appointment of what was termed a "prayer-meeting," if by this was intended a waiting on the Father of Spirits, to come into a renewed sense of his will, and to do it, it was well; but the name "prayer-meeting" was not well chosen, because to the majority of men it has come to mean an occasion of offering words to God, whether those who do so are, or are not, sensible of the fresh and living call. On the other hand, if by the term was meant a meeting in which no coming to a silence of the will was necessary before offering the sacrifice of the lips, or in which it was tacitly understood that there would be less restraint than in the "Meeting for Worship," then the Meeting for Sufferings must have acted more from the natural sense of things than from the leading of the Spirit. Everyone who has attended its sittings frequently, has known it sometimes to do this; as well as often to act in the true authority of the Master. A church can retain its life and power only upon the same condition as that which is incumbent on each of its individual members—that is, of keeping in the humble and tender state in which the cry again and again arises: "Search me, O God,

and know my heart; try me, and know my thoughts and see if there be any wicked in me and lead me in the way everlasting Reprinted from the "Friends' Quarterly Examiner."

The Confessors of Peace from the Second Century to the Era of Mahomet.

XIV.

A noted martial contemporary of Paul was Attila, the king of the Huns, whose name was the Scourge of God. Advancing westward in the course of centuries Tartary into Scythia, the Huns as we learn, had pressed the Ostrogoths (or East Goths) beyond the Danube, in the reign of the Emperor Valens. Thence they had advanced into Germany, and, when Attila came, he became their leader into Gaul, in western and in Spain the Visigoths (or Western Goths) had founded a kingdom.

Here the Romans, making common cause with the Goths against the dread invader, finally overcame the latter in a great battle fought near the site of the present city of Chalons-sur-Marne. This engagement is said to have been (if the historical records of the time are not at fault) the most sanguinary battle ever fought in Europe, it being calculated that there were upwards of 250,000 slain on the field. Driven beyond the Rhine, Attila and his hordes threatened Rome with destruction, but it was saved (A. D. 453) by the personal mediation of Pope Leo I.

During the remainder of the fifth century Gaul, or the country we now know as France, was very much divided between people of various nationalities. There were the Ostrogoths and the Burgundians, the Alemanni, the Alans, the Saxons and Franks, and a little remnant of the Romans. One by one, another, all opposing forces were driven or subjugated by the Frankish king, Clovis, the grandson of the founder of the Merovingian dynasty. Now, the Visigoths and the Burgundians were of the Arian faith, who seems to have been very much heathen, had married Clotilda, a Catholic daughter of Gundobad, king of the Burgundians. In the heat of the battle against the Alemanni, it is said, Clovis had vowed that if he won the victory he would acknowledge the God of his wife and become a Christian. The issue of the contest being successful, the king and three thousand of his followers received the rite of water baptism at the hands of Remigius, archbishop of Rheims. It is readily inferred that the natural tendency of the king had not been radically changed, and we are told that as Remigius was once reading to him the story of the Redeemer's apprehension and crucifixion Clovis exclaimed, "Had I been there with my Franks, I would have avenged his wrongs." But, alas, Clovis (using strong language), says that the pravity of the Frankish princes who followed was frightful, and was perhaps unparalleled in the records of history; so it remains true that the washing away of the flesh is nothing, without the answer of the conscience void of offence toward God.

Before dismissing Clovis, however, his successful and bloody career may be further highlighted by way of illustrating the right and wrong methods of conquests, Patrick, as has

on, being a shining exponent of the better way. When the Visigoths sought the alliance of the Burgundians, Clovis, while coveting the rich and beautiful south lands and at the same time putting forward the interests of religion, said to his warriors: "I am much grieved that these Visigoths, who are Arians, should possess a part of Gaul. Let us go forth with the help of God, and when we have conquered them, we will take possession of their land, for it is very good." And he added:—the Goths being signally defeated at the battle near Poitiers and driven south of the Pyrenees. Has not the subtle reasoning of Clovis been sharply revived even in our own day?

The various tribes of the Frankish nation retained their own chiefs, but Clovis determined to put an end to all minimizing of his ability. The king of the Riparian Franks, Mercaire, he caused to be assassinated by the sword of his own son, and then had the son killed in turn. The several other chiefs suffered the same fate. "Then," says Gregory of Tours, "inspired by Duray in his History of the Middle Ages," "Clovis, gathering his people together, said to the relatives he had killed: 'Unto me I remain like a wayfarer among strangers! I have no kinsmen to aid me if adversity should come.' But this he said, not with grief but from cunning, if perchance he might still discover some relative whom he might kill. In this condition of mind he died. A few days of his victories the Pope had written to him—'The Lord has provided for the needs of the church by giving her a demand for a prince armed with the helmet of salvation; be thou always for her a crown of glory; and she will give thee victory over thine enemies.'"

In contrast with this "man of blood and iron," that primitive Christian and connoisseur of peace, Irenaeus, bishop of Lyons, in his *Autobiography*, writing in the second century of the heavenly visits of tribulation, said: "In the beginning He (our Lord) figured forth the rung hook by means of Abel, pointing out where shall be a gathering-in of a righteous race of men. He says, 'For behold how the just man perishes and no man considers that righteous men are taken away and no man yeth it to heart.' These things were beforehand in Abel—were also previously said by the prophets—but were accomplished in the Lord's person; and the same is fulfilled in us with regard to us, the body following the example of the head."

In the middle of the sixth century, the rule of Justinian fills the historical foreground as did that of Constantine more than two centuries earlier. Personally, Justinian was more admirable man, being highly valued for his temperance, frugality and industry. Little time he gave to sleep, being ardently devoted to business and study. The *Code of Justinian*, commonly known as the *Code of Justinian*, was prepared under his direction being a digest of the laws compiled by Justinian, Theodosius the Second and others. One of the Emperor's time was spent in theological studies, and he was munificent in his gifts for the building of cathedrals and hospitals.

Unfortunately, however (quoting Dr. Anthon), his love of theological controversy led him

to interfere with the consciences of his subjects, and his penal enactments against Jews and heretics display a spirit of mischievous intolerance which has ever since afforded a dangerous authority for religious persecution." Death was the established punishment, under this professedly Christian emperor, for being a Manichean. During the thirty-eight years of his reign (527-563), Arianism in North Africa, where the invading Vandals had so largely settled, was doomed to a relentless onslaught, the famous generals of Justinian, Belisarius and Narses, being conspicuous figures in those early "dragonnades." Peaceful Montanists and Nestorians came similarly under the harrow of persecution. Yet Justinian was unable, remarks Schaff, "to preserve these conquests, and what was still worse, he was unable to give the conquered countries a better government than they had enjoyed under their barbarian rulers;" and farther, "the marvelous success of the Mohammedan invasion of Egypt and Syria half a century later, is generally ascribed to the total disaffection of the population, which resulted from the [sanguinary] ecclesiastical policy of Justinian." It is a suggestive reflection that the church building of St. Sophia, in Constantinople, erected by Justinian, and long famed as the most magnificent cathedral of Christendom, should now, after upwards of thirteen centuries, be a Turkish mosque.

The so-called civilized world, as the sixth century drew to its close, was evidently inviting the entry of a rival dispensation, whose distinguishing tenets were not to be those of the Prince of Peace. "The sword," declared this new interpreter, Mahomet, "is the key of heaven and of hell; a drop of blood shed in the cause of God, a night spent in arms, is of more avail than two months of fasting or prayer; whosoever falls in battle, his sins are forgiven; at the day of judgment his wounds shall be resplendent as vermilion and odoriferous as musk; and the loss of his limbs shall be supplied by the wings of angels and cherubim." The bible of this sword-conquering sect tells us, that "it hath not been granted to any prophet that he should possess captives, until he had made a great slaughter of the infidels of the earth. . . .

When ye encounter the infidels, strike off their heads until ye have made a great slaughter among them. . . . Verily if God is pleased, he could take vengeance on them without your assistance; but he commanded you to fight his battles that he might prove the one of you by the other. As to those who fight in defence of God's true religion, God will not suffer their works to perish; he will lead them into Paradise of which he hath told them." (Quoted by C. L. Brace, in *Gesta Christi*).

We may now conclude our theme with the following extract from *The History of European Morals*, by W. E. H. Lecky, in which that author, after referring to the malefic influence of the religious wars of the Middle Ages in stimulating militarism, despite the occasional prevention of a contest through the mediation of ecclesiastics, observes: "The military fanaticism evoked by the indulgences of the popes, by the exhortations of the pulpit, by the religious importance attached to the relics at Jerusalem, and by the prevailing hatred of misbelievers, has scarcely ever been equalled

in its intensity, and it has caused the effusion of oceans of blood, and has been productive of incalculable misery to the world. Religious fanaticism was a main cause of the earlier wars, and an important ingredient in the later ones. The peace principles that were so common before Constantine, have found scarcely any echo except from Erasmus, the Anabaptists [Mennonites], and the Quakers."

JOSIAH W. LEEDS.

Did Not Forget.

There lived in Auburn, New York, some sixty years ago, a clergyman, an intimate friend of my grandmother. This gentleman owned an exceedingly beautiful, fleet, and graceful sorrel mare, which bore the classic name of Diana. She was the admiration of the town and the pride of the clergyman's family. But alas! one dark and stormy night the barn was boldly entered and the beautiful Diana stolen from her stall. All efforts to discover the clever thief though long and perseveringly continued, were useless. At last the family sorrowfully abandoned hope; another but inferior horse was purchased, to which, by the way, the children would not allow the occupancy of the old stall of their pet, for that, with everything else that belonged to her, they insisted on keeping sacred to her memory.

Nearly twenty years had passed, the clergyman's hair had grown white with age, and his children had become young men and women, when he chanced one autumn to be called on business to a remote part of the State. Having an easy chaise, he made the trip, as was not uncommon in those days, by private conveyance. He was riding slowly along a winding road, on the third morning of his journey, when his attention was forced from the beauties of the scenery to the strange behavior of an old horse confined in a pasture by the roadside. The creature seemed bent on attracting the clergyman's notice; it pranced, snorted, and beat the fence with its fore feet, keeping all the time in line with the slowly moving chaise. Wondering a little as to the cause of such singular conduct, the clergyman drove along to the end of the pasture, and then turned from it down a road which branched off in an opposite direction.

As he did so, he was startled by a cry of such human agony from the poor creature in the pasture that he instantly stopped his horse and looked back. There at the corner of the fence she stood, her neck thrust desparingly forward, trembling in every muscle of her body, her eyes fixed on him with an expression of utter, helpless misery, which strangely moved the tender-hearted clergyman. He now discovered that the head and face of the animal bore a marked resemblance to his lost Diana. Impressed by the likeness, he obeyed a sudden impulse and drove rapidly back to the farmhouse near the pasture, where he found the farmer, just getting up from his twelve o'clock dinner.

"Friend," said the clergyman, "is that your horse in the field yonder?"

"Yes, the mare is mine. I've had her about twenty years."

"Twenty years! May I ask where you got her, friend?"

"I bought her off a peddler who cheated

my wife on a gingham gown, but he didn't cheat me on that horse."

"Diana! as sure as I'm alive!" cried the clergyman, starting excitedly for the pasture, followed by the astonished farmer. He entered the field, and the moment the old mare caught sight of him she rushed wildly forward, snorting with delight. Old and faded, rough and lame, the clergyman still unmistakably recognized his lost beauty; and oh, the joy of Diana! Tenderly she licked her master's hand and face, lovingly nestled her head upon his shoulder, and at last with something of her old coquettish way, took the rim of his hat daintily between her teeth, lifted it from his head, and replaced it hind side before.

"Never saw her do that before!" cried the farmer.

It was a trick which the clergyman himself had taught her, and which she had remembered during their twenty years of separation to practice once more for her beloved master.

The farmer consented to part with Diana for a small sum, and she was welcomed back to her old home, amid general rejoicing. There she lived, tenderly cared for, several years, and there she died a painless death, expending her last breath in a vain attempt to lick her master's hand.—*Our Dumb Animals.*

Too Busy to See God.

One reason for the growth of skepticism regarding fundamental spiritual verities is to be found in the ceaseless, universal and intense activity characteristic of the time. As a rule men and women of to-day give no attention to the contemplative side of life. All is unintermitting rush and whirl and excitement in every department of human affairs.

Even in the churches, the spirit of ceaseless and intense activity characteristic of the age makes it almost impossible for one to take time to be holy. There never was greater need than now for frequently heeding our Saviour's direction, "But thou, when thou prayest, enter into thy closet," etc." and for occasionally, at least, heeding the call, "Come ye yourselves apart into a desert place and rest awhile." Nor was there ever a time when, for the toiling and weary multitudes compliance with the foregoing directions was so difficult and apparently impossible.

Even in our churches, which should be to some extent sanctuaries of rest and meditation such are the exactions in the way of religious activity that we get little more time to see God and commune with Him than is allowed amid the intense activities and competitions of secular business. As a recent and able writer most aptly puts it, "In the churches we are—many of us—so busy working for God that we do not take time to look around and see God, and are making so great a din preaching and praying that we are not able to hear Him talk; are so busy looking far away for signs of Christ's coming that we do not see that He is already here, is the most manifest Being on earth to those who have eyes to see, and ears to hear, hidden only by the abundance of light."

We are mistaken, too, if we suppose that more is accomplished of enduring worth by that restless activity which allows no time, or insufficient time, for prayer and meditation than by that more measured zeal which takes

time to wait upon God for soul-inspiring and strength-renewing visions of his presence and glory. With all the burdens and anxieties incident to his great work of reformation pressing upon him, Luther used to take much time to pray. When an unusually heavy and troublesome day's work confronted him he was wont to say, "I have so much to do to-day that I cannot possibly get on with less than three hours' praying." He took time to see God and listen to his voice, and therein was the secret of his power both of endurance and of achievement.

They who are so busy that the dust of their own activity shuts out all vision of God from the soul, and that the din and clatter of their own works render it impossible for them to hear God speak, soon wear out, as a result of ceaseless over-strain and friction, and that without having accomplished much of permanent value. Too busy to see God and commune with Him, theirs is largely an unillumined and uninspired activity—building of "wood, hay, stubble"—works that will be wholly consumed when submitted to the final and fiery test. But with such as take time to see God, take time to get the mind of the Spirit in all their undertakings, it is otherwise. They work according to a Divine plan, God working with them, in them and through them, mightily; and thereby they build of substantial materials—"gold, silver and precious stones"—upon an immutable foundation—Jesus Christ—and according to a Divine plan and purpose to the fulfillment of which everything in earth and heaven must contribute. To such God most encouragingly says, "Ye know that your labor is not in vain in the Lord."—*The Free Methodist.*

HOUSE-FURNITURE.—I have peered into quiet parlors where the carpet is clean and not old, and the furniture polished and bright; into rooms where the chairs are neat and the floor carpetless; into kitchens where the family live and the meals are cooked and eaten, and the boys and girls are as blithe as the sparrows in the thatch overhead;—and I see that it is not so much wealth and learning, nor clothing nor servants, nor toil, nor idleness, nor town nor country, nor station, as tone and temper, that render homes happy or wretched. And I see, too, that in town or country good sense and God's grace make life what no teachers or accomplishments, or means or society, can make it—the opening stave of an everlasting psalm; the fair beginning of an endless existence; the goodly, modest, well-proportioned vestibule to a temple of God's building that shall never decay, wax old, or vanish away.—*John Hall.*

A vision rose before my eyes.

As I sat musing on this life,
Its good and ill, its joy and strife,
Of what should be in Paradise.

I saw two souls that, until then,
Had been divided, hand in hand,
In golden day at last they stand,
Clear from the doubts of scornful men.

They looked into each other's eyes,
With sense of perfect peace at last,
Made dearer for Life's sorrows past—
Thus shall it be in Paradise.

—*Hamilton Aide.*

Science and Industry.

WITHIN a month the telegraph system Alaska will be complete, and by Fall the connecting Seattle with Juneau and the North will be in operation.—*Ez.*

A HIGHLY recommended furniture polish made of a wineglass of olive oil, one wineglass of vinegar, two tablespoonsful of alcohol and a soft cloth and polish with flannel.

"MAKE YOURSELF WANTED."—In an address reported in the American papers, Secretary Shaw tells an incident that puts in a dozen words the secret of business success. A young clerk in a store, he said, asked an increase of salary. The proprietor said to him, "A little later the clerk asked for other rise. At first the owner was indignant, then, after thinking the matter over, he gave for the clerk."

"Young man," he said, "what you need not more money, but more usefulness." He pointed out to him countless ways in which he might have done something for the company and had missed his opportunity—when he had been careless or indifferent or ignorant.

"Every time," he concluded, that a customer comes in and asks for you personally counts for you and counts for the store. The business is to make yourself wanted."

It is the secret of success in business; not also the secret of success in every life? In the home, in the church, in school, everywhere, the one whose work is thorough and cheerful and enthusiastic is the one who is making the most of his life; "make yourself wanted" and you will soon know the joy of solid success.—*Youth.*

SHE RAISES CATS.—From the various products of the country we hear of new occupations taken up by women; some have gone into kitchen gardening, others to raising poultry, and yet others have undertaken the culture of nursery products or taken up the breeding of stock in its several branches.

There is one woman on the coast of Maine who has made a very considerable income conducting a cat farm. In that locality there are beautiful species of cat, called by some of the natives "coon cat" and by others "shag cat." These cats in many cases attain to a considerable size, eighteen and twenty pounds being not at all uncommon.

They vary in color, have large heads and many of them pronounced mutton chop ears in addition to their "smellers;" their chests grow very long and arched, and on the finest of the breed have a small fur growing from the very centre of the chest.

The tails of these cats are beautiful; they grow long, often two and one-half inches in length, and very full; they have also very unusual eyes, being large and extremely bright.

In frequent instances these cats mate with blue eyes and it is not uncommon to see a full-grown cat of this breed with one blue and one green eye.

Years ago many of the Maine sea captains brought home from their trips to Eastern Japan specimens of the beautiful cats of the Orient, which in after years developed into the present coon cat.

A woman recognized the beauty of this breed and has for several years been raising these cats and making money out of it (enterprise). She takes orders and sends cats to all parts of the United States. The price ranges from five dollars upward, color, etc., determining the cost. She has a large house for them and spacious rooms screened off with wire netting, which prevents the cats straying off. The proprietress of this cat farm says that cats are easier to raise and command reader sales than dogs.

A RIDE WITH THE ENGINEER.—A writer in *Chester's Magazine* describes a trip he made from New York to Albany on the locomotive of the Empire State Express. Its object is to throw into strong light the personality of the engineer. He says the engineer set his foot on the throttle and pulled the throttle a bit, and they started so gently the movement could scarcely be felt. Not a pound too much steam was used; the train got under headway evenly. Although the yard they went through was a tight one; then into the clear sky at moderate speed till the yard was cleared. Then the engineer pulled the throttle open wider and wider until he set it at a certain notch; then he let go and leaned back.

That was the time of the greatest exhilaration. The great locomotive seemed to be leaping out. It moved like a snake, swaying from one side of the track to the other, and each swing it took a better grip on the rails, gathered more momentum. Rising at each curve it seemed to dive around them, and when it had attained full speed, behaved like a buffalo driving ahead clumsily, yet with a sense of power that made the motion

The engineer sat leaning on the window ledge, his throttle hand resting idly on the lever, and though he was looking ahead, he was markedly interested. His whole attitude suggested a man at ease. For miles and miles he held the pace, the engineer, the Hudson river opened and closed, and unfolded like a picture book in the old slow hands. By and by they reached a town, then for water, then another town; then they slowed down and crossed the bridge and into Albany just in time.

"One and have lunch with me," was the invitation to the engineer. "Oh, I can't do that," answered. "I've got to go to work." "He meant he had to oil, and inspect, and tighten bolts, and so on. But hadn't he a moment's work on the trip up? No, he had only thrown forth a conscious effort. To a man, however, it would have been work of no nerve-wearing kind.

If you wish to be miserable, you must look at yourself, about what you want, and like, what respect people ought to have for you, and then to you nothing will be so easy as to spoil everything you touch. You will make sin and misery for yourself out of everything which God sends you. You will be wretched as you choose.—*Kingsley*.

"Putting off till to-morrow
Will lead us to sorrow
Beginning to-day
Is the very best way."

THE YOKE OF CHRIST.

BY S. J. TROTHER.

Thought from a sermon: "When we are yoked unto Christ we begin to learn of Him."

Yoked unto Christ in fellowship unending,
Resting or moving 'e'en as He doth move,
Brought near to Him while in his service bending,
My heart-beats timing to his heart of love.

Thus, always thus, my gracious Lord and Master,
Let me be taught and learn with joy of Thee,
Aye keeping step, nor slower move, nor faster,
Thy will forever the one law for me.

My own dear Lord! Could any lot be better!
Could any living yield more peace and rest!
Thy yoke a precious treasure, not a fetter,
Because it holds me near unto Thy breast.

Surpassing bliss! My heart is filled with longing,
Saviour bind on thy yoke, nor lose it more.
Lead me with Thee through all life's duties thronging,
Grant I may serve Thee on the "other shore."

Unnoticed and Uncounted.

It is constantly assumed in many quarters, and the statement is often made, that the churches are only half filled; that Christianity is on the decline, and that religion has ceased to be one of the great interests of the human race; and, all the while, in all parts of Christendom, and in lands outside its borders, there are millions of people leading devoutly religious lives, sacrificing themselves without hesitation and without repining, bearing heavy burdens without complaint, and doing the hard, rough, obscure work of the world with patient, unconscious courage. These faithful servants of the Lord constitute far the greater proportion of the human race. Some of them do not go to church; many of them are found in the churches, which are by no means as empty as they are represented. They are devout believers in Christianity, and the chief motive of their lives is profoundly and decidedly religious. They live as in the sight of the Infinite, and in the life immortal; but they never report themselves, they are never interviewed. Their lives are apparently commonplace, and are never included in those enumerations of the good and the evil which are from time to time taken by the daily press. It is one of the great distinctions between vice and virtue that it is easy to secure statistics of the first, and impossible to get any report of the second. The discords are always noticeable; the harmonies attract no attention. The devout, the religious, the faithful, and the pure, upon whose integrity society securely rests and who are the salt of the earth, do not appear in the census reports; but they make life safe and sweet as of old.—*Selected*.

My friends, wait upon God. When He himself shall give the signal and release you from this service, then are ye released unto Him. But for the present bear to dwell in this place wherein He has set you. Short, indeed, is this time of your sojourn, and easy to bear for those who are so minded.—*Epictetus*.

"As the flint contains the spark, unknown to itself, which the steel alone can awaken to life; so adversity often reveals to us hidden gems, which prosperity or negligence would forever have hidden."

TEMPERANCE.

The matter under this heading is furnished monthly to *THE FRIEND* on behalf of the "Temperance Association of Friends of Philadelphia," by Benjamin F. Whitson, 401 Chestnut Street, Philadelphia.

Reference was made last month to the address delivered by James Wood at the annual meeting of the Temperance Association. We had hoped to be able to print verbatim extracts from the same; but, being disappointed in this, we shall give from memory such thoughts as we recall. Unfortunately we cannot reproduce the apt expression and the mild but forceful tone and manner of the speaker, it would seem unnecessary to speak to an audience of Friends, or even to a greater part of the earnest Christian people of our land, about the evils of intemperance and the pernicious influence of the saloon. We all are fully convinced that the use of alcoholic liquors as a beverage is a very dangerous and reprehensible practice, to which is attributable more than three-fourths of all the pauperism, insanity, and crime that menace our civilization, and that the saloon is undoubtedly the greatest agency of evil that exists amongst the social institutions of our time. So earnest have Friends become in the effort to wash their hands clean of this iniquity, that a careful inquiry is made annually of every member as to his personal habit and influence in this particular.

Yet the feeling amongst Friends in this regard has not always been thus. A story is told of a certain Friend, perhaps a hundred years ago, who was a brewer, and, at the same time, the treasurer of the Monthly Meeting. It appears that on a certain occasion some question arose as to the disposition that had been made of a part of the funds belonging to the meeting, and the treasurer desired that a Friend should call at his office and inspect his memoranda book. It happened that on the morning this call was made the treasurer was exceedingly busy in the brewery, and, acting with undue haste, handed to the inspector, not the meeting book, but his office book of "orders." As the Friend glanced over the pages and saw one after another the names of reputable members who had ordered liquors of various kinds in liberal quantities, he said to the treasurer that he thought he could see where the money was going. Although there may not be a Friend to-day whose business is the manufacture or sale of intoxicants, so that a mistake like the foregoing would be impossible now, yet, if we could examine the order books of the distillers, we might gain very pertinent suggestions as to the probable disposition in indirect ways of vast sums of the public money. Think of a people spending more money for intoxicants than they do for bread! more in fact than for all cereal food products combined!

Should there appear suddenly a mysterious disease of some sort causing a weakening of will power and resulting often in idiocy, suicide, pauperism, and every manner of criminality as well as bodily ailments of a serious nature, great efforts would be put forth by concerted action everywhere, and enormous expense incurred in an effort to overcome the malady and eradicate its causes. Should the disease assume such alarming proportions as

that of alcoholism as it exists to-day, it would be called a plague of the severest type, and even the national government would subscribe vast sums of money and even direct the military authority to be exercised in the effort to suppress its ravages and prevent its spread. Such heroic action would be justified fully on the ground of safeguarding the public welfare. Yet such a plague does exist, and its victims may be seen on every hand in the midst of our proudest civilization. The number of them is so great as to seem incredible. But inasmuch as the causes are generally understood, and the fostering and spreading of the disease has become a mercantile enterprise entrenched behind vast social and economic interests, the government, though spending much in the effort to check or regulate it, is impotent to effect a cure; while public sentiment, through self-interest and indifference, is at best divided and impractical in dealing with the subject.

The interesting fact remains, however, that a large percentage, probably a majority of American citizens, are temperance people at heart, and long for the day when there shall be no saloons and when the curse of alcoholism shall have been effectually overcome. Indeed it might be overcome in large measure very soon, if temperance people were agreed as to the best method for accomplishing the result and would act conjointly. Here and there it has been practically eradicated, at least for a time, in some places by one method, in other places by a different method; some times with entire success, sometimes with partial success only. But on account of the failure of adjacent districts or states to adopt similar measures, the opportunity for renewed contagion is constant, and, worst of all, augmented by a vicious self-interest on the one hand and fallacious reasoning on the other. Under these circumstances a general extermination of the evil is indeed doubly difficult.

Nevertheless a great deal has been achieved and is being achieved and constantly along the lines of reform. Never has the issue been more to the front in the minds of the bone and sinew of the nation. The subject has been dignified by careful research, wise precedent, and influential opinion.

Some would advocate a statutory law similar in character to the federal law relating to Indian territory, that prohibits the manufacture or sale, or barter, or even the giving away, of "any malt, spirituous, or vinous liquor of any kind under any label or brand." Others contend that such a measure would be too drastic, and would not be duly enforced.

Some favor "local option," so that each community may decide for itself the question of liquor selling within its jurisdiction. The difficulty in this instance arises from the inability to the temperance community to regulate the action and influence of adjacent communities of a counter opinion and eager to stultify or render odious the law of the prohibition district.

Many advocate a system of "high license," limiting the business to such dealers only as are able to pay a required annual fee or "license to sell." The great objection to this plan is that it gives, under the required conditions, a legal status and sanction to the very business it is sought to curtail, making the

State a party to the transaction. It gives also to the liquor trade a political influence of tremendous consequence in its own behalf.

Some States have adopted the Dispensary System, by which the sale of liquors is taken out of the hands of private citizens, so far as pecuniary profit is concerned, and put under the proprietorship of the State. This method has the advantage of eliminating the incentive to foster and extend the evil, but many persons object with sound logic to the State conducting any business that is prejudicial to the public health and morals.

Other systems, also, have been tried with varying degrees of success, but the chief obstacle to overcome in every instance seems to be the lack of coherence amongst temperance workers, while the liquor interests are ever co-operative and ever at work, in ways peculiar and extremely subtle, in preventing a union of temperance forces. In States where the political parties are divided quite evenly, with frequently an abundance of temperance sentiment on both sides, the encouragement of party fealty is a fruitful source of weakness to the temperance element, especially when, as is usually the case, the liquor interests are less loyal to party and more eager to seize the balance of power. In States where the political sentiment is very one-sided, the temperance people are more free to unite on temperance lines, and to command recognition or else overthrow the existing faction. In such States, therefore, independently of whether they be Republican or Democratic, we shall find more advancement in temperance reform than elsewhere.

Pennsylvania might be such a state, being overwhelmingly one-sided politically, but under the influence of a large city, a corrupt political "ring," and an inexplicable party affinity amongst its best citizens, the State is rightly designated as owned by the liquor interests.

Thus with many methods proposed for controlling the evil of intemperance, yet with great lack of concerted action amongst temperance people, the need for unity of method and cooperation of effort amongst all honest opponents of the saloon and its attendant evils must be apparent to every one who makes a study of the subject.

Under a profound sense of this need a member of a Monthly Meeting of Friends in the State of New York was led to lay his exercise before the meeting for business, and to ask if it might not be possible for the meeting to agree on some given action. The matter was weightily considered and dwelt under for some time, after which it was decided to refer the subject to the Quarterly Meeting for its consideration and advice. The Quarterly Meeting in turn referred it to the Yearly Meeting. Here the subject was again reviewed and the duty of the church as a body and as individuals to seek prayerfully for light in this matter seemed to be felt by every one. The saloon is so intimately associated with all that the Christian church was intended to resist, that it would seem that the work of unifying Christian sentiment regarding it ought not to be impossible or even difficult. Accordingly it was proposed to call for an interdenominational conference to meet in the city of Washington in the year 1906, should the way open for the same to be held. It is hoped that in the

meantime a kindly but earnest effort would be made to secure a representation from each every sect claiming the name of Christian.

What such a conference may purpose shall not attempt to predict. That the various denominations have a common interest in the matter to be considered, there can be no doubt. That their conclusions should be monious, is reasonable to expect. That far the proposition is meeting with engaging approval, we know. That great may eventually come of it, is certainly a result we may hope for, and, as opportunity offers, labor and pray for, believing the aspiration of every true Christian heart to be "Thy kingdom come," in me and all. "Thy will be done on earth as it is in heaven."

California is a State of extremes as to morals and society. There is a great deal of drunkenness in San Francisco caused by a miscellaneous class of people that constitute the population. Almost every national represented here. The large number of United States soldiers discharged here on way home from the Philippines, adds to the criminal class. Hardly a week goes by that we do not read in the papers of some person committed by a soldier. Murder, highway robbery and suicide are frequent with criminals. There are many squalid looking drinking places. The license fee is only a few dollars; thus very poor and disreputable places are able to open saloons. In marked contrast with the condition here, are the large cities in the southern part of the State, and Berkeley and Palo Alto in this end of the State. In the last two, saloons are forbidden by a law prohibiting the opening of any saloon within one mile of the University. In Berkeley the title deeds also prohibit liquoring. These towns contain a fine class of people. Berkeley is supposed to have several thousand inhabitants and not any police. The Prohibitionists in the southern part of the State are hopeful and aggressive. In at least a dozen towns the saloon has been abolished. I believe that the influence of the Society of Friends, in its several branches, has contributed largely to these favorable results. Friends are active in the Prohibition party. Anti-Saloon League, and the W. C. T. U. Letter from W. E. V.

Sobriety of mind has a very close connection with the sobriety of body; it is, in fact, the foundation upon which physical strength rests.—Union Signal.

DRUNKEN, BUT NOT WITH WINE.—It is a little purpose to talk of religion or the necessity of piety, to a person who is fond of playing or sports, as to another who is temperate; for the pleasures of these latter ways of life make him as deaf to other proposals of happiness, and as blind to judging of other happiness and pleasure who is enslaved to intemperance.

A lady abominates a sot, as a creature has only the shape of a man; but she does not consider that drunken as he happens he can be more content with the liquor, than she can with the want of clothes; and if this be her case, she offers from him, as one intemperate man offers from another.—H. M. Law.

Items Concerning the Society.

Joseph S. Elkinton and Zebedee Haines were to start yesterday on their service of visiting the tribes of Indian tribes in our Eastern States, bound for Tusassassa reservation in New York.

According to minute received from his Monthly Meeting at Woodland, N. C., Abram Fisher expects across the ocean and attend meetings in the islands, having engaged passage on the *Avila*, sail from New York next Third-day, the instant.

On account of the late sitting of Haddonfield Yearly Meeting in the ancient Mt. Laurel house, we for our columns of next week. Seldom have we witnessed one held more unto edifying, and even unto the covering of Divine Goodness, than the meeting then enjoyed.

From the Friends' Tract Association of London have received two well made pamphlets of its entitled "Friends Ancient and Modern." These are these two are "George Fox, the First Preacher" and "Samuel Bowley, the apostle of Teutonia." We defer further review of them to our next number.

It is some time is received the thirty-sixth annual Report of the London "Friends' Foreign Mission Association," containing much interesting information of its religious and educational work.

We are glad to be able to present the following definite information that has been usual since the first holding of Yearly Meetings in 1657. The claim of New England Yearly Meeting to be the earliest in 1672 doubtless rests on the continuous annual holdings of such meetings.

THE EDITOR OF THE FRIEND:—May I be allowed to correct a statement in THE FRIEND of last 16th, page 345, column 3. The first Yearly Meeting was held in London in 1660. There were one or two omissions during that decade, but from 1712 onward the Yearly Meeting has been annually in London to the present time. Ellis was clerk to the Society from about 1657 to 1683. He signed the Epistles on behalf of the Yearly Meeting, as did B. Bealing later, but did not actually act as clerk to the meeting.

Thine truly,

NORMAN PENNEY.

EVESHIRE HOUSE, Library Department,
12 Ishopsgate Without, London, E. C.
Fourth of Sixth Month, 1903.

We are not disposed to pass by Old Scholars' at Westtown unheeded in our last number, but allowance of but one day already full between and the printer cut off the visible evidence of interest. And the interest of the thousand and returning pilgrims, compared with that of a year, continued unabated. The public expressed no one, either by quantity or by quality, rather refreshed all hearers. The address of Anna K. Cadbury on higher education for women, and that of Judge William F. Smith, who were excellent presentations of the which concerned their hearts. The incentive afforded forth by the latter, through angelic exhortation, to the sons and daughters to live up to the high standard of so long heritage, has left a warm and appreciative remembrance through the hundreds of hearers. The quick report, and arrangements for social intercourse among old acquaintances, left nothing to desire for the crowning of the favors of the visible spirit of gratitude.

JOHN DALTON, in connection with the celebration at Manchester, of the Cen-

tenary of the announcement by John Dalton of the atomic theory, Earl Spencer, as chancellor of the Victoria University, conferred degrees on two distinguished scientists who have developed and substantiated Dalton's theory.

Lord Spencer said: "John Dalton was a man born of humble parents, and he belonged to the Society of Friends, which has sent forth many eloquent men and distinguished and learned citizens. By his energy, his ability, and his determination he won for himself an education which soon put him at the head of the scientific world. He was honored in his own time by his sovereign and his nation, and now all the world knows that he has made one of the greatest discoveries science ever made." Quoting Professor Clarke Wilde, he continued: "Dalton created a working tool of great power of usefulness, something which none of his forerunners had been able to do. In the growth of chemistry since his day the guiding clue has been the atomic theory." "It is right," said the Chancellor, "that this University should do homage to that great man who one hundred years ago, when education, and especially science, was not esteemed as it is in the present day, gave lustre and honor to the city where he lived by his great discoveries." —*The London Friend.*

THE RECENT SESSION OF LONDON YEARLY MEETING.—"The abounding liberty," says the *London Friend*, "with which the state of our Society was discussed in our Yearly Meeting might surprise an intelligent new member listening to one Friend after another pronouncing the common sense of shortcoming and fault. A recently received member from the North of England was asked, after hearing the discussion last week, 'Did you not feel as though you had joined a sinking ship?' He answered, 'No,' and possibly the very freedom with which our weak points are exposed is a mark of progress and of future promise."

"We were reminded of the Buddhist who retires to a cave that he may learn of God to love his fellow men, and to love the whole world, but he remains in his cave."

"The most important pronouncements in the discussion were perhaps those relating to the character of the Gospel ministry among us. Amid much that is excellent, for which we may be thankful, in the discourses we hear in our meetings for worship, there is probably ground for the charge that we have an inadequate perception of the relation of the ministry of the Gospel to the Church. The call is spiritual, but, as Paul shows, it was humanly recognized in his day, and acknowledged either by the laying on of his own hands or the hands of the presbytery. We protest against a 'one man ministry,' resulting at times in a grievous lack of vocal ministry of any sort, and at other times in a number of very promiscuous utterances; and much expression in our meetings partakes rather of the nature of desultory exhortation, or the repetition of texts without any direct application to the meeting that is addressed. However humiliating it may be to us, the only pathway to higher things is clearly to understand what is amiss. We may be quite certain that it is not the good Spirit of God that is to blame."

Notes from Others.

No "great revival" is possible till the Church and ministry repeat, pray, get right with God, and unload the dead weight of about half our church members.—*E. P. Morrin.*

The *Independent* says that "union" will be the note of the Protestant churches in America and other countries for the next twenty years, and that no better service can be rendered than the effort to secure "Christian unity by denominational union."

"And in the morning, rising up a great while be-

fore day, He went out, and departed into a solitary place, and there prayed."

"His prayers were not, then, as ours too often are, mere monologues. They were true communions; an interchange of life with life; an intercommunication of earth with heaven."

The true patriot interprets "love of country" to signify love for the people who are in it. He will express this feeling by a special interest in their welfare and effort to make them the purest, noblest and happiest among the nations of the earth. This love will necessarily expand into a world-wide love, for all men have a common origin, need, nature and destiny.—*N. Y. Evening Post.*

Protestants of America are sending into foreign mission fields \$5,500,000 a year, through about twenty different societies. Roman Catholics in America have two societies, the Propagation of the Faith and the Holy Childhood, and together they last year sent to foreign missions \$113,423, while both are increasing their contributions, the Protestant increases faster than the Catholic.

Ecuador is said to be the most Roman Catholic portion of our globe. There are six Romanist churches or chapels for every thousand of the inhabitants; one acre in every four is church property; one person in every ten is a priest or a monk or a nun; and 272 days in the 365 are kept as ecclesiastical days of observance either as feasts or fasts. Less than eight per cent. of the people can read.

A Lockport, N. Y., clergyman complains of "the multiplication of forms and amateur liturgies, to make up for departed power in worship, the prominence of musical exercises, in which ungodly singers, inspired by lucre, brandy and vanity, shout lies to heaven to entertain the world; the sensational, secular and worldly preaching, changing the emphasis from eternity to time, and booming each successive craze of worldliness."

Then the preaching—well, fancy a man pleading for his life, or the life of a dear friend. No unrolling of a manuscript, and one hand employed to prevent its departure on the wings of the wind. No bending down over the notes with one hand flourishing overhead, like a drowning man signaling for help; but both upright, the preacher looking straight into the eyes of his hearers, and in tones which needed no ear-trumpet to catch, poured forth truths verified and heated in the furnace of his own heart.—*H. L. Hastings.*

POSSIBILITY OF AN AMERICAN POPE.—If present tendencies continue, the third or fourth pope in succession to Leo XIII. will be an American. This tendency is shown in the selection of heads of the Roman Catholic orders. It is not so very many years ago that such heads were invariably Italians, or at most and excepting a few societies, Germans in their traditions, citizens of Latin countries. The present inclination of the Roman Catholic Church is to put Americans at the head of as many of these organizations as possible. Complaints have been uttered by Italian aspirants, but they are being silenced by events. That the next step should be taken, and forty or fifty years hence an American pontiff be chosen, will be the logic of events. These events are the wonderful development of Catholic orders in America, and the certainty that that development is to be far greater during the next decade than ever before. The new Franciscan superior general, just chosen, was born in Prussia, but has spent many years in America, and is looked upon as an American. Other reasons entered into his selection, however, than simply the one of his nominal Americanism. Father David Flemming, an Irishman, was acting superior general only, but during his term of little more than a year he offended most of the Italian Fran-

ciscans. Finding themselves unable to secure an Italian, they substituted an American for an Irishman. Father Fleming has been made secretary of the new Bible Commission, of which Cardinal Satolli is the head, and will go to Rome to reside. The new superior general, Father Schuyler, organized the English-speaking Franciscan Province of the Holy Name, with headquarters in Paterson, N. J. The new American Franciscan consultant is Father Leonard of the commissariat at Washington. — *Boston Transcript*.

SUMMARY OF EVENTS.

UNITED STATES.—During the last few weeks the number of strikes of laborers in various trades has greatly embarrassed employers and been attended with great losses to the employees. During thirty-two days in New York it is conservatively estimated that the loss of profits to contractors and builders, with office expenses added, has amounted to \$8,000,000; to the workmen in wages alone, \$14,000,000. In Chicago the cooks, waiters and other employees at twenty-one of the large hotels quit work on the 12th inst. A dispatch says: The city has never been in this predicament before and thousands of persons are greatly discommoded. With the leading restaurants already closed, it is difficult to find a dining-room open.

The General Assembly of the Presbyterian Church, lately meeting at Los Angeles, California, unanimously adopted a revision of the Westminster Confession of Faith, which greatly modifies its teachings respecting predestination and infant salvation, and brings them into harmony with the doctrine of the love of God toward all mankind.

A dispatch of the 9th, from St. Louis, says: The crest of the Mississippi flood here was reached this morning with the stage at 87.5 feet, the highest water here since 1844. The river now flows steadily, and so far as the territory near St. Louis is concerned, the acute crisis is past. The danger to points below here is lessened by the spreading of the river over the lowlands. The loss of life will reach at least twenty, possibly a greater number. The property loss is several million dollars.

In East St. Louis on the 8th inst., on proclamation of Mayor Cook, houses were closed, and everybody was at work on the levees in a desperate effort to save the city, which is from one to four feet below the level of the water that pressed against the embankments. A hastily constructed levee of sand bags and mud was all that stood between the city and almost complete inundation. On the 10th inst. nearly two-thirds of the territory was under water. The levees along which begun to recede. Thousands of persons rescued from the waters have been thrown on the overtaxed charity of the local community, and in the impossibility of providing adequately for their necessities, the chief peril of the moment, it is stated, now rests. In view of the want and suffering caused by the flood, Mayor Cook has issued an appeal to the public for aid.

An urgent appeal in behalf of the flood sufferers in Kansas City, Kansas, has been made. In that city 23,000 persons, out of a population of 60,000, are reported to be homeless and dependent. Floods in Northern and Central New Mexico are reported.

A dispatch from Washington of the 12th says: The floods that are devastating large sections of the West and the great work, hurriedly organized by the Government officials who are in charge of the reclamation policy authorized by the recent irrigation law passed by Congress. The combined volume of the water impounded in storage reservoirs at the head waters of great rivers and their tributaries and that contained in a net work of hundreds of miles of irrigation canals and ditches, coupled with the absorbed by millions of acres of arid land, would have gone down the lower river, preventing what will be known as the great flood of 1903.

In addition to the floods in the Mississippi and Missouri Rivers and their tributaries, great damage by floods is reported from North and South Carolina.

Alaska was purchased by the United States from Russia, in 1867, for \$7,000,000. The value of the salmon caught annually from Alaska in this country now exceeds the entire amount of purchase money.

The Board of Health of Trenton, N. J., has in preparation a circular to be issued to householders advising them as to protection against mosquitoes. It is suggested that cisterns be covered with double mosquito netting of fine mesh; that all hollows where water can stand be drained out; that grass in meadows be kept down; and that the water be changed twice a day in the chicken coops and kennels. The circular advises that mosquitoes in houses can be killed by burning fresh Persian insect powder.

der. As cure for bites, alcohol and glycerine in equal parts is recommended.

Rules to be applied by the Department of Health in Philadelphia to improve the supply and inspection of milk and meat, recently adopted, provide that all milk sellers must be licensed; all dairies inspected monthly; and the milk and cream to be given a chemical and bacteriological test; milk dealers are required to sterilize all bottles before using them for the delivery of milk. All meat producing animals must be inspected by a veterinarian of the department before being killed, and all meat exposed for sale must bear the stamp of the health department. It has been lately stated by statistics that 35 per cent. of the deaths from tuberculosis in Philadelphia are in the mill district of Kensington.

It is stated that for the first time in the history of this Government the imports have exceeded \$1,000,000,000 in a year. The exports are about \$1,400,000,000.

Recent rains in various parts of the country have occurred accompanied by a dispatch from Latrobe, Pa., of the 14th, says: A fall of snow came last night. A heavy hailstorm came first, and this prepared the ground for the snow, which came down in great volume for over an hour, leaving the mountains as white as they are in the winter time.

A dispatch from Pottsville, Pa., says: Ferdinand E. Wessner, of Philadelphia, has just completed arrangements with the Philadelphia and Reading Coal and Iron Company for the manufacture of coal bricks on a large scale. Three of his machines are to be put in operation at once at the Lincoln colliery dirt banks, and 1,000 hands are to be employed. The Wessner patent consists in the use of 30 per cent. coal dirt, 15 per cent. sawdust and 5 per cent. coal tar. Fast quantities of waste coal dirt have been obtained in this region for years, and the supply is practically inexhaustible.

There were 430 deaths in this city last week, reported to the Board of Health. This is 3 more than the previous week and 18 more than the corresponding week of 1902. Of the foregoing 232 were males and 198 females; 63 died of consumption of the lungs; 30 of influenza; 10 of long and sudden fever; 11 of diphtheria; 16 of cancer; 17 of apoplexy; 21 of typhoid fever; 2 of scarlet fever, and 3 of small pox.

FOREIGN.—King Alexander of Servia, and his wife Draga were assassinated on the 11th inst., also two brothers of the latter, the Serbian Premier, and other high officials by a band of army officers. Prince Karageorgievitch residing at Geneva at the time, is mentioned as the possible assassin of King and Queen.

A dispatch from Washington, D. C., says this massacre has resulted in a situation which even forbids this and other Governments from sending a note of condolence on the one hand or a note of congratulation on the other. Individually, Cabinet members, as well as the President, regard the massacre with horror, but none is willing to be quoted either individually or collectively.

Russia has a larger Jewish population than any other country in the world. The Russian Ambassador in this country, Count Cassini, is reported to have lately said in an interview with Abraham N. Sadler, of New York, in reference to the massacre at Kischeneff:

"The public meetings that have been held in the United States, the resolutions that have been adopted will be ineffective in any country. Russia, with her 137,000,000 inhabitants, will not be influenced in her internal policy by outside pressure. She will take care of her people. Five millions of Jews resident there are but a small minority, and they can and will be protected."

"As an evidence, there are now more than 500 of the Kischeneff rioters in prison, and the guilty ones will be severely punished. We do not intend to do anything for Russia. We regret to lose them. Those who remain in Russia will be cared for. The attitude of my Government since the Kischeneff affair attests to this. We have hearts as well as other people. We do not want to see pillage and carnage any more than you do. I insist that the action of the Russian Government, from the manner in which they acquiesce with the facts of the unfortunate occurrences at Kischeneff, has been all that its severest critics could ask for."

The Congo Free State, now an independent nation, the head of which is the King of Belgium, has within a few years been greatly developed. Its territory includes nearly a million of square miles, inhabited by 30 millions of people. It has 500 miles of railway, 20,000 more under construction, and 1,000 miles of telegraph lines; seventy-nine steamers, some of them carrying electric light, ply on the Congo; shipping of 1,000,000 tons annually enter and leave its port on the sea; in 1901 its exports amounted to \$11,000,000.

The representations which have lately been made respecting the ill-treatment of the natives in that country have lately induced the British Parliament to adopt the

following resolution: "The Government of the State, having at its inception guaranteed to the natives that the natives should be governed humanely, no trading monopoly or privilege should be permitted. The Government requests the Government to confer other signatures of the Berlin General Act, in which the Congo State exists, in order that it may be adopted to abate the prevalent evils."

It is stated that over 2,000,000 people have India from the bubonic plague since 1896, and ease is reported to still continue in that country since the abatement.

The British policy of Great Britain has lately been re-affirmed by a large majority in the House of Commons when certain measures proposed by Colonel St. Chamberlain to modify it were under discussion.

A donation of \$10,000 has lately been transmitted through *The Christian Herald* of New York, for the relief of starving Chinese in the Province of Kwang Si, its receipt has been acknowledged by the Viceroy of that province, as a proof of American friendship and sympathy for the one million Chinese are said to be starving.

The smoke from the late forest fires in Canada so dense on the coast of Nova Scotia as to interfere with navigation.

The Experiment Station in Porto Rico by the United States Agricultural Experimental Station leads to conclusions officially announced by Commissioner of the Interior Elliott:

That the poorer sandy soil of Porto Rico will not produce a remunerative crop of sea island cotton when the dry months of winter and early spring have been so successful in harvesting this crop. Despatches from Aguadilla, Mexico, report a crop of terrifying nature. There were violent shocks at sea. These shocks took place on the night of the 10th, when simultaneous shocks were experienced in Tulancingo and Mescala. The people ran into their houses and falling on their knees prayed for mercy.

European engineers, say the periodical called *The Engineer*, are lately thinking that the coal mines may fail, they have in the Alpine glaciers exhaustible sources of energy. The melting of the glacier ice gives rise to mountain torrents, which being utilized more and more, especially since the transmission of power has more nearly approached perfection. The glacier is thus a mine of stores, and its ice has been somewhat poetically termed "the great battery of the Alps."

The Czar of Russia has signed a rescript which the government of Finland entirely dependent on Russia, and reduces the Finns to the political status of Russian peasants, enabling the Governor General to punish those whose presence he may deem undesirable without accusation and without trial.

NOTICES.

A WOMAN FRIEND desires position as companion lady for the Summer months, or permanently. Address W. Friend, of the *FRIEND*.

Notice.—A meeting of all Friends who are interested in the establishment of a Boarding Home for the poor, is called to be held at Friends' hall, 20 South Twelfth street, on Thursday, the 23d inst. at 4 p. m., when the committee who have been appointed in making inquiries and a practical plan for the work will set forth the particulars of the same and allow all to be present.

Westtown Boarding School.—The fall term of the School will open on Thursday, Ninth Month 20th. Friends who are intending to send children to the school will confer a favor by making application before the 26th inst., if the matter has not already been mentioned.

WM. F. WICKESHAM, Principal.

DIED.—West Chester, Pa., First Month 2d, 1893. ANX. ELLIOTT, wife of James Elliott and daughter of the late John and Phoebe Beington, in the seventy-fourth year of her age; a member of the Monthly Meeting of Friends of Philadelphia. "The foundation of Grace is laid, having this life: The Lord knoweth the time and the hour." 2 Tim. II: 19.

—, at his residence, Ranocan, New Jersey, on the eighteenth of Third Month, 1893, SAML. W. WILSON, the eighty-third year of his age; an elder and member of Burlington Monthly and Ranocan Associations of Friends.

Forward to Christ.

THE Old Testament provision, as of a series of shadows laid in advance of the Substance that them, was always leading forward to Christ whom they were prefiguring and denning, "who was, indeed, foreordained from the foundation of the world, but who manifested in these last times for us, who by him believe in God." Not that Christ was from the beginning onward spiritually latent, as "the Word of God," with men, as light that lighteth every man that comes into the world." He was in all those generations, "in the world, and the world was made through Him, and the world knew Him not," yet those, here one and there another, who apprehended peculiarly his own by receiving him. "To these gave he authority to become children of God, even to them that believed in his name, who were born of God" (John i: 12). He was in the world teaching, as men were able to bear it, through a law of degrees, which was a schoolmaster to lead to Christ, and was, according to their respective measure of light, the expectation of the Messiah. More especially among the Hebrews, in the fulness of time came, was there a compelling looking forward to a personal manifestation of the Messiah who should come.

Not, however, for nearly nineteen centuries there been on the part of Christendom looking backward to Him who was personally with us as Jesus, the Christ; and too generally an exclusive looking backward as to get to a blindness to his present and daily presence to the hearts of men,—those living appearances of the risen Lord by his Spirit in Him. He was so earnest to assure his followers in his parting language pleading that they take notice of his being "with them all days, even unto the end of the world."

Thus also had he in substance been teaching them,—even that it was expedient for them that He should go away, else the Comforter would not come. "If I go, I come again" (John xiv: 3). And He (the Spirit proceeding from the Father and the Son) when He is come, will convict the world in respect of sin, and guide you into all the truth" (xvi: 7-13). And so is fulfilled, in the experience of many witnesses past and present, the promise that "to as many as look for Him, Christ shall come again the second time apart from sin unto salvation."

But now, in the determinate ignoring of any Christ save as one apparent in the days of his flesh nineteen hundred years ago, many seem to be teaching Christ as always to be looked backward to, and never present as the inspeaking Word of God, speaking to our condition,—the one Mediator between God and men,—who even daily "upholdeth all things by the Word of his power." But there are many who can say, "we know that the Son of God is come and hath given us an understanding, that we know Him that is true." So Christ is known as still declaring in his present revelation; "I am He who liveth, and was dead, and behold I am alive forever more." For us to live is a living Christ, and not merely one dead and gone away; who is by his Spirit "Christ in us, the hope of glory." So that "He that hath the Son hath life, and He that hath not the Son of God hath not life." "For the Word is nigh thee, in thy heart and in thy mouth. Say not then, who shall ascend into Heaven, that is to bring Christ down from above" (Rom. x: 8, 6).

There is coming into the air a present day slogan, "Back to Jesus," which has in view more than the ignoring of Christ come again in these the days of his Spirit which have succeeded the days of his flesh. It would unload from men's minds all Christian teaching which has come forward since He in that prepared body himself taught his hearers, and would limit us to his recorded words (or rather the more convenient of them) as given in the four written "gospels."

We can sympathize with a desire for a genuine renaissance of "Primitive Christianity revived." Indeed, to get back, or rather forward to that, in its purity and simplicity is the mission and profession of our religious

Society from its beginning. We can most wholesomely spare much of human tradition with which the word of Life in ecclesiastical hearts has been overlaid, choked, and made unfruitful,—can well be cleared of most of that mediaevalism whose stultifying and darkening spirit has been getting exposed in our columns in the articles entitled "Confessors of Peace,"—we can dispense with the school systems and theologies of men,—but without Him, "Jesus Christ, the same yesterday, to-day, and forever," we can do nothing. And so by all means let us get back to Him, to-day abide in Him, and forever get forward with Him, in the true sense of a revival of Primitive Christianity. For never will Christianity past, present, or future, be found to be anything but Christ,—who "was then, is now, and ever shall be," the unchanging Saviour.

But the motive of the cry "back to Jesus," with many seems to be a desire not only to disown a degenerate church, but to get rid of the doctrines and epistles set forth by Paul and the other apostles. In the simplicity of the expressions of Jesus only, there would seem to be less religion to be burdened with. There certainly would be enough to fulfill, were one faithful to all that is involved in his words. He well-knew there was much that had yet to be developed to men's understanding. They could not bear all of it then, but it would be revealed by the spirit of Truth as they should be able to profit by it. He also pointed forward to successors in the unfolding of his doctrine, saying "He that receiveth whomsoever I shall send, receiveth me." "As the Father sent me into the world, even so send I you into the world." "For this cause came I into the world, that I might bear witness for the Truth. He that is of the Truth heareth my voice." So Christ's own living and commissioned teachers of doctrine, in co-operation with his own continued inward Voice and immediate Word, are ordained to edify the church, keep it watered and revived. And the writer of the "third gospel," in beginning the book which follows the fourth, distinctly says that those gospels were written only "of all that Jesus began to do and teach," up to the time of his ascension. This clearly implies a continuance of his doing and teaching by his own spirit in us and in his apostles and commissioned ambassadors.

So we in our day had best go back to Christ by pressing forward to Him who is before,—who goeth before us into all our Galilees, errands and missions of his spirit. "He that followeth me shall not walk in darkness, but shall have the light of life." We follow on to know the Lord, inwardly satisfied that the Saviour of the apostles, and of the New Testament books which could have been written by no other inspiration than Christ's own, is our only satisfying Future, with whom we have never yet caught up, and never shall overtake by looking back to Him merely as an historical character and deliverer of beautiful truths in the past. We want a Christ crucified that is the present 'wisdom of God and power of God' unto salvation. The world, even what is called the Christian world, is still in that Old Testament state, which needs to be looking forward to Christ, to whom, though He has come, they have not advanced. The expansion of all that is good in civilization, of all that may be developed in the human mind and thought as an instrument of Christ's spirit, of the spreading of the reign of Love which is the fulfilling of the Divine law from sea to sea till the earth shall be filled with the knowledge of his glory,—all depends on our faithful pressing "forward to Christ," and running with patience the race that is set before us, looking unto Him who is inviting us forward to the measure of the stature of his fulness.

Nicholas Gates.

Nicholas Gates, of Alton in Hampshire, England, son of William Gates, of the same place, from the time he understood there was a God who made the world and all things therein, was desirous to have the true knowledge of Him. In his childhood he took great delight in reading the Holy Scriptures, and in hearing the best reformed ministers, and gave himself often to private praying to the Lord unknown, uttering words before Him, until on a time in his chamber kneeling down by his bedside, in order to utter words, he was stopped, and it was said to him in his heart, as he declared and believed, by the Lord, "Thou needest not utter words, for I know thy heart and soul's desire." So remaining kneeling awhile, he arose but uttered no words.

About the age of twenty-one years, he came to join with those people in scorn called Quakers, and was rejected by his father, and became an alien to his father's house, and many times threatened to be cast off, yet he loved his father dearly. The Lord was more to him than his father, and fitted him for his service, and gave him a gift of the ministry, and called him forth freely to preach the gospel of the grace of God, and made him an experimental witness of the sufficiency thereof. He labored earnestly therein in divers parts of England, to invite all to receive and come under its teachings.

By the power and grace of God, he was supported under, and carried through, all the trials and exercises, stonings, stockings, re-

proachings, imprisonments, and spoiling of goods he met with for the Truth's sake, and his testimony thereto. He was religiously exemplary in his family, and among all where he traveled, preached sound doctrine, lived a holy life, was just in his dealing, diligent in his calling, a tender husband, a loving father, a kind friend, a good neighbor, a follower of peace, delighted in hospitality, sought unity, and labored to preserve it in the bonds of peace.

He was diligent in attending meetings, both on First-days and other days, and in the service of Quarterly and Monthly Meetings, and in taking care of the poor, and was greatly blessed of God. This servant of Christ being taken ill the tenth of the Tenth Month, 1707, the first thing he expressed his care for, was the church, and to have Friends preserved in unity, saying he was well satisfied with the Lord's dealings with him. "He hath been a good God to me all along, and hath let me live to good old age, and been my support from time to time, and is so in this present exercise." Another time he said, "My days are expiring apace; but I have lived to see the goodness of the Lord in the land of the living." He then expressed his love to his wife in a very tender, affectionate manner, and prayed to the Lord that he would bless and preserve her and his children to the end, desiring they might live together in love, and watch over one another therein. He said he did not know, if he had his time to live over again, that he could die better, having the evidence in himself of well-done; yet he said, if the Lord did see fit to restore him, and he could be an instrument to gain more souls to God, he could be glad; for that was his great joy, when he considered how he had spent his time in the Lord's service.

This honest, zealous old man gave good advice to many that came to see him, and for their children, laying a charge upon such Friends as had them, to keep their children to the plain language, and to bring them up in the fear and admonition of the Lord; admonishing his own children to do so by their children, and to ask them questions for opening their understanding that they might know what God is, and where he is to be found, while they are young and tender; and said, "Oh! that men, especially young men, did know the comfort of living a sober life."

A neighbor coming to visit him, asked him how he did; he replied, "Weak, and am going apace out of this troublesome world, to a place where there is neither sorrow, nor trouble." After this he said "Friends were formerly known by their fewness of words and keeping to their word in their dealings." He very often desired Friends to keep to plainness both in speech and clothing warning his daughter Deborah to watch over her children to keep them out of pride saying "There is scarcely a worse weed than pride." A while before he died he said "The door of entrance is open into the kingdom;" into which it is not doubted but he is entered. He departed the twenty-first of the Tenth Month, 1707, aged about seventy-four and convinced of the Truth about fifty-two years.—*Selected.*

"LEVITY in manner tends to laxity in principle."

Haddonfield Quarterly Meeting at Evening.

In passing along the main street of Moorestown, N. J., to the eastward, the visitor not fail to notice a broad and well constructed highway leading off to the southeast across a wide stretch of open valley country, until in the distance of its ascent of the opposite slope, some three miles away. Rising to the verge of the elevated extremity of roadway is an elevation of much greater height, which for miles around is a striking object in the relief of the landscape. To Mount Laurel, or, more anciently Eve Mount; one of a series of mound shaped, extending across the State in a southwesterly direction, from Raritan Bay to the Delaware, and interesting to the geologist as being apparently the relics of the erosion to which the country was subjected in past ages.

On the morning of Sixth Month 11th, the highway impressed even the casual observer with its indications that something of unusual interest was taking place. A line of tidy riages drawn by sleek, well-kempt horses, following each other at irregular intervals betokening the prosperity of the occupant was threading its way in the direction intended, as if all were actuated by a common purpose. Glancing for a moment at these we find a general look of intelligence a quiet cheerfulness. The dress of all is of a kind that commends for its simplicity good taste: many, however, are seen to the distinctive garb of the Quaker, and as we realize we are in the midst of a company of Friends, young and old, delightfully wholesomely intermingled; for this is the Haddonfield Quarterly Meeting. Visitors who have not become blended into one; the former having already accepted a seat on one of the commodious stages furnished by the transportation committee of the Quarterly Meeting. A casual glance reveals the fact that this particular vehicle at least is furnished with its quota of the "weight" of the meeting "gallery" friends predominate, whose yet cheerful demeanor indicates that the thoughts of the day are shaded by a sense of the occasion which confronts them. From his place of vantage beside the old driver, our observer looks out upon a landscape of meadow country, refreshed by recent rains, so eagerly received after months' drought. We take in full breath the soft summer air, laden with the fragrance of ripened clover and succulent verdure. On the one side we pass a herd of cows graze contentedly within their enclosure; on the other a company of berry pickers gather in boxes the scented luscious strawberries grateful to the palate at this season of the year. The glad notes of various species of birds salute our ears—everything is in a holy calm that is most fitting to our feelings and to the occasion that calls us here. Thoughts of the meeting now and then flood the mind; while desires are raised that it may be one of renewed spiritual blessing; until, at last, just over the brow of the hill, where in its three mile reach from Moorestown the road passes from the view of the observer stationed there, and on the opposite ward slope of Mount Laurel, stands the ancient meeting house to which we are re-

Build of conglomerate sandstone, a formation of frequent occurrence in the neighborhood, the structure has a venerable and substantial appearance; though decay is fast eating in, and the reduced size of the particular meeting which regularly gathers here, has already given rise to the question as to whether it is worth the while to spend much on its repair, since also, the Quarterly Meeting is not remote date, it is thought, will be held in the new commodious house at Moorestown.

And yet the size of this house bespeaks a day of large membership; and, like many others of its kind, it was built in two parts; the older, the western portion, beneath whose portal we alight, bears upon its wall the now barely decipherable date of 1734. The outlook is to the southward, upon a level enclosure with ample accommodation for a large number of vehicles which enliven the scene upon occasions like the present. A striking feature of the yard is an immense live oak, upon the eastern verge, which, not only has seen many generations of Friends, and even an silent witness to many changes in dress and equipage, as broad brim and drab stout horse and heavy carriage, adapted to the needs of larger families, have slowly replaced to things of lesser weight, lesser rarity. But, let us hope, that as the spiraling red is just the same to-day as then, just in the proportion a sufficient measure of the long grace is given to the humble worshiper that enters these doors conscious of his need to-day, to enable him to come forth again cheered and inspired for life and its duties as was the case with those who predeceased him.

Beneath the oak and the meeting house is an ancient burial ground, long since disused, beneath whose mouldering turf

"The rude forefathers of the hamlet sleep."

Arriving early, we enter the house to view the interior, which is most inviting with its polish at this season of the year. Scant lights afforded, owing to the small window and the far projecting youths' galleries. The bodwork, also darkened with age, tends to the same effect. We observe that the side walls are neatly panelled, giving evidence that the maker of a century ago was thoughtful of every thing that would otherwise have been to severely plain effect. The benches, however, like most of those of that period, convey no means constructed to induce comfort to the mind studious of physical ease; owing to that narrow formation of seat, and that limited expanse of back-rail so congenial to the older meeting-houses, but now happily giving place to a more comfortable design.

The hour of assembling at length has arrived, and, mindful of its observance, Friends assemble, until both ends of the house are well filled. But the visitor of twenty years ago sees now death's hand has wrought amid the membership. No more the commanding figure of Richard Esterbrook is seen to arise, with the phrase to announce the conclusion of the session for worship. Edward Sharpless, now missing; than he none more facile in quoted Scripture quotation, in the adornment and enforcement of the gospel message. No more do we behold the benign face of Deborah Roads, as she used to arise and with

gracious voice plead for souls to come to Christ. Hannah Evans, who sat near her, too, is missing. David Comfort and Joseph Walton—they who for so long a period sat side by side in their own meeting at Moorestown, the latter equalled by few in so varied and untiring industry for the welfare of the Society, passed from our midst in close succession. Nor can we forbear to speak of him, our beloved nestor, who but one short year ago, was with us—Charles Rhoads! Ever calm, judicious, one whose presence at the head of the meeting, gave to it a peculiar charm and dignity; bereft indeed were we, when "like as a shock of corn, fully ripe," he, too, was gathered into the heavenly garner. All these we miss; and others, who, though not so prominent, did, nevertheless, in their lives honor Christ.

The meeting gathers into a stillness which seems to indicate that the assembling is "of one accord." Who amid the company will assume the grave responsibility of breaking into this silence, deepening as the moments pass, mindful of the injunction of the Preacher of old,—"keep thy foot when thou goest to the house of God, and be more ready to hear, than to give the sacrifice of fools; for they consider not that they do evil." At length a voice is heard. It is that of a woman in prayer; and as the meeting arises, and stands with bowed head, we feel to be in accord with the petition for the Divine blessing which is poured forth on our behalf. Soon after, we listen to an eloquent plea for our lives to be lived "by the faith of the Son of God" in practical godliness,—which is clothed in scholarly phrase but delivered in a humility of utterance, indicating that that scholarship has been devoted to the service of Christ. "If thou art a farmer, be a living farmer, such as Christ would have thee be. Art thou a housekeeper? Be alive in Christ to live thy life amid thy round of duties, as He would have it lived; Art thou a parent? For thee to live is Christ. Fulfill thy duty in the faith of his life, and as in his sight,"—was the sense of the closing part of this forceful exhortation. The next speaker was led to allude to the appeal that is so often heard addressed to our younger Friends, to be found fitting themselves for the stations in the Church that have been left vacant by the faithful ones who have been called away, leaving almost empty benches as silent reminders of the solemn truth, that if the young and middle-aged are not found willing to yield obedience to a call for service, meetings must decline, and the Society dwindle away. The calling of the prophet Elisha was vividly brought to our remembrance, with striking application to the condition of some at the present time, who, if found abiding in the faith and zeal that led the prophet to follow in the lead of his great forerunner—Elijah, would find their work in our Israel of to-day, and instructive application was made of the recital that the mantle did not fall on Elisha, but he caught the falling mantle of Elijah. The speaker who followed referred to two incidents in the life of Elisha which had not been already touched upon—where the prophet Elisha craved that a double portion of the spirit of Elijah might rest upon him, and where he rent his own garment before assuming to be clothed with that of the other.

These two speakers were in close harmony in their exercises, and brought the meeting under the solidity of covering which would seem to indicate that not only a feeling of deep interest had been awakened, but that a season of close heart-searching was being realized on the part of some, who felt ready to raise the question—"Lord, is it I?" "Search me, O God, and know my thoughts; try me, and know my heart; and see if there be any wicked way in me, and lead me in the way everlasting," was the language next heard; all the more impressive since it fell from the lips of a young woman in the body of the assembly. "As the hart panteth after the water brooks, so panteth my soul after thee, O God!" accompanied with an appeal to the younger members to not overlook the important duty of being faithful in attendance upon meetings for worship, where they might have opportunity to realize somewhat as to the meaning of that soul thirst to which the Psalmist alluded, was quoted in a feeling manner by an Elder. Supplication was again offered; in which it was craved that the many gospel truths set forth during the meeting might find a sure place in the hearts of the people assembled; after which, the session for business was opened.

The reading of the extracts from the minutes of our late Yearly Meeting elicited much excellent counsel with reference to the subject of biblical criticism, which is therein opened by the insertion of the minute upon the subject adopted by our Meeting for Sufferings. The young were cautioned against allowing a doubting spirit to arise, which in the end might lead to the weakening of their faith in the Holy Scriptures, and finally wreck the same; as was instanced in the case of a young man who in a letter to a Friend admitted that by giving way to doubt he had now nothing upon which to build a hope of immortality. A young Friend—a minister—having expressed a concern to visit the woman's meeting, liberty to do so was feelingly granted. The character of his message to that body, and the Divine favor that apparently accompanied its delivery, as was afterwards learned, beautifully illustrate the good order that obtains amongst Friends, as well as the importance of yielding faithful obedience to intimations of a call to service.

A sense of the blessing that had rested upon the meeting throughout, the brotherly love that seemed to abound, the deep interest manifested by the younger members, as betokened by their reverential attitude and close attention to the various exercises, culminated in a supplication on their behalf; wherein the longing was fervently expressed, that the God of all mercies, without whose quickening power no human word can avail the deadened soul, might so fix upon their hearts the impressive lessons of the day as to incline them more steadily to seek the way of righteousness in their homes and at their business.

And so we passed out of the dim venerable structure, still aglow, as it were, with the heavenly light of the blessed gospel, into the common light of day, yet energized and quickened with a renewed sense of the responsibility of life and of those duties which we owe to one another as fellow members of a distinct branch of the Christian church, which has its

Obliging People.

Once was a wedding guest where the clergyman venerable and fatherly, exhorted the bride to be kind and obliging wife. The latter replied she seemed extraordinary and a little doubtful of the dignity of the occasion, but the clergyman I have reflected upon it, the more the more I see what it stands for have grown upon me. It is no slight thing to be obliging, accommodating, ready to put one's own desires aside and to live for others in little services, in the things of daily gentleness, and little attentions. Husband and wife dwell together in the tenderest intimacy. Unless both are obliging, they are in peril of that tiny rift which may widen to a great chasm in time.

What is it to be obliging? Is it not, primarily, to look rather upon the things of others than upon one's own, to wish for the pleasure rather than for one's own to give up rather than to hold fast? The obliging maid in the kitchen is not upset when the master of the house, arriving too late for noon, requires a meal prepared in the lull of the afternoon. The obliging boy or girl cheerfully lays down the book, or the pen to go on an errand. Nobody enjoys making a shopping-list to town for a friend and proceeding from store to store to match ribbons and braids, but the obliging woman does not bear the fatigue without complaint. To oblige another when it costs nothing is a sacrifice. To oblige when the act involves a sacrifice is pure unselfishness.

"Forty years of my life with my husband," said lady "I never knew him to be disobliging in the large things or in small. He has committed the small courtesies which add so much to the pleasure of one's home." It is high praise. Would that we might all measure it. All cannot be generous in money especially of money all cannot be equal in sudden emergency all cannot, always be, but all may be obliging.

Perhaps one way in which this excellent quality may be illustrated is in the habit of coming only once when one is called in the morning, and of coming promptly to meals when they are ready. Few of the minor transgressions of good manners cause more real confusion and annoyance than the objection to promptness which lays its paralyzing hand on the deep who prizes the morning nap. Drowsily she turns on the pillow, far away and without thought of the tap at the door, heavily drifting over her eyes the waves of slumber. Reluctantly she awakens the brain, habit binds the limbs, slothful indulgence blinds the conscience, and everything is at a standstill because the lazy member of the family tarries with the omelet, that should be feathered with hot flat, the warm biscuits grow too brown, the cook's temper cracks alarmingly, and the children will probably be late at school. A glimpse of obligingness about getting up in season would save all the needless fuss.

Then, here is a word for the man of the house who is much too apt to linger than he should in the way home at night. Business, he says, exacts his staying later than the closing hour, or, when he does start, he thinks a walk in the brisk air will be refreshing, and it involves only the taking of a train a half hour later, he avoids the street car and tramps on foot to the ferry. Had he arranged at

home for the half hour's margin on his return, it would have been all right, but most men have an impression that meals spring up at the wave of a magic wand, and no thought occurs to them of soggy potatoes or overdone meat. An obliging man takes care to consider domestic arrangements. He is as punctual as he possibly can be about the hour of his return at nightfall.

Obliging people are sunshine-bringers in a world where shadows throng. Their spirit of universal good-will is contagious, and they make people happier because they are themselves happy. Churlishness has no room in their scheme of living. They grudge not, they put themselves out, they take trouble and pains that they may confer pleasure. A genius for obliging others is as valuable a natural possession as any other great and fine endowment; but when it is not natural, it is easily acquired, for it may be cultivated by prayer and painstaking.—*Christian Intelligence.*

Brother, the angels say,
Peace to thy heart!
We, too, O brother, have
Been as thou art—
Hope-lifted, doubt-depressed,
Seeing in part,
Tried, troubled, tempted,
Sustained as thou art.

Brother, they softly say,
Be our thoughts one;
Bend thou with us and pray,
"Thy will be done!"
Our God is thy God;
He willeth the best;
Trust Him as we trusted—
Rest as we rest!

Ye, too, thy gently say,
Shall angels be;
Ye, too, O brothers,
From earth shall be free:
Yet in earth's loved ones
Ye still shall have part,
Bearing God's strength and love
To the torn heart.

Thus when the spirit, tried,
Tempted and worn,
Finding no earthly aid,
Heavenward doth turn—
Come these sweet angel-tones,
Falling like balm,
And on the troubled heart
Steals a deep calm.

—Anon.

FOR "THE FRIEND."

I. Worship—II. Ministry.

PART I.

The Church, or body of true believers, is spoken of in Holy Scripture as the body of Christ; the tabernacle, temple or house of God; for in them God dwells and abides. The individuals composing this church are spoken of as members (of the body); living stones, vessels of the sanctuary; terms having relation to their several service.

The Eternal Word who was in the beginning with God and was God, himself the Creator of all things, who made man in his own image, came into the world as Christ Jesus, that He might restore all things as they were in the beginning, ere through sin man had lost the Divine Image and holy communion with God.

No temple but man was there, no appointed formal worship though man was made to glorify God. Life, communion and happiness were conditional on obedience to God's word. To hear and obey this gave peace and joy, and thus dwelling with God they dwelt in love.

Ages subsequent to the fall of man, did the Lord first give permission to men to build an earthly tabernacle for his name to dwell in; yet though the temple was reared under Divine direction, and all its altars and vessels formed, as well as a priestly order of men set apart, and a ritual service particularly described, the Lord, by his prophets, foretold that all these could not contain nor satisfy the infinite, everlasting God, and that eventually they must give place to a more heavenly temple and service, wherein God should be worshipped in spirit and in truth, for this unanswerable reason, "God is a Spirit, and He seeketh such to worship Him."

The sacrifices, services and the priesthood and servants all typified better things to come, and were all to pass away and give place to the more glorious dispensation of Christ, like as the morning star is but the herald of the sun in its fulness of glory.

God by his prophet declares, "I will pour out my Spirit upon all flesh," again, "all flesh together shall see my glory." No more shall Israel alone have the monopoly of God's manifested presence and glory; no more shall all people have to wend their way to Jerusalem to worship the God of the whole earth. "For from the rising of the sun even unto the going down of the same my name shall be great among the Gentiles; and in every place incense shall be offered unto my name; for my name shall be great among the heathen, saith the Lord of hosts" (Mal. i. 11). But under the symbol of the ritual law incense could only be offered by an anointed priest, and such alone could enter the holy place, where the golden altar was; and the fire used must needs be the holy fire taken from the altar of burnt offering. There must then be a change in the priesthood, a change in the tabernacle, with its sacrifices and incense. Such is the case in this, Christ's dispensation. We who are Gentiles are called to worship not in any house built by human hands as being the temple of God, nor do we require any anointed Aaronic priest with genealogy intact from their father Aaron, neither altar for burnt offering, or for incense. These had all to pass away, nor are any such now to be found, even amongst the Jews themselves. But we, both Gentiles and Jews, enjoy the substance, their counterpart, which are not to pass away but to endure while time remains. Christ Jesus is made to us a High Priest, "after the power of an endless life" typified by that of Melchisedec antecedent to the law. He was anointed of the "Holy Ghost" both as King and Priest, and to all those who believe in Him and obey Him as their King and High Priest, he gives of his Holy Spirit, a measure of the anointing wherewith God his Father anointed him; and all true believers are made by him priests after the same power of an endless life, for as He said, "He that believeth in me shall never die." All the sacrifices for sin had their counterpart in Christ's offering himself on the cross of Calvary as a sin offering offered once for all, a propitiation for the sins of the

whole world, nor can any other *sin* offering be offered according to the Divine will and prove acceptable to God. The burnt offerings, the peace offerings and free will offerings have their counterpart in the whole-hearted obedience of God's people, when they immolate self on the altar of the Divine will and by the motions of God's Holy Spirit do works of righteousness or of worship, which as works of the obedience of faith find acceptance from God. In these the Scriptures themselves declare to be the "prayers of the saints," prayer having the unction of God's Spirit which itself is symbolized by the essential taking of fire from off the great altar, and all prayer lacking this and made alone in the will of man, is but offering strange fire.

(To be continued.)

Science and Industry.

In a late address before the Homeopathic Medical Society of Chicago, Dr. Arthur G. Sax is reported to have said that anger and fright lead to the secretion of poison in man, no less surely than in a reptile; the latter, however, has an advantage in the fact that he can store up his deadly venom and so remains uninjured, while man inevitably poisons himself with the product of his desire to injure another.

LEARNING TO USE TOOLS.—A boy ought to be at home in a barn, and learn to harness a horse, tinker up a wagon, feed the animals, and do a hundred useful things, the experience of which may be of special service to him in after-life when unlooked-for emergencies befall him. I have seen an ex-president of the United States, when an old man, descend from his carriage, and rearrange buckles and straps about his horses when an accident occurred, while the clumsy coachman stood by in a kind of helpless inactivity, not knowing the best thing to be done. The ex-president told me he had learned about such matters on a farm in his boyhood, and he was never at a loss for remedies on the road when his carriage broke down.

It is a pleasant relaxation from books and study to work an hour every day in a tool shop. The learned and lovable Prof. Oliver Wendell Holmes finds such comfort in "mending things" when his active brain needs repose, that he sometimes breaks a piece of furniture on purpose that he may have the relief of putting it together again much better than it was before. He is as good a mechanic as he is a poet; but there is nothing mechanical about his poetry, as you all know who read his delightful pieces. An English author of great repute said to me, not long ago, "Professor Holmes is writing the best English of our times." And I could not help adding, "Yes, and inventing the best stereoscopes, too!"—*James T. Fields.*

"AUDUBON societies for the protection of song and other birds were organized in twenty-four States between 1897 and 1900. The Bird Protective Society of America was organized in 1900. In 1896 the late J. Sterling Morton inaugurated a movement among children in the interest of bird protection.

"For several years all these societies working together had little influence on the public. There was an increasing demand from fashion-

able women for bird plumage for the ornamentation of hats and bonnets and millions of song birds, gulls, herons and humming birds were slaughtered every year.

"The sportsmen in the several states came readily to the support of bird protection laws, but the agents of milliners penetrated every district frequented by birds and killed without regard to law or popular sentiment. In one year a single New York house handled one million five hundred thousand plumages from birds slaughtered in a campaign of two months in the South. Another house handled as many heads and wings from birds slaughtered in Indiana and Illinois.

"The slaughter was carried to such an extreme that people of all the States joined in the protest. Protective laws were passed in nearly every State and still the slaughter continued. Then appeal was made to the milliners and women of fashion. The Millinery Merchant's Protective Association of New York came to an agreement with the New York Audubon Society and the American Ornithologists' union not to import, purchase, or use in manufacture the plumage of gulls, terns, grebes, humming birds, and song birds. "This agreement was endorsed at the recent meeting of the Millinery Jobbers' Association in Milwaukee and the milliners who three years ago were the instigators of bird slaughter are now on the other side, or in league with other bird protectors."—*Chicago Inter Ocean.*

DON'T GET LOST.—Persons who get lost usually wander around and around in circles, probably because one leg is usually a little longer or a little stronger than the other. Hence while they suppose they are going straight forward, they are going in a circle, and persons thus lost may travel around and around within a narrow space till they grow weary and faint and die.

A traveler journeying through a wilderness should have a good pocket compass, a watch and a map. Persons who are walking or riding can then usually judge of the distance they have gone by the time it has taken. If they travel three or four or five miles an hour, they can easily judge about where they are. At night every one knows how to find the north by the north star, if it is visible; and in the day time the sun is sufficient guide if one knows the time of day. In cloudy weather in the forest, one can find the north by looking on the trunks of trees, the moss which grows on the bark being thicker on the north side, the bark also is thicker on the north side,—that is in the northern hemisphere. In Australia the moss and bark would be the thicker on the south side.

A general knowledge of one's direction may be obtained by noticing the flow of the streams. In certain parts of the country all streams flow southerly; in other parts they flow northerly or easterly, and a person having a general idea of the "lay of the land" and of the water-shed can easily tell about where he is, and which way he is going.

Sometimes mountains or hill-tops can be seen by climbing trees, and there is less danger of being lost traveling on the tops of hills, than in the valleys.

Persons going through forests or brush

should "blaze their way" by hacking the tops of trees here and there, or breaking some brush as they pass along. In this man may be able to tell whether he has cut his own track, and which way he is going.

Persons who learn the positions of the stars can tell the time of night by the stars as accurately as they could by a clock. Knowledge would be exceedingly useful to a man who loses his way. The stars are guides, and he who is lost in the world's waste of sin can hardly find a safer guide, "the bright and the morning Star" shines for the redeemed of the Lord. But are they who are guided by its light, and shall come safely through the desert way till they reach the city of the Lord, and more out forever.—*The Common People.*

John Banks.

John Banks was born in the year 1668 in Sunderland, in the county of Cumberland, England. At sixteen years of age, he, by the great power and pure Spirit of God, the revelation thereof, in and through the Jesus Christ in his heart, brought to knowledge of God and the way of his Truth, before ever he heard any one call Quaker preach, and in himself was directed to the meeting of the said people, it is shown him that they were the Lord's people. So he went the next First-day to a meeting at Pardshaw, where very few words were said but through waiting diligently in the light of Christ, and keeping to the power of God came to experience the work thereof, the faithfulness to the Lord. In the year 1686 he was drawn in his spirit to visit some of the most laboring countries, and labored in the work of the ministry.

In the year 1668 he was made willing to forsake all, to answer the Lord's request, and he travelled into the south and west of England in the Lord's service. After that from year to year he labored zealously to preach the gospel of peace, not only in England, but Scotland and Ireland. He was at the sea twelve times, and often with great difficulty and danger of life by sea, in tempests and storms, and by robbers or pirates. He was made instrumental to turn many of the most zealous labors in the gospel of God to the knowledge of the Lord, and the faithfulness, who remain witnesses of the work and seals of his ministry. He had much suffering by loss of goods, imprisonment, hardships, which he was enabled to go through for the Lord was with him, and supported him, and blessed his labors, so that all men and women, were convinced and confirmed in the Truth by him and became faithful and able ministers of the gospel.

He was concerned in the love of the month or two before his death, notwithstanding his age and weakness to visit Friends at their meetings, and had conferences with them both at their meetings and public worship and at their Monthly Meetings, he held to take care of the poor and fatherless children and widows, for he was zealous of good order and Christian discipline in the church, and that those things that were best, just, pure and of good report should follow. Indeed, it was admirable that he who knew him, and the weak condition

in his last journey he was in a meeting at Somerton which was very large, and he preached nearly an hour and a half and made sound testimony to Truth and against error. He shows that wanted substance, with presence, and with good distinction in doctrine. His preaching was refreshing and edifying to the meeting, earnestly pressing friends to be faithful to the small appearance of Truth, encouraging such as were weary to a holy zeal.

After meeting it was a sufficient task for me to lead him to his quarters, yet he was very cheerful and signified great satisfaction in his service and travail . . .

On the 22nd of the Seventh Month, 1760, my Friends being present, after some time waiting in silence upon the Lord, he said to me to this effect: "Dear Friends, I counsel you in the love and fear of God, to keep meetings for the worship and service of God, both First-days and week-days, (mind that) and also monthly and quarterly meetings, which were set up by the power of God, to keep things in good order amongst us . . . though I am weak in body, and do not know whether I may live much longer or not, yet I am strong in the Lord, and in the power of His might, and have nothing to do but to die; I am rich in faith and good works towards God, and my cup is full of the love of God. Whether I live or die, it will be well with my soul; or blessed be the Lord, I can say with the apostle Paul, 'I have fought a good fight, have kept the faith, henceforth there is laid up for me a crown of righteousness'; and did the apostle say for himself only? no, he said all them that love his appearing."

To a young man lately convinced, dear Friends said, "Art thou the young man lately convinced of the blessed Truth?" He answered, "Yes." "The Lord be with thee; I desire thee in his love, to give up in obedience to the working of the Spirit of God in thy heart, and then He will do great and glorious things for thee. And do not thou stumble at the cross; for the more thou lookest at it, the more it puts it off, the harder it will be for thee to take it up."

To another Friend at parting, he said, "My dear love to thee and all that are faithful unto the Lord." . . . A great deal more good advice, of the living and eternal power of God that he had given him, which is not noted; but with delivery thereof, the hearts of many were melted, and tears ran down from their eyes. . . . The day he died, being the 6th of the Eighth Month, 1710, he said to a Friend: "It is well with me, and I have nothing to do but to die; and said, 'I shall end in the love I began' . . . So there is no doubt of his participation in the everlasting kingdom of God, and his glory for ever, to sound forth praises unto the Lord God; and the Lord that sits upon the throne, who is wor-

shiping him as aged seventy-three, convinced fifty-two and a minister forty-seven years.

When I speak, but speak not all you think. Your words are your own; your words are so no more. Wisdom steers, wind cannot make you sink. Never err when Wisdom keeps the door.

—DeLaune.

"Grace is a light set above nature."

The Boy in the Home.

A good boy is the natural product of a good home. If there is one thing that a boy cannot bear it is himself. He is by nature a companion with others. The great and overshadowing peril of a boy's life is not, as many suppose, his bad companions, or his bad books, or his bad habits; it is the peril of homelessness. I do not mean merely houselessness—having no room or bed which can be called one's own, but that homelessness which may exist even in luxurious houses—the isolation of the boy's soul, the loss of roots to hold him to his place and make him grow. This is what drives the boy into the arms of evil and makes the street his home.

If, therefore, a boy is normally the product of a home, what kind of a home is likely to make the right kind of a boy? I answer: There are three marks of a good home, which a boy will recognize before he will think his home good, which, if recognized as marks of his own home, will mark the boy for good.

The first mark is simplicity. I do not mean meagreness, or emptiness, or lack of comforts, or even absence, of luxuries. Some good homes are luxurious, and some are bare; and bad homes are to be found both among the poor and among the rich. A simple home is simply a home—not a step to somewhere else; not an instrument of social ambition or restlessness; not a mere sleeping place, like the box a dog creeps into at night; but a center of an affectionate self-denial and mutual forbearance, an end in itself, as though it was enough for a family to make simply a home.

The second mark of a good home is consistency. It is not a place of many precepts, but of consistent conduct. A boy is not easily formed by exhortation, but he is reached with extraordinary ease by contagion. A boy is in many respects immature and unobservant, but one trait in him is highly developed—the capacity to detect anything that looks like humbug. If he observes any considerable inconsistency between precept and example, between exhortation and character, all the well-intended efforts of his home are likely to be in vain. I remember hearing a father say, as he took up his cigar in the evening, that he did not smoke in his boy's presence for fear it might be a bad example; and I wondered what the boy would say the next morning when he smelled the study and saw the stumps.

No greater mistake can be made than to suppose that a boy is naturally inclined to go wrong, and no mistake is so likely to make the boy go where he is expected to go. The fact is that anything is natural to a boy. You can bend him either out of shape or into shape; and the chief reason why goodness does not tempt him as much as sin is that goodness is seldom made so interesting, heroic, and consistent as sin. In the Oriental picture of the shepherd and the sheep the shepherd goes before the sheep and the sheep hear his voice and follow him. That is the only way to be a shepherd of boys. They are hard cattle to drive, but easy to draw. There is nothing they like better than a consistent single minded, straight going leader, and when they hear his voice they follow him.

Out of the simplicity and consistency of the good home issues its third and special characteristic; it is that relation between parents

and children whose historical name is piety. Piety in its Roman usage was the original name for the natural, confident intimacy of children with their parents, and came to be a word of religion only as religion became, as Jesus Christ pictured it, an expansion of the ideal of the family. Man is God's child, and turns to God the Father precisely as the human child turns to a true home. This, then, is the kind of a home that makes the right kind of a boy—a home where simplicity and consistency open into piety; a home where children think of parents not as taskmasters, or fault-finders, or money-getters, or housekeepers, so that the first business of the boy is to keep out of the way, but as companions to whom it is a happiness to go, and advisers from whom it is safe to learn; a home which in later life, as the mystery of experience makes one again a little child, seems to the man the best picture both of the necessary discipline and of the abiding love of God.—F. G. Peabody.

Things Above.

The apostle tells us that if we are risen with Christ we should "set our affections on things above, and not on things on the earth," and this is a result of the new life—our affections centering themselves on heavenly things and our whole being resting on the sweet assurances of a heavenly Father's love. He who has come to this blessed experience in Christian life will have his walk and conversation in heaven; his life is hid with Christ in God and as he goes up and down through the highways and byways of life, it is a great relief when, here and there he finds a heavenly minded person; one who lives in a divine atmosphere, and whose words and thoughts are imbued with the spirit of truth, of peace and of love.

It has often been our happy privilege, in our intercourse with the people, to meet persons of this kind, who seemed, like Enoch of old, to be walking with God, whose hearts were overflowing with love to God and their fellow men; who seemed to enjoy blessed fellowship with their heavenly Father, and whose conversation would bring us closer to the source of Divine love and grace, and give us an inspiration to better things.

Andrew Murray, in his "Like Christ," gives some beautiful illustrations of this subject. In his comments on "Abiding in the love of God," he says: "Our blessed Lord not only said, 'Abide in me,' but also, 'Abide in my love.' Of the abiding in Him, the principal part is the entering into and dwelling and being rooted in that wonderful love with which He loved us and gives Himself to us. 'Love seeketh not its own,' but always goes out of itself, to live and be one with the beloved; it ever opens itself and stretches its arms wide to receive and hold fast the object of its desire. Christ's love longs to possess us."

"The abiding in Christ is an intensely personal relationship, the losing ourselves in the fellowship of an Infinite Love, finding our life in the experience of being loved by Him, being nowhere at home but in his love."

"Abiding in Christ and walking like Christ; these are the two blessings of the new life, which are here (1 John 2:6) set before us in

their essential unity. The fruit of a life in Christ is a life like Christ.

To the first of these experiences, abiding in Christ, we are not (or at least ought not to be) strangers. The wondrous parable of the Vine and the branches, with the accompanying command, 'Abide in me, and I in you,' has often been to us a source of rich instruction and comfort. And though we feel as if we had but very imperfectly learned the lesson of abiding in Him, yet we have tasted something of the joy that comes when the soul can say: Lord, Thou knowest all things, Thou knowest that I abide in thee. And He knows, too, how often the fervent prayer still arises, 'Blessed Lord, do grant me the complete unbroken abiding.'"

"The second expression, walking like Christ, is not less significant than the first. It is the promise of the wonderful power which the abiding in Him will exert. As the fruit of our surrender to live wholly in Him his life works so mightily in us, that our walk, the outward expression of the inner life, becomes like his. The two are inseparably connected. The abiding in, always precedes the walking like Him. And yet the aim to walk like Him must equally precede, any large measure of abiding. Only then is the need for a close union fully realized, or is the Heavenly Giver free to bestow the fulness of his grace, because He sees that the soul is prepared to use it according to his design. When the Saviour said, 'If ye keep my commandments, ye shall abide in my love, it was as if he said this: the surrender to walk like me, is the path to the full abiding in me. Many a one will discover that just here is the secret of his failure in abiding in Christ, he did not seek it with the view of walking like Christ.—Herald of Truth.

EMMAUS.

O dismal darkness when our lamps went out,
Our hopes are buried in the silent tomb,
Art Thou the only one with eye undimmed?
Tarry, and let us hear thy tidings strange,
Let us break bread and come to sweet discourse.
A light, a glory on the dimness shone,
The guest transformed to host is seen no more;
O steps retraced with speed and wondrous joy!

H. T. MILLER.

BEAMSVILLE, OHIO.

If we crave to be released from labor, we may get our desire and also leanness to our souls.

SUMMARY OF EVENTS.

UNITED STATES.—The town of Heppner, in Morrow county, Oregon, was almost destroyed on the 14th inst. by a great flood, following a heavy rain, which raised the stream flowing through the gulch in which the town was situated with such rapidity that what is described as a wall of water 15 feet high rushed through the town carrying all before it. The bodies of 200 persons who were drowned have been recovered, and it is believed that many more perished. The flood came about 6 o'clock in the evening, when most of the inhabitants were in their houses.

The railroads of the United States added 5234 miles to their total mileage during the last fiscal year, a record of construction greater than for any year since 1890, this brings the total single track mileage on Sixth Month 30,1902, to 202,471. The number of passengers carried was 649,878,565 and the number of tons of freight, 111,089,347. The total number of casualties to persons on account of railway accidents, as shown for the year, was 73,250, including 8588 killed and 61,662 injured. Of railroad employees, 2969 were killed and 50,224 were injured. One passenger was killed for every 1,883,706 carried.

Booker T. Washington has lately received a request

from the British South African Company to visit South Africa and make a study of racial conditions in British territory, and report to the company and to the British Government his plans for the betterment of the industrial, educational and moral conditions of the people. He has declined the invitation, in commenting upon which the director of the company said that had he accepted the invitation it was hoped it might have been possible to establish in Rhodesia an institution somewhat similar to the Tuskegee Institute.

A cart had been sent to Chicago by the farmers of the West for laborers to harvest the maturing crops. It is reported that 42,000 men will be required to care for the bountiful yield of the Kansas grain fields, and that other thousands of men will be needed in adjoining States.

The United States Supreme Court has restrained the Pennsylvania Railroad Company from interfering with Government coal sales, pending a decision in the case now before the court.

A dispatch from Chicago of the 21st says: Servant girls are not to be had in Chicago at any price. The scarcity of kitchen, dining-room and general utility maids is declared to be unprecedented. As a consequence the kitchens and pantries of a thousand stately mansions are barren of maids. Scores of families who were formerly supplied with domestic help at neighboring hotels and cafes are now in dire distress, for the maids are without wages and the cafes' lack cooks.

It is stated that 500,000 Jews have come to this country from Russia during the past 23 years.

The attention of the Attorney General of the United States has been called to a system of peonage which, it is charged, is being carried on by a firm in Madison, Ga., a case of this kind has been under investigation by a jury in an United States Court. A dispatch from Montgomery, Ala., says: United States District Attorney Warren S. Reese, acting under instructions from Attorney General Knute, is putting in operation the legal machinery with which it is expected the men employed in the peonage system, who are charged with forcing over a hundred of negroes, will be brought to justice and the whole trade broken up. Twenty-two men have already been indicted for violating Federal laws relating to peonage, kidnapping and the constitutional rights of citizens. Against these twenty-two men eighty indictments have been found.

A dispatch from Berkeley, Cal., of the 18th says: The investigation of the University of California, Dr. Joel Stebbins has made the remarkable discovery that the variable star Omicron Ceti, which has been known to vary at uncertain intervals since 1596, is at present undergoing extraordinary fluctuations, and a variation of brightness of many hundred times its ordinary intensity.

Professor Arthur W. Goodspeed, of the University of Pennsylvania, has recently announced that the human body emits a certain kind of light by means of which he has succeeded in photographing objects.

A dispatch from Pittsburg, Pa., says: Pittsburg and other Pennsylvania shops will turn out the bridge material, cars, etc., for a new railroad to be constructed in China by American capitalists. The road is to be built from Shanghai to Hankow. The project was first adopted by the American syndicate for fifty years, after which period it is to be turned over to the Chinese Government.

There were 420 deaths in this city last week, reported to the Board of Health. This is 10 less than the previous week and 12 less than the corresponding week of 1902. Of the foregoing 198 were males and 222 females; 61 died of consumption of the lungs; 45 of inflammation of the lungs and surrounding membranes; 9 of diphtheria; 14 of cancer; 14 of apoplexy; 25 of typhoid fever; 8 of scarlet fever, and 4 of small pox.

FOREIGN.—The accession of Peter Karageorgovitch as the successor of the King of Serbia has been proclaimed, and notwithstanding the fact that it was the outcome of the murder of King Alexander, it is believed that his family, his accession appears to have been recognized by Russia with but little hesitation. The Emperor of Austria in acknowledging Peter I. as King of Serbia refers to the heinous and universally reprobated crime which the country has met with. An official note by Russia issued on the 18th says: "I can nevertheless not refrain from expressing my sincere hope that King Peter will be able to give evidence of his sense of justice and firmness of will by adopting measures at the outset to investigate the abominable misdeed which has been committed, and to mete out rigorous punishment to those traitorous criminals who have stained themselves with the infamy attaching to regicides. Of course the entire Serbian nation or army cannot be held responsible for the crime which reverberates through the world, but it is none the less to Serbia's internal peace not to exact expiation for

the revolution carried out with violence by the mili Stag neglect would inevitably react in an unfavorable manner on the relations of all the States with Serbia, and would create for Serbia serious difficulties, and a very commencement of the reign of King Peter the First."

The British Government has instructed its minister, Servia to withdraw from Belgrade, its capital, upon arrival there of King Peter, and in the meanwhile nothing which could be construed as a recognition of the new Government.

The Government it is stated, has decided to send a diplomatic representative to the Serbian capital in order to emphasize its disapproval of the assassin of King Alexander.

A late election in Germany for members of the Reichstag has resulted in a large increase in the number of socialists in that body, which is the result as is stated a strong feeling of discontent of the workingmen's middle classes, with the militarism and class privilege prevalent in that country.

The report of the chief sanitary officer of the island Cuba states that there has been no small-pox on the island since Seventh Month 1900, nor yellow fever Ninth Month, 1901, and the progressive decrease in malaria has continued without interruption.

The Government of Ecuador is preparing to send with the Government a large party of Italian emigrants to settle in the eastern part of that country.

The whaling ship *Gjon* with an expedition under Amundsen left Christiania, Sweden, on the 17th search of the North magnetic pole. It has been announced that the Amundsen expedition will first visit Gronland Land on the east coast of Greenland, thence proceed for Behring Strait. If Captain Amundsen is able to follow the course projected it will take almost across the Pole.

The Suez canal was formally opened in 1869. It is stated that during the first year of its operation 486 ships passed through. In the first ten year years was 12,454 and in the second it was 31,272. Gross receipts for these two years were about \$4,000,000. The traffic of 1900 yielded a net profit of 400,000.

A dispatch from the City of Mexico states that the Government proposes to compel all signs and advertisements on walls to be in Spanish, with, if desired, translations into other languages. It is considered contrary to Spanish Law on the east coast of Greenland, numerous, should not have their Spanish counterparts.

It is said that America has furnished Japan with out of its 1200 locomotives.

NOTICES.

Correction.—"That soundless voice which utters when it appears is to the invisible," is the positive of a "soundless" voice which our types may say in last week's number, bottom of its first page.

Friends' Library, 142 N. Sixteenth St. Philadelphia.—During the Seventh and Eighth Months the Library will be open only on Second and Fifth from 3 P. M. to 6 P. M.

Westtown Boarding School.—The fall term of the School will open on Third-day, Ninth Month 8th Friends who are intending to send children at that time will confer a favor by making application before Month 26th, if the matter has not already received attention.

WM. F. WICKERSHAM, President.

DIED, at the residence of his son-in-law, Abner H. Moran, in Beloit, O., on the Eighth of Fifth Month EDWIN HOLLOWAY, aged 89 years, 8 months and 1 day. A member of Upper Springfield Particular and Burlington Friends. With the assurance that the deceased was not to sustain him by His everlasting love, a brief illness peacefully closed the life which he so lengthened out.

—, Fifth Month 21st, 1903, at her residence Mount Holly, LYDIA H. DARNELL, wife of Charles L. Darnell, in the 76th year of her age. A consistent member when health and weather would permit, a regular attendant of Mount Holly Particular and Burlington Meetings of Friends, New Jersey.

On the 15th of Sixth Month, 1903, at her residence, Southold, Ohio; ELIZABETH MORRIS, wife of John Morris, in her eighty-fourth year of her age. A member of Plymouth Particular and Chesterfield Monthly Meetings of Friends.

Declarations of Independence of Christ.

It is averred among our exchanges, in view of Servian's acquiescence in the work of military assassins, that that people has apparently to learn the fundamental lessons of government, if not the primary lessons of civilization. Such language would appear correct, if it means that the fundamental and primary lesson of both government and civilization is the spirit of Christianity,—the witness of the Spirit of life in Christ Jesus as living in the hearts of citizens. There is no other Name given under heaven or among men whereby government and civilization can be based or permanently prospered.

By Christianity we do not mean the deliverance of the religious machine of that kingdom of any other State. We do not mean the hypocrisizing travesty which an archbishop would put on when, in gorgeous vestments and surrounded by the bishops of the Cathedral of the Holy Spirit, he ministers the Te Deum, and thanks the Servian army for what it has done! Neither do we mean by Christianity the operations of any religious functionaries who do not mean to be paid to do or expect to be paid for temporal values. A hireling syndicate of religion will naturally pass its blessing on the wrong side. But by Christianity we mean the possession of the Spirit of Christ, which no man has not says the apostle, he cannot have.

The "trekking with the barbarism of mediocrity" is possible to sin in any country, our country excepted,—not because it is of Russia, but because Kischeneffism is the product, or of the north or south, that Lynchism and the culture is the offspring, or of Belgium, or of the Congo-rubber diabolism proceeds,—but it is sin in the unregenerate heart of man, and sin makes the human heart desperately wicked and man the same brute, any

where. To this the one antidote everywhere must be Christ and his gospel in the heart,—not merely the language of his gospel, but its power, and that power obeyed.

A sore need for more of his ambassadors everywhere, even in the most loudly professing Christian countries, is by recent developments opening up to view. Not only is his Spirit his own ambassador, but he has need of humble instruments to call men's attention to his Word in their hearts and his redemption for their sin. The sight of the need which we see is not, indeed, our commission, but the inward hearing and authority of his word "Go" applied to himself individually, is one's commission.

Between the endorsement of regicides by an archbishop and the urging on of lynchers by a pulpit minister, there is not much, in point of principle, to choose. As long as men will put "reverend" in front of their names, and of any irrespective of Christian or moral character, so long the Witness for Truth is advertised as no radical part of the popular notion of Christianity. Let us drop the presumptuous title altogether. Only one in all the Scriptures is found good enough for that holy adjective.

Not for the date of this day, but for his own soul's and his country's sake, who is willing to avouch in Christ his Saviour, a holy declaration of Independence of the World, the Flesh and the Devil, and his faithful dependence henceforward on the love and grace of God in Jesus Christ his Lord?

THAT'S WHY WE'VE COME.—A missionary family was returning recently, after a rest in America, to the work in Tabriz, Persia. As the little party came to the crest of the hills that shut the great plains of Tabriz off from the Aras River, and Mount Ararat, and Russia to the north, its members stopped to look off across the gray plain, to the gray city, and the great red, rocky hills beyond, which gather up the sun and fling it down like javelins into the city. It was a dreary sight after the green fields of home, and one of the little girls at last looked up into her mother's face and said, "It's not nearly so nice as America, mother, is it?" "No, my child," the mother replied, "that's why we've come." There was love in those hearts, and so there was loving service in those lives.—*Children's Friend.*

"A MAN of words and not of deeds, is like a garden full of weeds."

For "THE FRIEND."

I. Worship—II. Ministry.

PART II.

Having briefly traced the teachings of the ritual law of Moses, the honored servant of Christ, with reference to what they pointed in the true house or tabernacle of God, wherein Christ Jesus, as the Son and Heir to God's power and glory presides, let us turn our attention to its ministry and their service.

The priest under the law not only needed to be truly called in Aaron, and to be washed, clothed and anointed, but he needed to keep himself clean and holy, else would it incapacitate him from fulfilling his service in God's house which was holy. Now, Paul the apostle, speaking of Gentile Greeks who at one time were defiled by sin, goes on to say, "But ye are washed, ye are sanctified, ye are justified in the name of the Lord Jesus, and by the Spirit of our God" (1. Cor. vi:11). But this is just what the priests under the law needed to fit them for service in the temple. The Lord calls all. Whoever hears and obeys, He gives to them of his grace or spirit. By its operations they are washed and sanctified. He clothes them with his own righteousness. Not a mere imputative one, as some claim who themselves have not fully submitted to its cleansing operations, but the imparted righteousness of Christ, the fruit of his Spirit, a true holiness; for He commands, "Ye shall be holy, for I the Lord your God am holy" (Lev. xix:2); and Peter quotes this as applicable to all Christians, "Be ye holy, for I am holy" (1 Peter i:16); and without this "holiness no man can see the Lord," no man can offer incense in his tabernacle. But the Holy Spirit given by God to those who believe, coming in the name of Jesus, having all power in heaven and in earth, is able to cleanse from all sin and to make the heart, God's dwelling place clean. Is it then requisite that every Christian needs this preparation as a priest? Truly, it is; nor are we left in doubt. Isaiah foretells of the Gentiles, "I will take of them for priests and for Levites, saith the Lord" (Is. lxxvi:21); and John, in the Revelations, thus speaks of this being accomplished: "Unto Him that loved us, and washed us from our sins in his own blood, and hath made us kings and priests unto God and his Father" (Rev. i:6); (that is, I apprehend, priests to Himself as our High Priest, and priests by virtue of his anointing, to God the Father). All true Christians then are priests, all called in Christ as were those of old in Aaron, all anointed by Christ with his Spirit, all cleansed and made holy by the power of his Spirit.

Their offerings are "holy, spiritual sacrifices," "prayers, intercessions and giving of thanks for all men," indeed as every one abides under the anointing whatsoever he does in word or deed as done in the name (i. e. the

"A MAN of words and not of deeds, is like a garden full of weeds."

power, the love, the Spirit) of Jesus is as incense of a sweet smelling savor to God acceptable through Christ Jesus, our Lord. This is walking in the Spirit, walking with God as Adam did in Eden; and not only does Christ restore to us this holy worship and communion, but "To him that overcometh I will give to eat of the tree of life, which is in the midst of the paradise of God" (Rev. ii: 7). And who, reading the all embracing fullness of Christ's loving invitation to all, be they sinners or saints, to partake of the Divine life which man through sin lost, and Christ through death restored to man, can fail to see the far-reaching efficacy of his atonement, or the universality of the saving grace of our Lord Jesus Christ? Its glad tidings are ever fresh. "The Spirit and the bride say Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the *water of life freely*."

As priests then, Christians have a service to Christ in their walk and conversation among men. Their light, like that of the wise virgins must ever shine, that men may through their holy walk and good works glorify God; thus are they witnesses to Christ's power to redeem from sin, and of his Spirit being one of good will to man. Like their holy Master, walking in *his* Spirit they will go about doing good to all men. But gathered in his name with his fellow believers as the house of God, here each and every one has a special service, a special ministry under the supervision and direction of Him who has promised to meet with them there, as they draw near to the presence of God. It being a spiritual work, a spiritual worship, there is no absolute necessity for words, for God looketh on the heart and knoweth every thought. We of ourselves know not our own needs truly, until his Spirit makes it clearly known to us. Incense in old times was holy worship yet were no words spoken. So even now the sigh, the groan, the thirst, or the desire begotten of the Spirit are all comprehended by the Omniscent One and come with acceptance to Him through our mediator Jesus Christ. It may be, and generally the ministry of the larger number is this silent introversion of mind, this holy travail of soul and wrestling in spirit, for the blessing of God. How often have we proved the blessing vouchsafed in this silent, patient waiting upon God. It is God's appointed place, like to that between the altar and the tabernacle wherein stood the laver; wherein to wash as a necessary preparation for the priests, and even the high priest too, in order to offer at the altar or to enter into the presence of the Lord in his tabernacle. Here it is, Divine strength is infused into the worshipper, that he may know of being brought to the place of true worship which is "in spirit and in truth." But other members may be called to voice, not their own thoughts, but the voice of the Spirit, that the assembled church may with one heart and one voice glorify God. And as face answereth to face in a mirror, so does the language to the feelings of each individual soul. Christ himself is the Shepherd. He knows all their needs. He gives the food suitable for each; these eat and are satisfied, for the witness of God's Spirit sets his seal to what is spoken in prayer, praise or exhortation as coming from the fountain of wisdom.

These thus called to a vocal service or to a more public service to watch over the flock, have received a special call, and need a special preparation. I have said that all are called to be priests, under our one Great High Priest, who is head over all, our Lord and Master, and beside Him we own no man as such. All we having received the anointing are priests, and as such are brethren, on an equal footing; members of the body, wherein the mouth is no more an essential to the welfare of the whole than many of the other organs of the body. All have received the gift of sonship, and as such their names are written in the book of life. Gifts confer not more grace, but they do add responsibility to the recipient. Personally they confer no authority over the brethren; and even Apostles disclaimed having any right by virtue of their office, call or gift, over other member's faith, any more than as the Lord was pleased to use them at times, as he might and did use them and others, whereby to make his will and judgment known. Thus Ananias of Damascus, whom the Lord used to make known to Saul of Tarsus his call, himself held as far as we know, no public office in the church there. And Paul afterwards reproved Peter, though he was an apostle, for "dissembling" (Gal. ii: 11-14).

Having in common with all true Christians received this anointing, by virtue of which all are called to service, he who receives a special gift still needs (as the priests of old needed to wash in the laver every time at every service) to know a preparation of heart in order to worship God, and he needs a particular and special revelation of the Divine will in his more public service to the church since no man can of himself know another's thoughts or spiritual needs but God alone. And as under the law no vessel had to be used twice without a thorough cleansing to fit it for any subsequent service, and in the case of an earthen vessel it must be broken after once using, so this latter is the simile used by the Apostle Paul of his own ministry as a pattern of all other Christian ministry. It is so, that the excellency of the power may be known to be of God and not in the man or even of his office. When as a church we meet together, we must all be as empty vessels. Yet withal clean and ready for the Master's use, emptied of self and self sufficiency. "Our sufficiency," said Paul, "is of God. Who also hath made us able ministers of the Word, not of the letter but of the spirit." These must needs then be filled, as at first on Pentecost's day, with the Spirit, and "speak as the Spirit giveth utterance." So Peter, "as every man hath received the gift, minister the same one to another." "If any man minister, let him do it as of the ability that God giveth." And wherefore? Because it is a gift of the Head of the church to the church, and as freely ministered, God and Christ receive the glory. If the church be hungry (a fit state to receive the blessing of bread from heaven) the ministers will be hungry, if the spirit of prayer be poured out on the church, the ministers will receive of the shower; if all are (as the prophet states he and his hearers were) brought by the Lord into silence, the ministers will be silent. If one member suffer, all suffer with it. If one rejoice, all rejoice together. The

Spirit is poured as it were from vessel to vessel, thus the Word of the Lord has free course and is glorified. Sin and transgression check that flow, as did the sin of Achan.

A "Minister" or "Elder" more than all others needs often to retire before the Lord counsel and wisdom. God has given to all to be rightly used by the man of God, the Scriptures; and these will seldom lack gentle motions of the Spirit to do as Paul exhorted Timothy, "Give attention to read to exhortation, to doctrine." But above they will do, further, as he says, "Neglect not the gift that is in thee" (1 Tim. iv: 14).

In this gift Divine openings of Truth be unfolded to thy view, which no wisdom man could see. It moves as life moves, spring of action in Christ who is our life, not in nor from the will of man. A frame of mind, every thought hushed brought into obedience to Christ, is the fitting attitude of him who would be taught Christ. Art thou commanded to go, as Paul to Caesarea, go, and the Lord who sent with thee. He to thee will be wisdom, meekness and utterance; and as his servant, thy duty done, thou wilt be fed, thy Master's peace and joy be thine.

As there is a growth in Christian states so is there an enlargement in gifts of service. "If I wash thee not thou hast no part me," said Peter's Lord to him. But he prayed for and amply warned, how soon Peter's faith did fail. Bold Peter quailed before the maid and denied his Lord. He then went to be washed again, and washed he for on the day of Pentecost, foremost of all as spokesman, he was chosen to declare that this outpouring of God's Spirit was a heralding of those gracious showers which never throughout time should fail to fall on God's heritage. As we grow in grace the draughts will be vouchsafed. If our cup is made to run over, a larger one will be given. So as by the angel of God's presence we lead along the path that girds the river of water of life, the stream becomes deeper and deeper; first, as described by the prophet, the ankles, then to the knees, the loins, then to the thighs, the body, the head, the crown, the crown became a mighty flowing stream, which man could pass over. "It is according to the measure of God's mercy He saves us, by the washing of regeneration, and renewing of the Holy Ghost." And "he that is faithful in that which least will be made ruler over more." His gift and its increase are both from Him alone, who "ascended on high and these gifts to men, that the Lord God dwell among them." Alas! how few see and realize the fullness of the blessing in Christ that the Lord is come, and gives to the understanding to know this and to know the right, as He truly is the Counsellor, the Ruler of his household; whose house we, as we abide in Him, under his authority, which teaching all things.

W. W.

"O that mine eyes might closed be
To what becomes me not to see;
That deafness might possess mine ear
To what concerns me not to hear;
That truth my tongue might always
From ever speaking foolishly;
That no vain thought might ever rise
Or be conceived within my breast."

WORK.

BY M. D. TOLMAN.

We view the star-sown heavens, and say,
"God's work is infinite," and pay
Adoring homage. By this sign
We claim our heritage divine.

For we—are we not born to scan
His wide domain, his wondrous plan?
We are the children of his care,
For us he made this world so fair.

He gave us mind, He gave us heart,
For what if not to do our part?
Our little measure of his will,
So good to know and to fulfil.

For each his work—the earth goes round;
One builds a boat, one tills the ground;
One sows a seed, one finds a star;
One seeks new continents, afar.

One digs for precious gems and ore;
One makes a compass, and one more
Discovers gravitation's laws;
One seeks of rain and dew the cause.

One studies flowers, one studies crowds;
One seeks to know the world's great needs;
One writes a book, one preaches well,
One does a kindness. Who can tell
Of all good works—these and the rest—
A God's great wisdom, whose is best?
—Boston Transcript.

Jones' Alphabet.

Girge Washington Jones was nineteen
ear of age before he learned his alphabet.
obtained by three letters and they were
all the same. He was an orphan who man-
aged to live in spite of being a waif, homeless
and friendless. He had learned to read by
chance, exactly how, he never
could explain. The little which he had read had
wakened lofty ambitions in his boyish mind.
His day-dreams would have filled with laughter
if he knew him had they but known them.
He treasured his purposes as the secrets of his
heart and brain and patiently and con-
stantly toiled, living from hand to mouth un-
til he had reached the age of nineteen years.
His nineteenth birthday was his emancipa-
tion. He was going to his daily work
when he saw a fragment of a newspaper flit-
ting before him, driven by the wind. He
stopped and caught it and read:

"Push with energy; plod with patience; en-
tire with pluck; and you can do anything
at all that you approve. With these P's, push,
plod, pluck, as your alphabet, you can
tell every word but fail."

The boy became a man in a flash. He
taught himself to his full height and
weight.

"I have learned my alphabet; now I will
give a spell."

He looked again at the paper and saw that
it was a brief extract from an address
by the president of Walden University.
He said to himself, "I do not know where
Walden University is, but I will find it."

One week from his birthday, he started on
his way to Walden University. He carried in
his hand a small bundle containing his scanty
clothes. In his pocket were a few cents,
his good fortune. His journey was filled with
adventure, but he triumphed over all obsta-
cles. He asked nothing and would receive
nothing in charity. He earned his living by

the way, but ever kept moving toward his
goal. It took many weeks but he was ever
cheerful and courageous. His smile was a
sunbeam; his laugh was rich music; his song
was a trumpet blast. He worked and smiled
and sung his way, until wearied, footsore,
shabby and gaunt with hunger he entered the
city. He found the man whose words had
changed the current of his life. He quietly
stated his desire to secure an education and
exhibited the soiled fragment of paper con-
taining his alphabet.

He was encouraged and assured that if he
would continue to spell as he had begun he
could not fail to succeed. Disdaining to ac-
cept aid, Jones began to seek work to pay his
way. He tried scores of places only to be re-
fused. He bowed, lifted his fragment of a
hat when each said, "No!" One man who
had been unusually curt and surly was so
amazed at the smile and bow that he mut-
tered to himself:

"If he can do that when I say 'No' what
would he do I were to say 'Yes'! I'll try it as
an experiment."

When Jones was recalled, the man said,
"What kind of work can you do?"

"Anything."

"I have work, but it is hard."

"I am strong."

"It is dirty."

"I have soap in my pocket."

"The pay will be small."

"I do not need much."

"Follow me!"

Jones had a job.

The cellar of a large warehouse was as
gloomy as a dungeon. It was filled nearly to
the ceiling with boxes and barrels. Refuse of
every kind was piled up in heaps.

"Clear this up. Break up the barrels and
boxes that are useless. Pile neatly those
that are good. Put this rubbish in barrels on
the sidewalk. I will give you one dollar for
the job. When will you begin?"

"Now!" said Jones. "If you will let me
sleep in the room we came through, I will not
leave until the job is done. I saw an old
blanket on the floor that will do for a bed."

Permission being given, Jones had a job
and lodging. A few wisps of hay and a dis-
reputable old horse-blanket served for a bed.
Three nickels, his total wealth, purchased
three loaves of bread. A faucet in an old
sink furnished water, and Jones had a job,
board and lodging. It took three days to
complete the task. When it was finished the
employer was asked to pass his approval upon
the work.

Every bit of rubbish had been carried out
and filled a row of barrels on the sidewalk. In
one corner, boxes all ready for use were
stored. In another corner, a similar pile of
barrels was placed. In another corner, kind-
ling wood from the broken barrels and boxes
was heaped. In a box were two pailsful of
coal picked from the ashes; in another box
were scores of bottles taken from the rubbish,
all assorted as to sizes and carefully washed.
The windows that had been obscured with
dirt and cobwebs were washed clean and wiped
dry and bright. By the aid of an old white-
wash brush and a pail of discarded lime that
had been discovered in the rubbish, the cellar
had been carefully whitened, it was sweet,

light, clean and almost fit to live in. The
owner looked about him silently for a few mo-
ments and said:

"If that is the way you do your work you
will never want for a job. I have a pile of
wood in my back yard that you can tackle and
it is big enough to keep you busy for a year.
I'll pay you the market price for the work."

Jones looked at the silver dollar, smiled and
bowed his thanks and asked to be shown the
way to the wood pile. He worked his way
through two years' preparatory training, four
years' collegiate study at Walden University
and three years' training at Gammon School
of Theology. He applied his alphabet to his
books as he did to his work, and earned hon-
orable recognition in every study.

He became a speaker and a writer of more
than average ability. He developed in an all
round physical culture without a peer in his
class. He could sprint faster on an errand;
lift harder on a heavy load; knock out more
tough obstacles and surmount greater diffi-
culties than any man in either institution.

The day he received his diploma from Gam-
mon Theological seminary he sat down in his
room and carefully read the words on the
fragment of paper that contained his alphabet
and spelled out the words that were to form
the motto of his future work in the world.—
Southwestern Christian Advocate.

BROTHERLY KINDNESS.—A lesson of brotherly
kindness can well be learned from the
following clipping, taken from *The Young
Evangelist*:

A few years ago, a gentleman, going through
the crowded part of the city of Glasgow, no-
ticed a pale-faced little boot-black waiting for
a job. Touched by the delicate look of the
child, he thought he would give him the black-
ing of his boots to do. Accordingly he gave
the little fellow the signal. The boy at once
crept lamely toward the gentleman, and as he
pulled himself along was nimbly supplanted by
another bootblack, who was immediately at
the gentleman's feet and ready to begin.

"What's this for?" said the gentleman to
the intruder, somewhat angrily.

"It's a' richt," said the newcomer, bright-
ly. "Jamie's just a wee while out o' the hos-
pital, and the rest o' us take turns aboot o'
brushin' for him."

Jamie smiled pleasantly by way of assuring
the gentleman that his comrade's story was
true.

The gentleman was so gratified by this act
of brotherly kindness that he gave Jamie's
friend a whole shilling for his work, telling
him to give a sixpence to Jamie, and to keep
the other sixpence himself.

"Na, na, sir," quickly replied this little he-
ro, giving the shilling to Jamie and hurrying
from the spot. "Na, na, sir; nane o' us ever
takes ony o' Jamie's siller."

"A little thing, a sunny smile,
A loving word at morn,
And all the day long the sun shone bright,
The cares of life were made more light,
And sweetest hopes were born.

A little thing, a hasty word,
A cruel frown at morn,
And aching hearts went on their way,
And toiled throughout a dreary day,
Disheartened, sad, and lorn.

Clara Barton and the Dawning Opportunities for Womanhood.

Woman is apt to attach too little importance to her individual resources and power. And the world might be induced to acquiesce in her own standard of excellence and possibilities of achievement were it not that now and then the feminine mind and powers are flashed forth with astonishing brilliancy in the presence of some great crisis.

The ability to meet an emergency or rise to a great occasion is not limited to a few. It is one of the good gifts of Providence which is a part of all true womanhood.

At every fireside sits some woman, some girl, whose gentleness, sympathy and love may at any moment be forged into a cable of power that shall save the home, glorify the State and bless the nation.

Tornadoes, wars and pestilence, persecution, fire, famines and flood follow each other in quick succession. Fear creeps into men's souls, the heart is faint and weak, the arm of strength is crushed, governments are inactive or paralyzed. It is a time that calls for the strength of gentleness, the powers of sympathy and the healing agencies of love.

The ability to apply these forces is more generally distributed among women than they themselves suppose.

The most conspicuous example of this resourcefulness and power appearing among women for many generations is still among us. Her name—but who does not know her name—a name that has gone to the uttermost parts of the earth.

Wherever great calamities have fallen, or misfortunes have gathered, there the name of Clara Barton has been known and loved.

Her ministry has not been bounded by any country or limited to the people of any creed, nationality or color.

She recognizes only the citizenship of suffering, and her call to service and duty is the cry of human need.

She does not send anyone to the field of suffering—she goes herself. To find Clara Barton at almost any time during the present generation it would have been necessary to look for her in the track of the storm, in the wake of the Galveston hurricane, at the Johnston flood, in the famine stricken districts of Russia, in the jungles of Africa, among the hills and swamps of Cuba, or on the field of battle after the thunder roll of war had written the anger and passions of men in blood and death.

To many a dying soldier boy, she and her workers have appeared like the "Angels of Buena Vista" in Whittier's poem:

"Was that pitying face his mother's?
Did she watch beside his child?"

She has nursed the sick, found a way to house the homeless and feed the hungry.

When the gaunt hand of famine clutched at the throat of thousands of Russia's subjects, and the Government was powerless to carry relief, this gentle little woman found a way to transport supplies to the remotest province and went herself to the field, disregarding all trials and escaping dangers that would have shaken the courage of the bravest of men.

Rulers have decided to confer upon her badges of honor and the benefits of royalty,

but she chose the Red Cross as her badge of honor and flag of allegiance.

Women always work best under the shadow of the cross, even though it is a red cross—stained with blood and wet with tears. But He whose blood first stained the Cross shall by and by wipe away all tears, and there shall be no more crying, no more disease, and no more death. Even now it appears that physical ills can be greatly diminished, suffering lessened and death postponed.

Science has advanced so far and made such headway in preventing and stamping out disease that a popular dissemination of the principles of sanitation and the care of the sick would greatly lessen suffering and lengthen the span of human life.

Some eight years ago a substantial movement was made in this direction by the Philadelphia School for Nurses. It teaches the essential principles of nursing to all women, and conveys the benefits of hospital knowledge to the humblest citizen. It is the Red Cross work in time of peace.

The school has established a vast system of nursing service in behalf of the sick poor which reaches nearly five thousand homes every year.

It gives a brief, practical course with lectures, demonstrations and actual handling of the patient, together with experience in nursing under skilled leaders in the homes of the sick poor.

The school is now probably the largest school for nurses in the entire country, and in its still larger development Clara Barton feels that its trained workers may become of more importance to the country than the entire national guard.—*Selected.*

FOR "THE FRIEND."

A Visit to the Christiansburg Industrial School.

It was my delightful privilege last summer to meet Professors Charles L. Marshall and E. A. Long, the principal and treasurer respectively of the Christiansburg Industrial school of Cambria, Va.

I was more than pleased with their manner of address and intelligence evinced in the class rooms of the Hampton Summer Normal, the place of our first meeting, and consequently I gladly accepted the invitation which came to me some months later, to visit this school, and make the commencement address.

I had, of course, heard of the Christiansburg school, and of the great work accomplished for the negro by the beloved and lamented Captain Schaeffer, but on seeing the place, and going about among the people, I was compelled to say, like the Queen of Sheba, "the half had not been told."

I was met at the station by Professor Long, and driven through the beautiful mountainous country for about a mile, when a splendid, well-watered and sloping farm fell upon my vision. The rocky soil would have impressed one with difficulties of cultivation, and yet I found the farm under excellent cultivation, with the crops well under way. A commodious barn, built after the latest pattern at a cost, I believe, of some two thousand dollars, contained a number of horses and cows, and an abundance of the most improved farm implements. The pig sty, with a natural stream running through it, showed some of the finest

specimens of its stock that it has ever known by my measure to see.

We visited the well equipped industrial building where we found specimens of blacksmithing, wood-working, shoe-mending, drapery making and printing. A laundry, operated by the students, turns out a fine class of work while the specimens of cooking, as tested at the school banquet that evening, would satiate an epicure. A large ten thousand dollar building was presented to the people in an excellent speech by Henry Comfort, of Pennsylvania, on behalf of the Friends' Society of Philadelphia, and responded to in an inspirational, full of deep feelings of gratitude, breathing hope to a down-trodden race. Lawyer Oliver, of Roanoke, Va. Every one in the large audience present was deeply impressed by the occasion. This building is modern in every respect, with hot-water, gas and sewer connection, and is in every way suited to the purpose. The students' rooms were neat and orderly, and everything at the school was uplifting. Principal Marshall's cottage is a thing of beauty, while his wife is an ideal hostess.

The refining influence of the school has been reflected in the face of each of the two hundred and forty-seven students. The class-room work held in the Mansion House on the farm, once owned by a slave driver, was of itself a demonstration of what God can wrought. The Commencement exercises were held in one of the school buildings, on Zion's Hill, which was filled with an eager and intelligent audience.

The exercises were of a high order. The principal Marshall is doing a truly great work for his people, in the very locality where the good can be accomplished. He is a man whose only ambition seems to be to serve his race and his God. Christiansburg is dedicated to be to the western part of our State what Hampton is to the eastern. Already much more than a promise. Real, substantial work in agriculture is being done, and for a people who make their living from the soil, and this is the hope of the race. We noticed that the most kindly feeling seems to exist between the white and the colored people, and this is as it should be.

On Zion's Hill the foot-prints of the lamented Captain Schaeffer were visible everywhere, and nowhere more prominently than in the hearts of a grateful people. We could see the residence of his widow who is still a patient and dearly beloved worker among the colored race, and felt that the ground where we trod was holy ground.

Captain Schaeffer has a worthy successor, T. J. Mosby, a graduate of the University of Richmond, who is carrying on the religious work begun by Captain Schaeffer in a most acceptable manner.

God bless the Friends' Freedmen's Association of Philadelphia! They are indeed great things for our race and making them in developed human souls, that the dividends of gratitude in this world, a pay still larger, yet infinitely larger, in the mansions above, when they shall Him who has said, "Inasmuch as ye have done unto the least of these my brethren, ye have done unto me."

D. WESTER D.

What Worlds Yet Remain For The Explorer?

BY MARK SULLIVAN.

The ambitious explorer of to-day would be almost absurd fellow and as ignorant as Alexander, if he were to sit down and weep because he were no more worlds for him to discover. Recent news despatches plainly show there is almost interest and even romance in the explorer's life, although the dark spots have almost wholly disappeared from the maps. In Egypt, Theodore M. Davis of New York has made a discovery of epoch-making value to Egyptologists. After working for two years unwarded, he uncovered in Third Month a passage cut into solid rock, which he believed must lead to the tomb of another Pharaoh. He closed his excavations temporarily, summoned a council of eminent Egyptologists who had been able to record scientifically every detail; and, at their convenience, broke the seal of the tomb and stepped into a vault which had been closed for three thousand years. The reward of his labor was unusually rich—there were paintings and inscriptions, as of variegated and opaque glass, tapestries containing hieroglyphic inscriptions, and above all in interest, the actual chariot in which this Pharaoh rode at Thebes, described as the finest specimen of art which has come down to us from antiquity.

Such a reward for an explorer's labors shows that even if one may no longer discover new continents, he may still find something equally important to the intellectual world. Exploring is far from being a lost art. As a matter of fact it is just becoming an art and is being brought out of domain of blind strength and chance. If you wish to go into the Arctic, you find in the Royal Geographical Society's records in London data as to just what clothing comes the greatest heat with the least weight; just what dog food constitutes the least burden with the greatest kinetic energy, and other invaluable information. If you wish to cross the Sahara, there are scientific facts as to exactly how much food a camel of a given age must have and just how many days and hours he can safely go without water. Carefully compiled information makes exploring a fine art. The explorers of to-day do not fill the public eye as Livingstone did, not because their work does not appeal to the popular imagination, but chiefly because there are a hundred times as many of them. The great explorers, it is true—the picture-book ones who could name continents after their patrons and seas after their intimate friends—are necessarily of the past. A naive and freshman at a reception to Stanley, the great explorer who was last in America, said: "I should like to be as famous as you are, and in the same way; how can I do it?" Stanley replied bluntly, "Try the moon."

Stanley's way of saying he is the best of his kind. In the Valhalla of explorers there is room for just two more—the discoverer of the north and south poles. But granted, a young man who, realizing there are no more vast worlds to conquer, is willing to do the best he can and take the next piece of land yet remaining unexplored where shall he go? Let him go first of all to the Royal Geographical Society's rooms in London. He will find there a series of maps

on which the known world is marked white and the unexplored black. The largest solid black spot now left is a miniature one placed in the southern half of Arabia. It is curious that the largest unexplored area should remain in Asia, first known to the human race, while those continents recently discovered are thoroughly explored.

But while Arabia furnishes the place where you can walk farthest in a straight line without crossing the track of any other white man, it is hardly fair to speak of it as the greatest unknown area. Its edges have been touched at every side and its character is thoroughly well known as a barren, sandy desert, the crossing of which would be of no importance or interest except as a bravado test of endurance.

Generally speaking, central South America is the least known section of any continent. On the Royal Geographical Society's maps, the Amazon river basin appears as a solid black stretch, with narrow white lines, like the fingers of a spread hand, following the tributary rivers. This means that explorers have gone up the rivers and come down again, but have not penetrated any distance overland across the jungle-covered watersheds.

"The Great Sahara Desert," as the old school geographies used to put it, is to the popular mind a land of awe-inspiring mystery. But there are now four broad white trails of exploring caravans across it from north to south, and while there is still plenty of unexplored area between the lines of travel, it is in small tracts. The centre of Africa, too, is pepper-dotted with black spots, but there is a railroad to Victoria Falls and telegraph wires cross the sources of the Nile!

Australia still promises mystery, as well as hardship without limit, to those who attempt to cross the western part of it; and in North America there are yet two small black areas; one is between Labrador and Baffin's Bay, not far south of the Arctic Circle. Indians go in there every winter and come out in the spring with furs for the Hudson Bay Company's factors on the coast. The other North American terra incognita is in the hinterland of Alaska, just west of the McKenzie's River's mouth.

While it is said there are no more worlds for explorers to conquer, the Arctic and the Antarctic are not considered, as they involve a special difficulty quite apart from the ordinary problem of land exploration. There is, about the North Pole, an area of unknown land and water as large as the continent of Europe, and twice that area lies about the South Pole. Ambruzzi has dragged his sledges 36 degrees 33 minutes north, and Borchgrevink has been 73 degrees 50 minutes south; but, generally speaking, all north of 73 degrees and all south of 68 degrees is terra—and aqua—incognita.

While the interior of Asia contains no more secrets for the geographer, it is still a land of human mystery. Although it contains only a few very small black spots on the Geographical Society's maps, it is yet the most prized goal of adventurous travellers. It is still possible for explorers to come back from Central Asia and name their books "*Across Forbidden Lands*" and "*Through Closed Gates*." Not a dozen Europeans have been into Tibet; not one has been in Lhasa, the sacred city of the alleged reincarnation of Buddha. Last

year a Burial Buddhist, who had been a student at the University of St. Petersburg, by virtue of offering to be a pious follower of the faith bent on a holy mission, succeeded in reaching Lhasa and in bringing away 319 volumes, written by renowned lamas during the past nine centuries containing an exposition of philosophy, astronomy, history and geography, as these sciences are understood by the lamas of Tibet. Sven Hedin also has just returned from an informing journey across Central Asia, including Tibet. These, however, are but scratching the surface of mystery with a pen. In their customs, their mental attitude and their habits of thought, the people of Tibet are to-day creatures of that sort of mystery which the ancient geographers intended to imply when they scattered centaurs and unicorns about the unknown edges of their maps. Kipling was happily placed. In the mysterious North, back of the Himalayas, he could lay the scene of any tale he chose, even that of the "Man Who Would be King," and none could say it was impossible.

Compare the Geographical Society's maps of the areas still unknown with maps that would have been similarly constructed one hundred years ago. Australia was all black; not even the outlines of its coast were known; around Africa there was a narrow white band scarcely wider than the space between high and low tide—the vast interior was virgin fields for Mungo Park and Livingstone; North America, west of the Mississippi and north of the Rio Grande more than half the continent—was waiting for Lewis and Clark. To put it in figures, in 1900 less than one-eleventh of the world's surface was unexplored; in 1800 less than one fifth was known. The nineteenth century explorers had all the land for themselves; similarly, the sea had been the harvest of Magellan, Raleigh, Drake and Captain Cook; for the future the dark continent is the bottom of the sea, which Maury and Murray and the cable surveyors have only touched. There is, however, but little romance, little excitement and little poetry in this field. You drop a dredge two or three miles to the bottom of the sea and bring it up full of fish, mutilated; for fish which live normally under a pressure of several tons of water burst on being brought to the surface.

But if romance has gone, plenty of interest remains, exploring has ceased to be extensive and has become intensive; you may no longer have a continent or a sea named after you, but you may be immortalized in the name of a new variety of butterfly. The old adventurers had no object but land, more land, and yet more land for the glory of the king. If they happened to see something monstrous it was mentioned; otherwise, flora and fauna were not even incidents. It is these, however, that furnish work for the modern explorers. For them there is still an occasional prize. Only two years ago the okapi, an African mammal almost as large as the giraffe, was discovered by Sir Harry Johnson; but at the present stage of progress explorers must usually work with a microscope. In this field the things to be done are practically boundless. When all the varieties of monkeys have been differentiated and described there will

still remain the butterflies; when the butterflies have all been labelled and the amiable tourist with a green net disappears, there will remain, to paraphrase Lowell, the big fleas with other fleas upon their backs to bite 'em, and these fleas will have other fleas, and so on ad infinitum.

In ethnology no future explorer is likely to be startled by a new race or by a tribe of dwarfs, but there is an untouched field in which men may study primitive manners, primitive religions, primitive tongues, and from the data thus gained determine race origin and race relationship.

Professor Delitzsch and Sven Hedin have demonstrated that excitement has not entirely disappeared from the explorer's life. The archaeologists at work in Syria are uncovering facts as important to the intellectual and religious world as a new continent to the physical. There may not be danger, but to an imaginative mind there must be rare romance in uncovering, by a stroke of the pick, the wine cellar of an Assyrian king, with the red dust of the wine dry in the bottles.—*Boston Transcript*.

New England Yearly Meeting of Friends held at Westery, R. I.

Job S. Gidley and Amos O. Foster served as clerks of the Men's Meeting, and Mary A. Gardiner and Anna Gardiner, of the Women's Meeting. The loss by death of John W. Foster and Jesse Tucker, Senior, was felt, to make a great blank in the Yearly Meeting.

The various sittings of the Yearly Meeting, though a little smaller this year than usual, were thought of by the visitors and the visited, to be remarkable seasons of the year.

Those in attendance from other Yearly Meetings were Harvey H. Haight and his companion, Samuel T. Haight, from Canada; Marianna V. Wood, accompanied by her husband, Edward Wood, from New York State; Thomas C. Hogue, Susanna Leeds, and Joseph Leeds, from Philadelphia Yearly Meeting.

The Select Meeting convened Sixth Month 13th. The feeling of gospel love, one for another, was spoken of as being most delightful to the humble devoted servants and handmaids of the Lord. At 4 p. m. the Meeting for Sufferings convened. The importance of waiting upon the Lord for best wisdom, for the transactions of all the business, both temporal and spiritual, was alluded to; He would lead and guide his humble devoted followers, even to an hair's breadth, if He was only looked to and waited on for his blessed help.

First-day, Sixth Month 14th.—Meeting for Divine worship was held at 10 A. M. The meeting was felt to be a very favored one. The Great Head of the Church condescended to be very near and round about his people, verifying his promise as recorded in Holy Scriptures, "that where the two or the three were gathered together in my name, there am I in the midst of them." The need of being born again, of being washed in the laver of regeneration, was proclaimed. Also the great danger of hearkening to the insinuations of the evil one was held up to view;—that this cruel enemy deceived our first parents, and is very busy in this day trying to frustrate the great work of salvation in the children of men. The congregation was lovingly, but most earnestly exhorted not to yield to the wiles of this cruel enemy; there were those present who could testify that they had wandered far from the Father's house, as upon the mountains, where neither dew nor rain nor fields of offering, had been tasted and knew what the bitter words of repentance were for disobedience to our Heavenly Father. All were invited to close in with offers of redeeming love, that they might witness a change of heart, be prepared for the solemn course of life, and be able through the mercy of God

in Christ Jesus to enter the pearl gates and enjoy a world of never-ending bliss.

Another meeting for Divine worship was held at 4 o'clock. It proved a precious, baptizing opportunity, in which the dear Master condescended to be very near and round about his people. Prayer and praises were offered unto the Father of all our sure blessings, in that He had condescended to meet with us, unworthy as we felt ourselves to be, of the least of his favors.

The beautiful and comforting language of the dear Saviour to his beloved disciples, shortly before He was ordered up, "Peace I leave with you; my peace I give unto you; not as the world giveth, I give I unto you," was revived in our hearing. The assembly was kindly and affectionately warned against a luke-warm condition. The messenger stating he had been brought to the point of trembling, but in remembering how it was with the prophet of old who was not obedient to his Master and was slain by the lion, he could do no other than deliver what was given him for the people.

The danger of being too much occupied with the things of this world was brought to view. To seek first the kingdom of God and his righteousness was the all important work, trusting that all things needful would be added. That the cattle upon a thousand hills are his, and He can distribute them to whomsoever He will. The Lord would not accept of a divided heart. Many gospel truths were brought to view, to the edification and comfort of those assembled. All were pointed to the Lamb of God as our Mediator with the Father, whoever liveth at the right hand of the Majesty on High interceding for poor, fallen man, and is, as the Scriptures of truth testify of Him, "the way, the truth, and the life, and no man cometh unto the Father but by Him."

Second-day, Sixth Month 15th.—Meeting convened at 9 A. M. Earnest prayer was offered that He who is head over all things to his church, would condescend to meet with us, and enable us to transact the weighty affairs of the church to his praise and glory. The reading of the Epistles from the five Yearly Meetings, Canada, Ohio, Western (held in Indiana), Iowa and Kansas, with which this Yearly Meeting is in correspondence, was very interesting and instructive, bearing as they did, the words of counsel, of warning, of tender sympathy and love, and the meeting of the Lord and His people, in the decrease of several of her beloved older members; also words of good cheer and comfort and encouragement to press on amid the discouragements that surround them; that though their numbers might be few, we might remember with instruction, that Gideon's army of old, was very small compared with the host of the enemy arrayed against him, yet the Lord gave him the victory.

The Epistles received from other Yearly Meetings brought consolation to the drooping spirits. One of the visitors said in substance that he had attended many Yearly Meetings, but never before had been more deeply impressed by the reading of the Epistles.

In the afternoon session the state of society was considered by the reading of the queries and answers. Valuable counsel was handed forth during the consideration of the state of society, and although deficiencies were apparent, Friends were encouraged to maintain all our doctrines and testimonies as handed down to us by early Friends. The flood of literature coming from the press of late, some good, some indifferent and a large portion positively injurious, was spoken of, and parents, especially were cautioned to be on their guard as to the kind of literature that entered their homes.

The committee having charge of Epistles reported that they had concluded to write Epistles to each of the Yearly Meetings they were in correspondence with.

The reading of these next claimed the attention of the meeting. It was felt and expressed, that the committee had been favored in the preparation of these essays. Friends were encouraged in their correspondence with other Yearly Meetings to wait upon the Great Head of the Church for his help and guidance. Allusion was made to a dear

departed father in the church, when it had to his lot to write an Epistle, he had retired from the company and had been heard craving the strength of his Heavenly Father in its preparation. Epistles prepared and sent forth in this way, and with Divine permission, would edify and bless wherever they went.

After some further business had been transacted a visiting Friend requested that the meetings close in joint session, which was united with Men's and Women's Meeting.

The messengers sent amongst us by the Head of the Church," says one correspondent great grandeur of spirit were enabled to proclaim the truths of the gospel in the demonstration of the spirit and with power, at times it seemed a stream to swim in."

The business of the Yearly Meeting having transacted in much love and condescension toward another, then adjourned to meet again the usual time the next year if consistent with Divine will.

The meeting in joint session proved a tender opportunity of thanksgiving and praise each to the Great Head of the Church for his blessings and that he had condescended to meet with us from meeting to meeting. His ancient goodness had been felt to be extended to all, and we had been favored to sit together in heavenly places in Christ Jesus, to the comfort and rejoicing of many hearts.

T. C. WEST CHESTER, PA., Sixth Month 15th, 1903.

Items Concerning the Society.

New England Yearly Meeting which was held Portland this month, adjourned to meet at Providence, R. I. next year, two weeks later than would have met at Newport,—in order to enable teachers and scholars of the school at Providence to attend the sessions of the Yearly Meeting. It is believed that the commodious new gymnasium and other school buildings will amply serve the convenience of the Yearly Meeting.

Among the interesting incidents was the reading of a message of love "to our aged friend minister, Phoebe R. Gifford, of Providence, who, for many years was so efficient in the work of the Society, and who has just passed her dreddth milestone."

Albert Cook Myers is about to go to England to collect material for another book, which is entitled, "The Immigration of the English Quakers into Pennsylvania, 1682-1750."

They've got a bran new organ, Sue,
For all their fuss and search;
They've done just as they said they'd do
And fetched it into church.
They're bound the creature shall be set
And on the preacher's right
They've hoisted up the new machine
In everybody's sight.
They've got a chorister and choir,
Again my voice and vote;
For it was never my desire
To praise the Lord by note.

* * * * *
But death will stop my voice, I know;
For He is on my track;
And some day I to church will go,
And never more come back;
And when the folks get up to sing—
Where'er that time shall be—
I do not want a patent thing
A-squealing over me!

—Will C.

The following appears in a New Bedford paper: "Portland, Me., June 15.—The appealed case of Miss Flora B. Hoxie, of Lewiston, was heard by a special committee of the New England Yearly Meeting on Saturday, but a decision was not reached. The report is expected to-day. Miss Hoxie's case

an appeal from the ruling of the Falmouth Meeting, which sustained the action of the church in disowning her. The trouble started over the raising of money for a piano for the "rich" church in Lewiston. Miss Hoxie was treasurer of the fund. Before a sufficient amount was raised some one presented the church with a pianorgan. Miss Hoxie declined to hand over money for any other purpose than that for which it was subscribed, and the church voted to disown her.

Miss Hoxie was defended in the hearing by J. B. Foster, of Portland, formerly of the supreme court. The leaders of the organization deplore the action, and have tried to have it cleared up as quickly as possible."

Further news has been received that the next meeting reversed the decision of the Quarterly Monthly Meeting.

Notes from Others.

A missionary states that the pagan population of New York city exceeds, by more than one hundred thousand, that of Tokio, Japan.

A collection of the early English Bibles from the time when such Bibles began up to comparatively recent period, is being made for the library of Harvard College.

The English Baptist Union has taken decided grounds putting an end to the flaunting by clergy of degrees from cheap American institutions of learning.

The Patriarch of Constantinople says: From the earliest times the Greek Church prays and supplicates in every one of its solemn services for the souls of all the churches.

Mr. Low, of New York, has refused to license anti-missionaries as street preachers in the Fifth Avenue section this season. Last year these preachers were very active.

The London Examiner publishes the names and addresses of one hundred and twenty Congregational ministers who have declared their intention to refuse to pay the education rate.

The British Weekly prints the "Passive Resistance" which has been prepared by the National Resistance Committee. There are twenty questions with their answers.

The State of Baroda, India, the young chief, who was educated in England, has given a decisive answer to the cruel custom which has doomed children to life-long disgrace and misery.

Some of the younger clergy of the Episcopal Church find themselves unwilling to use the third of Friday collect of the Book of Common Prayer which "Jews, Turks, infidels, and heretics" are classified together.

Mr. Ewing, of Chicago, is carrying on a crusade against brutal teamsters. She co-operates with the Humane Society and goes into court and against the men she has arrested. She has been in all her persecutions.

The usual high estimate of the merit and proper reward for military service, disparages self-denial and women who consecrate their lives to the effort to lift up and save their fellow men, and set a false standard of excellence.

Millions "fell from grace" in part through the observance of "days." The Lord is thus robbed of more of his days. We are scarcely beginning with one before programs are sent to put specially children, in training for another.

Bessie Johnson, the popular society woman and daughter of Mayor Johnson of Cleveland, Ohio, has been commissioned as an official mother in the Juvenile Court. The appointment was at her own request after several days' visiting at the court and listening to the stories of poverty and want told by the children brought there by the police.

The Nonconformists of Derbyshire have suffered the first persecutions for resistance to the education act. P. B. Meyer travelled down from London by the midnight express to be present in court when the cases were called. The first Friend to receive a summons for non-payment of the rate is said to be Joseph G. Alexander, of Tunbridge Wells.

The Patriarch of Constantinople has replied to Archbishop Davidson's official communication on the occasion of his elevation to the primacy. The Patriarch's letter is "verbose even beyond Oriental wont," says *The Churchman*, and "abounds in expressions of good will." The Greek text of the letter is printed in *The Guardian* of Fifth Month 13th.

Julia Fraser, a popular San Francisco woman, first suggested that a woman's face be put on one of our postage stamps. So Endeavorers congratulate themselves on having furnished the initiative that put Martha Washington's face on our new eight-cent stamp, for Assistant Postmaster General Madden has written that Julia Fraser's article suggested the idea to him.

The numerous summer assemblies, Northfield, Winona, Chautauqua, had camp meetings to be held this summer show that the people like out-door services. In one of the western villages last summer the five churches unitedly hired the fair ground and held union services every first-day evening. The new plan brought out more than a thousand people, while before not over one hundred were present at all the churches.

The oldest Protestant church building, in Ponce, in Porto Rico, was erected by an English Church parish twenty-five years ago. While Spanish bloodmen lasted the bell was not permitted to ring. When the American troops landed in Ponce in 1898, some Brotherhood men of an Illinois regiment cleaned out the building, which had been closed for several years, and set the bell to ringing. Services have been held there ever since.

A contemporary believes that the modern extension of the gospel up and down through society, the effort to Christianize industry, art, politics and family life is not a departure from the original of Jesus. It is carrying to completion, it is making infinitely more valuable and significant that gospel whose professors have stood too long with their gaze fixed on a heaven only in the skies, or in the here-after.

The *Daily Mail* of London says: "The Turkish censor at Constantinople has objected to the appearance of the word Macedonia in the Bibles of the American Bible Society and insists that the words, 'the vilayets (provinces) of Salonica and Monastir' be substituted for Macedonia in 1 Thessalonians, i: 7; 8. The American Bible Society has had trouble for some months in passing its goods through the various custom houses of Turkey, because of the presence of obnoxious words in their publications."

Various religious bodies are undertaking radical departures in African evangelization. These departments are along industrial lines. American Methodists have under Bishop Hartzel, entered upon an extensive industrial undertaking, comprising twelve thousand acres and their development, and now a large number of Disciples of Christ are settling about the organization of an African indus-

trial colony. Those behind the enterprise claim the new way to be an improvement upon the old in missionary method.

It was not the fear of poverty, Dr. Hurrell said, or reluctance to lead a life of self-sacrifice that kept young men from the ministry. It was the awful doubt, the enervating theological unrest which was planted in the souls of the people by the learned professors who taught that the supernatural birth and life of Jesus Christ was a myth and that the doctrines so dear to the hearts of churchmen were untenable and unreliable. The religion that was taught as a science, he said, would never appeal to the student whose heart was in the work.

"I have profound faith in our Chinese Christians," says J. McJannet, of Amoy, "for I know they are easily stirred when some case that affects the interests of Christ's kingdom is concerned. . . . All the churches in my district are self-supporting this year. I feel there are large resources among our churches that we have not yet touched. The Chinese are a money-loving people—almost as much so as the English—but when their hearts are touched they can be as lavish as though money had no hold upon them whatsoever."

The religious organization which sends missionaries to foreign nations to preach the gospel of peace and good will and the duty of self-surrender and obedience to God, and rests its claims for support on the value of the human soul, and at the same time approves of and advises its members to enlist for war, occupies a position so absurd as to be essentially grotesque.

Ministers and others who teach the co-ordinate obligation of religion and [the heathen kind of] patriotism have no warrant in reason or Scripture, and the practice largely accounts for the diminished moral tone and tendency to skepticism among the people.—*Havemyer*.

An inscription on a stone tablet found in the ruins of an old synagogue in Kafengfu shows that the Jews first entered China during the Han dynasty, from B. C. 200 to A. D. 220. The records of the Jesuit fathers, who seem to have made a thorough study of the subject, fix the period of their coming at about the beginning of the Christian era.

The Jews who entered China many centuries ago have, it is said, become so transformed into the Chinese character and modes of living as to be hardly distinguishable from the native Chinese, except for their Hebrew features, which are still marked.

Officials of Protestant missionary societies in the United States have been consulted, during the past two months, concerning a movement in Cuba to create in that island a Catholic Church that does not acknowledge the supremacy of the pope of Rome. That such a movement exists in Cuba and has made some headway is certain. About a month since it began the publication of a periodical called the *Acolyte*. Copies of this publication have reached this country. Contrary to expectation it contains practically no denunciation of the Church of Rome, but for the most part on patriotic grounds it advocates a church that shall be national in scope and control. It states that President Palma was waited upon when he first arrived in Cuba and urged not to identify himself too conspicuously with the Church of Rome. The paper claims he has followed the suggestion, and that at heart he is a Protestant. It is stated that there are a large number of Roman Catholic priests, all Cuban born, who favor the undertaking and that only a leader is needed to make in Cuba a protesting church similar to the one already launched in the Philippines. These Protestant officials in the United States have, so far as can be learned, discouraged this anti-Roman movement in Cuba. Grounds for the

arguments against the movement are two. One is that further divisions among followers of Jesus Christ are undesirable, and that unless Protestant or Reformation ideas can be accepted, Roman Catholic ones had better be adhered to. The other is that religious reformers have need to be very brave, and that, frankly, there appear nowhere in Cuba leaders such as can hold out to the end.

SUMMARY OF EVENTS.

UNITED STATES.—On the 15th instant a negro named George White committed an aggravated assault upon a young white woman named her, near Wilmington, Delaware. He was shortly afterwards arrested and lodged in jail in that city. On the 22nd instant the prison was surrounded by a mob, and the prisoner forcibly taken out and burned to death at the stake. But little effort was made by the authorities to prevent the removal of the prisoner on the action of the mob. A man who was arrested as the leader of the mob and taken to prison was released on bail the next day, under threat of a mob of 5,000 persons that they would storm the jail. The coroner's jury returned a verdict that the negro died at the hands of "parties unknown." This outbreak of lawlessness has been condemned by many of the citizens, and the following resolutions were adopted at a special meeting of clergymen held on the 23d instant: "That we have no record or sense of approval, indignation and shame at the lawless and anarchistic demonstration that has brought reproach upon our Commonwealth."

"Second. That we call upon all classes and conditions to condemn and repudiate such lawlessness and inhumanity as have shocked not simply our own people, but civilization at large."

A feeling of great apprehension lest further acts of lawlessness should be enacted has since prevailed in Wilmington and the Governor of Delaware has authorized the military authorities to render assistance in preserving order if called upon by the mayor of Wilmington.

In the year 1882, the number of immigrants entering the United States was 788,392, the largest on record. The number must be equalled the present year, but of great change in the character and nationality of the immigrants has taken place. The Commissioner General of Immigration has recently stated that "The great bulk of immigration in 1883 was composed, as it had been since the foundation of our country, of the Teutonic and Celtic races of Western Europe, while the people who are flocking to our shores are entirely of the opposite races of Eastern Europe and Italy." This change in the character of our immigration has increased the illiteracy rate from about 7 per cent to 25 per cent."

The Board of Conciliation, which was created at the suggestion of the Anthracite Strike Commission, met at Wilkes-Barre, Pa., on the 25th, forming an organization and gave out a statement, including rules, under which all grievances between operators and their employees are to be considered.

General Manager Henderson, of the Reading Coal and Iron Company has lately said: "The local demand, or rather the local pressure to fill orders, has fallen off since it has been understood that there will be no strike. We are now sending coal to Chicago, for the first time in many months. New England market is not yet supplied, but we hope to soon be able to fill all our orders from that section."

In a late address before the Henry George Association, Clarence Darrow, the labor leader and attorney for the miners during the anthracite hearing, warned union labor that strikes and unreasonable demands were ruining them and the unions. Promiscuous boycotting and strikes, the mad rush of craft to increase their own wages without thought or care for the rest of mankind and the limiting of production by trade unions, he said, were the present perils of trades unionism.

At the National Colored Immigration and Commercial Association meeting in Montgomery, Ala., the Committee on Resolutions adopted a resolution recommending the chartering of vessels during the year 1894 for carrying colonists to the Republic of Liberia, Africa.

The water taken from Niagara River above the Falls for developing electrical power is stated to be producing 113,000 horse power on the American side, and water capable of developing 100,000 horse power is being taken on the Canadian side. Competent judges report that the Niagara water, running over the Falls, is being appreciably diminished thereby. It is stated franchises have been granted to divert 105,000 more horse power on the American side and 200,000 more on the Canadian side.

Snow is reported to have fallen for a short time at Aubury Park, N. J., early on the morning of the 23d ult. The Superintendent of Police in Philadelphia has or-

dered the police to arrest persons who spit on sidewalks, in public conveyances and in places of public resort.

The National Educational Association lately meeting at Indianapolis has recommended the adoption of a form of spelling twelve words, as follows:

Program, Thoroare,
Thru, Decalog,
Altho, Demagog,
Throught, Pedagog,
Thoro, Catalog.

One of the earnest advocates of this new spelling says: "The hope of the reform lies largely in our newspapers and magazines. If the leading newspapers and magazines would agree to use the amended spelling for one year the problem would be solved. The eyes of the public would at that time become accustomed to the new forms, and the people would not be willing to return to the present method. Here, I think, is our only hope of bringing about the change."

The city of New Orleans has lately begun a system of sewerage which is expected to place that city from a sanitary standpoint upon a level with the great cities of the world. It is expected to cost \$18,000,000, and to be completed in five years.

It is stated that the United States consumes nearly a third more coffee than all the rest of the world put together.

A despatch from Washington of the 25th ult says: President Roosevelt decided to-day to transmit to the Russian government the petition of the British regarding the treatment of Jews in Russia, and more especially the Kischeneff massacre. Immediately after this announcement was made Count Cassini, the Russian ambassador, who, several days ago, in a formal statement, said it would be impossible for Russia to receive any representation regarding the Kischeneff incident from any foreign embassy, called upon Secretary Hay, and was informed officially of the President's decision.

In diplomatic circles it is said that the petition will never reach the Czar, but will be received by Russia and dismissed with a polite note of acknowledgment and a verbal discussion between the American ambassador at St. Petersburg and the Russian minister of foreign affairs.

President did not come to a hasty conclusion, however. At first it was decided that the petition should not be presented, because it might be resented by the government of Russia and lead to a response that would cause a break in the relations of the two countries. This course was reconsidered, and by direction of the President the petition will now go forward.

It is also to be significant of leading citizens of the United States outside of Federal office holders. It is expected that it will take about two weeks to secure these signatures, work along that line already being in progress.

The following paragraph is said to be contained in this address to the Czar:

"I am moved from your Majesty's dominions, living under different conditions and owing allegiance to another government, your petitioners yet venture in the name of civilization to plead for religious liberty and tolerance; to plead that he who led his own people and all others to the shrine of peace will add new lustre to his reign and fame by leading a new movement that shall commit the whole world in opposition to religious persecutions."

This action of President Roosevelt is watched closely in Europe. "An Austrian paper remarks, the Russian autocracy can not remain unmoved by the fact that the President, as an advocate of humanity, reminds it in the face of the whole world of the duties it owes to humanity and justice."

A recent despatch from Tacoma, Wash., says: Hosts of army worms in a solid column one hundred and fifty yards wide, and nearly three miles long, are marching through Walla Walla county. The worms are from one and a half to two inches long, and are brown and fuzzy, with green stripes in some cases, and are like caterpillars. The ranchers are alarmed for their garden truck and wheat.

J. Edward Cutler, a post graduate student of Yale, is reported to have found that the number of persons lynched in the United States in the last twenty-one years to First Month 1st, 1903, was three thousand two hundred and thirty-three. The number of negroes lynched during the period named was one thousand eight hundred and seventy-two, and the number of whites one thousand and thirty-six. Since 1892 there have been steadily decrease in the number of lynchings, but they are still numerous in the South, and with the steady growth of the anti-negro sentiment, threaten to increase.

There were 466 deaths in this city last week, reported to the Board of Health. This is 46 more than the previous week and 23 more than the corresponding week of

1902. Of the foregoing 249 were males and males: 64 died of consumption of the lungs; 34 inflammation of the lungs and surrounding membrane; 1 of diphtheria; 22 of cancer; 10 of apoplexy typhoid fever; 3 of scarlet fever, and 2 of small pox. FOREIGN.—In accordance with instructions from governments, the ministers of the United States in Britain, France, Holland and Turkey left Belgrade, King Peter I. was installed in office. A dispatch, Paris of the 25th says, "The French minister has reported the circumstances attending the death of the ministers from Belgrade as follows:

"All the ministers received similar instructions, together with the ministers of the United States, that they should depart, this step being regarded most emphatic method of expressing the Powers' against the assassination of King Alexander and Draga. The Russian and Austrian representatives partly shared in the principle of the protest, but did not withdraw because they feared another action."

The German emperor has sent a dispatch to Peter, recognizing it, is said, in cordial terms, his aim to the throne of Serbia.

The recent elections in Germany for members Reichstag mention that Socialists polled three eight thousand votes, an increase over the preceding election of nine hundred thousand votes, nearly two per cent.

A dispatch from Berlin says: "The result of the elections leaves the Reichstag practically unchanged as the questions of the army, navy and commerce are concerned, though the Socialists, encouraged by the enormous increase in their popular vote, will probably offer stronger opposition to naval and military increases than ever."

Reports from Naples state that on the 22nd volcano Vesuvius was in full eruption.

Arrangements have been made for the President formally open the new cable to Manila on the morning of the fourth instant.

Four-fifths of the inhabitants of Canada are alive to the eastward of Lake Superior.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for volume.

Mark Nichols, Ind.; Mary B. Reeve, Phila.; Brown and for J. Morton Brown, Pa.; Benj. C. B. Lewis Forsythe, Pa.; Amos Thomas, Ind., Vol. 77; Sarah Richie, Phila., and for Arthur I. Joseph, C. Newlin, N. C.; Chas. Ashbridge for Chas. Ashbridge, Pa.; Thos. H. Whitson, agent, for Walter Pa.; Louisa Cameron, N. Y.; Joel Bae E. Thos. Snipes, N. C. to Ray 27; Richard T. O. N. \$6; for himself, Edmund L. Post and Isaac D. Harry Alger for Elizabeth B. Alger, R. I.

Remittances received after Third-day noon appear in the Receipts until the following week.

NOTICES.

The address of DAVID GARRETT is desired. A Friend who can do so, kindly inform

WM. C. COWERTHWATE, No. 304 Arch St.

Friends' Library, 142 N. Sixteenth Philadelphia.—During the Seventh and Eighth Months the Library will be open only on Second and Fifth from 3 P. M. to 6 P. M.

Westmont Boarding School.—The fact of the School will open on Third-day, Ninth Month. Friends who are intending to send children at the will confer a favor by making application before Month 26th, if the matter has not already been mentioned.

WM. F. WICKERSHAM, Principal.

DIED, at Crestline, Cherokee Co., Kan., Six 16th, 1903, HANNAH (BALES) HOBSON, widow of K. Hobson, in her seventieth year. Deceased long member of the Society of Friends, an earnest, a faithful wife and a devoted mother. Survive her.

—, at her home in East Everett, Mass., Six 19th, 1903, ELLEN L. W. WILLSON, widow of Samuel S. Willson, and daughter of Moses and Whittier of Dover, N. H., aged seventy-six years, loved member of Boston Monthly Meeting of Friends.

The Boy in the Church.

An excellent article by F. G. Peabody entitled "The Boy in the Home," printed in THE FRIEND Sixth Month 27, 1903, suggests naturally the corresponding consideration of the boy in the church. It has been said with just terseeness that "Mankind is incurably* selfish." That a boy is "by nature a companion with others," is not more correct than that he is naturally religious. The "peril of meanness" is second only to the peril of having a place in a home-like church. A home may do much, it is true, towards giving a child to appreciate the need and the value of a church, but it is beyond the power of a single home to make a church homelike, for the church and the parent each owes a duty to the child. If a good boy is the normal product of a good home, it is in a similar sense that a good Christian is the normal product of a good Christian church. What, then, is the kind of church that is most likely to produce good Christians? The requirements, it would seem, are the same that make a good home—"simplicity, consistency, piety."

In the home, so in the church, simplicity is synonymous with "meagreness," "emptiness," "lack of comforts," or even "absence of luxuries." A church appeals to a child in proportion to the amount of companionship of spirit he finds in it. It appeals to the child in the same way. A simple church is simply a real church—a family of God's children, varying in age and degree of experience, yet none the less a family. "It is not the instrument of social ambition or restlessness." "It is not a mere sleeping place"

where we may recuperate, "but a centre of affectionate self-denial and mutual forbearance." The "little tot" is never forgotten, but feels itself to be a recognized factor in the household.

Consistency is the second mark, we are told, of a good home. How extremely important it is in the church! Consistency between precept and example, between exhortations and character is the only safeguard against the "humbug," that a child is so quick to detect. Finally we have that filial relation designated "piety"—"the natural, confident intimacy of children with their parents"—"an expansion of the ideal of the family." Man being God's child, and the church being, presumably, an association of loyal children, it is as needful for the little Christian to have a good church as for the boy to have a good home.

This, then, is the kind of church that fosters the right kind of Christians—a church where "simplicity and consistency open into piety;" a church where the children think of the adults "not as taskmasters or faultfinders" or church-keepers, so that their place is in a corner or out of sight, "but as companions to whom it is a happiness to go, and advisers from whom it is safe to learn."

Reader, what are we doing to make the Society of Friends home-like to boys and girls and little children? What are we doing to make them feel that they are a part of the family? What are we doing to make them feel at home in the church?

Sad indeed, is the picture of parents weeping for their homeless children—homeless because they had never been made to feel at home in the house where they were clothed and warmed and fed, but not sheltered.

Sad also is the spectacle of a church bereft of younger members because their childish souls are permitted to become isolated and the roots are not nourished that would "hold them in their place and make them grow." W.

A Visit to the First Home of Old Colony Quakers.

Our last editorial was penned amidst endeavors to depart in season on a religious concern to attend the meeting of an unusual company. Descendants of the widely scattered family of the name of WING, whose American existence began in Sandwich, Massachusetts, of Quaker parentage, nearly two and a half

centuries ago, had planned for a general reunion in the place of their origin. They would virtually begin by religiously honoring the faith of their fathers in a Friends' meeting for worship in the old Sandwich meeting-house, on Sixth Month 28th. Some of the same descendants had done this one year ago, finding Friends' manner of worship and some of their doctrine "a new and inspiring discovery to them in religion," and "the one part of their visit most precious remembered." So charmed had they become with their whole pilgrimage and the historic associations incident to their visit, that they resolved to call all their tribes from far and near together again in the present summer, that this season might be to them as the last season, and yet more abundant.

As two of their visitors we found them in their hall,—from New York State, from Wisconsin and Iowa, from New Orleans, California, Pennsylvania,—two hundred pilgrims in number, men and women of character and intelligence, each with whom we conversed, interested to trace their kindred with us,—a kinship which we could claim better than locate in those "endless genealogies" which lay unfinished on the table. A public gathering ensued, in which speeches of introduction and welcome were exchanged between officers of the association and men prominent in the affairs of the township. The clergy of Sandwich did not stint their laying of the credit of stalwart character, as there represented, to the moral outcome of Friends' principles and early struggles in that colony. George W. Wing, of Wisconsin, the leading spirit of the reunion and the first invoker and shaper of the Association, emphatically ascribed to the town of Sandwich, in its first harboring of the Quakers and tiding them over the period of persecution, the honor of the introduction of religious liberty into America. The Friends, he might have said, first purchased that religious liberty for America, by their blood and sufferings, while Sandwich made it possible by their hospitality and sympathy, for Friends to have a foothold in Massachusetts long enough to take the brunt and buff the shock of the battle for toleration.

On First-day morning the wing of ancient goodness seemed spread over all visible nature. Ocean and forest, hills and meadows

to pass cure.

By some susceptibility to the Divine nature or light (vol. 9).—Ed.

Fealty of its Head, and co-operatively of its members (vol. xii 17).

seemed to savor of the excellent glory, and the Creator to be having the praise of his own works. It was a privilege to enjoy this in a three miles' walk to Spring Hill, while barge and carriages passed to and fro to convey the other pilgrims from town to Friends' Meeting.

Proceeding up the hill which is surmounted by the old and well-kept meeting-house, the third since the Society began, one beheld the green graveyard dotted over with groups of men and women studying the names and dates on the headstones, and sometimes scraping the moss from the marble with pen-knives to enable them to decipher the letters or figures. At length the waving handkerchief of Henry N. Hoxie convinced us that the hour of eleven was at hand, and all gathered towards the house, where the one hundred and eighty-five were soon seated. A profound silence settled down upon the meeting, full of a living solemnity that was eloquent with the unspeakable gift of grace from heaven. It would have seemed a sacrilege to interrupt the living voice of that stillness, and no one could, until an opening came for words which were uttered in trembling by a visitor, whose marriage in that house half a century ago was brought vividly home to his deepest feeling, accompanied with the language once heard at Cana of Galilee, "Whatsoever He saith unto you, do it." This opening became, as it were, the key-note of the meeting, as borne upon another to rehearse it in the form heard by George Fox as the beginning and substance of his apostleship of primitive Christianity revived; namely "There is one, even Christ Jesus, that can speak to thy condition." The offices of Him crucified, set forth as the word of God, the wisdom of God, and the power of God, became enlarged on unexpected lines to the meeting's view, and the true inwardness of the Word of Truth testified. Afterwards the vouchsafing from on high of the spirit of prayer in the closing solemnity, baptized the assembly into a dispensation of silence from which it was not easy to rise and go forth. The place seemed once more to have become a Bethel; and some strangers, later in the day, declared a willingness to join our religious Society if they could be sure of meetings always being held in that way. But sad complaint, during conversations at other times with those visitors, members of other denominations, was expressed at the degeneracy of Friends' meetings in their parts of the land, by being changed from our older and legitimate mode of worship, into mere imitations of the course of other churches, based on a different principle of worship. Whatever modes these strangers acquiesced in in their own churches, one would have thought they were conservative Friends to hear how they laid down the law of true consistency for Friends. Their thanks for the privilege of enjoying a real Friends' meeting, repaying their journey hither, were unmistakably sincere. But there had been nothing to be thankful for in the meeting but the Lord's work, and the measure in which the occasion was left open for his own work solely.

Preferring to repace the road to town on foot, one of us halted with others on a part of the same hill which was the site of some of Friends' first meetings in the year 1657. Near the dwelling-house standing on the spot is the ancient burial ground of the early Friends,

now well protected by an iron fence with granite posts.

A woman from Iowa of large frame, heart, mind and character came along, who was also preferring to walk to town; and as a devout Methodist, could bewail the degeneracy of the modern pulpit in its resort to intellectualism in the place of spirituality, to lectures instead of preaching, to scientific expositions of things of the day instead of feeding the flock with the bread of heaven. She pined for the aged ministers who were now not allowed to serve, though best qualified by experience to help in the paths of life, but must be displaced by the young and brilliant speakers whose learning and culture might for a time draw the entertainment-lovers, but were not ministry.

We soon passed the pools of water which first gave to our country the beautiful pink water-lilies which began to come into notice about thirty-five years ago. A single pink lily appeared as a sport of nature in a pond in Centreville, a few miles away, in this Barnstable county, and on coming to the notice of William Chipman, residing near Friends' Meeting-house on Spring Hill, he bargained for the root of the lily, which he transplanted in a meadow pool near the roadside where we were passing. From this came the pink lilies which are now obtainable in many parts of our country. But we remember when his Sandwich neighbors had to pay William Chipman seventy-five cents for a single lily, and have seen pink lilies growing in New Jersey, for the first root of which ten dollars were paid. Dr. Faunce, of Sandwich, paid the same for his first roots, and proceeded also to raise in his ponds the most beautiful varieties of water-lilies to be obtained from France or elsewhere, including fine specimens of the Egyptian lotus. These now also being obtainable from so many florists, Dr. Faunce has turned his attention to rare varieties of roses. He planted several of his lotus and rare lily roots in Shawnee Lake by the public roadside, for the delectation of the people. But there are rarities also among summer visitors, who, the night before leaving for the season, would get amongst those lotuses and lilies and abstract, some a trunkful and some a tubful of the roots, and take them home to plant. Thus was he discouraged. But William Chipman, the introducer of the pink pond-lily to America, became discouraged by his own act. For the fertilization of his lilies he insisted on dumping into his ponds material which he could buy up from the hen-roosts of the neighborhood. Dr. Faunce warned him that that manure must kill the plants, but the warning had no effect, while the ammonia had a disastrous effect. Chipman's pink lilies were all destroyed, but they were no longer needed to spread abroad in the land a beautiful gift to man. William Chipman's work blooms on, in a world from which he has passed on, from considering the lilies, how they grow.

We were glad, near the sunset of that day, to hail with pleasure the sight of some remnants of Dr. Faunce's lilies, as we passed Shawnee Lake on a stroll to visit at its upper end the old home of our cousin, Asa S. Wing, a home this summer closed in the absence of his invalid mother, who is cared for by a daughter near the home of our poet Whittier. Last summer this aged Friend was much re-

vered by the pilgrims who came to visit ancestral Wing house, and take photographs of her, as she stood at her flower-garden gateway in her distinctive Friends' bonnet and gown. These views were this year deemed to have ten-fold value, now that the Wing house is lent.

Though the great brick glass factories which built up Sandwich as once a much more populous town, are now becoming ruins, yet its building a glass-cutting industry is maintained with fine success for its exceptionally work. The Tiffany house, of New York, said to accept no American cut glass for trade, except that which is adorned by it. From inspecting the process of this work after seeing the tribes depart by rail for a day in Harwich to locate the ancient residence of John Wing and John Dillingham, — we turned towards the forest hills, and a mile's ride brought us through pasture lands to the edge of the upper lake, where stands an ancient tree, said to have been planted by Edward Dillingham, one of the first year's settlers of Sandwich, and one of "the ten men of genius," who took up land there in 1637. Tradition dates the pear-tree from the year 1658, making it now two hundred and sixty years old. But half its trunk is left, the other half being split off by a wind and lying in its branches there dead on the ground. To erect half seems to support a vigorous growth, and even hardy pears, above a trunk which is hollow like a canoe, and perfect by woodpeckers. One wonders, from year to year, how it can still be standing. A vigorous growth of new shoots keeps springing up at the root, so that when the old trunk falls the tree is likely to continue many years for its children. The remains of the cellar of the first Dillingham home are very evident in the tree, which stands as our earliest and most monument in America. A photograph is preserved of the last Edward Dillingham, who was a Friend and minister, standing by that tree some four years ago, shortly before his decease.

It is with peculiar feelings that we stand away from the site of perhaps the first Friends' Meeting in America, which has assembled at Sandwich at its appointed times from the year 1658 till now, but having more families living to it in its first year than members of the thirteen families joined to form a Friends' meeting in 1657 at Sandwich, under the leadership of Christopher Holder and John Copeland. The number of families in membership has since increased to sixty, at least. We went to postpone an intended walk to "Christopher's Hollow" in the woods, where Christopher Holder, in 1657, preached from the side to an open-air Friends' Meeting gathered in the hollow below him. From Boston a few weeks later, with John Copeland as companion, he issued the earliest explanation of the Faith of Friends, and appeared recently (Fifth Month 15th) in the columns. A valuable book prepared by his descendants residing in California has been published, entitled "The Holders' Memories," which gives much carefully collected information concerning this earliest of Friends to get room to preach on Massachusetts soil.

"PRACTICE puts an edge on precept."

A Letter of William Penn.

The following letter from William Penn to Thomas Lloyd, Deputy Governor of Pennsylvania, has recently come into the possession of the writer, who is a descendant of the latter. Whilst it has before appeared in print, being published in Proud's History of Pennsylvania, its interest to Friends seems to be sufficient warrant to justify its repetition at this time.

In order fully to understand some of the references in the letter it must be borne in mind that in the winter of 1688-89, William and Mary had been proclaimed King and Queen of Great Britain, King James having withdrawn in France. Penn was naturally viewed with suspicion, as the friend of James, and was the times arrested charged with disloyalty to the new sovereigns. To another attempt to arrest him, made on his return from George Fox's funeral First Month (January) 16th, 1691, he refers in the latter part of this letter.

It is probable that Penn had in mind the actions created by George Keith, where he speaks of George Fox escaping "the storm this is coming."

The letter itself is old, faded and stained. It comprises about four-and-a-half pages of small quarto letter paper, and is addressed

To My esteemed frd. Tho: Lloyd keeper of the seal and mr. of ye Roles in Pennsylvania.

GEORGE VAUX, JR.

B. N. MAWR, Pa., Sixth Month 24th, 1903.

"Eng. 14th 4 Mo., 1691.

L. FRIEND T. L. :—
My love, in the unchangeable truth, as thoue and thine, and the friends and family of God, in those parts, desiring your tenor and everlasting welfare, with an unaltered affection.

By this time thou wilt have heard of the several of my troubles, the only let of my return being in the midst of my preparations, with the great company of adventurers, when they fell upon me. The jealousies of some, and unworthy dealing of others have made way for me; but under and over it all, the angel Rock has been my shelter and comfort; and I hope yet to see your faces, with our mutual satisfaction. The Lord grant, if it be his glory, whose I desire to be, in all conflicts; for this world passeth away, and the grand beauty of it fadeth; but there are eternal habitations for the faithful; among which I pray that my lot may be, rather than for the princes of the earth.

I hope I need not urge my circumstances, except thy love, care and concern for me and thy suffering interest, in that country. I have now hast better learned Christ and Cato, and I say so, and wilt embrace such an opportunity to choose to express thy friendship and cherity; but is uncertainty and changeless thy fault; wherefore I will say no more, but desire that my afflictions may cease, and secure your animosities, or discontents, to thy yourselves, if yet they have continued; and that thou wilt both in government, and as Commissioners of property, yield thy assistance all thou canst. By all this God may use me to be fitter for future service, even to thee. I ask the people forgiveness for my long stay; but when I consider how

much it has been my great loss, and for an ungrateful generation, it is punishment enough. It has been 20,000 pounds to my damage, in the country, and above 10,000 pounds here, and to the province 500 families; but the wise God, that can do what He pleaseth, as well as see what is in man's heart, is able to requite it all; and I am persuaded, all shall yet work together for good, in this very thing, if we can overlook all, that stands in the way of our view Godward, in public matters. See that all be done prudently and humbly, and keep down irreverence and looseness, and cherish industry and sobriety. The Lord God Almighty be with you, and amongst you, to his praise and your peace. Salute me to John Simcock, K. Turner, A. Cook, T. Janny, Ph. Pemberton, S. Richardson, W. Yardly, the Welch Friends and Plymouth Friends, indeed to all of them.

"Thou hast heard of our great loss of dear John Burnyeat, and Robert Lodge, one in Ireland, and t'other in England, in about the same week; Robert Barclay, Th. Salthouse, and dearly beloved George Fox since. He died at Henry Gouldney's, by Gracious-street meeting-house; where he preached his farewell the First-day, and departed the Third, at Night, between nine and ten. I was with him; he earnestly recommended to me his love to you all; and said, William, mind poor Friends in America; he died triumphantly over death, very easily, foresaw his change; he was buried on the Sixth-day; like a general meeting; 2000 people at his burial, Friends and others: I was never more public than that day; I felt myself easy; he was got into his Inn, before the storm that is coming overtook him; and that night, very providentially, as ever since, I escaped the messenger's hands: I shall add only, that Friends have had an extraordinary time, this General Meeting; so that God supplied that visible loss with his glorious presence. R. Davies there, but not thy brother. In sincere love I bid thee, thy wife and family, and friends, farewell.

"Thy true friend,

"WM. PENN."

THE HELP OF HARDSHIP.—When Nansen was but a lad, he had the purpose of polar exploration in his mind. To train himself for it, he constantly exposed himself to cold and hardship, long marches through snow, baths in the ice-covered fords and every other trial of endurance that he could devise. When Peary started for the Pole, his accident—the breaking of his leg just before he landed in the icy wilderness of Greely Land—did not daunt him, because he also was trained to hardship. Carried helpless on shore, he directed all the details of the camp, used his enforced rests in studying the Eskimo methods of life, and gained, rather than lost, by the experience.

Hardship is not meant to crush: it is meant to help toward victory, and most great victories are conquered out of it and through it. Are we complaining of our cross, or bearing it bravely and hopefully, and growing strong in the Lord? Sickness or strength lies in our own choice. Which shall be ours?—Forward.

If we allow wrath never so little room in our thoughts, it lays hold of the mind, and enkindles that which destroys the likeness of God in us.

FOR "THE FRIEND."

Life and Literature.

There is a worldly minded apprehension of the facts of human life which, however superficially extensive and however minutely accurate, must lack of sound comprehension and sure direction from the want of a spiritual insight and a deep experience. To it the facts and observances of religion can be known but as a detached department of an at best shallow, though engrossing attainment; and religious duty and secular duty must accordingly become contrasted phrases and competing facts. "The double-minded man is unstable in all his ways;" and such instability must mark the worldling until he shall, by the renewing of his mind and the rectification of his standpoint, recognize that identity of sanction and aim whereby his so-called secular duty is completely absorbed or translated into religious duty.

The professor of religion, while of course bound to repudiate any detachment of sanction and aim between the religious and the secular life, may need to beware that he do not enjoin or even admit the like divorce between a truly religious literature and a truly secular one. In origin and essence the truth of literature is one with the truth of life; and they are one also in their contention with a false inspiration and a laggard aspiration. That which is unreasonable and inconsistent in one must be so in the other; and we thus seem to encounter some incongruity in the fondly inveterate tendency, even among Christians, to attribute an unapproachable, and a therefore more or less exclusive, sanctity to those writings of the past, which by the tradition of the best life of the past have come down to us as "The Holy Scriptures."

However important such a compact record of the salient events and lessons of human history may have been and may still be as a creed for the testing of novel pretensions, and as a stimulus of the stirring of the pure mind for continuous advancement in the Divine life, the function of such a record must be in a measure aborted if the inference be tolerated that an advanced life will not be accompanied and certified by an advanced literature. In the growing light of that Divine life to which those Scriptures testify, it may be increasingly incumbent upon Christians to observe and to emulate the holy boldness with which the inspired writers over-rode the limitations of the letter, in their confidence that the necessity for such license would be recognized by the earnest seeker and diligent searcher, who would be sure to be led, in some way, beyond the vague but all-pervading suggestion of metaphor and symbol, to the direct apprehension of substantial spiritual truth. The necessary blindness of an inexperienced faith in the condescending "foolishness of God" is thus both justified and superseded by the awakening of that clarified imagination and that "perception of resemblances," in which the previously mystical is recognized as the eminently practical.

The advancing revelation will evolve a more copious diction and an enlarged expression; but it will have no occasion to stoop to the definition of its own terms. It will presume the hearer to have been seasonably familiarized with these in the growing light and current

usage of the advancing life. Did it do violence to the best correct usage in the use of terms, it would be denotable as a mystification rather than a revelation, and would foster rather than check the tendency of theology to repose in a stereotyped cant.

However slowly, that "form of sound words" for which we need to contend, is surely an advancing form, in correspondence with the church's advancing insight. Most timely for our day would appear that restored version of Col. ii: 18, in which the danger or the effect of self-conceit is declared to consist not so much in the teacher's desire to apprehend "that which he hath not seen," as in the temptation to "dwell in that which he hath seen." There seems large prophecy in that testimony of the Psalmist, "Righteousness shall go before Him, and shall set us in the way of his steps."

The element of water seems to be largely, if not universally, employed in Scriptures as the symbol of Divine intelligence, and it would appear that the continuous precedence of the inspired life over the inspired literature may be fitly illustrated by the priority of a natural river over the canal which is made derivatively though artificially to flow by its side. Scriptures and canals are alike beneficial as conventional institutions. In the service of both there is an early stage in which the derivative current visibly or practically preponderates over the origination one; but in both this relationship is reversed as the kindred streams approach the illimitable ocean of their destination.

There seems a significant shortcoming in the otherwise copious vocabulary of that wonderful language which was the providentially ordained medium for the deliverance of gospel truth, in that then necessary overlapping and partial identification of superstition and religion which have not even yet been wholly eliminated from our church life. The untimely supercession of the weaker element would be as the putting of the new wine into the old bottles. As the aspiration for an ideal faith shall but be duly cherished, we may haply find that the primary and enduring sanction of Divine authority rests not so much in the truly expedient tradition of either literature or organization, nor yet of ritual, as in that self-evidence of the Spirit of Christ in the true followers of Christ, which while indeed "hidden" from a groveling worldly apprehension is ever, to the unsophisticated sensibility of the earnest inquirer, a twin fact with the demonstration of the contrary spirit in confederate presumption and the counsel of the ungodly.

R. R.

THERE are certain boggy places in business life, and politics, and social life, where you cannot set your foot without sinking in; there is a certain line beyond which a Christian cannot venture without betraying his Master. Never venture a single inch into any business, however lucrative, or any speculation, however attractive, or any social circles, however fascinating, if you cannot carry Christ with you and a clean conscience. Remember that Christ is our life, and without Him "no man can keep alive his own soul."—Cuyler.

"He does not care for his character who is not careful as to his companions."

William Rathbone.

William Rathbone, of Liverpool, was born there in 1726 of parents who were members of the National church. His mother died before he was two years old, and his father being, soon after, convinced of Friends' principles, he was carefully educated therein; and being in a good degree obedient to the visitations of Divine grace, he became, while young, an example of sobriety and industry. About the seventeenth year of his age, being under discouraging circumstances, he formed the intention of going abroad with a view to acquire wealth; but when he thought himself on the point of carrying this design into execution, his mind was brought under a weighty exercise, and he was impressed with a persuasion that his appointed station was in his native place, where a field of religious labor was opened before him; and that if he persevered in his intention, his religious interests would be subverted and the Divine will concerning him be opposed. In this state of conflict he was convinced that, if his sole dependence was fixed on the Almighty arm, it would supply all his wants and be an unfailing support in the various trials that might be allotted to him.

Through the continued extension of Divine regard, he was enabled to yield obedience to these convictions; to enter into covenant with a covenant keeping God; to limit his desires after perishing riches, and to bear the turning of his hand upon him. As he was favored to enter on the active scenes of life with faith and dedication of heart, so he was supported in his passage through it, to bear his portion of disappointment and affliction with Christian fortitude.

The gracious Being, who had directed his feet into the right way, was mercifully pleased to be with him from step to step, so that he increased in stability and usefulness; and about the forty-ninth year of his age he was concerned to bear a public testimony to the sufficiency of this Divine grace, which had been the stay of his youth.

For some time before his decease he was more than commonly enlarged in his public testimony, and accompanied two women Friends in visiting the families of Friends in his own and a neighboring meeting. The minds of some of his friends were singularly impressed with the exercise he was under the First-day preceding his illness, when he had to express in the morning meeting the necessity of having oil in our vessels and our lamps trimmed; calling upon some present to remember in what awakening manner this exhortation had been sounded in their hearing; saying it was given him afresh to believe that there were those present who, when the solemn summons should be issued, "Behold the Bridegroom cometh," however diligent they might have been in having their vessels replenished, would find they had nothing to spare. The following day he was a little unwell but cheerful; on Third-day complained of a violent cold that affected his head, and in the afternoon was obliged to go to bed. He was confined to his chamber about a week, during which his patience and fortitude were exemplary; and although through the extremity of his bodily illness, he was at times delirious, yet at intervals his understanding returned, in one of which he expressed audibly, "Who would not love and praise thy

name, thou King of saints?" and continued with solemn prostration of soul for a considerable time, and then said very intelligently, "O, poor creatures; called upon to offer in righteousness; who can, who dares but obey the call!" It was a season of awful quietness; his spirit was again powerfully engaged in fervent prayer for full two hours, except once or twice when raised up to do something, he let fall a wandering express but when he was laid quietly down, he again favored with the renewed influence of the spirit of supplication. Through the weakness of his illness his voice was much interrupted, but sundry expressions were at times distinctly heard, "Most Holy Father, Lord God, Almighty; I have known the rod and the scourge." What followed could not be distinctly heard, but it is not easy to set forth the solemnity of the occasion.

In the evening his wife and children lay in the room, and one of his daughters bade him, he took her hands in his, looked at her with a most sensible expression of affection, then closed his eyes, and without a sign of struggle breathed his last. He departed his life the eleventh of the Eighth Month, '89, in the sixty-fourth year of his age, and a minister about fourteen years.

Cannot be Delegated.

A widow school teacher through the *Louis Globe Democrat* makes the following strong plea for co-operation between parents and children:

What we need in our schools is the co-operation of the parents with the teacher. To assure this is too much neglected to make our schools a grand success, many times.

In speaking of the importance of the co-operation of parents with the teacher at the work of the school-room, I shall assume that I am addressing the parents themselves. I begin by asserting that parents are more largely responsible for the education of their children than are the professional teachers of the community at large, or the state. To give every child a physical, intellectual and moral nature, is a duty imposed on every parent. If for convenience or for the sake of getting better results, we delegate any part of this work to others, if we commit the child to the keeping of nurses, and to the curative art of physicians, his intellect to the guidance of teachers, and his soul to the tuition of the Sabbath school instruction and pastors, we must delegate the work, but we cannot delegate the responsibility. We shall be held accountable for the education our children receive. The teachers are responsible to us, we are responsible to God.

We have, then, arrived at a very important and far-reaching parental duty in connection with secular education. Parents being always responsible for their children's education, must always watch and superintend it. When we send our children to school we do it and cannot, as some think, transfer to others all the care and responsibility of their education.

Unless we send with them our watchful solicitude, wrapping them about as a protection against evil influences, and attracting them, all possible influences for good, we are unnatural and recreant parents; and it is more likely that in future years the list of

in of duty which we would not bear when our children were subject to us will come back a heavy load of unavailing sorrow, and will sit all brood on our hearts, when their ignorance all rebuke us, and their misdeeds shame us. In this day and generation we can all afford to leave the "education" of our children to school.

There is a crying necessity for a greater sympathy between parent and teacher.

This can only be aroused by a better mutual understanding, and this mutual understanding will follow, as the night the day, if each will be the initiative, lovingly forbear with one another, honestly confer together and study hard work for the salvation of the earnest co-ordinator.

It ought to be an abiding thought in the child's mind, spoken or unspoken, that my father, my mother, are very anxious that I should do well at school. This one influence, if the child loves and respects his parents, will do more to make and keep him industrious and faithful than all other influences combined.

The parent will secure this object in a great variety of ways; in fact, if he really has the child's welfare and success at heart, there will ordinarily be no great danger of the child's failing to perceive it and to be affected by it. But, there are judicious and injudicious ways of accomplishing the end which the parent has in view.

When this subject is brought before parents, great stress is generally laid on visiting the school. I am inclined to think that undue importance is attached to mere visiting. Some of our results may come from it. Both teacher and pupil may be made to feel that the public eye is upon them, and may be thereby induced to make some exertions to satisfy the public, but a far more healthy and a more effective supervision would be secured if each parent should keep himself in constant communication with the teacher and the school through his own child by watching his progress, by interesting himself, so far as he is able, in his studies, by correcting the misapprehensions that are always arising between teacher and scholar.

I now ask the parents: Are you watching and directing with care the technical skill of your children? Do you keep in mind that the child's intuitive emotional impressions of your teaching are most governable while he is young? And more, that the time will soon come when he will have no such intuitive capacity if it is for long neglected.

Science and Industry.

A new star, belonging to the class known as Apol, has been discovered by a woman, Mrs. Coraski, of Moscow.

Mrs. E. PRETTY, of Philadelphia, has been appointed typewriter and stenographer in the office at Washington. She has made a record of writing seventeen hundred and five hundred words in six and one-half hours. It is believed that no one has ever exceeded this speed.

There is a newly-formed "syndicate of domestic maids," whose object is to restore to

woman her rights in the kitchen, from which she is being driven by men cooks and waiters in restaurants and hotels. The syndicate asserts that experienced women cooks cannot get places and that women who want to fit themselves for the place of "chef" are unable to find opportunity. It has, therefore, petitioned Paris hotel keepers to consent to employ regularly a certain proportion of "apprentice girl cooks" in their kitchens.

THE VERSATILE AMERICAN.—The Englishman has none of that all-around mental activity which distinguishes the American. He knows only one thing—that by which he earns his living; and he does not desire to know anything else; far less is he ashamed of not knowing it. A London policeman if you ask him about some distant street or building of importance, will reply civilly, but unabashed, "I cannot tell you, sir; that is not in my beat." An American policeman would know the fact, and if he did not know it, he would feel called upon to apologize for his ignorance.

In a remote Maine village there was recently some occasion for a plumber, and a very good one was forthwith improvised from a carpenter. Such a thing would be impossible in England. Many a New England farmer can build or repair his house, "tinker" his mowing machine, shoe his horse, doctor his cow, break his colt, row or sail his boat, "butcher" his pig, shear his sheep, skin a fox, track a deer, hibe bees, serve as a guide or lumberman, solve a problem in arithmetic, make a good speech in a town meeting, and do a hundred other things besides. There is probably not a man in all England who can do half so many things. The American is quick witted, has far more general intelligence and information, and is therefore by far a better workman.—*Harper's Magazine*.

NATIONAL CHARACTERISTICS IN TOOL-MAKING.—"Show me a piece of machinery or a tool, and I'll tell you what nation made it," said a member of the steel trust. "Every nation's character is very strongly marked upon the tools that it turns out."

"The English and the Scots are conservative. They cling, in their machines, to safety, to rigidity. Hence their output has for its earmark a heaviness that might be called cumbersome. These machines are very reliable, and strong, and massive, like a dray horse. They have no finish, no style, no elegance. The English and the Scots leave such considerations out of their minds altogether. The French are a nervous, delicate, sensitive people, with a highly-developed sense of the beautiful. Hence their machines and their humble tools have style, an air of elegance. The finish of the cheapest French tool is good. For elegance and good taste the machinery of the French is unsurpassed. This trait the French automobile shows. German tools are good, but not elegant and not light. They incline to curved surfaces. This trait is well known in them by contrast with the angular, race-horse-like contours of the American tool. American tools and machinery are characterized by their direct, plain, simple design; by the use in them of the lightest, best alloys and the newest steels; by a saving of weight that results in hollow structures wherever pos-

sible; by a race-horse leanness of appearance. In simplicity the American tools are by far the best. In elegance and finish they excel the tools of all other nations but the French."—*Philadelphia Press*.

PICTURESQUE ASTORIA—Astoria is one of the most picturesque of American towns, quaint and old, having been founded by the early explorers and trappers who came to this country nearly a hundred years ago. Long the outpost of John Jacob Astor's trading company, it was once taken by the British and held as a frontier fort. Placed here on the steep river edge where there was rightly no room for a city, and finding it difficult to crowd its way up the hill, the town has reached over the river, many of the streets, banks, stores, hotels, canneries and warehouses being set up on piling, with the tide sweeping through underneath. Step off the sidewalk and drop twenty feet into salt water; look through the cracks in the little court of the hotel, and see the dark river swirling beneath, and smell the barnacled piling. Even the railroad that now reaches the town comes in on legs, a long, centipede-like bridge of piers across a river bay.

It is a strange, interesting, not unambitious old town, set about with net-drying platforms, slippery fish wharves, canneries exhaling the odor of cooking fish, the little, low homes of fishermen and net makers of many nationalities, from Norwegian to Portuguese; the crowded tenements of Chinese and Japanese workers in the canneries; and, higher up the hill, the more pretentious homes of the packers and business men. Here and there an Indian or two, remnants of a passing tribe, look on imperturbably at the usurpation of their ancient fishing places. When the tide favors, the river beyond the wharves is busy with the heavy boats of the fishers, and often, more distant, on the mighty river one sees an ocean craft bound up for Portland or down again to the sea.—*Century*.

FACTS ABOUT PATENTS.—Some one has unearthed the interesting fact that the first patent ever issued in this country was granted to one Samuel Winslow, in 1641, for manufacturing salt. The grant was made by the Massachusetts Bay Colony for ten years, and was conditioned on Winslow's completing his plant within a year. Later, under the articles of confederation, the States were permitted to issue patents independently, as the original colonies had done. The first patent granted by the United States as a nation was issued to Samuel Hopkins, of Vermont, who claimed protection for a method of making pot and pearl ashes. According to recent estimates by the commissioner of patents, from six to seven-eighths of the manufacturing capital of the United States is based more or less directly upon patents. Incidentally, it may be noted that the number of applications filed at the patent office in sixty-five years, from 1837 to 1901, reaches the enormous total of one million two hundred and one thousand three hundred and forty-six. The number of patents actually issued in this country, from the time of the earliest records to Twelfth Mo. 31, 1901, is seven hundred thousand three hundred and forty-one. The nearest approach to this by foreign countries is France's record of three hundred

and thirty thousand nine hundred and seventy-seven grants, from the most ancient records (extending, of course, much further into the past than those of this country) to the close of the year 1901. Great Britain follows with a record of two hundred and ninety-four thousand seven hundred and fifty-eight, while Germany's total is only one hundred and forty-four thousand two hundred and thirty-nine. Although this comparison would seem to redound to the credit of American alertness and enterprise, it should be remembered that it has been, until recently, much less difficult to secure patents here than abroad. The grand total of patents issued by the nations of the world up to the time of the last compilation, in 1901, is two million eighty-seven thousand eight hundred and twelve.—*Harper's Weekly*.

The Pet Toad.

It had been a long, cold spring; but, now that a really warm day had come, summer seemed to have arrived at last, and, taking with her a diminutive spade, the little girl went out into the yard, for she dearly loved playing with the rich, brown earth and the few seeds which she had all winter kept among her choicest possessions gave her a good excuse. Placing the envelopes containing the seeds on the ground, she began her excavations with the greatest enthusiasm, stopping after each spadeful of dirt was thrown out of the hole to examine the wriggling worms and insects whose homes she had so ruthlessly invaded.

Presently she paused and drew back, half curious, half fearful. A clod of earth, which she had thrown to one side as containing nothing of any interest, was in motion, giving curious little hops and jumps, and seeming about to throw itself back into the hole whence it had been taken. The little girl was so surprised that, for a moment, she quite forgot to run away, and then something happened which prevented her doing so; for the lump of earth fell apart and there, squatting upon the ground and looking up at her, was a little creature with a crooked back, wide mouth and shining eyes.

With a cry of joy, the little girl, quite regardless of her clean white frock, knelt beside her visitor, for she saw at once that it was a toad. Ever since she could remember, toads had been her greatest delight, though few enough of those fascinating creatures were to be found in the city where she lived.

She at once picked it up and brushed the remaining dirt away; then, quite forgetting her gardening, she ran into the house to show her find. But, sad to relate, she encountered her nurse in the kitchen, and that worthy woman, shuddering at the sight of the toad and predicting that the hands of her young charge would be covered with warts, flatly refused to allow the new pet to be taken upstairs. The little girl could not help shedding tears of disappointment, but she knew that an appeal to any other authority would be useless; nurse had been with the family for many years, since before the birth of the little girl in fact, and she must be obeyed.

The toad, for his part, appeared relieved at finding himself back in the warm sunshine, and when the little girl put him down beside a

clump of ribbon-grass which, after a survey of the yard, she had decided upon as being the most fitting place for his residence, he at once disappeared amidst the vegetation; and the little girl, fearing that she would never see him again, sadly completed her planting.

The next day, on approaching the clump of ribbon-grass, what was her surprise to see the toad sitting before his home, basking in the warm sunshine. He did not move when she drew near, but graciously allowed her to scratch his back, evincing his satisfaction by blinking his great goggle eyes. The little girl was delighted by his tameness, and when day after day went by and she found him every morning in the same spot, she decided that her pet, even though she might not keep him in the house, must have a name. After much thought, she named him Charley, after a friend of her sister, a young man who lived next door and who was a great favorite with the whole family. The next time this gentleman called on her sister, the little girl told him of his namesake, and she was surprised and hurt to find that he did not seem at all pleased by the honor done him, even though she assured him that the toad in question was the very nicest one she had ever known!

Charley the toad (naturally enough) cared nothing about the displeasure of the man whose name he had been given, though the little girl explained it to him most carefully, and he appeared to listen with the greatest attention. He soon learned to know the call of his little mistress, and, if not already sunning himself, would come from his lair in the ribbon-grass at the sound of her voice. He learned to eat from her hand, and the little girl often caught flies or dug worms in order to give him a treat, for she loved to see his long tongue come out and wrap itself about the article of food before he swallowed it.

One day the little girl had a surprise. She had often secretly felt rather ashamed of Charley's dingy appearance, though she would not for the world have said as much to anyone, for fear of hurting his feelings. She had noticed for some time that he seemed rather dull and languid, and, on this particular morning she was dismayed to find him lying quite limp on the ground and taking no notice whatever of her approach. She hastened forward and, on examination, found that her pet's skin was split all the way down his back! Speechless with horror and indignation, she was just about to rush away and discover, if possible, the offender who had been guilty of such cruelty, when the toad began to twitch and jerk his legs. She could not leave him in such apparent agony and, with a heart aching for his sufferings, she seated herself upon the ground beside him. And then something happened which appeared to her little short of magic.

Charley was still struggling violently, but she now saw that his contortions were not due to pain. First the head and then the body of the toad emerged through the slit which had been along his back; then pulling out his legs, one after the other, and with as much exertion as a person would make in removing a very tight glove, Charley stood before her in all the glory of a bright new skin! Nor was this all; taking up the cast-off skin which lay on the ground beside him, Charley rolled it

between his forepaws until it was in a fit little wad, and then popped it into his mouth and swallowed it! This happened late in summer and, with the approach of cool weather, Charley seemed to become uneasy, hopping constantly from place to place and digging shallow holes here and there about the yard. Whenever the little girl found one of these holes, she filled it up carefully, until a big sister caught her thus occupied one day and told her the toad was only looking for a place to pass the winter, and, then, giving over her attempts to keep the yard in order, the little girl left Charley to his own device.

That night there was frost for the first time that season, and when the little girl went into the yard next morning, no Charley came to her call. Nor did she ever see him again, though whether he came up in one of the adjoining yards the next spring, or perished during the severe winter weather, she never knew.—*The Churchman*.

The Curse of Discontent.

An Arabian guide once told an American traveler a story, which, in a condensed form is related in an exchange. Its application the reader can readily make.

There lived on the banks of the Indus an ancient Persian by the name of El Hafed. From his beautiful and comfortable cottage on the hillside, he could look down upon the gleaming river, and over the glorious sea he was a man of wealth. His fields and orchards yielded plentifully, and he had money in interest. A beautiful wife and lovely children shared with him the joy of a happy home.

One day there came to the cottage a Persian priest. That priest sat down with El Hafed and told him how diamonds were obtained. "If you had a diamond," said the old priest, "as big as your thumb, you could purchase many farms like this, and if you had a thousand you could own the whole country."

That moment El Hafed became poor. All his possessions seemed to lose their value, and the feeling of discontent filled his soul. He said: "I must have a mine of diamonds. That is the use of spending one's life in this way in this narrow sphere? I want a mine, and I shall have it!"

That night he could not sleep. Early next morning he went to the priest and asked him how he could find those diamonds. "If you want diamonds," said the priest, "go and get them." "Won't you please tell me where I can get them?" said El Hafed. "Well, if you find high mountains, with a deep river running between them, over white sand, this white sand you will find diamonds."

The enthusiastic, restless and dissatisfied farmer sold his farm, took the money and went off in search of diamonds. He began to travel through Egypt and Palestine. Years passed, but he was pursuing his useless search. He went over through Europe and returned broken-hearted, in rags, a hungry wanderer, stung with humiliation and crushed by bitter disappointments, he stood on the shore of the bay of Barcelona. He looked at the waves as they came rolling in, and listened to the whisper that invited him to peace and the moment of despair, threw himself into the sea, never to rise again.

The man who purchased El Hafed's

his camel out one day to the stream at the edge of the garden to drink. While the camel lifted his nose in the water, the man noticed white flash of glittering, glistening, sparkling something at his feet. Out of curiosity, he reached down and picked up a black stone with a strange eye of light in it, which seemed to reflect all the colors of the rainbow. He took the curiosity to the house and laid it on the mantel, and soon forgot all about it.

One day the same old priest came to visit Hafed's successor. He noticed the flash of light from the mantel and sprang toward it in amazement, and exclaimed: "Here is a diamond! Has El Hafed returned?" "Oh, no, it is not a diamond. It is a stone we found in the garden." "But I tell you that it is a diamond," and the two men went out in the garden and stirred up the white sand, and there came up in their hands beautiful diamonds more valuable than the first.

This is all historically true. It was the discovery of the wonderful mines of Golconda, at the founding of the line of Great Moguls. The guide swung his cap and said, "Had El Hafed remained at home and dug in his own garden, he would have been the wealthiest man of his time, and the most honored!"

Items Concerning the Society.

We learn of our friend Elizabeth C. Cooper's return to West Grove from her religious visit performed in Eastern Quarterly and subordinate meetings in North Carolina. In the Select and Quarterly Meetings the Word was preached by a number present, in some favored communications. As heretofore stated, the discussion of some features of the discipline adopted which the meeting had been protested, resulted in no report being sent to the Yearly Meeting. She attended Up-River Meetings, Cedar Grove and Rich Square Meetings, besides that held at Piney Woods on the First-day following the Quarterly Meeting; and called on the sister of families in the several neighborhoods, with special interest in the aged and afflicted, who were some refreshing, tendering seasons witnessed and felt, which are precious, but we cannot give ourselves command. Friends were very kind to her every place, and the help and protecting of our Heavenly Father, all throughout, is acknowledged with thanksgiving.

Notes from Others.

A gravedigger in Holland claims to have buried thirty thousand people.

Most the Presbyterian Church \$73,000 to pay the expenses of delegates to the General Assembly next month.

Robert P. Coyle, says that Presbyterianism has never had a spinal column. It has given up everything but principle.

A writer to the *Christian Science Sentinel* says: "All the wicked bitterness shown by religious sects towards each other might be extinguished by a bold and sympathetic consideration for the same convictions of others."

The Presbyterian Creed Revision is to omit the playing of the Creed of 1648 against the pope, and words of unregenerate men, and the sinning of refusing lawful oaths, and adds chapters on Holy Spirit, the love of God and missions.

John Macmillan, one of the most eminent poets and writers of the United Free Church of Scotland, as recently died at the age of seventy. He held a high place as a student of nature and a nature.

R. J. Campbell says, "The more direct and simple the style, and the more rich and real the spiritual experience of the preacher, the more the people welcome the message. They crave the note of certainty."

Principal Forsyth says: "The minister's authority is not that of the person, or his talents, or his order, but that of his gospel. The true minister seeks more hospitality for his word, than sympathy for himself."

Dr. Nassau, from the west coast of Africa, affirms that the recent barbarities allowed in the Congo Free State by the syndicate engaged in collecting rubber, "exceeds the worst features of the worst days of slave hunting."

The Presbyterian Evangelical committee of Brooklyn has procured a portable church building, built in sections, so that it can be placed in a city mission field where no suitable hall can be secured, and when no longer needed there it can be taken down and removed to a new mission field.

The famous bell at the cathedral of Rouen, France, known as "Rouvel," has become cracked. The bell has rung the curfew for a period of six hundred years without interruption. It is impossible to repair it, and the townspeople are much distressed at their loss.

The Secretary of the Presbyterian Board of Ministerial Relief, makes the statement that only twenty-five hundred Presbyterian ministers receive a salary of one thousand dollars or more; the remaining five thousand receive from three hundred to one thousand, the average being about six hundred dollars.

Baroness Bertha Von Suttner, author of "Lay Down Your Arms," who is known sometimes as the Harriet Beecher Stowe of Germany, is soon to make an extended visit to the United States. She will give a series of lectures in the interest of universal peace, the cause of which she has pleaded during her whole life.

The Belgian authorities in Africa have threatened the American Presbyterians with forcible eviction unless they vacate their station on the Kasai River, and other missionaries have been expelled from Juapa, because of the activity of Protestant missionaries in exposing the horrors of the awful barbarities for which Belgian authorities are responsible.

But for the Endeavorers the colony of lepers on the French island of Lifou, in Asia, would have been annihilated. They were ordered by the Government to leave Lifou, and to take up their abode on a small, uninhabited island some sixteen miles away. No adequate provision was made for their temporal wants, and some lost their lives trying to escape the hardships of their new life. Many others would have died of starvation had not the local Christian Endeavorers carried boat loads of food to them. After two years the Government prepared another island and ordered the chief to bring the poor fellows back. He refused to contaminate his vessel, and the lepers might have been left to perish had not members of the Christian Endeavor Society near obtained a small vessel by traveling many miles. They carried the helpless lepers down the steep rocks in their strong arms and saw them comfortably landed and safely housed. Then they burned every scrap of their clothing, washed themselves in the sea, and returned to their homes, unconscious of having performed one of the most heroic deeds in the annals of man.—*Boston Transcript*.

MAY END ERA OF HIGHER CRITICISM.—It is the theory of evangelical leaders that the present ser-

ies of John Wesley memorial meetings will do much to put an end to the higher criticism discussion. These meetings were begun last spring and will continue to be held to the end of the summer, the actual anniversary of Wesley's birth being Sixth Month 28. Leaders say that thousands are, for the first time, hearing of the beginning and achievement of that positive evangelism which started with John Wesley's work. Being thoughtful persons, they inquire the cause of the movement, and learn it to have been a positive gospel aggressively preached. There are signs that the era of higher criticism is passing, and leaders in both England and America are not few who scent an evangelical revival. The laity declares itself to be thirsting for a straight gospel story, it is said, and it is held that the Wesley memorials will make a finish of the opposition, perhaps set the new movement under way.

AMERICA'S RESPONSIBILITY.—The following, regarded in its day as one of Chief Justice Story's masterpieces, is worth reproducing as an ideal which our country may not lose sight of, tho' Christ is the needful and higher ideal whereby it must be saved:—

"We stand the latest—and, if we fail, probably the last—experiment of self-government by the people. We have begun it under circumstances of the most auspicious nature. We are in the vigor of youth. Our growth has never been checked by the oppression of tyranny. Our constitutions have never been enfeebled by the vices or luxuries of the old world. Such as we are, we have been from the beginning—simple, hardy, intelligent, accustomed to self-government and to self-respect. The Atlantic rolls between us and any formidable foe. Within our own territory, stretching through many degrees of latitude and longitude, we have the choice of many products and many means of independence. The government is mild. The press is free. Religion is free. Knowledge reaches or may reach every home. What fairer prospect of success could be presented? What means more adequate to accomplish the sublime end? What more is necessary than for the people to preserve what they have themselves created? Already has the age caught the spirit of our institutions. It has already ascended the Andes and sniffed the breezes of both oceans. It has infused itself into the life-blood of Europe, and warmed the sunny plains of France and the lowlands of Holland. It has touched the philosophy of Germany and the north; and, moving onward to the south, has opened to Greece the lessons of her better days.

"Can it be that America, under such circumstances, can betray herself? Can it be that she is to be added to the catalogue of republics, the inscriptions upon whose ruins is: 'They were but they are not?' Forbid it, my countrymen! Forbid it, heaven!"

The *Presbyterian* comments on the following utterances of Bishop William Lawrence at the recent Protestant Episcopal General Convention in Boston:

"The ministry is increasing neither in number nor in power. Infidelity is all about us. The tests of life are social and financial success. Sport and amusement have made inroads. Gambling is unsettling habits of industry. Below these are the lower standards of taste and gross immoralities. Temptations are undermining our youth. All these influences are potent enemies of the Christian faith."

All his statements are doubtless true, yet it is not a condition that can be charged especially to the twentieth century. The story would apply equally as well to the centuries that are past, and would doubtless apply express the state of things in decades to come. They are the fruits of sin, and since sin entered into the world and death by sin, these conditions have existed. The Church needs not be discouraged. The wheat and tares

must grow together until the harvest. The sowing of the seed, the cultivating of the crops, the gathering of the grain, so far as possible to every man that hath received a gift to minister the same) is the Church's business. The results must be left with God. Meanwhile there is this assurance: His kingdom shall never perish from the earth, "and like as there were found the seven thousand who had not bowed the knee to Baal in the time of the apostasy of God's chosen people, so the faithful ones will prove again the salvation of the kingdom, and in God's own time ultimate, final, complete, glorious victory will be the result."

REST COTTAGE.—Isabel Shipley, formerly a teacher in the public school, but for some years past a worker among the colored people of South Camden, carried out the idea nine summers back, of giving a brief outing amidst wholesome rural surroundings to some of the ill or infirm among her poor friends. A number of her guests have been slaves, to whom after lives of hardship and toil, this rest seems a veritable heaven on earth.

At first she boarded them in private families, but four years later rented one or two cottages at Sadiertown near Westmont, Camden County, N. J. This plan was followed for several seasons with good results, but as the renting was only for a part of the year, the possibility of getting proper accommodations became very uncertain.

She accordingly determined to make a strong effort to overcome this difficulty by providing a cottage especially for the purpose.

A piece of ground having been purchased, a small house was built and partially finished last year.

It was finally decided that it would be of advantage, in forwarding the good work to place the property in the care of a board of trustees; who were appointed Tenth Month 4th 1902. John B. Rhoads, 239 Market street, Philadelphia, serving as President.

The board feels that the present unfinished condition of the cottage is not satisfactory. The place as it now stands is paid for with the exception of a small balance of less than one hundred dollars. The trustees wish to finish the interior of two rooms, which have not been ceiled, to add a small side porch, a kitchen and a room over it. They appeal to the friends of such work to subscribe the needed sum to approximately five hundred dollars.

The house when thus completed would accommodate twelve people. Some of the guests remain about two weeks, others longer, as their cases require. They greatly enjoy the pleasant change and the beauty of their surroundings, and almost invariably return home improved in health and with thankful hearts.

Contributions may be sent to Catharine E. Rhoads, Treasurer, Haddonfield, N. J. Sixth Month, 1903.

SUMMARY OF EVENTS.

UNITED STATES.—In a recent address at Louisville, Ky., Booker T. Washington said: "In the present season of anxiety and almost of despair, which possesses our people, the race there are three things I wish to say as strongly as I may: First, let no man of the race become discouraged or hopeless. There are in this country, North and South, men who mean to see that justice is meted out to the race.

"Second, let us keep before us the fact that, almost without exception, every race or nation that has ever got on its feet has done so through struggle, and trial and persecution.

"No one should seek to close his eyes to the fact that the race is passing through a serious and trying period of its development; a period that calls for the use of our ripest thought and sober judgment.

"Let nothing lead us into the extremes of utterance or action. Let us in the running race, the race of individual exertions, the most patient, forbearance and self-control in the midst of trying conditions that wins its cause. Let nothing induce us to descend to the level of the mob. There should be meted out equal justice to the black man

and the white man. Whenever the nation forgets or is tempted to forget, its basic principle the whole fabric of government for both the white and the black man is threatened with destruction. This is true whether it relates to conditions in Texas, Indiana or Delaware."

President Roosevelt has signed a formal order making reservations of lands in the island of Porto Rico for the purpose of the government. The section was taken under the provisions of a law passed at the first session of the Fifty-seventh Congress, which authorized the President to make the reservations before Seventh Month, 1903. In the aggregate more than ninety thousand acres of land were involved.

It is expected that from the sale of the lands the island will receive about five hundred thousand dollars. This sum will be devoted largely to educational purposes.

The first of the series of experiments to test the effect of preservative chemicals used upon foods, which the Secretary of Agriculture was authorized to conduct by act of Congress, and which have been continued for about six months, have ended. The preservatives used thus far are borax and boric acid.

Speaking in general terms, Dr. Wiley said: "Our experiments have been conducted with a view to ascertaining the effect of the preservatives on digestion, and our observations have covered the effect on the digestion of carbo-hydrates, or fat, and on the digestion of protein and gluten. We also have observed the effect on the assimilation of food, and carefully noted all increase or decrease in weight and in the excreting and absorbing organs. We have recorded with care the effect of the preservatives on the composition of the blood.

The results of these experiments, it is stated, will not be published for several months.

Salicylic acid will be the next article experimented with.

The recent subscriptions by the stockholders of the Pennsylvania Railroad of 1,500,000 additional shares at sixty dollars a share within a few weeks is regarded as a very significant proof of the high esteem in which this corporation is held in this country.

A dispatch from Austin, Texas, of the 1st inst. says: A deadly enemy of the cotton boll weevil has appeared in the cotton fields south of here, in Caldwell county.

It is a small green bug, which has a voracious appetite for the weevil and does not harm the cotton plants. It is estimated by Texas Agents experts that the cotton boll weevil caused a financial loss of twenty-five million dollars to Texas cotton planters last season.

At the Philadelphia School for Nurses certificates were recently given to twenty-one young colored women who had graduated at that institution.

Speaking in a recent lecture from Santa Barbara, California, says: An oil well in the northern part of this country has proved one of the most remarkable discoveries on the Pacific coast. The first flow was at the rate of forty barrels per minute, the oil shooting fifty feet above the top of the derrick. The depth of the well is about two thousand feet.

The past month in Philadelphia was the coldest Sixth Month ever recorded by the weather Bureau. The average daily temperature was one and a half degrees lower than the coldest previous Sixth Month of 1881.

A sudden change to high temperature occurred on the 2nd inst. which was followed by a number of cases of heat prostration in several of the large cities.

The statement is made by the *Public Ledger* of this city that about one hundred and thirty thousand dollars worth of property was destroyed by fire due solely to the foolish celebration of the Fourth of this month. 31 persons were killed by it and 2,649 are known to have been seriously injured.

Discoveries of fossils and bones of prehistoric men and animals are being made in the Fish Creek country, Montana, by Professor M. S. Farr and a party of students from Berkeley university.

In the remains of a city belonging to the stone age Professor Farr found the bones of animals of immense size, and various crude instruments, many of them ornamented with gems.

A dispatch from Washington says: During the fiscal year which closed on the 30th ult., one hundred and thirty-two thousand eight hundred and twenty-nine claims were allowed by the pension bureau and one hundred and thirteen thousand seven hundred and twenty rejected. The number of allowances exceeded those of last year to the extent of eleven hundred and fifteen.

In a recent report to Congress, in reference to the Pure Food Bill, it is stated that enormous quantities of glucose are used in adulterating certain foodstuffs for medicinal purposes, and in some cases certain additives are made into so-called "fruit" and jams.

There were 10,000 deaths in this city last week, reported to the Board of Health. This is 13 more than the pre-

vious week and 77 more than the corresponding week 1902. Of the foregoing 246 were males and 233 males: 58 died of consumption of the lungs; 31 of inflammation of the lungs and surrounding membrane; 7 of diphtheria; 13 of cancer; 19 of apoplexy; 20 typhoid fever; 4 of scarlet fever, and 8 of small-pox.

FOURMEN.—The cable ship *Angile* arrived at Honolulu on the 3d inst., having the longest run of the long Pacific cable now extending from Manila, via Guam, Midway Islands, to that port.

On the 4th instant President Roosevelt sent a message from Oyster Bay on Long Island to Governor Taft, Manila. From there it was forwarded by other cables back to this country, circling the globe in two months. The new cable is nearly 8,000 miles long from San Francisco to Manila and passes through the Midway Islands, thence to Midway Island, thence to Guam, thence to the island of Luzon. The rate to Manila is to be not over \$1 per word.

Treaties have lately been signed at Havana between the United States and Cuba, by which two naval coaling stations have been obtained by the United States from nominal rent, and the sale of Pines placed under Cuban sovereignty.

The British Board of Agriculture has prohibited landing in Great Britain of any hogs from the United States, and also the importation of cattle from England after Eighth Mo. 1st. The prohibition relative to cattle from New England is caused by the recent demonstration of mouth disease among the cattle in Eastern States.

A despatch from Vienna of the 1st says: Medical circles here are greatly interested in a report, commented to the Viennese Society of Physicians, to the effect that a long standing case of cancer was cured by radium rays at the clinic of the late Professor Gosenberg. The patient, who was 61 years of age, and long suffered from cancer of the palate and lip, and had repeatedly been operated upon fruitlessly, until the autumn of 1901, when one physician determined to try radium rays, and treated the afflicted parts by exposing them to the action of radium bromide, the strongest radium preparation in existence. He was rewarded by a gradual and complete disappearance of the tumors.

The Jewish population of Russia states that the regulations in force in Russia has caused nearly all the Jews living in the rural districts, amounting to about 25 per cent. of the whole Jewish population in 1882, to be driven into the towns and cities. The number of Jews who have continued constantly to diminish in the towns, more and more crowded up, have been driven to a subsistence. As a result, the towns and cities are becoming the scene of Jewish pauperism, and places for physical and physical diseases. The Ministry of the Interior, in view of the dangers from the hungry proletariat, has decided to open 101 new Jewish settlements. The regulations forbid Jews to live in cities and towns where they had not been living at the time the regulations were issued, to remove from one town to another, or acquire new land.

It is said that the most thickly populated island in the world is Malta, with 1,360 inhabitants to the square mile. Barbados comes next, with 1,054 to the square mile.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each contributor for vol. 7.
